Trade Information Furnished by the Bureau's Regional Divisions.

Four regional divisions, the Western European, Eastern European and Levantine, Latin American, and Far Eastern Divisions, collect and disseminate basic information on foreign markets. They supply complete information concerning current business and industrial conditions in all foreign countries on the basis of which business executives can act with confidence. Individual requests for service are promptly answered. The present unsettled conditions in foreign countries render this official information of special value. No exporter should fail to regularly consult the monthly cable reports and Trade Information Bulletins covering his foreign markets prepared by the regional divisions.

More than 1,000 foreign representatives of the United States Government are constantly forwarding the latest foreign trade information in their field. This is checked and verified at Washington and placed before the American business public with a speed of a modern cable information service. It presents a complete picture of current, commercial, and industrial conditions in foreign countries on the basis of which business executives can act with confidence. The value of such basic information on domestic markets has been proved during the last 10 years, but only the Government itself is equipped to provide a similar service covering the entire world.

COMMERCE REPORTS

A WEEKLY SURVEY OF FOREIGN TRADE

HERBERT HOOVER, SECRETARY OF COMMERCE — JULIUS KLEIN DIRECTOR BUREAU OF FOREIGN AND DOMESTIC COMMERCE

Manufacturer's Agent vs. Purchaser.

5950—Textiles, dry goods, buttons, toys, small hardware articles, drugs, and chemical products—Brazil; manufacturers' agency.

It is a waste of time and money for American exporters to answer an inquiry of this kind as though the purchase of goods was desired. What the inquirer wants is to secure from the exporter in the United States an outline of the terms on which he would be willing to grant exclusive agency for his product. And yet replies to foreign-trade inquiries sometimes contain the assumption that goods rather than representation is sought. One prominent manufacturer's agent, for example, states that his offer to secure the agency for an American specialty received over 50 replies; but all of these quoted prices and terms of payment just as though he were a potential purchaser instead of a potential representative.

The manufacturer's representative or agent reduced to the simplest terms is an extension of the manufacturer's selling force abroad. His rôle is to push the exporter's selling campaign on a basis of commissions on orders secured. Now and then he carries stock, but only rarely does he do any buying or selling on his own account. Thus, to try to sell goods rather than the merits of the line to an applicant for representation of the exporter's line is like trying to sell goods to an applicant for the position of foreign salesman in the exporter's own establishment. By recognizing this fact considerable waste of time can be eliminated.

The Position of the Export Merchant and Agent.

Foreign importers and agents often overlook the importance of the services rendered by export merchants or agents in this country and frequently request the Bureau to only approach manufacturers in this country in regard to certain trade opportunities. It is admitted that in many cases factories catering to foreign trade and having an adequate organization for the handling of this business are in a better position to deal direct with foreign concerns, but in many lines the rule is that an export merchant or agent can far better attend to the needs of the foreign concerns, particularly in cases where the volume of foreign business in a particular line would be too small to justify any individual mill or factory maintaining its own export organization. Furthermore, it has often been found that a foreign concern can obtain more advantageous offers from a purchasing agent or export merchant in the United States than by going direct to a few factories because these middlemen are usually intimately familiar with the local conditions in the different parts of the country and have therefore a better opportunity of securing desirable stocks at advantageous prices. Therefore there is a decided raison d'être for the export agent and export merchant, which our foreign customers should not overlook.

Foreign Trade as a Career.

Many leaders of industry are taking increasing interest in the export departments of their organizations. By offering the management of this department to energetic men of training and vision, by increasing the proportion of mill production for export sale, and by sending Americans to foreign fields to represent their firm, the heads of the business are consistently supporting the export department.

If American foreign trade is to continue to expand along lines appropriate to the best interests of the United States and our selling markets, new blood must be sought to carry on the work. At this particular time of the year it seems pertinent to bring to the attention of prospective college graduates the opportunity that lies before them in the field of foreign trade.

Many of the leading colleges are offering varied courses in foreign-trade subjects which serve to give some conception of the work involved. It would appear, however, that certain of the students who have taken these courses have not done so with the idea of utilizing them from a practical point of view. The man who takes up foreign trade as a profession faces no easy task. He must not only have a knowledge of the commodity he expects to sell, but must also be a keen student of the language and characteristics of those with whom he plans to trade. The advantages

offered in travel and new contacts more than recompense one for the extra work involved.

Just as it is important for the young man faced with the problem of choosing a career to give the question of foreign trade deep consideration, so is it of significance for the business executive to consider the college man as a prospective member of his export department. Such a man, by reason of his training, is fitted to cope successfully with the many problems that he will be forced to face. His equipment will be such that he will readily master those business fundamentals necessary to any man at the start of a career. He will measure up to the type of man most desired as a representative of the United States in foreign fields. If he has the required ability he will eventually come to play a leading part in the business with which he is connected.

This is a question that deserves more than passing thought on the part of both the business man and the student.

Trade Lists Available.

The Commercial Intelligence Division has recently compiled the following trade lists of importers and dealers. Most of these lists indicate the relative size and importance of the firms listed, their character of business and nationality, as well as side lines handled. The suffixes A or B added to the file numbers indicate that the lists are revisions of former lists, the new compilations being more complete and reliable than the original. All of these lists have been mimeographed, and copies can now be obtained from the Bureau or its district and cooperative offices by referring to the titles and file numbers:

Printers, publishers, and importers of printing supplies, Japan	FE-11036-A
Engines, importers and dealers, China	FE-13008-A
Automotive products, importers and dealers, China	FE-13011-B
Drugs and chemicals, importers and dealers, China	FE-13015-B
Automotive products, importers and dealers, British Malaysia	FE-18002-C
General exporters and importers, Netherlands East Indies	FE-19006-B
Electrical machinery, importers and dealers, Netherlands East Indies	FE-19009-B
Rubber goods, importers and dealers, Netherlands East Indies	FE-19035
Iron and steel, importers and dealers, India	FE-21019-A
Theaters, motion-picture houses and importers of films, India	FE-21029-A
Building materials, importers and dealers, architects, builders, contractors, and engineers, India	FE-21031-A
Rubber goods, importers and dealers, India	FE-21036
Building materials, importers and dealers, architects, builders, contractors, and engineers, Australia	FE-23031-A
Rubber goods, importers and dealers, New Zealand	FE-24026
Sugar centrals and exporters, Philippine Islands	FE-25005-A
Automotive products, importers and dealers, Yugoslavia	NE-3012-B
Groceries, importers and dealers, Syria	NE-9009
Automotive products, importers and dealers, Malta	NE-16004-A
Leather, importers and dealers, Egypt	NE-14016-A
Hardware, importers and dealers, Bolivia	LA-11017-A
Jewelry, importers and dealers, Bolivia	LA-11018-A
Machinery, importers and dealers, Bolivia	LA-11024
Machinery, importers and dealers, Brazil	LA-12042-A
Hospitals, Brazil	LA-12081
Hardware, importers and dealers, Ecuador	LA-15014
Boots and shoes, importers and dealers, Paraguay	LA-19000-A
Hardware, importers and dealers, Uruguay	LA-21005-A
Boots and shoes, manufacturers and importers, Nicaragua	LA-27002-A
Hardware, importers and dealers, Cuba	LA-31015-A
Jewelry, importers and dealers, Cuba	LA-31026
Building materials, importers and dealers, Cuba	LA-31027
Stationery, importers and dealers, Cuba	LA-31028
Electrical supplies, importers and dealers, Cuba	LA-31029
Furniture, importers and manufacturers, Cuba	LA-31030
Plumbing and sanitary supplies, importers and dealers, Cuba	LA-31031
Rubber goods, importers and dealers, Australia	FE-23043

FOREIGN BUSINESS SECURED THROUGH BUREAU'S SERVICES.

The Bureau of Foreign and Domestic Commerce is constantly being advised of orders which have been placed abroad by American manufacturers as a result of names and information furnished through the Bureau. Recently the Agricultural Implements Division of the Bureau received a request from the American trade commissioner at Peking for catalogues of farm implements, such as harrows, plows, etc., to be furnished to a prospective customer in China. The division passed the request on to some 14 American manufacturers of agricultural implements, with the result that one company, acting on the request, has received an order amounting to about $25,000.

A California firm interested in hats and millinery recently secured an order from a firm in China, as a result of a trade opportunity submitted by the American commercial attaché at Peking.

Another American firm writes:

The commercial attaché at Tokyo sent us a list of the leading gas manufacturers in Japan. We in turn sent out our bulletin to the gas companies on this list. To date it has resulted in $1,200 worth of business.

CABLE REVIEW FOR WESTERN EUROPE

Charles E. Lyon, Acting Chief, Western European Division

BELGIAN INDUSTRIAL POSITION WEAKER.

Based on cable from Acting Commercial Attaché Samuel H. Cross, Brussels, and Consul G. S. Messersmith, Antwerp, April 20.

[Unfavorable features in the Belgian business situation are mainly dependent on the Ruhr occupation, which continues to exercise a limiting effect on transactions in most industrial lines. The metallurgical industry is still hampered by fuel shortage. Purchases of American fuel have not as yet become important, and any interruption in coal imports would place local smelters in an exceedingly precarious position. Cotton spinning is depressed by disappearance of the German demand, but Flemish linen mills are generally well occupied. Antwerp business has been unfavorably affected by the Ruhr situation.]

Note Circulation High—Securities Lower.

The note circulation of the Banque Nationale, in spite of reported efforts at restriction, remains high. On April 5 the circulation stood at 6,900,444,454 francs, as compared with the low point for March of 6,825,205,775 francs on March 22 and the high point of 6,964,853,045 francs on March 1. Money is tight, with interbank loans quoted at 3¼ to 3½ per cent and bank indorsements and acceptances for 90 days quoted at 4½ per cent.

Stock-market values are falling after showing abnormal increases in February and March, as shown by the following table giving the movement of 10 representative stocks on the basis of 100 as par:

Price movement of Belgian stocks.

Stocks.	Feb. 23.	Mar. 9.	Apr. 6.
Banks	290	282	272
Railroads	143	125	152
Metallurgy	383	382	353
Collieries	687	707	691
Glass	935	979	940
Textiles	487	502	487
Colonials	465	465	427

The retail price index continues to rise, going from 397 on February 15 to 408 on March 15, and resulting in demands for further wage increases in certain industries. Good weather is favoring spring plowing and sowing, but lack of rainfall retards forage growth in meadows.

Unfavorable Outlook for Metallurgical Industry.

The iron and steel outlook generally became worse during the past month, owing to the absence of German fuel deliveries and inability to secure sufficient quantities of foreign coke or coking coal at reasonable prices. While a readiness to purchase American fuel exists, differences in Belgian and American opinions on analysis and terms of payment have prevented the closing of any large deals. Optimism concerning resumption of Ruhr deliveries caused a general withdrawal of consumers from the high markets in March, with the result that producers in many cases had no forward orders and have allowed some price reduction. Blast-furnace coke has now been raised from 180 francs to 215 francs per ton.

An increased use of foreign labor is noticed in the coal industry, but there has been a marked emigration, particularly of Flemish workers to the northern France agricultural area. Shortage of cars is slowing up deliveries, while mine stocks are at unparalleled low levels.

Little Change in Glass and Textiles—Future Uncertain.

The position of plate-glass products is unchanged and favorable, but the volume of new business received shows signs of decline. Window-glass prices remain unchanged, the standard case of 300 feet, simple thickness, being quoted at 225 francs, plus 5 or 10 per cent. One new furnace is in process of erection and another projected at the Libby plant. Although window-glass plants have had no difficulty in disposing of their products, business on the whole has suffered severely from exchange during the past month.

Belgian cotton spinners are hampered by the complete disappearance of German demand and are attempting to avoid an accumulation of stock because of apprehension that lack of demand may lower prices. The domestic demand for cotton cloths is negligible and, although large export orders are coming in, weavers hesitate to accept much new business on account of uncertain production costs. The position of Flemish linen mills is generally favorable, as weavers are well supplied with American orders. The continued lockout in the Verviers woolen industry is limiting wool sales in Antwerp.

Conditions at Antwerp.

Consul Messersmith reports that the Ruhr occupation is being felt in Antwerp, with rising manufacturing costs, wages, and cost of living counterbalancing the increased export demand for Belgian products resulting from low franc exchange. Money was tight during the month. Demand for export credits was good owing to a stimulated export demand for Belgian goods. Fifteen American vessels arrived at Antwerp during March, while 17 left, only 11 of which were loaded. Grains formed the chief imports during the month. The outbound movement of Belgian, French, and Swiss goods was about normal, but German transit has been seriously affected by the Ruhr occupation.

The end of the petroleum rate war was marked by an increase in the price of gasoline from 60 centimes to 1 franc per liter. The grain market was affected by exchange, and transactions during March were only one-half the volume of March of last year. The lumber market is quiet, with increasing prices. The diamond market showed increased activity toward the end of the month, with a better demand for good stones, prices steady, and cutters fully occupied. The pork market is quiet, with stocks large and prices following exchange movements. An increased demand for frozen beef is noted.

CONDITIONS IMPROVING IN NORWAY.

Based on cable from Assistant Trade Commissioner Harry Sorensen, Copenhagen, Denmark, April 16.

[An appreciable economic improvement was noticeable in Norway during March as the result of the aggressive business policy of the new Government and its friendly relations with foreign countries. Shipping and fishing industries are already deriving benefits from the new régime, while financial circles are characterized by a more optimistic tone. The future of the labor situation in Norway is somewhat uncertain in view of the discontinuation of the court of arbitration.]

Consolidated Bank Statement—Note Circulation.

The consolidated bank statement for January, recently given out, shows loans amounting to 3,013,500,000 crowns and deposits to 2,897,400,000 crowns. The statement for December showed loans at 3,172,000,000 crowns and deposits at 2,887,000,000 crowns.

The Norwegian note circulation, which amounted on April 1 to 375,000,000 crowns, showed an increase of 21,000,000 crowns over the amount in circulation on March 17. The crown is rather steady but shows a weakening tendency.

Bank Legislation—Capital Emissions—Exchange Turnover.

Recent bank reconstructions and the difficulties of Stavanger banks have caused the Parliament to pass a law providing for the giving of aid to distressed banks, and for their public administration.

Capital emissions of 1,030,000 crowns show a large decrease from the February issue of 4,900,000 crowns. The amounts taken by new enterprises were 193,000 crowns in March and 3,900,000 crowns in February. Business failures reported for March amounted to 75, as compared with 70 for February and 67 for January.

March shows a stock exchange turnover of 7,600,000 crowns in stocks and bonds and 4,500,000 crowns in foreign exchange. The January turnover of stocks and bonds had amounted to 5,600,000 crowns.

Wage Conflicts Probable—Industrial Situation.

Wage negotiations are now being carried on in the iron and steel, electric, and printing and engraving industries, but considerable conflict appears probable in view of the difference between demands and concessions and the discontinuation of the labor court. Several strikes have already been instituted. The number of unemployed on March 24 registered 22,000, a decrease of 5,000 from the number on March 15.

The industrial situation shows a general improvement; there is an increased foreign demand for several products, with prices firm or rising. Winter and spring fish catches were above the average, and the settlement of the tariff is expected to bring about an improvement in the fish export demand. The rise in world freight rates and the lifting of tariff barriers are resulting in a great improvement in the shipping industry, even above the seasonal improvement which would be expected.

Principal Exports Show Increase.

Norwegian exports for February were valued at 62,200,000 crowns, an increase of 15,600,000 crowns over the January exports. The largest item on the export list was wood pulp, with a value of 12,700,000 crowns, which was an increase of 38 per cent over the exports during the previous month. Animal foodstuffs exported during the month showed an increase of 41 per cent over January exports and reached a total of 10,600,000 crowns; mineral manufactures, valued at 9,200,000 crowns, had increased 28 per cent over the January figure. Paper showed only a small increase and amounted to 8,500,000 crowns, while lumber showed an increase of 57 per cent over the January exports and totaled 6,900,000 crowns.

The chief imports during the month, with their relation to January quantity figure, were as follows: Coal, 152,000 tons, 25 per cent increase; mineral oils, 8,980 tons, 110 per cent increase; iron bars, 2,733 tons, no change. Automobiles imported number 168 and motorcycles 44, showing decreases of 136 and 91 per cent, respectively.

Wholesale Prices Increase.

Wholesale prices continued upward during March, showing an increase of 2 per cent for the month. The index shows 229.4, or 6.7 points over the January number. The following articles showed an advance in price during the month: Vegetable foodstuffs, fertilizers, feedstuffs, coal, petroleum, iron, metals, and building materials; decreases were shown by animal foodstuffs, hides, and leather.

MARKED SEASONAL IMPROVEMENT IN DANISH INDUSTRIES.

Based on cable from Assistant Trade Commissioner Harry E. Sorensen, Copenhagen, April 16.

[A distinct improvement was noticed in Danish industries during the past month, due largey to seasonal influences. Unemployment decreased, industry became more active, shipping improved, and building activity increased. The occupation of the Ruhr, however, is still affecting industry adversely by pushing up raw material prices, and is to a large extent responsible for the unfavorable balance of trade.]

Danish National Debt—Note Circulation Increases.

The national debt of Denmark at the end of the fiscal year, April 1, amounted to 1,189,500,000 crowns, of which 520,500,000 is external. The floating of an internal loan of 30,000,000 crowns has just been approved by the Riksdag.

The note circulation of the Danish Riksbank at the beginning of April was 449,000,000 crowns with a gold cover of approximately 52 per cent; on March 10 the circulation had been 435,000,000 crowns with a gold cover of 53 per cent. The Danish crown exchange continues its fluctuations but shows a slight sagging tendency.

Consolidated Bank Statement—Increase of Capital.

The consolidated statement of the Danish banks for March shows loans amounting to 2,826,000,000 crowns and deposits of 2,995,000,000 crowns, as compared with 2,965,000,000 and 3,030,700,000 crowns, respectively, a month ago. Indications are that public confidence is being restored in the Landmandsbank. One minor bank failed last month with a loss of about 100,000 crowns.

The capital of a large shipbuilding company, Burmeister & Wain, has been increased from 10,000,000 to

15,000,000 crowns. Capital emissions were active during the first of the month but more quiet during the last half, with the price of bank and industrial shares falling slightly more than 3 per cent.

Foreign Trade Shows Unfavorable Balance.

The trade balance continues unfavorable in spite of large agricultural exports. Imports during February were valued at 155,400,000 crowns, an increase of 14,400,000 crowns over the January figure. The most important import item for February was textiles, which amounted to 17,600,000 crowns, an increase of 7 per cent over the previous month. Grain imports increased 12 per cent over January and totaled 17,000,000 crowns. During February 133 automobiles were imported, or practically the same number as in January.

The chief export items during February were dairy products, which showed an increase of 6 per cent over the previous month and amounted to a total of 39,400,000 crowns. Live stock valued at 3,600,000 crowns showed a 50 per cent increase. Agricultural exports were also very important, but prices declined somewhat and the values were not sufficient to prevent the appearance of an import surplus. The spring sowing has been completed under satisfactory conditions, and agricultural prospects in general appear very favorable.

BRITISH FOREIGN TRADE IN MARCH.

Based on cable from Commercial Attaché Walter S. Tower, London, April 21.

The total British foreign trade during the month of March showed an increase over February, imports being larger by £6,100,000 and exports by £2,400,000. Reexports, however, fell off by £700,000. The principal increases in imports were recorded in the following classifications: Food, drink, and tobacco, £3,500,000; raw materials and unmanufactured articles, £1,000,000; and manufactured articles, £1,700,000. Exports of raw materials and unmanufactured articles increased £2,100,000 and manufactured articles £1,600,000. Reexports of food, drink, and tobacco showed a slight increase; a falling off of £900,000 was noted in the classification of raw materials and unmanufactured articles.

British foreign trade for March, 1923, and a comparison with February, 1923, and March, 1922.

Imports and exports.	March, 1923.	February, 1923.	March, 1922.
Total:			
Imports	£90,002,000	£83,855,000	£87,879,000
Exports	60,221,000	57,510,000	64,581,000
Reexports	9,086,000	9,823,000	10,154,000
Food, drink, and tobacco:			
Imports	40,726,000	37,141,000	45,261,000
Exports	2,646,000	2,864,000	3,270,000
Reexports	1,689,000	1,300,000	2,709,000
Raw materials and articles, mainly unmanufactured:			
Imports	27,732,000	26,732,000	22,695,000
Exports	11,564,000	9,470,000	8,465,000
Reexports	5,586,000	6,492,000	5,015,000
Articles mainly or wholly manufactured:			
Imports	21,226,000	19,462,000	20,309,000
Exports	45,935,000	44,324,000	51,760,000
Reexports	1,858,000	2,021,000	2,428,000
Animals, not for food:			
Imports	23,000	27,000	13,000
Exports	48,000	41,000	98,000
Reexports	3,000	10,000	1,000
Parcel post:			
Imports	315,000	486,000	202,000
Exports	728,000	812,000	987,000

As compared with March, 1922, imports during the month were greater by £2,100,000, and exports less by £3,600,000. Imports of food, drink, and tobacco decreased £4,500,000, but this reduction was more than offset by an increase of £5,600,000 in imports of raw materials and unmanufactured articles. Increases of £3,000,000 were recorded in exports of raw materials and unmanufactured articles, and £5,800,000 in exports of manufactured articles.

Exports and Reexports of Key Commodities.

Exports and reexports of cotton piece goods and woolen and worsted tissues continued to decrease both in quantity and value, cotton piece goods being less by 5,000,000 square yards and £200,000, and woolen and worsted tissues by 3,200,000 square yards and £500,000. The demand for iron and steel caused exports and reexports of this commodity to increase 51,000 tons in quantity and £600,000 in value. The increases by 1,200,000 tons and £1,900,000 in exports of coal largely reflect the continental demand caused by the cutting off of the Ruhr coal supply.

Total exports and reexports of key commodities from the United Kingdom during March, 1923, February, 1923, and March, 1922.

Commodities.	March, 1923.	February, 1923.	March, 1922.
Cotton piece goods:			
Square yards	337,906,000	342,980,000	304,298,000
Value	£11,307,000	£11,518,000	£11,524,000
Woolen and worsted tissues:			
Square yards	14,466,000	17,718,000	15,057,000
Value	£2,932,000	£3,465,000	£3,023,000
Iron and steel:			
Tons	369,000	318,000	296,000
Value	£5,841,000	£5,234,000	£5,771,000
Coal:			
Tons	7,180,000	5,903,000	5,201,000
Value	£8,818,000	£6,848,000	£5,785,000

Exports and reexports of cotton piece goods during the month were 33,600,000 square yards, or 11 per cent, in excess of March, 1922; value figures, however, showed a decrease of £200,000. While iron and steel quantity figures registered an increase of 73,000 tons, or 25 per cent, over March, 1922, values were only £70,000 greater, or a little more than 1 per cent. Coal exports and reexports were greater in quantity by 1,900,000 tons, and in value by £3,000,000, the respective percentages of increase being 38 per cent and 52 per cent.

American Consular Officers on Leave.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Huddle, J. Klahr	Hamburg, Germany	May 25	Shawhan Hotel, Tiffin, Ohio.
Savage, John M	Southampton, England.	May 16	Care of Manhattan Club, Madison Avenue and Twenty-sixth Street New York City.
Strother, Shelby F	Guadaloupe, West Indies.	May 12	First and Burnett Streets, Louisville, Ky.
Thackara, Alexander M.	Paris, France	June 12	Department of State, Washington, D. C.

CONFIDENCE IN YOUR FIELD SUPERVISOR.

M. H. Hoepli, Acting Chief, Automotive Division.

Unless the word "confidence" is written in large letters across an exporter's contract with his field supervisor, the returns from the investment in the latter's position are certain to fall short of possibilities.

The advantages which can be derived from an efficient field force—not necessarily large, but commensurate with the foreign business—are so obvious to most exporters, and the field man's returns in dollars and cents are so difficult to measure, that at times the executives in the home office fail to realize those elements which prevent them from securing the maximum of benefits from the field supervisors. Recent experiences reported by officials of the department's foreign offices point out losses in money, in sales, and in good will which could have been avoided had the export executives—or perhaps those men in their organization to whom this important contact work had been intrusted—clearly understood the field man's duties, qualifications, and prerogatives.

Appointing a Dealer.

In a virgin territory the field supervisor's first task, after he has properly familiarized himself with conditions and decided that his interests can best be taken care of by a local representative, is to appoint a dealer with the proper qualifications.

To find an agent who is willing to take on a truck line in Cuba at the present time, for instance, is by no means easy, not to say impossible. To induce a dealer with the proper sales and service facilities, financial resources, and other desirable qualifications, to represent a truck manufacturer in that territory, especially if his make is not known, requires considerable salesmanship and could hardly be done by mail. Even if that were possible, neither the exporter nor the dealer—perhaps previously entirely unknown to each other—could enjoy the same measure of mutual confidence as if they had had personal contact, direct or indirect, through a representative.

Introducing American Sales Methods.

Intensive sales work based on thorough analysis of the territory, a systematic follow-up of prospects, personal solicitation, and proper servicing are essentially American. If foreign countries are to be as thoroughly developed as the home market, the American sales plan—fully adapted, however, to local conditions—must be introduced and followed out.

In all but a few instances the exporter is compelled to educate the dealer's sales force and develop its latent possibilities. To supply the agent with advertising literature, to address sales letters to him so and so often, and to "pep him up" in other ways by mail and by cable frequently irritates more than it encourages. Insistence on sales quota, for instance, has, next to delayed deliveries and price adjustments, contributed a large share to the list of agency troubles.

A call from the exporter's personal representative, on the other hand—provided he has the proper qualifications—conveys to the dealer that the exporter feels his welfare linked up with the success of his agents and that they are both working toward the same goal; it inspires the agent with confidence and enthusiasm and makes him disposed to accept the exporter's suggested sales methods. The field supervisor is thus placed in a position where this constructive suggestion and cooperation with the local sales force can bear fruit.

The Export Manager's Advisor.

The efficient conduct of an export business presumes certain definite policies, which are generally laid down by the home office and based on the export executive's judgment and experience.

During times of rapid economic change and readjustments, as in the last three years, the policies on which an export business is conducted are liable to exhibit weaknesses mainly because they are not sufficiently flexible. It is impossible for the average export manager to keep thoroughly posted on every development concerning his numerous dealers and all the markets that he supplies. The field man, as an advisor on the spot who is looking out for the exporter's interest, can be of paramount importance by cautioning the home office as well as the foreign dealer of an impending slump or by pointing out to them signs of improvement, of which they can then take the fullest possible advantage.

But how can either the exporter or the agent derive benefit from such advice unless the field supervisor is listened to with full confidence in his judgment and unless the export policies are flexible enough to provide for such adjustments? The field men, if properly lined up, act as an advisory staff to the export manager and assist him in formulating and interpreting export policies.

Field Supervision Pays.

Dealers, it is true, in many instances can be appointed by mail, and export policies can be outlined in the home office, but what happens in the case of a dispute? If it is at all serious and unless the territory has been given over to an export or import commission house with office in the United States, the manufacturer usually is compelled to send a representative abroad to adjust matters in a discussion across the desk; meanwhile, however, some good sales may have been passed up and suspicion has been bred. The manufacturer bears the expense of the trip, and both he and the dealer suffer direct or indirect loss.

This is the minimum of evil result when the dealer appointed is a good one, but matters are far worse when the dealer does not come up to standard. Then loss of sales, warehouse charges, depreciation, legal proceedings, arbitration, and transshipment are some of the exporter's unpleasant experience.

The field supervisor, if vested with the proper authority, is in an excellent position to straighten out difficulties, thanks to his close personal contact with both the home office and the agent and to his understanding of the foreign people and their ways of doing business.

The Field Work Properly Organized.

In order to live up to his task the field man must thus be able to estimate correctly the potentialities and characteristics of the market as well as the qualifications of the dealer. He must not only be a salesman,

but a sales organizer and executive. In the long run his success will depend on his judgment of economic factors and trends. Since the exporter himself will be judged by his field representative, the latter's personality should inspire confidence and respect.

This presupposes necessarily that the export manager himself has absolute confidence in the field man's judgment and reliability; and if so, he should also be willing to accept the latter's suggestions and advice, thereby holding him responsible for any results.

To facilitate operations the field man should be stationed at a strategic point—an automotive center, for instance—from which the entire territory is easily accessible. While he should be required to keep the home office posted on the markets which he covers, thus relieving the dealer from a duty which he is usually not competent to handle from an unbiased viewpoint, such routine as advertising, accounting, and the like should not be included in the field supervisor's duty.

A field man thus qualified, having duties and prerogatives properly balanced, and enjoying the absolute confidence of his superiors, if given sufficient time can develop the vast potentialities latent in some of our foreign markets.

SPECIALTIES

Henry H. Morse, Chief, Specialties Division

CONDITIONS IN THE AUSTRIAN GLASSWARE AND POTTERY TRADES.

Consul Robert W. Heingartner, Vienna.

Partition of Austria has curtailed glass and pottery production and made it dependent on imports. Character of Austrian glass and pottery exports. The future of Austrain glass and pottery production.

The collapse and partition of the Austro-Hungarian Monarchy left the Austrian Republic without an adequate glass and earthenware production. The ancient and highly developed glass and earthenware industries of Bohemia (now a part of Czechoslovakia) not only amply supplied the Monarchy's needs in these articles, but they had besides a large surplus for export.

Extent of the Industry.

These industries were therefore left undeveloped in other parts of the Monarchy. The territory now comprised in the Republic of Austria possesses only 18 glass factories, as compared with 150 such factories in territory now belonging to Czechoslovakia; and, not counting brickyards, there are only 10 earthenware factories in the present Austria. Certain branches of these industries were entirely neglected in Austria. There was, for instance, not a single porcelain factory in the territory of the Republic, no plate-glass factory, no factory making high-class tableware, and only one small glass factory producing cheap table glassware.

After the partition of the former Monarchy, Austria became almost completely dependent on imports (especially from Czechoslovakia) for its supplies of glass and pottery. This dependence was also felt by the undeveloped Austrian glass and pottery industries which were, to a large extent, obliged also to import their coal and raw materials chiefly from Czechoslovakia.

Austrian Glass and Pottery Imports.

Of all glassware imported into Austria in 1920, 87 per cent came from Czechoslovakia, and in the following year 89 per cent originated in that country. Czechoslovakia also furnished the bulk of Austria's pottery imports, with 81 per cent in 1920 and 73 per cent in 1921.

Germany figures second in Austria's imports of glassware and pottery, supplying 8 per cent of imported glass in 1920 and 16 per cent of the imported pottery. In 1921 the German share increased to 10 per cent of Austria's imports of glassware and 25 per cent of the pottery imports. This increase in German imports is due to the rise in the value of the Czecho-Slovak crown and the steady depreciation of the mark. German imports of glassware and pottery increased in 1922, with a corresponding loss to Czechoslovakia.

Austrian Exports of Glass and Pottery.

The greater part (about three-fourths) of Austria's glass exports for the years 1920 and 1921 was concave glass. In 1920 Italy was the largest customer, buying 32 per cent of Austria's glass exports, but in 1921 exports of glass to Italy decreased to 21 per cent of the total exports. In 1920 Austria's glass exports to Hungary were only 19 per cent of the total, while in 1921 Hungary purchased 33 per cent of the entire Austrian glass export. Exports to Yugoslavia also increased from 12 per cent of all glass exported in 1920 to 21 per cent in 1921.

During the first nine months of 1922 Austria's exports of glass remained about stationary, with 5,407 metric tons exported, which would amount to about 7,209 tons for the entire year, as compared with 7,524 tons in 1921.

Raw Materials Available.

With an increasing glass and pottery production in Austria, steps are being taken to utilize the raw materials available in the country, and while the deposits of such materials are not equal in quality to those found in Czechoslovakia valuable deposits of porcelain clay, potters' earths, sands, quartz, and feldspar have been found in Austria, and a systematic utilization of these deposits will lessen Austria's dependency on Czechoslovakia for raw materials. An improvement in this respect was already noticeable in 1922, when there was no increase in the imports of porcelain clay and potter's earths.

Future of the Austrian Glass and Pottery Industry.

The future of Austria's glass and pottery industries will, of course, depend to a large extent on the price of coal, which will always have to be imported in large quantities. Czechoslovakia will always be a serious competitor of the Austrian glass and pottery indus-

tries, since the glass and pottery industries of that country not only have excellent raw materials but they are also near the coal mines, and, therefore, are not hampered by the serious item of freight, as are these Austrian industries. Some Austrian glass factories have been obliged to shut down lately because of the recent rise in Austrian freight rates, which made the price of coal so high that the glass factories could no longer operate at a profit.

GLASS ITEMS.

The Market in Cuba for China and Glass Ware.

Within the last few months there has been a decided improvement in sales of chinaware and pottery in Cuba. Most of the highest grade chinaware and porcelain comes from England, France, Belgium, and Germany, while the United States supplies the bulk of the cheaper grades. Business done with foreign firms is usually on the basis of drafts drawn for 90 days from date of shipment, but the tendency of American firms is to allow less time than this. In glassware American firms are strong in the market, although competition from France and Belgium is keen. Sales to Cuba are most frequently based on documents against acceptance of attached draft drawn at 60 or 90 days from date. A few firms, however, sell on open account, expecting payment in from 30 to 60 days after the arrival of the merchandise. (Commercial Attaché Paul L. Edwards, Habana, March 10.)

Market for Window Glass in China.

The total net imports of window glass into the whole of China for the year 1921 were 249,426 boxes at a value of 2,006,999 haikwan taels (approximately $1,345,000). Complete figures for 1922 are not yet available, but statistics covering the port of Shanghai, through which 40 per cent of China's imports enter, may be stated as an index to the 1922 trade in this commodity, and are as follows: In 1921, 513 boxes of colored window glass, valued at 14,792 haikwan taels, 120,120 boxes common window glass, valued at 860,288 haikwan taels, and irregular sizes of window glass worth 23,026 haikwan taels were imported; while in 1922, 1,274 boxes of colored window glass, valued at 23,330 haikwan taels, 219,097 boxes of common window glass, to the value of 1,077,236 haikwan taels, and irregular sizes of window glass, worth 55,104 haikwan taels, were shown on the import lists.

Glass is also manufactured in China to some extent, recent reports placing the number of glass factories at 445, although few of these factories manufacture window glass. No production figures are available. Their output is to be considered negligible.

Belgium, which is China's chief source of supply of window glass, furnished in 1921 115,221 boxes, valued at 825,052 haikwan taels (approximately $618,789). Japan ranks second, its exports of window glass to China during 1921 having totaled 74,244 boxes, at a value of 590,460 haikwan taels. The net imports of window glass from the United States during the same year were 1,528 boxes, valued at 32,634 haikwan taels.

An inferior quality of glass is put on the market by Belgium, which has practically no other outlet for this grade. Japanese glass is of poor quality but slightly better than that supplied by Belgium. The Japanese have not met the Belgium competition in regard to prices.

China can not be considered at the present time as a large market for glass. This commodity is chiefly used only in the treaty ports, very little being consumed in the interior. Building activities, however, in such treaty ports as Shanghai, Tientsin, Hankow, Canton, and Dairen have been decidedly active within the past two years, and the consumption of window glass of better grades has increased. The Chinese merchants in these ports are rapidly adopting window-glass store fronts and trade from this source can be looked for with reasonable assurance. At present, however, American firms will find it extremely difficult to compete with European manufacturers, but there is business to be had if they are willing to meet the market conditions prevailing in this territory. (Trade Commissioner Lansing W. Hoyt, Shanghai.)

Conditions in the Belgian Glass Industry.

The plate-glass plants have applied a 5 per cent wage advance since December 1, which makes a total of 10 per cent since September 1. This industry has also been authorized to work 100 supplementary hours per year over and above the eight-hour day. In special glass there are now five plants operating: Glaces de Charleroi, Courcelles, Gilly, Fauquez, and Selzaete. Opalescent glass is being produced at Cronfestu, and blown colored glass at Hamendes and the Verreries Belges. Nineteen furnaces are now operating in the window-glass industry—three at Bennert et Bivort, two each at Jonet and the Verreries Belges, and one each at Jemappes, Mariemont, Ancre, Piges, Goffe, Desgain, Gobbe, Chausteun, Hamendes, Jumet, Marine, and Binche.

Flint-glass operatives have demanded a 10 per cent wage increase, and strike notices have been posted in at least one plant. A more or less free cartel has been established by the hand-blowing plants, fixing a base price of 150 francs for free measures, with 25 per cent off for high exchange countries and 30 per cent for other exports. The Fourcault plants (Dampremy and Montignies) are booked ahead for the full first quarter. (Office of commercial attaché, Brussels.)

MUSICAL INSTRUMENT NOTES.

The Player-Piano Market in South Africa.

American player-pianos are making headway in the South African market against keen German competition, and while these imports into South Africa still come largely from Germany the American player-pianos are finding increasing favor as the demand for these instruments becomes more widespread. There is reason to believe that player-pianos ranging in price from $300 to $350 f. o. b. New York would find favor. (Consul G. K. Donald, Johannesburg, February 16.)

Marketing Pianos and Phonographs in Cuba.

It is estimated that about 75 per cent of the pianos sold in Cuba at the present time are paid for on a monthly installment plan. In some cases the installment payments are made over a period as great as 36 months. This necessarily involves a considerable capital outlay on the part of the piano merchants, as they are unable to obtain corresponding credit terms from their foreign suppliers.

Phonographs are frequently sold in Cuba on a year's credit, payment being made in 12 equal monthly installments. Owing to the amount of capital required to carry on such business, foreign manufacturers of pho-

nograph records, who are not already represented in Cuba, have difficulty in finding agents, as the manufacturers in general are not able to furnish corresponding credit terms. The market for phonograph records at present is reported very good. (Commercial Attaché Paul L. Edwards, Habana, March 10.)

Phonographs Popular Among Better Class Chinese.

The better class of Chinese are ready purchasers of phonographs and records. Furthermore, practically every foreign family in China possesses a phonograph. Most phonographs, records, and accessories are marketed by dealers with headquarters in Shanghai, or some other large port, who have their own branches at many interior points. There is no reason why American phonographs, if properly advertised and marketed at reasonable prices, should not enjoy extensive sales. (Consul General P. Stewart Heintzleman, Hankow, January 20.)

British Imports of Musical Instruments.

Imports of musical instruments into the United Kingdom for the calendar year 1922 were considerably larger than in 1921. Organs imported in 1921 numbered 159 and were valued at £19,974, while in 1922 they totaled 206, valued at £7,058. Pianos were imported in 1921 to the number of 9,079, valued at £334,526, and in 1922 totaled 16,274, worth £570,190. Other musical instruments imported in 1921 numbered 283,762 and reached a value of £155,636, as compared with 391,568 imported in 1922, valued at £191,286. Parts and accessories were imported to the value of £291,486 in 1921 and £291,286 in 1922. Altogether the United Kingdom imported 293,000 musical instruments in 1921, with a total value of (including parts and accessories) £801,622, and 408,048 musical instruments in 1922, reaching a total value of £1,059,597, both values including parts and accessories. (Consul Irving N. Linnell, London.)

Additional information regarding specialties appears in this issue under the following sections:

Tariffs and trade regulations:
Restriction on importation of Japanese shaving brushes into Southern Rhodesia.
Spanish regulations for exports of works of art.
Foreign trade opportunities Nos. 6219, 6220, 6223, 6224.

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

THE SUKKUR BARRAGE PROJECT.

William Althoff, Assistant Chief, Industrial Machinery Division.

New interest in the Sukkur barrage project is evoked by the recent announcement by the finance member of the Bombay Council that the Government of India has agreed to provide the necessary finances. Such a move takes the project out of the realm of indefinite possibilities, where it has remained for years, and puts it on a plane where constructive action may be expected promptly, thus making it of immediate concern to manufacturers of equipment and materials required for such undertakings.

For those not familiar with the term it might be explained that "barrage" in this case means a weir, or dam, with controlled or automatic flood gates along its entire length.

Consul Avra M. Warren, stationed at Karachi, reports that the Sukkur barrage and canals project, according to plans sanctioned by the Secretary of State for India, consists of a masonry structure across the Indus River at a point about 3 miles below the Lansdowne Bridge at Sukkur, Sind, India, with a system of canals taking off above it on each bank of the river. The barrage will have the form of a double bridge. The downstream bridge, 4,725 feet long, will provide a roadway for traffic across the river. The upstream bridge, termed the "gate bridge," will be employed solely for operating the barrage gates. Its length will be 4,925 feet, including the land span and terminal towers. There will be 66 spans in the barrage, having a clear opening of 60 feet each, arranged so that the openings can be closed, when required, by iron gates 18½ feet high. The gates will be operated so as to insure the water in the river at the barrage being maintained at a level of 194.5 feet above the mean sea level at Karachi. This level will give a reading of approximately 10.5 feet on the Sukkur gauge. Sluices will be provided at either end of the barrage. The left-bank group will have seven spans, and the right-bank group will have five spans. These will be separated from the central portion of the barrage by means of dividing walls. As it has been ascertained that at Sukkur there is no through traffic of boats plying on the river from the places above and below the site, the project does not provide for a ship lock.

The waterway provided by the barrage openings allows for a maximum flood of 1,500,000 cubic feet per second passing Sukkur. The record observed discharge, which occurred on August 1, 1914, is 949,000 cubic feet per second. The barrage is expected to be kept open during the "abkalani," or flood months (June to September, inclusive) each year. When the discharge falls below the quantity needed for irrigation purposes, the barrage gates will be closed until the river rises to the level required to supply the canals.

Seven New Canals Proposed.

Of the seven new canals that will take off immediately above the barrage three are on the right bank and four on the left. The bed levels and full supply levels of all the proposed canals have been designed so as to insure their commanding the maximum areas possible in the tracts served by them. Natural valleys and drainage lines have, of course, been taken into consideration, and in all cases these lines are to be left unobstructed. Drainage lines of the right-bank system of canals will eventually tail into the great Munchhar Lake and thence into the Indus. The present cultivation in the area to be served by the proposed canals is 2,035,636 acres. The anticipated cultivation in the thirtieth year after the completion of the scheme is estimated at 5,308,408 acres—an increase of more than

3,250,000 acres. The land area affected by the flow is approximately 7,500,000 acres.

Cost of the Project—Comparison with Similar Undertakings.

The cost of the Sukkur barrage project is estimated at approximately £18,000,000. It is anticipated that construction will be commenced at the rate of approximately £2,000,000 per year.

A comparison of the Sukkur barrage with some other undertakings that are more familiar will assist in giving a clearer idea of the magnitude of the project.

Sukkur barrage, compared with other projects.

Undertakings.	Crest length.	Maximum height.	Volume.
	Feet.	*Feet.*	*Cubic yards.*
Sukkur Barrage	4,725	65	[1] 1,566,000
Assuan Dam, Egypt	6,398	147	1,203,000
Roosevelt Dam, Ariz	1,125	280	342,000
Arrowrock Dam, Idaho	1,100	349	585,000
Elephant Butte, N. Mex	1,155	306	605,000
Shoshone Dam, Wyo	200	328	78,000

[1] Includes 385,000 cubic yards of earthwork in guide banks.

Some of the principal items of interest in the Sukkur barrage work are:

Loose stone pitching	cubic feet	15,540,000
Ordinary masonry	do	13,000,000
Cut-stone masonry	do	1,000,000
Excavation by dredger	do	52,600,000
Wet excavation by hand in foundation	do	5,000,000
Earth work in guide banks	do	10,400,000
Concrete blocks	do	2,350,000
Steel sheet piling:		
Permanent (527,000 square feet)	tons	10,500
Temporary (500,000 square feet)	do	10,000
Iron works in barrage gates	do	5,600
Iron works in regulator gates	do	1,400
Rolled-steel sections, plain, and worked into trusses	tons	1,300

Requirements for the Project.

The electric power required for this work will be 2,600 horsepower. It is estimated that 40 miles of broad-gauge railway and 10 miles of 2-foot gauge railway will be required for construction work. A fleet consisting of 2 dredgers, 5 steamers, 6 motor boats, and 85 barges and pontoons is called for, and 6 electric derrick cranes, 24 hand cranes, 6 electric-locomotive cranes, and 2 electric cranes with 53-foot span are listed. Lifting machinery and rollers for barrage and regulator gates will be required. The estimate also includes forty 8-inch pumps with electric motors, and 34 pile drivers.

Mr. A. A. Musto, of Karachi, is the executive engineer of the public works department in charge of the Sukkur project. Drawings and specifications are in the India office in London and probably also in the office of the Governor of Bombay in India. Previous reports regarding the Sukkur project have appeared in COMMERCE REPORTS for February 5, page 338; and January 8, page 116. In the first of these some details are given of the construction material and equipment expected to be used.

Catalogues Desired in Brazil.

W. L. Schurz, American commercial attaché at Rio de Janeiro, Brazil, advises that he is desirous of receiving catalogues of machinery of all kinds that might be of interest in Brazil. Catalogues should be mailed to the Industrial Machinery Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., and should be marked on the outside front cover: "To be forwarded to W. L. Schurz, American Commercial Attaché, Rio de Janeiro, Brazil."

Manufacturers who have agents in Brazil should indicate their names and addresses on the printed matter. It would be well to furnish more than one set of printed matter, as it frequently is desirable to have extra copies to give to interested inquirers. The language employed in Brazil is Portuguese; if printed matter is not available in that language, French would be preferable to Spanish.

Tender for Machinery and Supplies for Argentine Government.

Trade Commissioner Brady, at Buenos Aires, Argentina, has forwarded to the Bureau a copy of a tender which has been issued by the Department of Navigation and Ports of the Argentine Government for the purchase of machinery and materials. The following are the general classifications of the commodities required: Metal-working and woodworking machinery; scales and balances; electric motors, fans, etc.; steam engines; boilers; pumps; cold-storage machinery; welding equipment; mining and quarrying machinery and equipment; hoisting and conveying machinery; and air compressors.

It is stated that the conditions under which the bids must be submitted make it imperative that the purveyors be represented in Buenos Aires, and the date for the opening of the tenders (June 4) should permit American manufacturers who desire to participate sufficient time to make necessary arrangements.

A copy of this tender in Spanish may be examined by companies interested at the New York office of the Bureau, located at 734 Customhouse.

Market for Cigarette Machinery in Portugal and Colonies.

Vice Consul H. Tobey Mooers, Lisbon, Portugal, has submitted under date of March 16 a report describing the market for cigarette machinery in Portugal and its colonies.

[This report contains particulars regarding the companies operating in that district and may be obtained from the Bureau, or through its district and cooperative offices, by referring to file No. IM-89986.]

Ontario Gold Mines Plan New Equipment.

Vice Consul Harold S. Tewell, North Bay, Ontario, March 12.

The program of expansion in the gold fields of northern Ontario will call for an expenditure of a considerable amount for milling equipment during the present year. A number of the mines that have been producing gold for several years are reported to be planning the enlargement of their mills, and it is probable that machinery for the conversion of ore will be installed on many new properties that have just passed the stage of preliminary development.

[This report contains interesting details regarding the companies operating in that district and may be obtained from the Bureau, or through its district and cooperative offices, by referring to file No. IM-89561.]

Additional information regarding industrial machinery appears in this issue under the following sections:

Foreign trade opportunities Nos. 6208, 6209, 6210, 6211.

CONSTRUCTION NEWS

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by referring to the reference numbers given. Where no reference number is given further information is not available.]

Brazil.—The American consul at Pernambuco has transmitted a report on the award of the contract for the completion of the port of Recife. By Act No. 131 of March 12, 1923, published in the Jornal do Commercio of March 13, 1923, the governor accepts the proposition presented by the engineer, Mario Castilhos de Espirito Sante, for the completion of the supplementary port works and equipment of the port of Recife, in accordance with contractual bases and instructions to be drawn up. In the Jornal do Commercio of March 15, 1923, the proposition of Castilhos to construct the port works by administration is printed. Reference No. 90612.

Panama.—It is reported that in accordance with Law 6 of 1923, dated February 21, a contract between the executive branch of the Government and Enrique L. Hurtado, according to the text of the law appearing in the Gaceta Oficial, was entered into on September 15, 1922. The contractor is to construct 30 miles, more or less, of narrow-gauge railway from Caledonia Bay, on the Atlantic coast, to a point between the Ucurganti and Sanson Rivers in the valley of Chucunaque, near the Colombian border. The contractor is further required to construct one or more wharves at the Caledonia Bay terminal of the railway, which will accommodate vessels of 1,000 tons; to build stations necessary; and to furnish the equipment required for the operation of the railway. Service is to be provided for public traffic at least once a week, and oftener if necessary. Reference No. 90800. (Consul George Orr, Panama.)

Spain.—In a printed pamphlet dated March 1, 1923, and issued on March 14, 1923, the company known as the Tranivas Electricos de Vigo has published explanatory memoranda, lists of the materials necessary for the new lines that are soon to be constructed, and a tender of the conditions under which bids may be offered. The bids must be presented before June 30, 1923. The company is in the market for all of the material that will be required for these new lines. This material will include all articles necessary for the track, the electric equipment, and the rolling stock, the latter to consist of 10 passenger cars with motors, 10 passenger trailers, 2 freight cars with motors, and 14 freight trailers. The lines which are to be built as soon as possible and for which the permission of the Government has been secured are as follows:

Lines.	Built on—	Length.
		Kilometers.
Tram line to connect the present Vigo lines with the new Vigo-La Ramallosa Railway	State road	0.835
Railway from the end of the above connecting tram line to La Ramallosa.	New roadbed	17.020
Tramway from La Ramallosa to Bayona	State road	4.050
Tramway from La Ramallosa to Gondomar	do	4.400
Tramway from Chapela to Redondela, connecting Vigo with Redondela.	do	7.810
Total		34.115

This information supplements the article appearing under Construction News in the April 2 issue of COMMERCE REPORTS. Reference No. 91265. (Consul Henry T. Wilcox, Vigo.)

MINERALS AND METALS

Luther Becker, Chief, Iron and Steel Division

JAPAN'S TRADE IN IRON AND STEEL FOR 1922.

Commercial Attaché James F. Abbott. Tokyo. March 20.

Imports of iron ore, iron, and steel into Japan for the 12 months ended December, 1922, totaled 38,410,971 piculs (2,286,367 long tons), which compares with 24,119,554 piculs (1,435,688 tons) received in 1921. This is a greater amount than has been recorded for the past three years and may be taken as an index of the active revival of construction work in certain lines which has been under way in spite of the general economic depression. This is especially conspicuous in the case of rails, the import of which for 1922 was about three times that for 1921, and in wire rods (a large part of which is used in wire-rope manufacture), the import of which more than doubled in the same period. The importation of bars, rods, angles, and other structural shapes increased 66 per cent in 1922 over the preceding year and that of black plates 75 per cent.

Among the items that dropped in volume are galvanized corrugated sheets (23 per cent) and black pipes and fittings (8 per cent), and especially material for building construction, bridges, vessels, docks, etc., which dropped from 21,014 tons, valued at 6,487,393 yen, in 1921 to 7,680 tons, valued at 2,202,528 yen, in 1922. This item reflects a depression in shipbuilding as well as the fact that the great boom in the erection of modern office structures in Tokyo, Osaka, and Kobe has subsided to a considerable extent.

Imports for the Past Two Years.

The following table presents the imports of iron ore and the chief iron and steel products into Japan in 1921 and 1922 (figures are in piculs of 132.27 pounds):

Imports of iron ore, iron, and steel into Japan, 1921 and 1922.

Iron and steel.	1921	1922
	Piculs.	*Piculs.*
Iron ore	9,634,000	13,642,000
Pig iron	3,784,862	5,466,268
Ferromanganese	11,776	19,276
Ferrochrome and other alloys	4,493	37,439
Ingots, blooms, billets, and slabs	7,614	212,682
Bars, rods, tees, angles, etc	2,485,325	4,115,434
Wire rods	358,881	901,304
Plates and sheets, uncoated	3,749,184	6,538,462
Galvanized plates and sheets (plain)	170,632	130,940
Galvanized corrugated sheets	108,917	83,558
Tin plate	618,133	957,640
Wire, bright	35,818	63,940
Wire, galvanized	418,063	855,801
Hoop, band, and strip steel	101,619	157,290
Wire rope	11,607	21,440
Black pipe, tubes, and fittings	549,407	503,060
Galvanized pipe and tubes	16,744	55,199
Scrap iron and steel	157,060	892,197
Nails	286,298	544,050
Metal screws	19,635	18,454
Bolts, nuts, and washers	21,152	25,553
Rivets	6,057	6,356
Materials for railway construction:		
Rails	940,384	2,869,001
Fishplates	61,164	148,771
Materials for construction of buildings, bridges, vessels, docks, etc	353,035	129,025
Gas holders and tanks	197,715	1,720
Steel cylinders for compressed gases	5,171	11,235
Iron cocks and valves	4,808	2,867
Total of items listed	24,119,554	38,410,977

An outstanding feature of the official figures available is the fact that although the quantities rose sharply the values decreased in striking fashion. Thus the 148,000 tons of bars, rods, angles, etc., imported in 1921 were valued at 28,000,000 yen, whereas the 245,000 tons imported in 1922 were valued at 25,273,396 yen.

The Chief Suppliers of Pig Iron and Ingots.

With regard to pig iron, ingots, etc., Japan gets most of such raw material from China and British India. A noteworthy feature of this trade during recent years is the marked increase in the importation of Indian (Tata) pig into Japan, due to its cheaper price. Correspondingly imports from Europe and America have declined. This is clearly seen in the following table:

Imports of pig iron, ingots, etc., into Japan, 1921 and 1922.

Imported from—	1921		1922	
	Quantity.	Value.	Quantity.	Value.
	Piculs.	*Yen.*	*Piculs.*	*Yen.*
China	1,269,340	5,066,547	2,154,564	6,790,895
Kwantung	1,186,547	3,788,917	1,225,237	3,577,779
British India	572,521	2,745,600	1,677,509	5,620,299
Great Britain	401,670	3,793,500	213,559	1,112,573
Sweden	314,923	3,113,361	93,145	795,811
United States	35,618	276,631	144,726	745,523
Australia			1,736	9,056
Other countries	76,578	383,898	225,208	876,525
Total	3,857,197	19,168,464	5,735,774	19,528,461

In the item of iron pipe and tubes the United States continues to supply a large proportion of Japan's needs. In 1922 out of total imports of pipes and tubes of 558,259 piculs, valued at 6,537,361 yen, the United States furnished 526,857 piculs, valued at 5,602,176 yen, with Great Britain credited with 21,405 piculs and all other countries 9,997 piculs.

Reappearance of Continent in Structural-Steel Trade.

In structural materials such as iron and steel bars, rods, plates, and sheets a striking feature in recent Japanese trade is the reappearance of continental Europe (Germany, Sweden, Belgium) as a supplier of such materials. Great Britain has held its own, but the greatly increased tonnage from Germany and Belgium is counterbalanced by corresponding decreases from the United States. This is clearly brought out in the following table:

Imports of bars, rods, plates, sheets, etc., into Japan, 1921 and 1922.

Imported from—	1921		1922	
	Quantity.	Value.	Quantity.	Value.
	Piculs.	*Yen.*	*Piculs.*	*Yen.*
China	19,264	202,100	82,115	348,709
Great Britain	1,546,899	27,109,801	2,312,554	30,703,671
Germany	507,543	4,368,407	2,504,859	16,781,423
Belgium	377,486	2,710,284	1,099,432	6,481,317
Sweden	59,580	1,042,764	82,590	1,284,487
United States	5,582,664	79,303,862	7,648,082	71,674,947
Other countries	37,731	423,740	53,602	458,387
Total	8,131,167	115,160,958	13,783,234	127,732,941

Iron and Steel Exports Unimportant.

Iron and steel manufactures do not play a very important rôle in Japan's export trade. Enameled ironware was shipped abroad in 1922 to the amount of over 4,000,000 yen, most of it going to China and British India. Other items are nails, rails, knives, sewing needles, umbrella ribs, fans, and cans and other tinware. With one or two exceptions these were not segregated prior to 1921. The total exports of iron manufactures of all kinds for 1920 were valued at 21,069,991 yen, for 1921 at 9,114,151 yen, and for 1922 at 10,321,852 yen.

Supplemental report dated March 29.

Japan's Iron and Steel Production Increases.

Iron and steel production figures as published by the bureau of mines, Japanese department of agriculture and commerce, indicate for 1922 a 17 per cent increase over the preceding year. The 1921 output amounted to 2,051,518 metric tons, the 1922 to 2,392,835 metric tons, these totals being made up of: Pig iron—1921, 649,686 tons, 1922, 797,352 tons; ferro-alloys—1921, 7,575 tons, 1922, 14,121 tons; raw steel—1921, 832,428 tons, 1922, 905,823 tons; rolled steel—1921, 479,587 tons, 1922, 586,449 tons; steel forgings and castings—1921, 82,242 tons, 1922 (including the output for Chosen), 89,090 tons. The tonnage figures for the last half of 1922 included in the totals for the year are tentative and subject to correction.

Details of the output in the complete year 1921 and the first half of 1922 (corresponding figures for the second half of 1922 not being available) appear below:

Iron and steel production of Japan, 1921, and January-June, 1922.

	1921	Jan.-June, 1922.		1921	Jan.-June, 1922.
	Tons.	*Tons.*		*Tons.*	*Tons.*
Pig iron	649,686	341,429	Rolled steel	479,587	283,217
Coke	596,458	261,184	Rods	125,969	.....
Charcoal	9,785	3,117	Bars	135,488	74,295
Reworked	28,125	10,576	Shapes	113,316	54,635
Other	15,318	66,552	Plates	.....	79,745

Other	169	25			

[1] Not stated.

Stabilized Coke Prices Give Impetus to French Metallurgy.

Cable from Commercial Attaché Chester Lloyd Jones, Paris, April 18.

The iron and steel market here is stabilizing and quotations of iron and steel products on a sliding scale according to the price of coke at time of delivery are disappearing, due to the fact that the Societe des Consommatours de Cokes de Hauts-Fourneaux has set a definite schedule of prices for coke to extend through May. It is now stated that 20 per cent of necessary coke supplies will be furnished blast furnaces at 198 francs per ton and further needs at 310 francs per ton. While these prices are still very high, nevertheless, since iron producers are now given a definite cost price on which to base estimates, a revival in metallurgical lines is expected to result. Supplies of coke from the Ruhr have slightly improved, and prices of iron and steel products will probably remain stable until Ruhr developments come to a definite issue.

The pig-iron market is strong, with few producers quoting, but several blast furnaces have recently been blown in. Firm quotations on pig iron are being made at 500 francs f. o. b. furnace; prices on hematite pig are easier and sales are reported at 550 francs f. o. b. furnace, with plants in central France quoting 530 francs.

The steel market shows improvement, and manufacturers of semifinished products are again in the market. Orders for structural shapes are being booked at 750 francs per metric ton f. o. b. mill. The plate market is very active, with orders for plates being placed in Belgium and England and orders for sheets in England. Five-millimeter plates are now selling at about 900 francs and merchant bars at 800 francs. Mill prices are not profitable, but manufacturers prefer to accept them in order to keep their workmen employed.

Belgian Metallurgical Industry Depressed.

Cable from Acting Commercial Attaché S. H. Cross, Brussels, April 20.

The Belgian iron and steel outlook generally became worse during the past month, due to the absence of German fuel deliveries and inability to secure sufficient quantities of foreign coking coal and coke at reasonable prices. While a readiness to purchase American fuel exists, difficulties in reconciling Belgian and American views on analysis and terms of payment have prevented any large deals from going through, and any interruption in coal imports from Great Britain would place local smelters in a precarious position.

Optimism over chances of resumption of Ruhr deliveries caused a general withdrawal of consumers from the high markets in March, with the result that metallurgical producers in many cases had no forward orders and allowed some price reductions in order to stimulate demand. The Easter holidays also diminished transactions.

The price of blast-furnace coke produced from native coal has now been raised from 180 francs to 215 francs per ton. Steel quotations have been generally unchanged since the middle of March. Smelters appear to have accumulated pig and foundry iron stocks, the latter being difficult to sell owing to inactivity of foundries, and there has been some reduction in prices of ordinary basic, which is now at 470 francs per ton, and No. 3 at 580 francs per ton.

Prices on Raw and Finished Steels.

Prices on steels remained disproportionately high compared with finished products, Bessemer ingots being quoted at 590 francs, blooms at 640 francs, billets at 685 francs, and sheet bars at 750 francs, thus averaging only about 10 francs a ton cheaper than at the beginning of March. Finished-steel prices in the main run about 75 francs per ton cheaper than at the beginning of March, and would probably decline further if sterling eased off. Demand appears slack except in the light and medium sheet market, but open-hearth products are exceptionally scarce and are quoted at 750 francs for steel bars; heavy beams at 725 francs; rods at 950 francs; and cold-rolled hoops at 1,400 francs per ton. The S. A. des Acieries d'Angleur is reported to have secured an order of 10,000 tons of rails for Finnish State Railways. Heavy plates meet with no demand, and galvanized products are practically unchanged. Prices of Thomas 5-millimeter sheets are now 775 francs per ton, about 50 francs below early March quotations, 1-millimeter sheets in the vicinity of 1,250 francs, and galvanized 1-millimeter sheets at 1,900 francs per ton.

An increased use of foreign labor, especially Italian and Polish, is noticed in the coal industry. Car shortage is slowing up deliveries of coal, while mine stocks are at an unparalleled low level. Fine coals are extremely rare, and many ovens are now crushing sizes for coking purposes.

German Iron and Steel Trade Dull.

Cable from Commercial Attaché C. E. Herring, Berlin, April 14.

Heavy iron and steel plants and manufacturers of finished goods in the occupied territory are working for stock, while those in occupied territory still have sufficient old orders on hand. Half-fabricated steel likewise is dull and many plants are working part time. For instance, 12 per cent of the firms in the Berlin district are working only half time.

Guiding inland prices of pig iron effective April 1 are: Hematite, 646,300 marks per metric ton; first-grade pig iron, 616,300 marks; third grade, 613,300 marks; ferrosilicon, 10 per cent, 872,200 marks; spiegeleisen, 10 per cent, 939,600 marks, or a 5 per cent reduction from those of February 24.

Inland prices on Thomas steel half fabricates effective April 11 are fixed at: Ingots, 728,000 marks per metric ton; blooms, 813,000 marks; billets, 864,000 marks; sheet bars, 890,000 marks; shapes, 1,003,000 marks; merchant bars, 1,012,000 marks; hoop iron, 1,222,000 marks; wire rods, 1,080,000 marks; heavy plates, 1,141,000 marks; medium sheets, 1,282,000 marks; fine sheets, 1,471,000 marks.

Maximum inland cement prices of February 12 and potash prices of February 14 remain unchanged.

British Steel Output Gains in March.

Cable from Commercial Attaché W. S. Tower, London, April 19.

Production of pig iron of all classes by the United Kingdom during March amounted to 633,600 tons, a gain of 90,200 tons over the February output and of 65,700 tons over that for January; and the production of steel ingots and castings was 802,500 tons, a gain of 95,400 tons over February and of 178,200 tons over January. At the end of March 202 blast and 255 open-hearth furnaces were in operation.

Minerals in the British Cameroons.

The following extract, relating to the minerals in the British Cameroons, is from a recent issue of the United Empire:

The whole area of the Cameroon Province, West Africa, needs to be thoroughly prospected, as there is sufficient evidence that minerals do exist, but in uncertain quantities. In the Ossidinge division, coal, oil, mica, and salt are present, but only the mica has been exploited on a commercial basis. In the Bamenda division there is an unlimited supply of good iron ore, but difficulties in the way of transport forbid its export. There have been many rumors concerning rich gold mines in the hinterland. Thus far no evidence is forthcoming as to their whereabouts, although traces have been found in the Sanaga, Wuri, and Benue Rivers. Copper ores are said to be found in the neighborhood of Gasheka and Koncha. Although certain of the grassland natives are expert brass workers, so far as can be ascertained the metal used is of European origin.

Zinc, tin, lead, and manganese deposits have been found throughout the Province, but only the zinc and lead ore has been put to commercial use. This ore has a local value, being purchased by the Hausas and Fulani for use in the preparation of pigments. Mica occurs in the forest area near the native village of Esudan. Transportation of this mineral is fairly easy, only a short overland haul being necessary to reach the Cross River, down which it is sent to Rio del Rey. Arsenical ores and copal have also been reported.

Ore Analyses—Primitive Iron Industry.

In the grassland area the occurrence of iron has been reported by several observers. The partial analysis of an iron ore which is especially common near Bali is Fe, 42.25 per cent; SiO_2, 12.26 per cent; Mn, 0.35 per cent; and P, 1.17 per cent. Laterite, rich in iron, derived from the decomposition of basalt, is widely dispersed. A partial analysis of two specimens of ore was made, that from the Ossidinge district giving the following result: Fe, 29.38 per cent; SiO_2, 27.25; Mn, 1.41; CaO, 0.01; MgO, 0.21; and P, 0.72 per cent. The analysis of the Bagangu-Bafut ore showed the following result: Fe, 55.40 per cent; SiO_2, 9.21; Mn, 8.43; CaO, 0.89; and P, 0.12 per cent. At present the winning of the ore is only of local interest. The various tribes are noted for their skill as smelters and smiths, making weapons and agricultural implements with varying degrees of skill. The smelting is done in a low furnace sunk into the ground. Air bellows are worked from the top of the furnace, and clay tuyeres for the air lead down to a sloping floor inside the furnace. The charge, mixed with charcoal, is fed through a hole in the top of the furnace, and is withdrawn when the furnace has cooled down, after a 24-hour smelting operation. The smelted iron is then broken up and sold to the smiths, who clean it by crushing in rope rings on stone anvils, the slag being thrown away as worthless.

Iron and Steel Stocks Low in Philippines.

Cable from Trade Commissioner John A. Fowler, Manila, April 13.

The market for reinforcing bars is rising, and jobbers are buying up the stocks held by importers. Shortages in some sizes are now apparent.

Prices of ¾-inch twisted bars have risen to 14½ to 16 centavos per kilo and are still rising. Merchant steel bar stock is somewhat short. Prices on galvanized plain and corrugated sheets have advanced sharply and are now firm. Jobbers are buying freely from stocks of importers, which are not large. Stocks of wire nails are small, but the demand is becoming brisk, with base price of importers' stocks at 8.50 to 9 pesos per keg of 100 pounds. Barbed-wire supplies also are small, and prices have advanced sharply; 12-gauge barbed wire is now selling at 9.25 to 9.50 pesos per 100 pounds, and the demand is quickening.

Heavy war stocks from China and Japan are being offered in 1,000-ton lots, with no large purchases made.

Mineral and Metal Items.

State Assistance to Metallurgical Industry in Brazil.

The State of Sao Paulo has decreed that the Comp. Electro Metalurgica Brasileira and other iron and steel manufacturing companies already incorporated or to be incorporated during 1923 will be exempted from all State taxes during the current year. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, March 31.)

Dominican Nonferrous Ores Available.

A producer of nickel, manganese, copper, and chromium ores, located in the Dominican Republic, is prepared to supply large quantities of such ores to American consumers. Further information on the subject may be obtained, under file No. 86585, from the Iron and Steel Division of the Bureau of Foreign and Domestic Commerce at Washington.

Handling Radium in Soviet Russia.

In accordance with a resolution of the Council of Labor and Defense, the mining of radium ore and production of radium are to be concentrated with the Supreme Council of National Economy. All newly produced radium is to be kept at the Radium Institute of the Academy of Science, which is to maintain exact records of the production of radium and of supplies on hand in Soviet Russia, without requisitioning same from present holders. (Abstracted by Eastern European Division from Economic Life [Moscow], March 3.)

Sale of National Spelter Works in England.

It is reported that the National Spelter Works at Avonmouth, which were erected by the Government during the war at a cost of £3,000,000, but which were never utilized for the intended operations, have been sold to Baldwins (Ltd.). The buyer, it is understood, aims to realize the original plan of importing Australian ores or concentrates direct and of carrying out at Avonmouth—probably in conjunction with the existing Swansea concern—the processes of roasting or calcining required for their conversion into spelter. (Alfred Nutting, clerk in American consulate general, London, March 19.)

Czechoslovakian Iron and Steel Industry.

It is reported that in the Vitkovice mills two more blast furnaces will be restarted next week, making a total of five in operation out of seven. It is further reported that of the eight steel furnaces six will be in operation next week to care for large orders for rails. At present about 2,000 workers are employed in the steel mill. It is also stated that the iron works in Sabotin and Stepanov, in Moravia, will renew operation on a steady basis after having had spasmodic periods of activity. A very slight improvement is noted in the machine industry of Czechoslovakia. (Trade Commissioner H. Lawrence Groves, Prague, March 10.)

Additional information regarding minerals and metals appears in this issue under the following sections:

Survey of current business:
United States output of cement and bricks.
United States copper production.

RUBBER PRODUCTS

P. L. Palmerton, Chief, Rubber Division

CHILEAN IMPORTS OF RUBBER MANUFACTURES.

A. M. Walker, Rubber Division.

Of the Chilean imports of rubber manufactures in 1921, 55 per cent, or $299,939 worth, was furnished by the United States, as compared with $393,194 from the same source in 1922. In 1918 Chilean imports of rubber goods from the United States were valued at $1,572,766. These statistics indicate that although the market is still suffering from general economic depression, the trend of United States sales in Chile is again upward.

There are a few small factories in Santiago and Concepcion that manufacture rubber overshoes, rubber clothing, rubber carriage tires, and rubber stamps. Crude-rubber imports averaged 25 tons annually from 1914 to 1918, and amounted to 31 tons in 1919, 41 tons in 1920, and 20 tons in 1921.

French and British Competition in Tire Market.

The Chilean market for American rubber tires approached the million-dollar mark in the banner year 1918, dropped rapidly until 1921, and recovered somewhat in 1922. In the pre-war year 1913 Chilean imports of rubber tires from the United States were valued at $33,920; in 1918, $994,911; in 1921, $113,071; and in 1922, $199,687. The ratio of imports from the United States to the total Chilean tire imports was 56 per cent in 1913, 89 in 1918, 92 in 1919, 86 in 1920, and 65 in 1921. French and British tires secure practically the remainder of the trade; in 1921 French tires constituted 21 per cent of the total tire imports, while British tires accounted for 13 per cent.

The total number of automobiles in Chile on January 1, 1923, was estimated at 7,893, including 608 trucks. United States tire exports to Chile in 1922 included 10,776 casings valued at $157,386. Approximately 60 per cent of the cars in use require inch clincher tires, 25 per cent straight-side tires, and 15 per cent millimeter clinchers. The most popular straight-side sizes are 32 x 4, 33 x 4, 34 x 4, and 34 x 4½; in millimeter measurements 815 x 105 and 880 x 120 are the sizes most in demand. The roads are in bad condition and this has the effect of increasing tire consumption.

Mechanical Rubber Goods Market Improving—Great Britain our Principal Competitor.

The mechanical rubber goods market in Chile is beginning to offer an improved outlook. Although the total imports of this class of goods from the United States fell from $391,805 in 1920 to $108,490 in 1921, the year 1922 witnessed an increase to $148,841, divided between belting, $61,094; hose, $81,606; and packing, $6,141.

American-made rubber hose is increasingly popular in Chile. In the last pre-war year (1913) the total imports of this commodity amounted to 98,090 kilos, 24,639 of which were from the United States. In 1921 the total was 163,583 kilos, 97,086 of which being from the United States, 30,887 kilos from Great Britain, and 15,102 kilos from France.

Chilean import statistics combine all kinds of transmission belting and show a total of 160,802 kilos in 1921, of which 74,956 came from Great Britain, 74,123 from the United States, and 11,118 from Germany. In 1913 Great Britain supplied 43 per cent of these imports, Germany 30 per cent, and the United States 24 per cent.

Rubber packing is imported from the United States and Great Britain. Of the 34,384 kilos imported in 1920, 16,905 kilos were furnished by the former and 16,148 by the latter country. In 1921 the corresponding figures were: Total, 20,269 kilos; United States, 8,748; and Great Britain, 10,649 kilos.

Rubber in sheets with cloth insertion was imported principally from Germany and Great Britain before the war, but of the 33,907 kilos imported in 1921, 26,369 originated in the United States, 4,780 in Great Britain, and 2,639 in Germany.

Rubber Footwear Market in Southern Chile.

The market for rubber footwear is comparatively small, the total imports reaching but 34,827 kilos in 1920 and dropping to 20,903 in 1921. The dry climate of northern Chile is not conducive to the use of rubber footwear, and southern Chile, which has a relatively heavy rainfall, is sparsely populated. Chilean imports from the United States in 1921 included rubber boots valued at $1,953, as compared with $13,200 in 1922, and rubber shoes valued at $19,782, as compared with $4,644 in 1922. The local manufacture of leather shoes is rapidly expanding, and a possibility exists of further introduction of American-made rubber heels for use by the shoe-manufacturing industry. In 1922 Chilean imports of rubber soles and heels from the United States were valued at $1,604.

Other manufactures of rubber are relatively unimportant in the Chilean trade. United States exports in 1922 included tire-repair materials valued at $6,108, druggists' rubber sundries $1,160, hard rubber electrical supplies $447, other hard rubber goods $2,164, and other rubber manufactures $15,339.

Polish Market for Rubber Footwear.

Commercial Attaché H. B. Smith, Warsaw, February 26.

Due to climatic conditions, the Polish market for rubber galoshes is large, considering the purchasing power of the people. In view of the extreme depreciation of the Polish mark, the good sales of Swedish galoshes (notably the Tretorn brand) at prices fully equal to if not exceeding American levels was a feature during the past winter. It is to be noted that where the above brand is for relatively unattractive and heavy models, the workmanship and materials are of the best, and each shoe carries a two-year replacement guaranty. The competition during the winter was chiefly from German and British makes of inferior quality, offered at materially lower prices. The success of the Tretorn products was probably due to a personally conducted sales and advertising campaign, while other makes were pushed only by correspondence.

Basket ball is not unknown in Poland, and there is also a limited market for athletic shoes for Rugby football. A considerably larger market exists for tennis shoes. Most of the tennis courts are concrete, and the ordinary rubber-soled shoe is not so likely to be popular as a tough composition sole with canvas upper.

It is to be noted that commercial practice in Poland, aggravated by exchange uncertainties, necessitates caution in entering the market. For American firms who do not have personal representatives on the spot, payment in the United States against shipping documents is alone advisable, even though a far smaller volume of business may be anticipated on this basis. Satisfactory representation in Poland is practically indispensable.

Rubber Trade Notes.

Tire Price Increase in Canada.

Retail tire prices were increased 5 per cent by Canadian manufacturers on March 21, 1923. The last price change was on January 6, when an approximate 15 per cent increase was announced. (Consul Dudley G. Dwyre, Fort William, Ontario, April 6.)

Tire Market in Dominican Republic.

The severe business depression of the past two years has militated against the increased use of automobiles, there being about 1,800 now in use. Only American-made tires are offered in this market. No price changes have occurred during the past three months, but changes are expected soon; the 30 by 3½ fabric retails at $9.80 to $12, and the standard cord tires of the same size retail at $13.50 to $16.50. Local agents give discounts to subagents ranging from 5 to 15 per cent, depending on the quantity sold. (Consul Charles B. Hosmer, Santo Domingo, March 20.)

Italian Martiny Company Producing Cord Tires.

The Societa Anonima Walter Martiny, of Turin, Italy, manufactures a line of solid and pneumatic automobile tires, rubber heels, and raincoats. A line of cord tires, said to be of a different grade from American cord tires, is offered by the company. (Consul Dana C. Sycks, Turin, March 22.)

Outline Monograph for Mexico.

The Rubber Division has recently issued another rubber exporter's handbook entitled "Facts affecting the importation of rubber products into Mexico."

Additional information regarding rubber appears in this issue under the following sections:

Tariffs and trade regulations: Reduction on Mexican duty on small tires.

PAPER

John Matthews, jr., Chief, Paper Division

MARKET FOR PRINTING INKS IN ARGENTINA.

Trade Commissioner George S. Brady, Buenos Aires, March 8.

Argentine requirements for printing and lithographic inks reaches 1,000,000 pounds annually, of which 80 per cent is imported from the United States. The business is largely in the hands of a few houses (branches of American and European factories), which import the ink in barrels and rework it in local shops. Some ink is imported prepared in cans, but this is not considered as successful nor as economical a method as to import in bulk, since the saving of about 5 cents a pound in import duties on ink imported in bulk more than pays for the cost of reworking and packing. The journey through the Tropics also affects the prepared ink, and it is therefore possible to supply the consumer with a superior and more uniform product when it is prepared for the market in Buenos Aires. One American manufacturer, with a factory in Buenos Aires, has the bulk of the trade, and by personal work has captured a market which was formerly in the hands of German and French firms.

Formerly the slow-drying European inks were preferred in Argentina, but the largest consumers now use the American standards, although in many of the smaller shops, where attention is not given to the presses, slow-drying inks are preferred.

Two of the largest daily newspapers consume around 60 drums of 500 pounds each per month. One of these papers has American presses with 35-inch rolls and uses American methods throughout, while the other uses French and German 35-inch roll presses. The other newspaper and job shops are equipped with standard American, German, French, and English presses. The principal newspapers use black ink only and do not print colored supplements or rotogravures.

Foreign Sources of Supply.

About half of the ink imported is news ink, the remainder being job and lithographic inks. Imports of printing and lithographic inks into Argentina during the year 1913, 1919, and 1921 were as follows:

Imports of printing and lithographic inks.

Countries of origin.	1913	1919	1921
	Kilos.	*Kilos.*	*Kilos.*
United States	71,050	665,074	320,169

Others	827	.....	6,407
Total	320,045	786,579	406,045

Reduction of Surcharges Asked by German Paper Associations.

In a recent issue of the Berliner Tageblatt it is stated that the economic committee of the Reich Council of Economics recently had under consideration an application from the associations of the paper working industry for the abolition of the surcharge on the gold duty for cellulose, paper, and cardboard of foreign origin. The world market prices for cellulose, c. i. f. German ports, are about 8 to 10 per cent below the German prices, and, in case of certain kinds of paper, up to 50 per cent lower. Cardboard prices are proportionately lower. A crisis has thus occurred in the industry, which has already lead to restriction of work and

unemployment. After a short discussion the committee adopted the following resolution: "The Government of the Reich is requested to consider whether, in view of the extended occupation of Germany and the consequent threatening of the supply of the German market, the import duty for cellulose, paper, and cardboard can not be temporarily reduced by one-half of the customs rates."

Favorable action by the Reich is expected to effect a reduction in prices, since wages, according to a representative of the cellulose industry, form only 6 per cent of sale prices.

Canada's Exports of Pulp and Paper in February.

Consul H. Merle Cochran, Montreal, March 26.

Canadian exports of paper, wood pulp, and pulp wood for February, 1923, were valued at $10,849,806—a decline of $644,323 from those for January, but an increase of $1,803,967 as compared with February of last year.

The exports of paper in February amounted to $7,030,137; wood pulp to $2,953,541; and pulp wood to $866,128. Of the total paper exported, newsprint alone was valued at $6,360,140, of which the United States took $5,914,252, Australia $234,437, and New Zealand $141,852. The bulk of the wood pulp also went to the United States, its share being $2,771,912, as compared with exports valued at $133,389 to Japan and $48,240 to the United Kingdom. All of the pulp wood, amounting to 99,830 cords, was shipped to the United States.

Australia and New Zealand were the largest purchasers of book paper and bond and writing papers, while the United Kingdom was the leading purchaser of kraft wrapping paper, and the United States of paper board.

Exports of newsprint during February reached 168,790 long tons, and wood pulp 100,929 tons, of which sulphate represented 19,049 tons, mechanical pulp 30,928 tons, and the remainder (50,952 tons) was fairly evenly divided between bleached and unbleached sulphite.

Side Runs of the Paper Trade.

Indian Imports of Paper from the United States Decline.

The Indian imports of paper products from the United States dropped last year to one-seventh of the previous year. A little American packing paper and writing paper still enters India, but this represents a very small proportion of the total importation. The finer grades of paper are mostly British, while the coarser grades are continental. American paper prices are at the present time too high for this market. (Canadian Commercial Intelligence Journal, April 7.)

Paper and Pulp Situation in Czechoslovakia.

Paper factories in western Bohemia have recently received some new business, but are still reported to be operating on a scale not exceeding 50 per cent. Prices of several qualities of paper are still reported above world's market prices, and operating costs are still not in line with the readjustment demanded by the high Czecho-Slovak exchange. In Slovakia most of the paper mills are reported closed, and the industry is virtually at a standstill. The cellulose producers are in a more favorable position and are operating on export orders sufficient to keep them busy for some weeks. (Trade Commissioner H. Lawrence Groves, Prague, March 9.)

Australian Paper Imports.

Imports of paper into Australia from the United States for the year ended June 30, 1921, were valued at $3,760,000. During the same year imports from England were valued at $8,672,000; from Sweden and Canada, approximately $5,400,000 each; and from Norway, $3,260,000. (Consul Romeyn Wormuth, Sydney, March 9.)

Polish Paper Industry.

Polish paper production in 1922 amounted to approximately 42,000 metric tons, or 70 per cent of prewar figures. However, this production was able to cover only 40 per cent of the demand of the country. Production, which before the war amounted to 62,000 metric tons, has progressively recovered to 15,000 metric tons in 1919, 20,000 metric tons in 1920, and 31,000 metric tons in 1921. (Leon J. Cochrane, clerk to trade commissioner, Warsaw, March 20.)

Little Gain in Paper Trade of Chosen During 1922.

Imports of paper into Chosen during 1922 were valued at $2,662,396—a slight increase over 1921, when they were valued at $2,514,704. Shipments of printing paper fell off somewhat—1922 imports amounting to only $1,205,715, as compared with $1,250,960 during the previous year. Exports of pulp were valued at $1,098,975 during 1922, which is a little better showing than in 1921, but still approximately $600,000 under exports for 1920. (Vice Consul Foster M. Beck, Seoul, January 15.)

Trade Lists Available.

The Commercial Intelligence Division has recently compiled the following trade lists of importers and dealers. Most of these lists indicate the relative size and importance of the firms listed, their character of business, nationality, as well as side lines handled. The suffixes "A" or "B" added to the file numbers indicate that the lists are revisions of former lists, the new compilations being more complete and reliable than the original. All of these lists have been mimeographed, and copies can now be obtained from the bureau or its district and cooperative offices by referring to the titles and file numbers:

Agricultural implements, importers and dealers, Bulgaria	NE-2009
Drugs and chemicals, importers and dealers, Syria	NE-9012

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

RICE TRADE OF NETHERLANDS.

Consul General George E. Anderson, Rotterdam.

The United States lost heavily in the rice trade of the Netherlands in 1922, when imports of rice from the United States totaled only 6,449 metric tons valued at $463,540, as compared with 29,117 metric tons valued at $2,315,181 in 1921. India gained most of the trade lost by the United States and greatly increased its exports of hulled rice, while an increased amount of broken rice came through Germany from the Hamburg market.

Rice Imports in 1921 and 1922.

Imports of the several varieties by countries of origin and also the total imports from each of the principal supplying countries for the past two years are shown in the following table.

Imports of rice into Netherlands.

Items and countries of origin.	1921		1922	
	Metric tons.	Value.	Metric tons.	Value.
Hulled rice:				
Belgium	6,450	$523,845	1,856	$134,520

Other countries	10,311	700,777	1,162	162,720
Grand total	86,096	6,167,393	72,708	4,521,620

Rising Costs Decrease Consumption.

There are several reasons for the decline in this trade, but the chief reason appears to be the high cost of handling, grading, polishing, and disposing of the product in Netherlands now as compared with pre-war standards. The consumption of rice in Netherlands has decreased greatly. Before the war imports ranged from 250,000 to 365,000 metric tons annually, of which approximately 80,000 metric tons were for domestic consumption. The remainder was for polishing and reexport. In 1921 it was thought that the Dutch mills would be able to regain some of their pre-war trade, and imports of rice increased materially as compared with those of 1920. During 1922, however, consumption of rice in Netherlands has fallen still lower, as appears from the fact that the net imports over exports were only 57,046 metric tons, as compared with 71,447 metric tons in 1921. While exports of prepared rice increased by approximately 1,000 metric tons, the increase was too small to be of any significance in the trade.

Imports from United States Irregular.

The importation of American rice has always been more or less spasmodic, and usually occurred when the crop in India and Siam was small or when prices in the United States were exceptionally low. The business since the war has been more or less demoralized as a result of general business conditions, reduced consumption in Netherlands, unfavorable finances, and other unfavorable conditions in consuming countries. The trade in Netherlands has again come into the control of the old established and responsible firms, but the change has been accomplished at an unfavorable time, and it is not likely that any immediate improvement in business can be reasonably expected.

Exports Show Small Increase.

As has been indicated, there was an increase of almost exactly 1,000 metric tons in the exports of rice of all kinds, the chief increase being noted in miscellaneous rice. Exports for the past two years are shown in the following table:

Exports of rice from Netherlands.

Items and country of designation.	1921		1922	
	Metric tons.	Value.	Metric tons.	Value.
Hulled rice:				
Germany	4,417	$329,029	1,078	$79,420
Belgium	527	45,535	1,213	102,220
Great Britain	1,307	112,452	1,298	114,760
France	428	46,262	1,012	97,280
United States	313	25,711	.....	.....
Austria	682	50,397	216	16,720
Switzerland	546	59,058	240	25,080
Dutch Guiana	953	71,776	.....	.....
Other countries	2,147	196,579	5,955	539,220
Total	11,320	936,799	11,012	974,700
Broken rice: All countries	188	12,807	143	8,740
Other rice:				
Belgium	275	24,493	327	25,080
Great Britain	1,204	114,015	1,951	152,380
United States	423	51,272	310	34,580
Italy	437	38,565	519	38,000
Other countries	802	88,737	1,400	130,720
Total	3,141	317,082	4,507	380,760
Grand total	14,649	1,266,688	15,662	1,364,200

Changes in the Export Market.

While there was not much decrease in the exports of hulled rice, the trade was notable for the great change in the countries which purchased the exports. In 1922, as had been the case for many years, Germany was the

best customer, taking almost 40 per cent of the total exports. Great Britain also was a good customer, and Austria, Switzerland, and other central European countries took most of the remainder. In 1922 Germany took less than 10 per cent, the rest of central Europe fell off in even greater proportion, and the trade was compelled to seek new markets. These were secured partly in France and Belgium, but mostly in the Mediterranean countries, Argentina, Venezuela, South Africa, and the Baltic States. There was a similar change in the exports of miscellaneous rice. Great Britain, Belgium, and Italy were the best customers in 1922, but nearly a third of the total exports went to other countries whose imports the previous year were too small to be separately enumerated. The Baltic States and South Africa were the principal new markets developed during the year.

Notes on Food Products.

Live Stock in North Manchuria.

There were in North Manchuria in 1922 approximately 11,000,000 sheep, 5,000,000 cattle, 3,500,000 horses, and 3,000,000 hogs, according to official Chinese information. Approximately 65,000 head of sheep were exported to Soviet Russia during 1922. (Consul G. C. Hanson, Harbin, China.)

Business Slow at Norwegian Fish Canneries.

Sardine factories and fish canneries in Bergen are operating with minimum forces, packing being confined almost entirely to fish balls and cod roe. In Haugesund and Stavanger some kippers are being packed, but only to fill orders already received. In the Kvinnherred district practically all the canneries have closed down. (Consul George N. Ifft, Bergen, Norway.)

Proposed New Grain Marketing Plan for Canada.

An organization was formed at Fort William last September for the purposes of promoting a grain sample market, making new grain marketing plans, and furthering the interests of the grain trade in general. This organization is now endeavoring to bring the grain market from Winnipeg to Fort William, which they consider the logical place for it. The organization has devised a new marketing plan which has been approved by the Fort William Board of Trade and the city council. (Consul Dudley G. Dwyre, Fort William and Port Arthur, Ontario.)

The Vanilla Crop in Guadeloupe.

The season for vanilla is now closing and the harvest is much less than was indicated by earlier estimates. As some 15,000 pounds have already been shipped and apparently little remains, it seems probable that the harvest will not exceed 20,000 pounds. The flowering for the 1923–24 crop has commenced, and to date is very satisfactory. All the vanilla will probably go to the United States, with the possible exception of a small shipment to France. (Vice Consul E. St. George Lough, Basse Terre, March 13.)

Mutton and Lamb in New Zealand.

There were 3,790,000 sheep and 5,150,000 lambs slaughtered in New Zealand during the calendar year 1922. The 1923 outlook for sheep is about 30 per cent less than the 1922 figures. The number and quality of lambs has been reduced by adverse weather conditions. Because of this, and the fact that farmers are keeping their sheep on account of the high price of wool, the 1923 estimates of killings are considerably below those of last year. (Consul Karl de G. Macvitty, Auckland.)

Greek Government Annuls Provisional Contract.

The provisional contract between the Greek Government and the Franco-Argentine Bank, Portales & Co., for the supply to Greece under certain stipulated credit conditions of a quantity of wheat, together with 10,000 head of cattle, is considered as annulled (according to Nea Emera of March 20, 1923) in view of the fact that the Argentine Congress failed to ratify it. The additional statement is made that Argentine representatives who are at present in Greece have lost no time in submitting further proposals to the Greek Government for the fulfilling of a similar contract, but that the Minister of Ravitaillement is of the opinion that such a contract would not be advantageous to Greece and will not be concluded. (Clerk to Trade Commissioner C. E. Dickerson, jr., Athens, March 22.)

North Russia Exporting Meat and Game.

A newspaper dispatch from Vardo in northern Norway indicates that the food shortage in northern Russia is no longer serious. The Soviet cutter *Komiteren* arrived at Vardo recently with 5,000 kilos of frozen reindeer meat, 17,000 partridges, and 2,000 ptarmigans, which were offered for sale. Several Norwegian cutters loaded with fish and other foodstuffs, which recently went to Murmansk, have returned to Vardo with their cargoes unsold. They report very little business of any kind in the northern Russian ports. The export of meat and game from these ports, considered in connection with recent exports of grain from Petrograd to Sweden and large offers of rye to Norway, indicates that the food shortage in this part of Russia is much less severe than generally reported. (Consul George N. Ifft, Bergen, Norway.)

Dried Codfish for Portuguese East Africa.

Dried codfish is a staple article of diet in Portuguese East Africa and is carried in stock by practically all traders. A good market for American dried codfish might be developed if American exporters can quote satisfactory prices and pack their fish in such a way as to resist the tropical climate. In 1920, the latest year for which statistics are available, 116,000 kilos of dried codfish were imported, 105,000 kilos of which came from Scotland. Later statistics are expected to indicate an increase in the quantity.

The inauguration of a direct monthly steamer service between the United States and Portuguese East Africa has forced freight rates down materially, and has correspondingly reduced the freight differential against American goods in this market. (Consul Cecil M. P. Cross, Lourenco Marques.)

Additional information regarding foodstuffs appears in this issue under the following sections:

Eastern Europe and Levant: Latvian land distribution.
Latin America: Mexican crops.
Tariffs and trade regulations:
Reduction of export duty on rice in French Indo-China.
Regulations for Greek imports of molasses.
Certain Greek exports exempt from payment of Government portion of foreign exchange.
Permission for limited importation of wheat into Portugal.
Foreign trade opportunities Nos. 6183, 6184, 6185, 6186, 6187, 6188, 6190, 6191, 6200, 6212, 6218, 6225.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF.

Latvian Textile Industries on Full Time.

The Latvian textile industries are operating on full time. Mill owners have stated that production is not entirely for Russian account. (Minister F. W. B. Coleman, Riga, March 2.)

Mexican Ixtle Exports on the Increase.

Ixtle fiber exports from Mexico to the United States covered by invoices certified at the American consulate in Mazatlan amounted to 524,672 pounds in 1921 and 704,760 pounds in 1922. (Consul W. E. Chapman, Mazatlan, Sinaloa, Mexico, April 6.)

Belgium Receiving Russian Flax.

A shipment of 750 tons of Russian flax was received in Ghent on March 17 by direct route from Petrograd. This is probably the first of several direct all-water shipments of Russian flax to Belgium. (Consul C. R. Nasmith, Ghent, Belgium, March 17.)

Tunisian Imports of Textiles Smaller.

Through the rise in raw-cotton prices and the improvement in exchange rates Tunisian textile imports have been very small since the new year. Stocks on hand are apparently sufficient to meet the present local demand. (Consul Harris N. Cookingham, Tunis, February 24.)

Japanese Wool Imports Advance.

According to the Japan Wool Manufacturers' Association January imports of wool and wool manufactures were as follows: Raw wool, 6,414,100 pounds; tops, 689,800 pounds; wool yarn, 1,180,700 pounds. The value of these goods was slightly greater than the value for January, 1922. (Commercial Attaché James F. Abbott, Tokyo, March 14.)

East African Sisal Growers Optimistic.

Although East African sisal has been and is still selling at a comparatively low price, planters are optimistic in regard to future market conditions and consequently are increasing their acreages. New buyers of sisal are arriving in East Africa and new decorticating plants are being built. (Vice Consul Oscar Thomason, Nairobi, Kenya, March 1.)

Higher Prices for Chilean Wools.

At the close of the shearing season at the far south of Chile (Magallanes Territory), numerous American as well as British buyers were present and showed considerable interest in the finer grades of merinos. The great bulk of the clip was promptly disposed of and prices realized were considerably higher than those prevailing a year ago. (Consul George A. Makinson, Valparaiso, January 5.)

Venezuela a Possible Jute-Fabric Market.

A possibility of building up a good business in burlap and jute cloth for bags, also in new and used bags for the exportation of coffee and cacao, exists in Venezuela. At present British control the business on account of lower prices. With efficient representatives on the ground, American firms could secure some of this business, provided they are in position to meet price competition. (Consul William P. Garrety, Puerto Cabello, March 7.)

Peruvian Wool Trade Fluctuating.

Average exports of wool from Peru in years when the price is good are about 6,500 metric tons per annum. When the price is low, the Indians consume more wool in their own garments. Production varies but little, however, from year to year. The woolen factories consume 700 or 800 metric tons annually, and the Indians probably use about as much for their own needs. (Acting Commercial Attaché W. E. Dunn, Lima, February 23.)

Chinese Feather Crop Below Normal.

Estimates of careful observers at Yangtsze River ports place the duck and goose feather crop at 60 per cent of normal. China usually exports about 4,500 short tons, or approximately 20,000 bales, per year. However, in 1922 only 2,000 tons were shipped from Shanghai, which is the center of the trade. Considerable business is also transacted at Nanking. Present prices are ruling very high. (Trade Commissioner Lansing W. Hoyt, Shanghai, March 9.)

Mexican Henequen Production Declining.

Official reports from the State of Yucatan place the henequen production at 936,136 bales for 1920, 565,424 bales for 1921, and 461,515 bales for 1922. The Mexican Government experiment laboratory has recently given attention to a new biological process for extracting sisal and other fibers which, according to unofficial reports, has proven more successful and economical than present processes. (Consul General Claude I. Dawson, Mexico City, March 19.)

New Zealand Slaughtering More Sheep.

The 1923 outlook for sheep in New Zealand is about 30 per cent below 1922, since 3,790,000 sheep and 5,150,000 lambs were killed during the calendar year 1922. Moreover, the number and quality of lambs have been affected by adverse weather conditions. However, the high price of wool is causing farmers to keep their sheep now, and the 1923 estimates of killings are considerably below last year. (Cable from Consul Karl deG. MacVitty, Auckland, April 6.)

Demand for Waste Materials Active at Marseille.

Waste materials, such as rags, packing, and bristles, have been in great demand during the last month in the Marseille market. Cash payments are made. Old rags, bags, and bagging of every kind, but particularly flour sacks, meet a ready sale. Old woolens are not to be found. American orders for rabbit skins are keeping prices up; the old high level of 20 francs per kilo for the best grades has been reached. Goat and calf hair is much sought by mattress makers. Hog bristles are selling at 22 francs per kilo, coarse cattle hair for 300–400 francs per 100 kilos, and horsehair at 500–600 francs per 100 kilos. Old feathers are in demand at 1.40 francs per kilo. (Vice Consul Alexander P. Cruger, Marseille, France, March 26.)

GRAY GOODS IN PORTUGUESE EAST AFRICA.

Consul Cecil M. P. Cross, Lourenco Marques, January 22.

[The market for gray goods in Portuguese East Africa falls into two geographical divisions. The first of these comprises the part of the Province north of 21° of latitude, and the second the territory south of that line.]

Sheeting and drill are the two forms of gray goods on the market in Portuguese East Africa. The largest demand for gray sheeting comes from the northern division, where the climate is warmer and where the low rate of wages compels many of the natives to purchase unbleached cloth for garments instead of the preferred colored goods. American, Japanese, and Indian manufacturers supply the market. In quality the American goods are usually conceded to be the superior, but their higher price enables the somewhat inferior Japanese and the much inferior Indian cloth to maintain a hold on the market.

The only available figures for the years 1919–1921 are the following (kilo=2.2046 pounds):

Imports of unprinted cotton goods, 1919–1921.

Imported from—	1919	1920	1921
	Kilos.	*Kilos.*	*Kilos.*
United States	2	118	632
Japan	4,667	2,836	1,978
India	23,850	29,283	52,662
England	9,994	27,631	19,378
British East Africa	4,732	3,228	4,483
Portugal	33,216	24,754	37,532
Belgium	.....	411	819
Holland	3	661	875
Rhodesia	4,275	6,744	4,764
Other countries	203	3,332	1,916
Total unprinted goods	80,942	98,996	125,039

These figures are somewhat difficult of interpretation, inasmuch as they include bleached goods as well as grays. They serve to indicate, however, that Japan is failing to maintain the position won during the war. The figures for India bulk large because they include bleached goods, and because they also represent considerable quantities of both American and Japanese fabrics shipped via Bombay. The same is true of British East Africa.

Selling Methods for Sheetings.

This routing of goods through Bombay is due to a variety of causes. Chief among them is the fact that the greater part of the native trade is in the hands of Indian traders and merchants whose connections are in Bombay. The Bombay firms are large enough to import in quantity and are thus able to quote to dealers in East Africa lower prices than can be obtained for small lots in either the United States or Japan when bought through the medium of one or two brokers in England and Europe.

Some European firms maintain branches or agents in Portuguese East Africa for the sale of colored goods and blankets, but no American house has found it worth while as yet to come south of Zanzibar. The European branches and agencies occasionally handle the American cloth, but as a rule only through middlemen in England or Europe whose commissions prevent serious competition with Indian firms in Bombay. Some of the local Indian and other firms are large enough to handle moderate-sized shipments, but the great importance of the marks on the goods has so far as a rule compelled them to deal through the Bombay or European middlemen instead of approaching the American manufacturer direct. This handicap is equally great for the Japanese, but if American merchants were to establish direct connections the saving in commissions would enable them to meet the Japanese prices.

Direct Trade Connections.

The local trade would probably not warrant the establishment of a branch, and agencies might in many cases not be desirable; but much could be done by direct selling connections, particularly now that there is direct regular monthly steamer service with the United States.

In the north there is a complicating factor in the large estates operated by different companies, which maintain their own stores for supplying the thousands of natives who work their plantations. It is through these companies, which usually buy through their European offices, that American exporters have been able most successfully to press their goods on the East African market. Efforts at direct selling by firms controlling established brands should produce equally satisfactory results.

Drill Trade of the Northern Division.

The second staple gray cloth of American origin is a drill 29 inches wide and weighing 0.375 pound to the yard. The pieces are 40 yards long. This cloth is used principally for sails on the small native craft but is coming into increasing use in the manufacture of garments fashioned after European models, which are growing in popularity among native men.

These drills reach this market through practically the same channels as the sheetings and are encountering the same competition from the Japanese. One Japanese brand which appeared on the market during the war is patterned closely after the American drill but is inferior in texture. It comes in pieces 40 yards long, is 28 inches wide, and weighs 0.308 pound to the yard. The failure of some shipments to come up to sample, coupled with the inferiority in quality, which the slight difference in price (approximately 5 shillings per piece) is not sufficient to overcome, is gradually restoring the American drill to its former position.

This process could be materially accelerated by a little selling effort on the part of those controlling brands already known on the market. The introduction of a new brand is not believed to be advisable because of the rather limited extent of the demand; moreover, it would be found very difficult without severe price cutting over a period of a year or more. However, direct selling might permit this to be done, although the prejudices of the local market are firmly fixed, and it was only the abnormal situation existing during the war that permitted the Japanese to secure a foothold.

Imports of Drills and Other Sailcloth Materials.

The following import figures include also other varieties of sailcloths, which accounts for the appearance of England, Rhodesia, and Portugal among the supplying countries. Japanese drills are included with the Indian, since they are received from Bombay.

Imports of drills and other sailcloth materials, 1919–1921.

Imported from—	1919	1920	1921
	Kilos.	*Kilos.*	*Kilos.*

Drills the Only American Gray Cloth in the South.

In the southern division drills are the only American gray goods on the market. Probably because of the numbers of natives going from this region to work in the Transvaal mines, where they receive much better wages than at home, the purchasing power of the natives is on the whole notably higher, and they purchase higher grades of cloth than the unbleached sheeting as garments. The climate is also much cooler, which is an added incentive to purchase the heavier colored goods.

There is, however, a very low-grade gray sheeting on the market; this is of Indian manufacture, and is used almost exclusively for the wrapping of the dead for burial, but is going out of favor even for that. It is 24 inches wide and comes in pieces 22 yards long, done up in 24 folds. The demand is very small, annual importation not exceeding 500 pieces. In this article quality is of small consideration, and the price of the Indian cloth is such that competition is hardly worth while. If, as now seems possible, the local natives should be debarred from the Transvaal mines in the future, they might be obliged to resort to gray sheetings, in which case there will be an excellent opening for new brands.

Demand for Drills Larger than in the North.

The demand for drills in the southern division is somewhat larger than in the north, however, for the wearing of clothes of European cut is much more general. The principal competitor of the American drill, as in the north, is the Japanese. Efforts at direct selling by the owners of popular brands should be even more effective here than in the north, because the number of large independent firms is relatively greater.

Imports of cotton drills (including all sailcloth materials) for the year 1920 (the latest figures available) were credited to the following countries: United States, 1,078 kilos; Japan, 215 kilos; India (including Japanese goods shipped via Bombay), 657 kilos; United Kingdom, 5,701 kilos; Portugal, 4,049 kilos; Transvaal, 636 kilos; total, 12,336 kilos.

BELGIAN TEXTILE SITUATION UNCERTAIN.

Cable from Acting Commercial Attaché Samuel H. Cross, Brussels, with cooperation of Consuls Nasmith (Ghent) and Messersmith (Antwerp), April 20.

Belgian cotton spinners are hampered by the complete disappearance of German demand, while the high price of fabrics is diminishing the volume of new business received by weavers. New orders for cotton-spinning mills are not as large as current shipments, hence some limitation of production is likely unless purchases by German weavers are eventually resumed. Yarn prices are slightly weaker, 18s single being quoted at 16.75–17.25 francs. The home demand for cotton cloths is negligible, and, although large export orders are coming in, weavers are generally afraid to accept much new business because of uncertain production costs.

The volume of raw-flax sales has been seriously reduced, but prices are generally unchanged. Purchases of Baltic staple were large. Flax spinners now have forward orders covering four to six months, but cancellation is feared if sterling falls. The position of Flemish linen mills is generally favorable, weavers being well supplied with American orders, the American demand for dress and handkerchief linens being large.

The lockout in the Verviers woolen industry continues, limiting raw wool sales in Antwerp.

Dyers and finishers have increased their charges 15 per cent on account of the high cost of British fuel.

Conditions at Ghent.

Cotton spinners in Ghent are making serious efforts to avoid accumulation of stocks on account of apprehension that the lack of demand may lower prices. The extensive use of Brazilian, African, and Peruvian cotton continues. Belgian weavers are buying very little yarn, but a good British business is reported, while shipments to Rumania continue under the old export guaranty.

Flax-yarn sales were greatly diminished during the last fortnight owing to some expectation of lower flax prices although sales of flax yarn products increased notably during March. The exportation of linen goods to the United States from the Ghent district for the first quarter of the current year was 2,500,000 square yards valued at 9,500,000 francs, compared with 1,900,000 square yards valued at 7,500,000 francs for the first quarter of 1922.

Exports of rabbit skins to America during this quarter were two and one-half times as large as during the corresponding period last year.

JAPANESE SILK EXPORT TRADE.

Trade Commissioner Halleck A. Butts, Tokyo, February 14.

Japanese raw-silk exports in 1922 showed an increase of 82,164 piculs (Japanese picul=132.27 pounds) over 1921. It was but natural, therefore, that the trade became optimistic over the possibilities of 1923. Final purchases of 230,000 kin (kin=1.3227 pounds) made on a rising market on December 29, when prices advanced from 10 yen to 20 yen over the previous day, tended to strengthen this view. Local reelers and exporters, therefore, determined to remain firm in their decision not to accept the low offers made by export buyers, assuming that this could not be construed as a maintenance of price by manipulation but a result of a real shortage.

Although trade in silk piece goods shows gains, these figures do not reflect a prosperous year. It is only because stocks were carried over from the previous year and the fact that the 1921 trade had been extremely discouraging that the shipments in 1922 appear favorable. Japan's exports of silk and silk goods are given in the following table:

Japan's exports of silk and silk goods, 1921 and 1922.

Commodity.	1921		1922	
	Quantity.	Value.	Quantity.	Value.
		Yen.		*Yen.*

All other....do....	....	4,729,472	....	2,859,137

Production of Silk Fabrics Much Reduced.

Production of silk fabrics for export during 1922 was seriously reduced, according to a report of the prefec-

tural conditioning houses. This was due, perhaps, quite as much to the condition of the home market for raw materials as to lack of foreign demand. The high price for domestic raw silk made it difficult to compete in other markets, and makers turned their attention to the domestic piece-goods market, which assured a fair remuneration. Fukui and Ishikawa, two leading silk-goods export manufacturing centers, produced, respectively, only 970,661 pieces and 674,793 pieces, showing decreases of 302,552 and 11,382 pieces when compared with 1921.

The total production in December, 169,971 pieces, was the low of the year and a decrease of 99,003 pieces from December, 1921, figures. The year's total of 2,247,169 pieces represents a decline of 426,728 pieces compared with 1921.

This reduction in output has enabled the trade to maintain prices in nearly all weights of plain habutai. Although these goods are not in demand, stocks are light and brokers need not sacrifice to meet offers. Pongee, however, is a menace to the market. American purchases are scattered, and since producers are anxious to market their holdings the export market has a rather heavy floating stock. This condition was aggravated during January by continued production, the output of silk textiles in Fukui being 76,954 pieces, or 7,454 more than in December. Although this included habutai, crêpe, pongee, etc., the increase was chiefly in pongee.

Rising Cloth Prices Affect Philippine Demand.

Cable from Trade Commissioner John A. Fowler, Manila, April 13.

Due to the rise in American cotton-cloth prices, Chinese dealers in the Philippines are reluctant to indent on practically all regular lines and are buying for immediate needs only. Retail prices are not following the American market, a majority of the textile lines selling below replacement. Stocks of warp sateens and of American and Chinese ginghams are insufficient; of gray and bleached goods and American khaki, small; of shirtings, chambrays, prints, gray, and bleached drills, moderate. There is an oversupply of organdies, chiefly Swiss, while stocks of English ginghams and colored drills are depleted.

Additional information regarding textiles appears in this issue under the following sections:

Survey of current business: United States wool consumption.
Cable review, western Europe: Future of Belgian textile industries uncertain.
Tariffs and trade regulations: Removal of Rumanian export prohibition on rabbit skins.
Foreign trade opportunities Nos. 6192, 6193, 6194, 6195, 6196, 6199, 6200, 6201, 6202, 6203, 6204, 6217, 6219, 6224, 6225, 6226.

AUTOMOTIVE PRODUCTS

M. H. Hoepli, Acting Chief, Automotive Division

PROMISING FOREIGN MARKETS FOR SERVICE STATION EQUIPMENT.

Even more promising markets for mechanical tire inflation equipment than those described in COMMERCE REPORTS of April 2 (p. 22) are indicated by the additional reports received by the Automotive Division in reply to its questionnaire sent out some months ago. The increased use of motor busses in nearly every country of the world, equipped with large-sized tires which are practically impossible to inflate by hand pumps, makes the use of mechanical equipment almost necessary. For this reason air compressors have been installed in many countries during the last few years, and their use naturally will be extended to passenger cars.

Air Compressors Serve Many Purposes in Service Stations.

The multifold uses to which compressed air can be put in addition to the inflating of tires is being more widely recognized in many countries. As the use of compressed air is extended for pneumatic valve grinders, drills, riveting hammers, valve spring compressors, grease and oil guns, gas and oil dispensing stations, hoists and jacks, as well as for washing, spray painting and varnishing of cars, testing radiators for leaks, and cleaning dirt from engines and equipment, motor-vehicle dealers and service station and garage owners will find it possible to install air compressors with greater economy.

Oil Stations Afford Potential Market.

Reports indicate that a fertile market exists in Denmark, where out of the 400 fuel stations established by one American oil company only 50 have air equipment. A British company in the same territory, operating 200 fuel stations, has comparatively few stations furnishing air for tire inflation. Moderate-priced equipment is needed in Norway. Several different makes are already being used there successfully, but their increased sale is limited by their high price range. Very few motor-vehicle dealers in Spain offer tire inflation service at the present time, but it is believed that energetic salesmen and moderate prices will open up a remunerative market.

Several local makes of mechanical tire-inflation equipment are now being used in France. One of these air compressors sells for approximately $66, at present exchange rate; it will undoubtedly offer real competition to American makes, although it is reported to be bulky and hard to operate. American manufacturers will have an opportunity to show their lines at the annual Salon d'Automobiles at Paris in October, 1923. Such action should stimulate sales not only in France but in the neighboring countries. This applies especially to Belgium, where a tendency for the adoption of mechanical equipment is noted; but prospective purchasers desire first to see such equipment in actual operation.

Even in central European countries, where import restrictions are in effect, our foreign representatives report that local firms are interested in importing me-

chanical equipment that sells at a moderate price. Particular interest is manifested in Germany and Austria in mechanical tire pumps to be attached to a car. Equipment of this type has been used in Austria in the past but has not proved successful. A demand for garage tire-inflation equipment exists in Austria, and American manufacturers will find a large number of immediate prospects among the taxicab companies and motor-vehicle and tire manufacturers and their agents. Austrian importers and commission merchants also sell in the Balkan States; under suitable conditions, representation could be granted to one reliable firm for all of this territory, where interest has been shown in American compressors. Commerce Department representatives in Italy report that approximately 80 per cent of garages in that country will undoubtedly purchase moderate-priced equipment, as the German makes selling for about $95 at present rate of exchange are reported to be unsatisfactory.

Automotive progress in the Near East is illustrated in the reports which state that a market can be developed for modern service-station equipment in Palestine; the recent installation of 29 curb gasoline pumps in one city in Egypt demonstrates the possibilities in that country.

The few abstracts above have been made from a large number of reports received in this division, which are being brought to the attention of interested manufacturers listed on the Exporters' Index. These reports describe conditions in various parts of each foreign country and are accompanied by lists of dealers and jobbers in service-station equipment. Any manufacturer of such equipment who is interested in extending his foreign business may receive full details upon application to the Automotive Division.

INCREASED AUTOMOTIVE EXPORTS CONTINUED IN FEBRUARY.

February exports of automotive products, according to the new classification which went to effect on January 1, showed a large increase as compared with the previous month, the total value being $13,007,011 and the increase 20 per cent.

Passenger cars and trucks accounted for the major part of this gain, exports of cars having advanced 46 per cent in number and 37 per cent in value, and of trucks, 25 per cent in number and 47 per cent in value. The substantial improvement in foreign automotive markets since a year ago is demonstrated by the fact that exports of passenger cars during February, 1923, registered an increase of 185 per cent in number and 145 per cent in value over the shipments in February, 1922, while truck exports showed an increase of 274 per cent in number and 178 per cent in value.

Unit values of passenger cars exported in February decreased $32 from the January unit values; the unit value of trucks increased $96. Exports of parts and accessories increased 94 per cent in quantity, but only 3 per cent in value. A similar but not so marked divergence between quantity and value of parts and accessories was shown in January exports as compared with December; it is therefore evident that the relationship between value and quantity is not sufficiently stable to allow of unit calculations regarding the price levels of parts and accessories. This is undoubtedly due to the wide variety of products which enter under this classification.

Exports of passenger cars, motor trucks, and busses from the United States during February, 1923.

Classification.	February, 1922.		January, 1923.		February, 1923.		Unit value.

Leading Markets Take Increased Shipments.

With the exception of Cuba, which dropped from third to ninth place, the leading markets took increased shipments during February as against January. Australia continued in the lead, followed by Canada and the United Kingdom; the latter country took 559 cars more in February than in January, when a substantial increase was shown as compared with December. Belgium continued to hold the leading place as truck market during the month, although shipments to that country decreased. Exports to other markets, however, showed increases; the largest gain was made by Japan, which took 103 trucks as compared with 10 in the previous month. Cuba, one of the leading markets in January, took only 15 trucks in February.

Exports of Other Automotive Products.

Motor-cycle exports during February increased 14 per cent in number and 13 per cent in value, reaching a volume greater than in any month since 1920. Automobile engine exports also showed a substantial increase of 68 per cent in number and 72 per cent in value. Unit values of engines for passenger cars increased slightly from the average of $142 in January, while those for trucks decreased considerably from the average of $453. Exports of detachable marine engines showed a large decrease in number and unit value. One aircraft engine valued at $12,000 and two small airplanes were exported during the month.

Other automotive exports from the United States during February, 1923.

Ratio of Exports to Production.

Production during February totaled 254,415 passenger cars and 21,354 trucks. About 3.4 per cent of the passenger-car production was exported, as against 2.7 per cent in January; 7.9 per cent of the trucks produced were shipped abroad, as against 7.1 during January.

Argentine Market for Motor Vehicles.

Trade Information Bulletin No. 84 on the Argentine market for motor vehicles, by Trade Commissioner George S. Brady, has just been released by the Superintendent of Documents. This monograph covers in full the extent and character of the country, its social organization, city life, and rural conditions; the motor car in Argentina, sale of passenger cars, trucks, and motor cycles, imports during preceding years and future possibilities, the market for parts and equipments, and the market for tires; description of the roads, fuel supplies, distribution practices, show rooms and advertising, tariffs, and prices. The bulletin also contains a full-page map showing distribution and dealer centers. Manufacturers interested in the Argentine market or wishing to extend their sales there will find the bulletin well worth their study. The Automotive Division or the district and cooperative offices of the Bureau of Foreign and Domestic Commerce will be glad to furnish copies to all interested parties on request.

AUTOMOTIVE DIGEST.

Argentina—Motor Vehicle Sales Active.

Medium and low-priced passenger cars are finding a good market in Argentina at the present time, although the summer season is now closed. The market for trucks is also good, with keen price competition. Imports during the first quarter totaled 1,095 passenger cars, of which 1,006 came from the United States. Fiat and Renault predominated among the 89 European cars imported. One half of the 34 trucks brought in were of American make. The assembly output of out low-priced American make during the quarter totaled 5,000 passenger cars and 710 trucks. (Cable from Trade Commissioner George S. Brady, Buenos Aires, April 3.)

Australia—Sydney and Melbourne Chief Distributing Centers.

The market in the Commonwealth of Australia is never assigned to one distributor, but is divided among the States. The principal market is in New South Wales, with Sydney as port of entry and principal consuming and distributing center. The State of Victoria is a close second, with Melbourne as headquarters. These two centers absorb approximately 80 per cent of all the motor vehicles imported into Australia. Exclusive agencies are granted for each of the less populous States—South Australia, West Australia, Queensland, and Tasmania—in the case of popular cars; but on a new and comparatively unknown product, it is not uncommon for the Sydney or Melbourne distributor to have the privilege of appointing subagents for these States until such time as the volume of business warrants rearrangements. Whenever possible, a factory representative should appoint distributors throughout the Commonwealth. (Trade Commissioner J. W. Sanger, Melbourne, February 27.)

United Kingdom—Automotive Production Still Increases.

Makers of light cars and light motor cycles continue to produce at high pressure; several large manufacturers of motor-vehicle engines, particularly motor-cycle engines, are reported to have made more sales in the current year than during the whole of 1922. Orders for heavier passenger cars and motor cycles have fallen off slightly, owing to inclement weather. A large number of manufacturers are experimenting with front-wheel brakes, and next year's show is expected to exhibit a number of high-grade British touring cars equipped with them. At the present time the Sunbeam, Aston-Martin, and Austin are the only cars using brakes on all four wheels. Wolseley Motors (Ltd.), of Birmingham, recently advertised that their works represent a capital outlay of £3,500,000, and that to maintain an output of 150 cars per week 8,000 operatives are being employed. (Assistant Trade Commissioner William M. Park, London, March 17.)

Great Britain—Higher Car Prices Under Discussion.

With the general advance in prices, particularly in the steel market, the question as to whether motor-vehicle prices will have to be raised in the near future is occupying the attention of the British automotive industry. The consensus of opinion is that, while no general advance is probable or desirable, it is certain that prices are now at rock bottom. Improvement in the industry continues, and Coventry firms took on 150 more workers during the past week. It is learned from an authentic source that the Morris Motors turned out 385 Morris-Cowley cars of the 11.9-horsepower model in one week. This is an exceedingly large output for any British company and illustrates the trend in the market in its preference for a light car. Pressure continues to be brought to bear on the government to change the present basis of taxing motor cars. (Assistant Trade Commissioner William M. Park, London, March 13.)

France—Producer-Gas Competition for Motor Trucks.

An international competition for motor trucks operated by producer gas generated in gas producers installed on the trucks will be held, starting October 1, 1923. This competition is being organized by the French National Bureau of Inventions and Researches in cooperation with the technical departments of the Ministry of War. The competition will include shop, road, and endurance tests, and will be open only to trucks carrying a load of 3,500 to 5,000 kilos. They must be built specially for the use of lean gas, either with special motors or ordinary motors suitably transformed, and must be built to utilize gasoline as an emergency fuel. Charcoal and wood are specified as the only combustibles for these tests. Entries will be received until July 1, 1923, at the Commission Technique of the Automobile Club de France, Paris, where detailed programs and schedules may be secured. (Consul Ernest L. Ives, Paris, March 16.)

Spain—Citroen Cars Being Used as Taxicabs.

Representatives of the French Citroen car have established a taxicab service of 15 cars in Madrid, 10 more to be added in the near future, with the expectation that the number will be increased to 250 is possible. These cabs are very attractive closed coaches, seating four passengers. The coaches are selling for 13,000 pesetas in Madrid. Motors are 10 horsepower and said to consume 7½ liters of gasoline per 100 kilometers. Charges will be 80 centimos per kilometer and 3 pesetas per hour when standing. It is expected that the representatives of one low-priced American car will establish similar services, and a well-known American cab company is also investigating the possibilities of establishing a service. The Madrid Municipal Council has been approached with a petition for the establishment of a new class of taxicabs that will charge 80 centimos per kilometer; this is accompanied by a request that cabs charging 1.25 pesetas and 1 peseta be limited to 250 and that no limit be placed on the number charging 80 centimos. [A complete schedule of all taxicab charges now in effect is contained in Exhibit No. 7614, which was published in COMMERCE REPORTS April 2.] (Commercial Attaché Chas. H. Cunningham, Madrid, March 5.)

Foreign trade opportunity No. 6216.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

BRITISH COLUMBIA PINE vs. OREGON PINE.

A great deal of confusion exists in foreign markets in regard to Douglas fir. In some countries it is called Oregon pine, in other countries Douglas spruce, while it is also known by many other names. The fact remains, however, that for practical purposes there is only one kind of Douglas fir, whether it grows in British Columbia, Canada, or in the States of Washington or Oregon. Whether Douglas fir grows north or south of the international boundary line should not affect its name. Rather persistent efforts on the part of our colleagues in British Columbia have been made lately, particularly in the United Kingdom, to have British importers specify British Columbian pine, and some enterprising salesmen, acting on behalf of their British Columbian principals, have endeavored to impress upon the minds of their British customers that British Columbian pine and Oregon pine are not the same species, the former being of superior quality. This effort to discredit Douglas fir grown in the United States has, however, not been successful, because a great many foreign importers have a first-hand knowledge of Pacific coast conditions. In fact, if an order has been placed with a San Francisco exporter of Douglas fir, the shipment may in many cases be made from British Columbia and vice versa, and as long as the exporter has complied with the grading rules governing Douglas fir no objections can be raised. Furthermore, the grading rules for Douglas fir are the same in British Columbia and in the United States Pacific Coast States.

A recent article in a Canadian lumber paper gives a different point of view in regard to this question of nomenclature. In discussing the market for Douglas fir in Chile the writer states that the American exporters have for years had a strong hold on that market. The article says:

> There is no reason for the British Columbian exporter to stand aside for the benefit of his California competitor. I must, however, draw attention to the advisability of offering Douglas fir as "Oregon pine." The South Pacific coaster respects the latter as an old and trusty friend, but the former name is unknown, and it is difficult to convince him that the woods are the same.

Every Canadian or American exporter, knowing conditions on the Pacific coast, fully agrees with the writer of the above article that British Columbian pine and Oregon pine are identically the same, and it is difficult to see why, this being so in Chile, the same conditions should not also apply to the Douglas fir trade in the United Kingdom.

LUMBER MARKET IN SOUTH AFRICA.

Consul Charles J. Pisar, Cape Town, March 6.

There is a fairly important market for southern yellow pine in the Union of South Africa, but it is generally believed that with better shipping facilities and more favorable prices a greater demand for this kind of lumber could be developed. It is impossible to give figures showing the proportions of yellow and other pine lumber imported, but it is estimated that fully 90 per cent of the pine sold here comes from the United States, being shipped from the Gulf ports. This lumber is used extensively for rough work, heavy structural work, and by the railways and public works departments of the Union Government. In the furniture industry it is used to a large extent for the backs of wardrobes, drawers, etc. Pine and other kinds of lumber used for floorings, ceilings, etc., come principally from the Scandinavian countries.

More yellow pine can be sold here if American shippers will push their products in this market and if they can quote prices and terms that will not make the landed cost of the lumber beyond the reach of the importer.

Furniture and Woodworking Industries Large Users.

Of the hardwoods used in furniture making, white oak is probably the most popular. Japan sells oak in South Africa, and while its prices are less than those charged for American oak it is not believed that the Japanese competition is very serious. The bulk of the oak imported has always come from the United States. Walnut is also extensively used in the furniture industry. Lately, on account of the high cost of hickory, Australian spotted gum has been substituted for it. Australian jarrah wood is used largely for heavier house timbers.

There are 123 woodworking establishments and 90 furniture factories in the Cape Town district alone. Every description of builders' joinery work, particularly window frames, doors, etc., is produced. Moldings and turnings to any design are also made. Boxes, cases, and crates for the fruit-growing and wine trade constitute a principal item of the output of this industry.

Household furniture of every description is manufactured by the furniture industry, which has made rapid strides during the past few years. This industry particularly centers in and around Cape Town. Church and school furniture and office furniture and fittings, including counters, partitions, paneling of walls, desks, tables, filing cabinets, and cupboards are also manufactured. During the past few years the domestic industry has been unable to cope with the demands made upon it, this demand being the result of the high cost of furniture imports, which fell off considerably during the war period.

Lumber is principally imported by wholesale merchants who invariably buy in large quantities, sometimes in entire shiploads, or partial shiploads. These merchants generally carry important stocks and supply the builders, furniture, and other woodworking industries with their requirements. They also season wood. None of the furniture or woodworking factories carries on a business sufficient to warrant them to purchase cargo lots, although there are many who import direct carload lots.

Conditions Affecting American Imports.

The high freight rates between American ports and South Africa, as compared with the lesser rates ruling between Scandinavian countries and South Africa, places the American exporter at a disadvantage. The depreciated exchange rate of the pound sterling in relation to the dollar further increases the cost to such an extent as to make competition very difficult.

All unmanufactured lumber imported into the Union of South Africa, together with ceiling and flooring boards, planed, tongued and grooved, is classified under section 145 of the tariff, and is subject to a duty of 3 per cent ad valorem. The whole duty is refunded on the products of the United Kingdom and reciprocating British colonies.

Clear pine boards, shelving, poplar boards, etc., which have been planed, are not classified as unmanufactured wood, and are subject to a duty of 20 per cent ad valorem. A rebate of 3 per cent is granted on the products of the United Kingdom and reciprocating British colonies.

SWEDISH LUMBER MARKET FOR FEBRUARY.

Assistant Trade Commissioner H. Sorensen, Copenhagen, Denmark, March 19.

The activities in the Swedish timber trade slackened during February in comparison with the preceding month, according to a report published by the royal board of trade. While during January 198,000,000 feet were sold, it is estimated that the figure for February does not exceed 118,800,000 or 138,600,000 feet. So far as England is concerned, the few transactions which have been done have been closed with the upper and middle districts of the Gulf of Bothnia, and the majority of the lumber sold was fifths and lower grades. The prices are unchanged, pine, 7 inches wide, unassorted quality, selling at $44.85 to $45.47 per thousand, and spruce, fifths quality, 7 inches wide, at $36.25. Deals are at present very hard to sell, whereas scantlings and battens are in demand. Holland is showing some interest for spruce, but prices are still low. The highest prices obtainable from Hernosand and districts farther south are $37.56.

During the first part of February a brisk business was done with Australia and South Africa in planed lumber. Spruce floorings in Australia are obtaining $44.24 to $44.85 for basis 6½-inch widths, f. o. b. South Norrland, and in Cape Town $49.77 to $50.39 was obtained for 6½-inch pine planed. Cement staves have changed hands at $19.66 to $20.28, f. o. b. Hernosand, and for slating battens $32.62 has been obtained. At the end of February the total sales amounted to about 544,500,000 feet.

[Prices above are computed at the par values of the pound sterling, $4.8665, and of the Dutch florin, $0.402. Actual rates were slightly lower. New York exchange for the pound in January averaged about $4.65 and in February $4.69. Rates for the florin were $0.3956 and $0.3952 for January and February averages, respectively.]

Netherland's Market Not Promising.

Consul General George E. Anderson, Rotterdam, February 28.

Lumber dealers are little disposed to forecast the coming season. The large stocks in hand preclude any very free import of most lines of wood unless there is a complete revolution in business conditions. At present consuming industries, including shipyards, box factories, and the building trades, offer little demand, and sales are small and slow. There is still a steady demand for piles and poles and some sizes of pine, of which there has been a shortage, and in this American

exporters are sharing. American pine will continue in demand for special purposes so long as freights remain reasonable and prices do not materially advance, but the prospect for a good year's trade is not very bright.

The import of lumber and timber into the Netherlands in 1922 was overdone, and there was a serious slackening of the trade in the closing months of the year. Large stocks were left on hand, which are yet to be disposed of. There was a large increase in the imports of finished lumber, which resulted in considerable unemployment in the Dutch planing mills. Finland, Sweden, and Germany led in the bulk of the trade in the order named, but imports of American pine increased very materially.

THE VENEER INDUSTRY IN SOVIET RUSSIA.

Abstracted by the Eastern European Division from "Economic Life," Moscow, February 10, 1923. The bureau assumes no responsibility for the accuracy of the data.

The production of plywood had been one of the most advanced branches of the woodworking industry in Russia prior to the war and now presents the soundest basis for future development. There were 46 veneer sawmills in Russia in 1914, producing about 200,000 cubic meters (339,200,000 square feet on basis of one-fourth inch) of plywood, one-half of which output had found a ready market abroad—in England, Netherlands, and other countries where Russian three-ply veneer commanded the market. The war had a disrupting effect upon this industry in its center, the western timber region (Pollessye), and in addition a number of plants were annexed by the newly established border States. At present there are in Soviet Russia 29 veneer mills with 40 hydraulic presses, 13 of the plants belonging to the State plywood veneer trust, 12 being assigned to different mixed companies, 3 being controlled by the match trust, and 1 by the shipbuilding syndicate. The production of all these plants, after complete restoration of the same and under a full load, can be brought up to 45,000 cubic meters (76,320,000 square feet on basis of one-fourth inch) of glued veneer per year with one shift of workmen and double that quantity with two shifts.

Additional Capital Needed to Increase Output.

The production program for 1921–22 fiscal year had provided for the operation of 17 plants with 17 presses out of 27 available, for an output of 14,500 cubic meters (24,592,000 square feet on basis of one-fourth inch thickness) of veneer for the year. Actually, however, only 10 plants have been operated intermittently, producing in all but 5,900 cubic meters (10,006,400 square feet) of veneer, or 3 per cent of pre-war productivity. The program for the current fiscal year includes 15 plants with 17 presses, figuring upon a production of 22,600 cubic meters (38,329,600 square feet) of veneer, of which 11,000 meters (18,656,000 square feet) are earmarked for export. The first trial shipments, amounting to 3,663 cubic meters (6,212,448 square feet) of glued veneer, exported in 1921–22, were not successful, because the goods did not conform to the standards of the foreign markets, principally the British, in regard to trimming, gluing, grading, etc., and due to the absence of proper marking on the bundles of the grades, gauges, and mill brands. Due to the spoliatory felling of veneering timber in certain sections, caused by the fuel famine, a number of plants have to be transferred to other districts. These transfers, coupled with necessary technical overhauling of the equipment, call for an expenditure of about 400,000 to 500,000 gold rubles in addition to increasing the working capital by 500,000 to 600,000 rubles for collection of raw material. (The gold ruble at par is worth $0.5146.) Prior to the war the veneer industry was always subsidized to the above extent and chiefly by the foreign consumers.

Czechoslovakia Lumber Industry Slack.

Consul Charles S. Winans, Prague, March 3.

The lumber industry in south Bohemia (as reported at the general meeting of the south Bohemian section of the Czecho-Slovak Manufacturers' Association on March 3) is at present operating on a scale of 50 per cent, as against 1922, when production was approximately 25 per cent below normal. Wages in the past year have been reduced 22 per cent. In Slovakia the lumber industry is reported practically at a standstill. A great many of the sawmills are refusing to operate, while others are working on a limited scale, largely for stock.

Reports indicate that the export lumber trade is having difficulties. Conditions in Germany prohibit large orders from that country, with the exception of mine and special timbers. Practically no wood is being delivered to France and Belgium, and the transport conditions are interfering with shipments to Holland and the Dutch harbors.

CUT-OFFS.

Wood Used in Italian Biplanes.

A detailed report by Trade Commissioner A. A. Osborne, Rome, on wood used in the construction of Italian biplanes is available in the Lumber Division.

Formosa Lumber Too High in Price.

There is practically no market in Japan for Formosa lumber (Arisan lumber), according to a statement by a certain lumber merchant who has recently returned from Japan, on account of its high price. American lumber is much in demand in Japan. (Taiwan Shimbun, January 14.)

American Walnut Well Liked in Ontario.

American walnut has become one of the favored hardwoods for home furnishings in Ontario. From reports received through local retailers, the demand for this commodity has grown during the past few months. (Vice Consul in Charge L. Dale Pope, Sault Ste. Marie, Ontario, April 3.)

Austrian Lumber Not Moving Rapidly.

Lumber export sales are seriously affected by the German situation, particularly the Rhine transit interruption. Reduced shipments have caused local overstocking and the probability of early curtailment of operations. (Trade Commissioner W. F. Upson, Vienna, March 8.)

Bank Report for Foreign Customers.

In following up lumber trade opportunities it is usually desirable for a firm to arrange with its American bank to forward a copy of the bank's report on the concern to its correspondents in the country where the customer resides and for the firm to so advise its customer. Foreign lumber concerns often hesitate in writ-

ing to the United States for information of this nature, and, at any rate, it would mean perhaps several weeks' delay.

American and Canadian Ties for India.

During the past year several hundred thousand American and Canadian creosoted Douglas-fir ties were sold to the Indian railroads on account of the difficulty the roads had in securing native hardwood ties at reasonable prices. It is not probable that more than 10 to 15 per cent of the most of India's annual requirements of ties would be purchased outside India and Burma. The most recent contract placed by Indian railroads for foreign ties went to Australia for jarrah wood. (Extract from Canadian Commercial Intelligence Journal of April 7.)

Additional information regarding lumber appears in this issue under the following sections:

Tariffs and trade regulations: Removal of duty on lumber in certain Provinces of Honduras.
Foreign trade opportunities Nos. 6177, 6178, 6179, 6180, 6181.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

FEBRUARY ELECTRICAL EXPORTS.

Preliminary figures for February show that the exports of electrical goods from the United States during that month amounted in value to $4,839,738. Although representing a decrease from the amount shipped during the previous month, the difference is not great when allowance is made for the shorter number of business days. One item also accounts for a difference of $874,000, this being the value of the large locomotive shipments made in January, no exports of electric locomotives occurring in February. Compared with the exports of electrical goods during February, 1922, there was an increase in the same month of 1923 amounting to $454,344. February, however, was the low month of 1922.

Substantial increases over January's exports occurred in the shipments during February of fractional-horsepower motors, motors over 200 horsepower, electric fans, domestic heating and cooking appliances, radio apparatus and parts, and railway signaling equipment. The exports of mechanical-drive turbines during February decreased to the extent of $118,000 worth, as compared with January, and only about half the number of self-contained lighting outfits were shipped. Telegraph-apparatus exports also fell off considerably during February, as did also exports of wiring supplies and fixtures and bare copper wire. Exports of the remaining classes during February were about equal to the previous month.

CHILEAN INTEREST IN RADIO.

Assistant Trade Commissioner W. E. Embry, Santiago, March 20.

The development of interest in radio in Chile has not kept abreast with that shown in Argentina, Uruguay, and Brazil, but it is not to be understood that there is an absence of interest in Chile on this subject or a lack of possibility for developing a market for American radio equipment. On the contrary, in Santiago, Valparaiso, and several other smaller Chilean cities interest in radiotelephony is growing steadily and its fuller development only awaits the establishment of a broadcasting station within the country, such as those now in operation on the east coast of South America.

It is reported that the broadcasting stations recently erected in Buenos Aires, Montevideo, and Rio de Janeiro have given very satisfactory results, and large numbers of amateur receiving sets have been sold in these countries. This is especially true of Argentina, where conditions for broadcasting programs are almost ideal, as the land generally is flat and radio transmission carries all over the River Plate district and Uruguay, as well as into southern Brazil on the north and as far as the Andes on the west. For this reason the sale of radio equipment has met with the greatest success in that country, and it is now estimated that there are approximately 25,000 sets in the Argentine Republic in comparison with approximately 100 less than one year ago.

American radio equipment up to the present time has been given preference in South America. This is especially true of Chilean orders, as practically all equipment now in use in Chile is of American origin. Four or five concerns in Santiago deal in this class of goods, and a similar number handle radio apparatus in Valparaiso. Estimates of the number of sets throughout the whole of Chile vary from 100 to 500.

Broadcasting Stations in Chile.

The Chile Radio Corporation, a local Chilean concern, with offices on the top floor of the Ariztia Building (the highest office building in Santiago) has an efficient amateur broadcasting station with 1-kilowatt power, and programs, consisting mainly of music, are being offered from time to time. Outlying cities within a radius of 300 miles of Santiago report that the concerts are heard very distinctly under normal weather conditions. The manager of this company reports that on different occasions he has heard very clearly parts of programs broadcasted from the Avenida de Mayo Station in Buenos Aires. These, however, were heard on exceptional occasions, as the high Andean Cordillera make the reception of complete messages from Buenos Aires very difficult, and the west coast of South America can not hope to satisfactorily receive broadcasting from Argentina.

Another smaller broadcasting station has been maintained in Providencia for the past three or four months by a local amateur radio enthusiast, and programs consisting of phonograph records have been broadcasted successfully. Providencia is an outlying suburb of Santiago. The broadcasting from this station is carried on by an improvised equipment of 20-watts power.

Numerous native Chileans have shown unusual interest in all matters pertaining to radiotelephony and its development. Amateur sets have been constructed and experiments are continually being made by local amateur enthusiasts. It is not unusual for amateurs in Santiago to receive—or, rather, intercept—messages sent out from stations in Honolulu, France, Japan, the

United States, and other distant places. One of the local amateur stations recently heard very distinctly messages from Arlington.

Concession for French Hydroelectric-Power Plant Granted.

Vice Consul J. Lee Murphy, Paris.

Announcement has been made of the granting of a concession to construct a hydroelectric plant on the Gave de Pau River in the Basses Pyrenees, near Biarritz. It is estimated that a normal output of 4,400 kilowatts can be obtained at the point where the plant is to be constructed.

The terms of the concession provide that a stock company be formed with French control. French machinery and equipment will probably be given preference, although it is said that this may be purchased from foreign manufacturers, if satisfactory terms as to delivery, price, and quality can not be obtained in France.

[Firms interested may obtain the name and address of the concessionaire from the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, or through any of the bureau's district or cooperative offices, by referring to file No. 87383d.]

Electrical Trade Notes.

Hydroelectric Plant Proposed Near Sao Paulo.

Request has been made by the Sociedad Anonyma Brasital for permission to construct a water-power plant on the Tiete River near the falls of Ittu, located a short distance west of Sao Paulo. This company obtained a concession in 1911 covering this same project.

Lighting Fixtures Needed in Ceylon.

Possibilities for the sale of electric-lighting fixtures in Ceylon exist in connection with the new city hall, which, according to Consul Marshall M. Vance, is soon to be constructed at Colombo. The work is being done under the direction of the Municipal Works Engineer, Colombo Municipality.

Progress of Austria's Hydroelectric Program.

During 1922, 10 hydroelectric plants of more than 500 horsepower capacity each, and having a total capacity of 22,610 horsepower, were completed and put into operation. Eight additional plants on which work was started will have an aggregate of 33,030 horsepower. In addition, some work was done on 895 plants, all of less than 500 horsepower capacity. (Consul R. W. Hinegartner, Vienna.)

Formosa Hydroelectric Project.

Recommencement of active work on the Jitsugetsutan (Lake Candidius) hydroelectric project in Formosa is expected to take place in May of this year, according to a report from Consul General Harvey T. Goodier, of Taihoku, Japan. Suggestions made by the German consul general at Kobe that German machinery be used on this project are said not to have been favorably received by the company interested in this project.

Italian Radio Operation Opened to Private Interests.

Private operation of wireless installations and services can now take place in Italy under Government permit, in accordance with a decree recently signed by the King and originating with the Ministry of Posts and Telegraphs. Permits to operate simple receiving apparatus, such as is used to listen in on broadcasted messages, may also be granted by the terms of this new decree. The measure, which is about to become effective, replaces the old law of June 30, 1910, regulating wireless operations, which made them a Government monopoly. (Commercial Attaché H. C. McLean, Rome, March 10.)

Honduran City to Have Electric Supply.

Additional customs duties have been established by the Honduran Congress in order to raise the sum of $130,000 for the construction of a water system and electric-light plant for the city of Comayagua. The mayor (alcalde) of Comayagua is designated as the president of a board to control the expenditure of the funds, including the making of all contracts for this construction work. (Consul Robert L. Keiser, Tegucigalpa, February 10.)

Japanese Company to Resume Construction.

It is reported that the Japanese Government has decided to provide the Taiwan Electric Power Co. with funds to enable it to continue construction of the generating plant, on which work has been temporarily suspended. The original plans were for the construction of a power plant of 100,000 kilowatts capacity to cost 40,000,000 yen (1 yen=$0.4985). These plans have been modified to some degree, it being now estimated that the total amount of capital required will be 30,000,000 yen. (Commercial Attaché James F. Abbott, Tokyo, March 26.)

British Electrical Exports Decline During February.

Figures published in the London Electrician show a decline of 21.7 per cent in the British electrical-goods export trade during the month of February from the January exports and a falling off of £56,296 from the shipments during February, 1922. The total electrical exports for the first two months of this year were valued at £2,132,572—a decrease of £229,719 as compared with the same period of last year. Imports of electrical goods into Great Britain during February were valued at £254,554. This also represents a decrease from the imports of February, 1922, amounting in value to £42,051.

Irish Electric-Power Scheme Progressing.

Plans for utilizing the waters of the Bann River, flowing into Lough Neagh, in County Antrim, Ireland, some 30 miles from the city of Belfast, have reached the stage at which many of the most influential people of northern Ireland are interested in seeing the project accomplished. The purpose of this scheme is to generate electricity sufficient to supply all of the industries of that section. A bill was introduced into the Imperial Parliament early this year for the chartering of a company and conferring upon it the necessary powers to proceed with this work. It is said that the people of County Antrim have just begun to realize that the Bann River possesses one of the finest hydroelectric power schemes in the whole United Kingdom and that enough power could be produced to light the whole of the six counties and supply every mill and factory with power. (Consul William P. Kent, Belfast.)

Additional information regarding electrical equipment appears in this issue under the following sections:

Foreign trade opportunity No. 6207.

CHEMICALS

Charles C. Concannon, Acting Chief, Chemical Division

FOREIGN SALES OF AMERICAN CHEMICALS CONTINUE FAVORABLE.

During the eight months ending February 28, 1923, a gain of 19 per cent was made in the exports from the United States of those crude and finished chemicals, drugs, and dyes that come within the purview of the Chemical Division. Foreign sales for the period aggregated $82,340,825, against a corresponding total of $69,300,925 a year ago.

Shipments abroad for the months of January and February, 1923, represented expansions of 14 per cent and 19 per cent, respectively, over the first two months of 1922, the January exports rising from $9,585,859 to $10,944,830 and the February from $8,692,116 to $10,374,895. Compared with the preceding month, however, the February, 1923, trade showed a decline of 5 per cent—a loss that may be partly accounted for by the difference of three days in the length of the months.

Comparative Eight-Month Figures.

For the eight-month periods ending with February, 1922 and 1923, American chemical exports had the following values:

Exports of chemicals and allied products from the United States.

Articles and groups.	July 1, 1921–Feb. 28, 1922.	July 1, 1922–Feb. 28, 1923.	Per cent of increase (+) or decrease (−).
Chemicals and allied products	$51,842,166	$58,305,753	+12
Naval stores, gums, and resins	9,642,219	14,222,046	+48
Ginseng	1,227,093	2,083,306	+70
Other crude drugs, roots, etc.	461,252	605,071	+31
Peppermint oil	219,132	199,417	−9
Other essential oils	325,323	371,941	+14
Logwood extract	393,301	247,298	−37
Other vegetable-dye extracts	569,325	264,067	−53
Sulphur or brimstone	3,461,447	4,427,676	+28
Sulphur, refined	20,146	84,314	+318
Metal polishes	200,710	208,175	+4

Beeswax	12,866	17,689	+37
Wax manufactures	248,899	242,573	−2
Matches	169,774	157,258	−7
Total	69,300,925	82,340,825	+19

"Chemicals and Allied Products" Explained.

Under the first item in the table, "Chemicals and allied products," are included coal-tar products; medicinal and pharmaceutical preparations; acids and heavy chemicals; sodium compounds; pigments, paints, and varnishes; fertilizers; explosives; perfumery, cosmetics, and toilet preparations; and pyroxylin products. All future analyses by the Chemical Division of imports and exports of this class will be based on this grouping. Soaps of all kinds, blackings and polishes (except metal polishes), clays, chalk, asbestos, mercury, radium, salt, and tanning materials and extracts, which come more or less within the field of chemical industries, will be excluded from these statistical studies, as the articles named are assigned to other divisions of the bureau.

For the eight months under review shipments of American-made coal-tar products—crudes, intermediates, and finished products, including dyes—expanded 44 per cent in value. Increases in value were likewise shown by medicinal and pharmaceutical preparations (24 per cent); sodium compounds (26 per cent); pigments, paints, and varnishes (32 per cent); explosives (38 per cent); perfumery, cosmetics, and toilet preparations (34 per cent); and pyroxylin products (62 per cent). Fertilizers increased 1 per cent in quantity, but declined 8 per cent in value. Value decreases occurred also in the exports of formaldehyde, glycerin, soda ash, sal soda, ammonium sulphate, and phosphate rock except the high-grade hard rock.

FRENCH AGRICULTURAL NEEDS IN NITRATES.

Consul Thomas D. Davis, Calais, February 24.

In 1922 France used 126,400 metric tons of sulphate of ammonia, of which 30,500 tons were imported from Germany, 37,500 tons from England, 5,000 tons from the Saar, and 2,000 tons from Belgium. The remaining 51,400 tons were manufactured in France. In addition France imported 260,000 tons of sodium nitrate and 10,000 tons of Norwegian calcium nitrate and manufactured 12,000 tons of cyanamid. These figures translated into terms of nitrate give approximately 69,000 metric tons, or about the pre-war figure (71,000 metric tons).

Importations during the year reached a value estimated at 300,000,000 francs and amounted to about 82 per cent of the total consumption. When one considers in this connection the desirability of tripling the present annual consumption, a very clear idea is obtained of the urgent need of increasing the domestic production by every practical means and of reducing at the same time the price sufficiently to encourage the use of nitrogen fertilizers to the desired point.

French Production of Chemical Fertilizers.

Before the war sulphate of ammonia was manufactured in France almost exclusively from gas-plant and coke-oven gases and from the treatment of sewage. The destruction of the factories in the Nord and the Pas-de-Calais during the war appreciably diminished production, as the following table shows:

Production of sulphate of ammonia in France.

Derived from—	1913	1922
	Tons.	*Tons.*
Gas plants	22,300	24,200
Coke-oven gases	37,500	18,200
Sewage	12,300	.....
Other sources	2,500	9,000
Total	74,600	51,400

Taking into consideration the progressive increase in production of coal by the mines damaged during the war, it is thought that in 1923 it will be possible to at-

tain a production of 60,000 to 70,000 metric tons of sulphate of ammonia and to push this to 80,000 metric tons in 1924.

The cyanamid industry, existing in France since 1907, can put on the market an appreciable quantity of combined nitrogen. It is capable at present of fixing 20,000 metric tons of nitrogen per year, and after the completion of its second group of factories will be able to fix as high as 30,000 metric tons.

For the manufacture of synthetic nitrates France has the Soulom factory, installed during the war, with a capacity of 1,200 metric tons of nitrogen. Although this amount is comparatively insignificant, it constitutes a beginning toward the method of production it is now thought will have to be largely resorted to if France succeeds in obtaining the quantity of nitrates needed.

Nitrogen Production by German Process.

Under a bill recently ratified by the Chamber of Deputies the production of atmospheric nitrogen by the Haber-Bosch process is to be undertaken at Toulouse [see COMMERCE REPORTS for April 9, 1923]. The works will be established in the former powder factory at Toulouse, which already has annexed to it a sulphuric-acid plant and an installation for the transformation of ammonia into nitric acid; that is, the two acids for the neutralization of synthetic ammonia and the formation of sulphates and nitrates utilizable as fertilizer. On full realization of this project the French production will probably not amount to more than 60,000 metric tons of nitrogen, still leaving an abundant field open for the profitable exploitation of the Claude process in the utilization of coke-oven gases.

Pending the realization of the foregoing projects, French agriculture is suffering from the lack of fertilizers, whose high price discourages their use in sufficient quantities.

Hankow's Trade in Foreign Chemicals.

Consul General P. S. Heintzleman, Hankow, China.

Hankow has a relatively large and flourishing trade in foreign drugs and chemicals. Foreign-educated physicians and surgeons are returning yearly to China in increasing numbers, and hospitals along modern lines, conducted under the supervision of Western-trained physicians, are being constantly opened in this center and the other large cities of the district. Numerous hospitals are also maintained by the various mission societies operating in the district.

Many heavy chemicals are imported in fairly large quantities. The following table, compiled from the returns of the Chinese maritime customs, gives the imports of foreign chemicals into Hankow during 1921:

Imports of chemicals at Hankow in 1921.

Articles.	Pounds.	Value.
Acids:		
Boracic	174,133	$22,859
Hydrochloric	159,600	12,497
Sulphuric	76,667	2,834
Unclassed	156,667	33,201
Ammonia, mixtures of	80,533	15,589
Borax, crude and refined	73,067	8,049
Soda:		
Ash	22,243	107,096
Caustic	875,200	36,083
Nitrate	112,133	3,545
Silicate	276,133	7,632
Unclassed	195,067	6,015
Sulphur	346,800	6,456
Chemical products n. e. s.		29,945

In addition to the foregoing, dyes, colors, etc., are imported in large quantities every year.

Chemical Trade Notes.

Spanish Ergot of Rye Offered.

A dealer in Spain has informed Consul Fred C. Slater, Corunna, of his desire to communicate with an American firm interested in importing ergot of rye in the fall. Further information may be obtained upon application to the Chemical Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., mentioning file No. 87639.

New Japanese Fertilizer Factory.

The Suzuki Shoten are to establish a factory for the manufacture of sulphate of ammonia on the island of Hikojima near Moji. The capital of the new company is understood to be 10,000,000 yen, one-fourth paid in. The machinery for the plant has been ordered from abroad and has already been shipped. (Commercial Attaché James F. Abbott, Tokyo, February 27.)

Italy's Sulphuric-Acid Production.

In 1879 there were only 13 factories in Italy, producing 10,000 tons of sulphuric acid annually. In 1908 there were 80 factories, with a total output of more than 500,000 tons (50 per cent acid). By 1914 these figures had increased to 110 factories and 630,000 tons. About 80 per cent of the acid is produced in plants manufacturing fertilizers and copper sulphate. (Consul Joseph Emerson Haven, Trieste, February 10.)

Portuguese Production of Arsenic.

There are seven mines in Portugal which are producing arsenious ores. The production of arsenic has not been large, but it is believed that it could be greatly increased. [Further information relative to Portuguese arsenic will be furnished to interested persons upon request addressed to the Chemical Division, Bureau of Foreign and Domestic Commerce, Washington, D. C.; refer to file No. 88594.] (Consul General W. Stanley Hollis, Lisbon, March 6.)

Exports of Ergot of Rye from Vigo in 1922.

Consul Henry T. Wilcox, Vigo, Spain, February 16.

In 1922 the shipments of ergot of rye from Vigo, Spain, to the United States more than tripled in quantity in comparison with those of 1921, but only slightly more than doubled in value, 99,979 pounds, valued at $68,959, having been exported to the United States in 1922, as compared with 30,387 pounds, valued at $31,104, in 1921. The large increase in amount and the decrease in value per unit took place in spite of the poor crop of 1922 and were due, first, to the sale of stocks which had been held over from 1921 in the hope of better prices, and, second, to the competition which the Spanish shippers found in the United States from German and Polish ergot. The price of ergot of rye has been steadily going down since 1920. In that year the average invoice price was $4 a pound; in 1921 it was $1 a pound; and for the past year the average price was $0.68.

Additional information regarding chemicals appears in this issue under the following sections:

PETROLEUM

Henry C. Morris, Chief, Petroleum Division

FRENCH PETROLEUM IMPORTS DURING 1922.

Imports of petroleum products into France during 1922 were considerably larger than in 1921, particularly in the items of gasoline and kerosene, according to official French statistics. Receipts of these two products, which had declined in 1921 as compared with the 1920 figures, rose in 1922 to a larger total than that for either of the two preceding years. Imports of gasoline and naphthas (essences) totaled approximately 200,000,000 gallons, an increase of 24 per cent over the 1921 figure, while receipts of kerosene (refined petroleum) showed an increase of about 40 per cent, the 1922 total being slightly more than 100,000,000 gallons. Lubricating and other heavy oils registered an appreciable increase over the 1921 figures, although imports of these oils were still somewhat below those for 1920.

The following table shows the imports of the various products during the last three years:

French petroleum imports for consumption.

Products.		1920	1921	1922 [1]
Crude petroleum	quintals	13,226	529	9,133
	hectoliters	29,712	3,244	6,277
Refined petroleum (kerosene)	quintals	1,267	54,632	2,540
	hectoliters	3,760,576	2,745,132	3,835,806
Essences of petroleum (gasoline, etc.)	quintals	16,303	38,079	8,437
	hectoliters	6,356,818	6,036,612	7,548,559
Lubricating and other heavy oils	quintals	2,262,073	1,294,634	1,871,751
Residues	do	676,619	554,347	770,680
Petroleum pitch	do	34,658	24,076	18,369
Paraffin and lignite wax	do	45,984	11,953	29,871
Vaseline	do	9,290	1,112	812

[1] 1922 figures subject to correction.

The sources of supply for petroleum products imported into France during 1922 remained essentially the same as in the preceding years. Imports of the principal products from the United States showed increases in general proportionate to the totals from all countries, and receipts of Rumanian oil were also larger than in 1921. Rumanian shipments of kerosene to France, which totaled 42,970 hectoliters (1 hectoliter=26.4 gallons) in 1920, rose to 257,688 hectoliters in 1922, while shipments of gasoline from Rumania amounted to 438,579 hectoliters, as compared with 213,965 hectoliters in 1921. Imports of kerosene from Russia declined from 249,463 hectoliters in 1920 to 20,427 hectoliters in 1922, although the 1922 shipments of Russian gasoline were somewhat larger than those for 1920.

American Petroleum Exports During January and February.

United States exports of petroleum products during the first two months of 1923 showed a general increase over the corresponding period of 1922. Total exports of mineral oils during January (271,488,564 gallons) were 27 per cent above the January, 1922, figure, while the total February shipments of 240,429,912 gallons were 38 per cent above the corresponding 1922 exports. Lubricating greases and paraffin wax showed marked gains as compared with the first two months of 1922. Exports of crude petroleum showed comparatively little change; the largest increases appear in the shipments of gasoline and naphthas and in gas and fuel oils. Comparative figures are given in the following table:

United States petroleum exports.

Products.	January—		February—	
	1922	1923	1922	1923
	Gallons.	*Gallons.*	*Gallons.*	*Gallons.*
Crude petroleum	30,246,792	31,437,002	24,309,832	27,359,913
Gasoline, naphtha, and other light products	49,856,310	58,605,435	38,236,093	67,118,318
Illuminating oil	82,232,005	93,619,793	62,317,902	61,809,005
Lubricating oil	31,250,261	32,287,005	23,487,997	21,835,941
Gas and fuel oil [1]	50,459,307	86,976,331	49,517,465	89,666,648
Residuum and other products not specified	124,450	108,018	514,044	254,982
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*
Lubricating greases	3,532,085	4,954,688	4,154,566	5,403,474
Paraffin wax:				
Unrefined	3,874,410	10,643,304	7,192,026	9,289,103
Refined	15,716,154	18,788,269	10,410,777	18,753,691
Total paraffin	19,590,564	29,431,573	17,602,803	28,042,794

[1] Does not include fuel or bunker oil laden on vessels engaged in the foreign trade, which was as follows: January—1922, 2,328,190 barrels; 1923, 2,778,440 barrels; February—1922, 2,422,749 barrels; 1923, 2,526,475 barrels.

PETROLEUM DEVELOPMENT IN ITALY.

Consul H. Earle Russel, Rome, March 8.

The Italian Council of Ministers on February 2, 1923, intrusted to an interministerial committee the work of defining the attitude of the Government on its petroleum policy and to initiate the work of exploration. On February 15 this committee decided to aid and unify all Italian efforts to locate and exploit petroleum deposits in Italy. As of interest in this connection, the following brief summary of Italian petroleum operations is submitted:

The regions in which indications of possible commercial petroleum deposits have been found up to the present are as follows: The valleys of the Trebbia, Riglio, and Chero in the Province of Piacenza; the valleys of the Taro and Baganza in the Province of Parma; the valley of Pescara in the Province of Chieti; and the Latina Valley, traversed by the Sacco River, in the Province of Roma and by the Liri River in the Province of Caserta. In Emilia the commercial production of petroleum began in 1891 with an annual total of about 1,000 tons. In 1911 the maximum output of 10,390 tons was reached, and since then it has declined, being a little over 4,000 tons in 1920, the last year for which definite figures are available. Investigations were also carried on in the Provinces of Bologna, Reggio, and Parma, but without result. In the various valleys mentioned above drilling has been done at different times, but the actual production has never been large and the total output of all Italy during the last few years has not exceeded 5,000 tons per year.

In addition to these zones that have been and still are the object of exploitation, there are several localities in southern Italy and in Sicily in which oil indications have been found. For the purpose of stimulating exploration in these localities and to intensify the work in those already being exploited, law No. 250 of March 1, 1911, granted premiums for drilling under certain conditions. In 1911, 12,604 meters of drilling was done, of which 4,392 meters were subsidized under this law, premiums

tons. In 1915 premiums of 243,544 lire were paid on 9,386 meters out of a total of 13,471 meters drilled, while production declined to 5,308 tons. Since 1915 there has been a more or less steady decline in the amount of drilling, the premiums paid, and the production of oil, so that the results of the provisions of law No. 250 have been negative so far as increasing production is concerned. This lack of success has been due largely, however, to circumstances outside of the industry, rather than to lack of energy in the work.

The law of 1911 was made effective for 15 years with an annual grant of 300,000 lire available, which has been used only to a small extent. A practical consequence, however, has been to encourage some drilling at considerable depths, particularly at San Grovanni Incarico, Velleia, and Montechino, where evidences of petroleum deposits were found at depths not previously reached.

Prospects of Further Undertakings Uncertain.

Present conditions for drilling in Italy are not considered especially favorable, because of high costs and the uncertainty of finding oil in paying quantities, consequently private interests have requested further State assistance. The attitude of the Government, however, leads to the belief that such assistance, either in the form of actual assumption of drilling or by more indirect means, would be contemplated only in case private initiative were entirely lacking. Nevertheless it is hoped that exploration will be continued, and while Italian engineers and oil experts are not overly optimistic, they believe that it would be worth while, in the interest of the national economy, to exploit deposits of petroleum even with annual production not exceeding that obtained in Emilia, could such deposits be located in other sections of the country.

[A publication entitled Il Mercato Mondiale del Petrolio, by Mario Monti, has been forwarded to the Bureau by Commercial Attaché H. C. MacLean, and may be consulted on application to the Petroleum Division. This book, written in the Italian language, contains an interesting discussion of the Italian petroleum situation.]

Impetus Given Oil Industry in the Philippines.

The Philippine Council of State, upon recommendation of the secretary of the department of agriculture and natural resources, has adopted important amendments to the rules and regulations governing exploration and drilling of petroleum lands calculated to encourage investment of capital and exploitation of this latent product of the soil, according to the Manila Daily Bulletin of February 13.

One of the important amendments increases the area of land that may be granted persons or corporations for exploration purposes from 18,000 hectares from the entire island to 72,000 from each Province in the inaccessible parts of the islands and 40,200 in accessible parts. The reason for more permits for the exploration of oil lands not being applied for was stated to be due to the restricted areas granted for this purpose.

The new regulations require each corporation permitted to explore any territory to pay a fee of 5 centavos per hectare (about 1 cent per acre). They also permit a second corporation to explore the territory granted another for exploration purposes and drill wells after one year has elapsed. Under the old regulations a three-year exploration permit was granted and during that period only one corporation was allowed in the field.

Another important change is that under the new regulations right to explore a given territory does not prohibit portions of it from being open to concession to homesteaders. It is said that in the event that a ploration which contains oil, arrangements can be made to require the homesteader to secure another lot.

Petroleum Notes.

Mineral-Oil Shipments Through Suez Canal in 1922.

The total eastbound shipments of mineral-oil products through the Suez Canal during 1922 amounted to 282,000 tons, compared with 211,000 tons in 1921 and 263,000 tons in 1920. Shipments of American oil products—kerosene, gasoline, and lubricating oil—which reached 400,000 tons in 1913 and dropped to 207,000 tons in 1921, showed a slight recovery in 1922, having risen to 261,000 tons. The westbound traffic for 1922 in mineral-oil products, mostly crude oil, amounted to 2,001,000 tons in 1922, as compared with 1,313,000 tons in 1921 and 787,000 tons in 1920. (Consul Coert du Bois, Port Said, Egypt, February 20.)

Purchases of Equipment for the Grosny Oil Field.

A special Russian commission, operating in Germany and England, purchased through the medium of Arcos (Ltd.) about 4,000,000 rubles worth of technical materials and equipment for the "Grozneft" (the governmental "trust" operating the Grosny oil field), including oil and steam engines, belting, rope, and various other items of equipment for the exploitation of the fields in 1923. The orders are to be fulfilled within 3 months in England, whereas in Germany from 4 to 12 months were required. The commission was authorized to sell abroad 2,000,000 poods of benzine, but the sale of Russian benzine met with some opposition on the part of former owners of the Grosny oil fields, who are endeavoring to restrict the admission of Russian oil and benzine into European markets "over their heads." (Abstracted by the Eastern European Division from Economic Life of February 17. The Bureau assumes no responsibility for the accuracy of the information.)

Argentine Oil Notes.

The weekly production of crude oil at the Argentine Government workings at Comodoro Rivadavia is estimated at 1,000 metric tons, although no statistics on output are being made available, owing to the reorganization of the State Petroleum Administration. Prices of Argentine oil, as announced by the Petroleum Administration are as follows: In bulk at Buenos Aires, delivered to lighter, tank car, etc., 35 paper pesos per metric ton; in iron drums provided by the purchaser but loaded by the administration, 37 pesos per ton; and in iron drums provided and loaded by the administration, 40 pesos per ton. January imports of petroleum products into Argentina included 1,409,100 gallons of gasoline in containers and 8,910,320 kilos (about 3,200,000 gallons) in bulk; 1,356,060 gallons of kerosene; 42,813 metric tons of fuel oil; and about 1,600,000 gallons of other mineral oils. (Assistant Trade Commissioner C. C. Brooks, Buenos Aires, February 20.)

Additional information regarding petroleum appears in this issue under the following sections:

Survey of current business: United States gasoline production.
Tariffs and trade regulations:
Reduction of Italian import duty on certain kerosene.
Removal of Polish export prohibition on lubricating oil.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

PRICES ON BELGIAN AGRICULTURAL IMPLEMENTS.

Acting Commercial Attaché Samuel H. Cross, Brussels, March 8.

Exhibitors at the agricultural implement show held at the Cinquantenaire, in Brussels, February 17 to 26, under the auspices of the Societe de Mecanique et d'Industries Agricoles, included several Belgian manufacturers who were not mentioned in the article on the "Production and sale of agricultural implements in Belgium," which was published in COMMERCE REPORTS No. 38, issue of September 18, 1922, pages 798 and 799. Much interesting information regarding the prices which are being charged for Belgian implements was also brought out at this show.

Production of Threshing Machines.

Among the threshing machines shown were large mobile units for motor or steam operation, manufactured by J. and G. Rogge Freres, Dottignies, which sell at prices ranging between 15,000 and 18,000 francs. Models of the same type manufactured by Leon Claeys, Zedelghem, approximate these prices. This manufacturer claims a production of 1,000 machines a year. Small stationary threshers, to be operated by a horse sweep, are produced by Charles Gregoire-Paerewyck, Alost. They are about 6 feet long, and sell for 1,775 or 1,875 francs, according to whether they weigh 390 or 450 kilos. Horse sweeps for operating these threshers, made by the same firm, retail at about 1,000 francs. Larger mobile threshers (but smaller than the first type mentioned) are produced by P. Tixhon and E. Coheur, of Herstal. These machines, of 4 or 5 horsepower, are capable of operation by either horse sweep or motor, and are priced at 4,150 and 5,500 francs.

Prices of Plows and Cream Separators.

The firm of Alfred Melotte has now taken over the operation of the cream-separator works at Remicourt. The prices of this firm's plows range from 370 francs for a 1-horse double Brabant plow, weighing 90 kilos, cutting a 25-centimeter furrow, to 890 francs for a 3 or 4 horse double plow of 185 kilos weight, cutting a 32-centimeter furrow. A two-share Brabant plow of 170 kilos weight is priced at 570 francs, while a four-share plow, weighing 163 kilos, costs 575 francs. Spring-tooth weeders, with 7 to 13 blades, and weighing from 125 to 200 kilos, are priced at between 585 and 670 francs. Horse harrows of 38 to 85 kilos weight, with 24 to 54 teeth, sell for from 90 to 315 francs.

The Melotte cream separator factory at Remicourt produces 90 machines per day. Large numbers of machines have been shipped from this factory to the United States and Canada. Prices on Melotte suspended-bowl separators range from 435 francs for a machine of 50 liters per hour to 1,430 francs for a 600-liter machine.

The Persoons cream separators, which are practically identical in type with the Melotte, are priced somewhat higher. A 100-liter Persoons separator costs 525 francs, as compared with 475 francs for a 75-liter Melotte separator, and the Persoons 175-liter machine costs 690 francs, as compared with 650 francs for a Persoons separators have been raised 10 per cent since March 1. Another firm, although less prominent, produces machines which are cheaper in some respects. This is P. Vandeputte & Cie., of Eecloo, which sells a 100-liter separator for 465 francs, although its higher capacity machines are relatively somewhat more expensive.

IMPLEMENT EXPORTS IN FEBRUARY SHOW LITTLE CHANGE.

Exports of agricultural implements from the United States during February amounted to $2,788,581, which was a decrease of $52,328, as compared with the figures for January. In view of the fact that February is the shortest month of the year, this decrease is practically negligible and indicates that exports are continuing at about the same level as during January. Comparison of the exports for February, 1922 and 1923, shows an increase of more than 250 per cent in the latter period, while exports for the eight-months period ended February 28, 1923, which were valued at $20,819,010, show a considerable increase over those for the corresponding period of 1922, when exports were valued at only $12,061,093.

The item which showed the greatest change during February, with the exception of tractors, was harvesters and reapers, which increased by $139,296. In January, 2,270 harvesters and reapers, valued at $217,717, were exported, and in February this number increased to 3,599, valued at $357,013. Most of these harvesters and reapers went to France, exports to that country being 1,963, valued at $164,338, in January, and 3,225, valued at $301,131, in February.

Next to this item came drills and seeders, with a decrease of $49,637. Exports of this item were 815, valued at $106,981, in January, and 550, valued at $57,344, in February.

Horse and power plows, which were exported to the value of $257,269 in February, showed an increase of $15,371, as compared with January. The number exported, however, decreased from 9,791 in January to 8,744 in February. On the other hand, cultivators, which decreased by $21,607, showed an increase in the number exported from 2,389 to 2,597. The same is true with regard to mowers, which decreased in value from $157,974 to $132,992, while the number increased from 5,867 to 7,192.

Tractor Exports Increasing.

Tractors comprise a large percentage of the exports of implements, and the number of tractors exported is showing a constant tendency to increase. This applies particularly to wheel tractors, of which 965 were exported in January and 1,485 in February. The value for the two months was $632,012 and $814,543, respectively. In garden and track-laying tractors there were decreases during February, which, however, were not sufficient to offset the increase in exports of wheel tractors. The amounts exported were as follows: Garden tractors, 61 in January, valued at $19,767, and 42 in February, valued at $13,659; track-laying tractors,

valued at $54,742. Exports of all types of tractors show increases of several hundred per cent when compared with February, 1922.

Agricultural Implements in Anatolia.

Notwithstanding existing uncertain political conditions in the Near East, there are every day increasing indications of the impatience of the Turkish peasant of Anatolia to get back to the land and to exchange the sword for the plowshare. Mustapaha Kemal Pasha in his recent speeches has been urging the necessity for work and the study of modern methods on the part of agriculturists. In this connection it should be noted that already there is a considerable demand from Anatolia for agricultural machinery.

A special commission has recently been appointed for the purpose of inquiring into the needs of the population in the matter of machinery and farming implements. It is stated that, as a result of negotiations with the Commissariat of National Economy, an agreement has been arrived at, and since ratified by the Council of Commissaires, authorizing a Turco-America company to import, within a period of three months of signing the contract, a definite quantity of agricultural implements. The company itself is to be locally registered, and 70 per cent of the shares are to be reserved for Turks. Assembling and repair shops are to be installed at different points. (The Near East, March 1.)

Additional information regarding agricultural machinery appears in this issue under the following section:

Foreign trade opportunities Nos. 6182, 6223.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

CONDITION OF GERMAN LEATHER INDUSTRY IN OCCUPIED TERRITORY.

German tanners whose plants are located in the occupied areas are faced with stagnation of their export trade. Briefly, with the occupation of the Ruhr, all the German machinery for granting licenses for exports from the occupied areas stopped. In its place the French and Belgian authorities erected their own machinery, while the German Government declared it illegal for firms of German nationality to export goods from the occupied territories on the basis of the grant of foreign export licenses, establishing heavy fines and imprisonment for offenders. As a result of this impasse, German tanners in the occupied territories are cut off from trade with foreign countries and the rest of Germany. At the present time the tanning industry in Germany, in common with many other industries, must export, irrespective of domestic demand, a certain percentage of its manufacture in order to enable it to continue to buy the essential raw stock and tanning materials to maintain operation. As a natural result of the present situation, some tanneries in the occupied areas are already finding it necessary to cancel foreign orders as well as orders which they have placed for purchases of raw materials abroad.

The rise in the mark during the past few weeks has had little effect on the price of raw hides. As yet, owners are continuing their policy of refusing to reduce quotations, and in many cases are still withdrawing their lots from auctions. This is the reason why recent public sales of hides have shown practically no result. Leather prices have not decreased to an extent commensurate with the improvement in the exchange rate. However, prices are again quoted in paper marks, whereas a few weeks ago they were calculated in dollars. It is estimated that it is necessary for a tanner who is using 300 hides per week to spend about half a million paper marks weekly for material.

The exports of sole leather from Germany in 1922 amounted to 3,642 tons as compared with 6,338 tons in 1913, a decrease of about 100 per cent. Of harness and [illegible] 1,388 tons in 1913, or nearly twice as much. The chief buyers at present are the Netherlands, Switzerland, and Denmark.

Import and Export Operations of the Russian Leather Syndicate.

Extracted by the Eastern European Division from Economic Life, Moscow, February 27. The Bureau assumes no responsibility for the accuracy of this information.

The Russian Hide and Leather Syndicate has recently received from abroad 5,000 heavy South American hides, representing a part of the 250,000 poods (1 pood equals 36 pounds) of raw hides contracted for by the syndicate through Arcos (Ltd.) to the value of 3,000,000 gold rubles. The rest of the hides will arrive during April and May, and thus the acute shortage of sole-leather hides will be eased considerably. There is still a scarcity of tanning materials. Estimating the requirements of the Russian leather industry at 700,000 poods of tanning extracts and the domestic production at 200,000 poods, there is a visible shortage of these materials amounting to 500,000 poods. Half of this quantity (250,000 poods of solid extract, to the value of 1,000,000 gold rubles) has been covered through Arcos (Ltd.) at London. About 700 poods of dyes and other materials have been bought and received from a German firm.

The acute shortage of sole leather, which threatened a suspension of work in the largest shoe factories of Russia, forced the syndicate, regardless of disadvantages of importing this material, to purchase 11,000 poods in Finland and Esthonia for immediate delivery. A special lot of kid leather from England and of colored leather from Germany have been obtained for Moscow shoe factories. The leather syndicate is also negotiating with Danish firms concerning importations of shoemaking machinery and parts, which are badly needed because of the worn-out condition of the equipment of the factories. The shoe factories are also in need of supplies and findings. The importation of wire, nails and tacks, steel band, thread, etc., during the last half of 1922 amounted to upward of 250,000 gold rubles.

syndicate during the last six months of 1922 is estimated at about 6,000,000 gold rubles.

Materials Exported Through Leather Syndicate.

As to exports by the leather syndicate, the major part consists of raw fur skins, bristles, horse hair, and small raw skins. During the second half of 1922 the syndicate consigned to the Leipzig Fair fur skins valued at 1,400,000 gold rubles, which were practically sold out. A shipment of fur skins, bristles, and horse hair, valued at 2,900,000 gold rubles, was recently consigned to Arcos (Ltd.) at London and partly sold at auction, and a fresh shipment of fur skins, goat, colt, and foal skins, valued at 600,000 gold rubles, will be forwarded shortly.

Results of German Live-Stock Census.

The following figures showing the results of the live-stock census taken in Germany as of December 1, 1922, were published in the Leather Trades' Review, London, of March 14:

Live stock.	Dec. 1, 1922.	Dec. 1, 1921.	Live stock.	Dec. 1, 1922.	Dec. 1, 1921.
Cattle:			Sheep:	*Number.*	*Number.*
Calves—			Under 1 year...	1,614,708	1,748,169
Under 3 months..	*Number.* 1,200,456	*Number.* 1,220,971	Over 1 year....	3,951,378	4,142,860
3 months to 1 year.	2,546,118	2,736,483	Total.....	5,566,086	5,891,029
1 to 2 years.	2,580,563	2,722,455	Pigs:		
Oxen and bulls.....	1,011,519	1,049,192	Under 6 months	8,339,293	9,656,395

Total.....	16,309,474	16,790,699	Over 1 year....	2,198,589	2,130,721
			Total.....	14,682,622	15,817,819
			Goats.....	4,135,950	4,295,458

Improvement in Belgian Tanning Industry.

Conditions in the Belgian tanning industry have improved because of the low stocks and an improved demand in the home market, according to a report in the Leather Trades' Review, London (March 28). This shortage was due to the fact that manufacturers had reduced their purchases from the producing countries to a minimum on account of the fluctuating exchanges. The exchange factor has, however, its advantages as well as its disadvantages, for the export trade is now benefiting. Certain foreign countries, particularly France, are buying certain classes of Belgian leather owing to its lower cost. The labor supply is sufficient, wages are stable, and no strikes are in prospect. Employers would, however, like to see some modification of the 8-hour day.

Prices have been established by the action of the large tanneries, which have returned to the pre-war system of contracts for monthly deliveries over a period of six months at a fixed price. By this means speculation on the part of the wholesale merchants has been stopped.

The total imports of raw hides and skins were 18,400 tons, valued at 96,000,000 francs. They were supplied mainly by France (6,000 tons), Great Britain (4,950 tons), and the Netherlands (2,100 tons). Small quantities were also purchased from Australia, British India, Ireland, and South Africa. Dressed skins and hides came from France (3,700 tons), Great Britain and Germany (each 300 tons), and the Netherlands (186 tons).

Hide and Leather Trade Notes.

Czechoslovakia Authorizes Exports of Goatskins.

Authorization has just been granted by the Czechoslovakian Minister of Commerce for the exportation of 100,000 goatskins. (La Halle Aux Cuirs, Paris, April 1.)

Austria Continues Export Prohibition of Raw Hides.

The Austrian Government has decided to continue export prohibition on raw hides, thus ending the struggle between hide producers and leather manufacturers in favor of the latter. (Trade Commissioner William Ford Upson, Vienna, March 8.)

Agitation in Italy for Higher Import Duty on Leather.

The tanners in Rome are bringing pressure to bear on the Government to obtain higher tariffs on leather imports. An interministerial commission was appointed to study the situation. (Le Cuir, Paris, March 22.)

Australian Prohibitions.

The Australian Government has prohibited the export of leathers containing more than 10 per cent of sugar and glucose. The importation of cattle from Great Britain and North America is prohibited unless shipped between December and May. (Leather Trades' Review, London, March 28.)

Estimated Flocks of Sheep and Goats in South Africa.

The total number of sheep in South Africa on June 30, 1922, was estimated at 35,091,980 and that of the goats at 8,960,954, giving a total of 44,052,934, according to the annual report of the Department of Agriculture. The losses among sheep from disease and drought was given as 1,503,978, and goats, 344,638. (Pastoral Review, Melbourne, February 16.)

Italy's Foreign Trade in Hides and Leather.

Imports of raw hides into Italy during the first six months of 1922 were valued at 104,196,040 lire, as against a value of 9,906,206 lire for exports. The Italian import trade in tanned leather, leather belting, leather goods, boots, and gloves reached during the same period a value of 117,023,266 lire, as compared with exports of similar items valued at 25,002,586. (Leather Trades' Review, London, March 21.)

Business Scarce in Italian Leather Market.

A strong foreign demand for hides has been felt in the Italian market, but business has been scarce. The English and American call was for heavy ox and cow above 40 kilos, but the prices generally were below seller's ideas of value. For calf there was some demand from Germany. Very little business was possible with Italian tanneries, owing to the difficulty of moving leather stocks. The supply of hides and skins was not large. (Leather Trades' Review, London, March 21.)

High Cost of Hides Curtail British Leather Production.

The production and sale of leather, both sole and upper, has reached a very unprofitable basis, and in many quarters there is some anxiety, says the Yorkshire Post of March 10. Hides are now substantially higher than in pre-war days, in spite of the fact that the output of leather is larger than the demand. Quotations for sole bends are very unstable, and the input of hides is being curtailed. The market for Indian kips is firmer, but sales of the leathers made therefrom are less than normal. The principal upper leathers selling are glaces and suede. (Consul Percival Gassett, Leeds, England, March 10.)

Australian Tanners Aim to Improve Wasteful Branding.

The question of wasteful branding was brought up at the last meeting of the Federated Tanners' Association of Australia, where, as in South Africa, the custom of branding hides on the rump and flanks is an expensive evil. The tanners hope, in cooperation with the Australian Meat Council, to educate the owners of cattle, particularly at large stations, to brand on the lower thigh, neck, or cheek. (Pastoral Review, Melbourne, February 16.)

Raising of Sheep in French Colonies to be Stimulated.

French tanners and woolen manufacturers are disturbed by the continuous shrinkage in the domestic flocks of sheep. This has emphasized the developing of sheep raising in the French colonies. The attempts to acclimate Merino sheep in the colonies undertaken by the Tourcoing Chamber of Commerce are making good headway. This spring the experiment will be repeated in Madagascar under the direction of an expert from the Ministry of Agriculture, the entire expense of which will be borne by the chamber of commerce. Sheep bought in South Africa will be used in these experiments. Later similar experiments will be made in French West Africa. (La Halle Aux Cuirs, Paris, March 25.)

Native Hide Supplies in Switzerland.

The number of large cattle hides delivered by the Swiss Master Butchers' Association during the year ending November 30, 1922, according to the annual report of this association, was 124,974, an increase of 25,521 over the previous year, while calfskins numbered 216,070, an increase of 51,095. Of the large hides 28,649 (22.9 per cent) were classed as damaged and 572 (0.4 per cent) were rejected. The number of calfskins damaged was 45,486 (21.05 per cent). The loss resulting from this damage was estimated at 319,000 francs. The increase in the number of large hides available is ascribed to the increase in slaughter of cattle due to lack of fodder. (Leather Trades' Review, March 14.)

Effect of Franc Depreciation on French Leather Industry.

The franc has changed little in value during the last few weeks, but its temporary stabilization is at such a figure as to seriously affect the leather industry. French leather prices have continued to increase, and representations have again been made to the Minister of Commerce asking that home markets be protected against foreign buyers, who in consequence of the exchange have a great advantage in purchasing power. It is pointed out that the increase in prices caused by these foreign transactions is very serious so far as raw material for the manufacture of footwear is concerned, and has resulted in French buyers being practically driven from their own markets. Export duties are proposed to remedy the present state of things, and it is believed that the Minister of Commerce is seriously considering the propositions put forward. The question of increased costs and increased prices still dominates the situation. It is probable that the present difficulties will result in closer cooperation of the various branches of the industry, resulting in the formation of a committee representing every section from tanners to shoe retailers which will meet periodically and follow the trend of events most carefully. (Shoe and Leather Record, London, March 16.)

Additional information regarding hides and leather appears in this issue under the following sections:

Foreign trade opportunity No. G225.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

CANADIAN IMPORTS OF MANUFACTURED LEATHER GOODS INCREASING.

Manufactured leather goods imported into Canada during February, 1923, were valued at $215,752, and showed a substantial increase over similar imports for the previous month, valued at $160,007. Goods of this class to the value of $145,314 were received from the United States, $52,976 from the United Kingdom, and $17,462 from other countries.

During the 11 months ended February, 1923, the leather boots, shoes, and slippers imported into Canada were valued at $1,038,504, and the United States and the United Kingdom supplied practically the whole amount. Leather gloves were imported to the value of $310,061, and came principally from France ($151,400), United Kingdom ($101,014), and the United States ($34,164).

The following table shows the total value of the various classes of manufactured leather goods imported into Canada and the share of the trade supplied by the United Kingdom and the United States during the 11

Canadian imports of manufactured leather goods during the 11 months ended February, 1923.

Classes of leather goods.	United Kingdom.	United States.	Other countries.	Total.
Boots, shoes, and slippers	$343,132	$687,489	$7,883	$1,038,504
Gloves	101,014	34,164	174,883	310,061
Saddlery and harness	42,720	59,359	892	102,971
Belting	16,800	124,186	48	141,034
Other manufactures	122,122	571,004	3,920	697,046
Total	625,788	1,476,202	187,626	2,289,616

Foreign Sales of Harness and Saddlery Increasing.

The exportation of 85,728 pounds of harness and saddlery from the United States during February, 1923, was approximately 20,000 pounds greater than the quantity exported during the preceding month. The South American trade during February amounted to 2,043 pounds, as compared with 199 pounds of similar goods exported during the corresponding month of 1922. Cuba, Mexico, Honduras, Panama, and the Prairie Provinces of Canada constitute leading markets for harness and saddlery of United States manu-

The following table shows the number of pounds of harness and saddlery exported to important markets during January and February, 1922 and 1923:

Leading markets.	January—		February—	
	1922	1923	1922	1923
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*
Bermuda	1,814	2,743	996	115
Canada:				
Maritime Provinces			36	103
Quebec and Ontario	157	367	454	118
Prairie Provinces	467	1,464	13,644	5,834
British Columbia and Yukon	119	50	274	
Cuba	2,774	42,646	6,474	38,484
Guatemala	533	311		964
Honduras	808	1,917	1,205	5,814
Mexico	16,405	12,787	6,348	29,369

Items of Interest to the Trade.

India's Leather Belting Trade.

The total value of belting imported into India is in the vicinity of $1,500,000 annually, of which 90 per cent originates in the United Kingdom and most of the remainder, chiefly high quality leather belting, is supplied by the United States. (Canadian Commercial Intelligence Journal, April 7.)

Canadian Export Trade in Harness and Saddlery.

The value of the harness and saddlery exported by Canada during the 11 months ended February, 1923, was $22,557, approximately $11,000 less than that of the corresponding period of 1922 and about $120,000 below the figure for the 1921 period. The leading countries receiving shipments of this class of goods during the 11 months periods of 1921 and 1923, respectively, were: United Kingdom, $3,564 and $66; United States, $116,099 and $16,403; Newfoundland and Labrador, $14,657 and $1,053; and other countries, $6,994 and $5,035.

Hankow Market for Trunks, Bags, and Suit Cases Limited.

The Hankow market for imported trunks, bags, and suit cases is limited, the demand being confined to the foreign residents and the better-class Chinese, as the high price puts foreign-made goods of this class out of reach of most of the natives. The foreign population number 5,000, of whom 3,000 are Japanese. All kinds of trunks of both native and foreign manufacture are sold on this market, the prices ranging from $45 to $265 Mex. Practically all foreign-style trunks on the market are imported chiefly from England and the United States, as local manufacturers do not turn out this class of goods. The wardrobe trunk seems to be popular, though box trunks with trays are mostly used. The market for American suit cases and bags is limited, as the Japanese have flooded this center with cheap imitation-leather goods. (Consul General P. S. Heintzelman, Hankow, March 10.)

Australian Boot and Shoe Trade Slack.

Some employees in the Australian boot and shoe trade are working only part time and others are out of employment, but it is believed that the depression in the industry is only temporary. During last year trade was brisk, but after Christmas there was a decline in orders, attributed partly to the unseasonable weather and a consequent reduction in the demand for certain classes of footwear. This was noticeable in the case of white boots and shoes, and retailers having large stocks on hand curtailed their orders. Some retailers believe that a decline in prices is likely to take place and are holding off buying. Many manufacturers, however, report that their factories are still working on full time. That the slackness is not yet being severely felt by the majority of workers is shown by the fact that none of them have sought aid from the union. (Leather World, London, England, March 29.)

Additional information regarding shoes and leather manufactures appears in this issue under the following sections:

Survey of current business: New record for United States production of shoes.
Foreign trade opportunities Nos. 6197, 6198.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

MONEY IN CIRCULATION IN CUBA.

Assistant Trade Commissioner C. A. Livengood, Habana, April 3.

Cuban Treasury Department officials estimate United States gold coin in Cuba at $2,000,000 to $2,500,000 and United States paper money at more than $100,000,000. The amount of American silver in the form of dollars in the island is considered negligible, while American fractional silver is reported to be in circulation to the extent of approximately $100,000.

Recently there has been some discussion as to whether nickel coins in circulation in Cuba are in excess of the requirements of business. These coins are in great part Cuban. In 1919, $300,000 in 10-cent pieces and $200,000 in 5-cent pieces were imported from the United States, and in the latter part of 1920 another importation of 5-cent pieces amounting to $150,000 was made. At the present time it is considered by treasury officials that $300,000 is a high estimate for the amount of United States nickel and bronze coins in Cuba.

At the date of the latest coinage of Cuban money (1921) the total amount of Cuban nickel pieces, including 5-cent, 2-cent, and 1-cent pieces, which had been coined was $1,449,560. Recent reports show that of this amount $570,164 is held in the treasury and in the banks. This leaves a remainder of $879,396 as the amount of Cuban nickel coins in circulation. If to this is added the estimated amount of American nickel and bronze pieces in Cuban circulation, a total of $1,179,396 is arrived at, which is considered by treasury officials to be a satisfactory estimate of the quantity of this class of coins now in actual circulation in Cuba. It is maintained that this sum, which is at the rate of $0.41 per capita, is not in excess of Cuban needs.

Oversupply of Small Coins in Habana.

However, owing to difficulty in securing proper distribution of small coins, reports have been made of a surplus of this class of money, especially in the city of Habana. The Union of Tobacco Manufacturers has appealed to the treasury department for permission

to exchange the nickel small coins, which are received in large quantities by the cigar stands, for the Government stamps required in the sale of cigars and cigarettes. The treasury department in reply maintains that there is no surplus of small coins requiring special action.

From the interior of the island requests have come for increased supplies of fractional coins to meet the demands of the laborers in the sugar harvesting. As the Government has no appropriation for transporting coins to the interior to meet local demands, it has not been able to comply with requests to make monthly shipments of small coins to sugar mills. Until recently the supply of fractional coins in the interior has tended to flow steadily to Habana because of administrative methods whereby remittances of sums received by the Government for taxes, customs, etc., were made by shipping to Habana the actual money received by local collectors. This flow of small coins to Habana has been checked by a decree dated February 16, 1923, by virtue of which governmental collections may be deposited in local branches of the Habana banks and remittances made by means of drafts.

The Cuban treasurer general has issued a statement suggesting that American fractional money be segregated with a view to arranging for its exchange for other money with the United States Treasury. He favors the prohibition of the importation of American silver, nickel, or bronze coins by persons entering Cuba in excess of $5 for each person. In order to force the use of Cuban silver, he advocates prohibiting the importation of American $1 bills.

Canadian Province to Grant Loans to Farmers.

Vice Consul Frederick C. Johnson, Fredericton, New Brunswick, March 26.

To encourage agricultural development and to assist the farmers of New Brunswick, Canada, in certain sections because of heavy losses sustained this year, legislation is in progress to relieve the farmers from their financial embarrassments. Many farmers throughout the St. John Valley have of late been obliged to mortgage their farms for short terms, the present financial difficulties being due largely to the loss of the American and upper Canadian markets for their surplus stocks of potatoes, vegetables, and hay.

The legislation under way gives power to municipalities to borrow money on 30-year bonds for the purpose of making loans to farmers on first mortgages at not more than 6 per cent interest, the loan to be repayable in installments if desired. The money thus loaned is conditional on its being used in discharging liabilities incurred in improving lands for agricultural purposes, in clearing and draining lands for cultivation, and for other purely agricultural development, and the aggregate advanced to any one person is not to exceed 50 per cent of the valuation of the farm to be mortgaged.

The bill provides that municipal councils shall authorize officers to make the loans and administer the act.

Transfers of Foreigners' Bank Deposits Still Prohibited by Rumania.

Consul Ely E. Palmer, Bucharest, March 5.

In its issue of February 11 the Bursa reported that the Rumanian Government had decided to permit the gradual conversion into foreign exchange and the transfer abroad of deposits of Rumanian currency held by foreigners in local banks. A denial of the accuracy of this report appears in the semiofficial Government newspaper, L'Independence Roumaine, issue of February 18, which states:

It has been announced that the Government expects to rescind the measure by which bank deposits of foreigners are blocked. This inexact report has aroused considerable excitement. Holders of deposited funds who have hastened to the banks to withdraw such funds have met with refusals, inasmuch as the measure referred to is still in effect.

Most of the deposits referred to date from the period immediately following the war, when foreigners exporting goods to Rumania sometimes preferred to hold here in local currency the sums realized from such sales, in the hope that they might ultimately convert the lei into foreign currency at a profit.

Additional information on finance appears in this issue under the following sections:

Tariffs and trade regulations: Certain Greek exports exempt from Government portion of foreign exchange.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

CREDIT AND COLLECTION FACTORS IN SPAIN.

Commercial Attaché Charles H. Cunningham, Madrid.

[NOTE.—This report of Mr. Cunningham's on credit and collection factors in Spain is based on an investigation into the rôle played by certain factors determining the need of credit and the extent of credit accommodations.]

In calculating the factors which determine the Spanish buyer's need of credit and the extent of credit required, the following points should be considered:

The cost of freight, duties, and handling charges add roughly 40 per cent to the cost of merchandise to the importer. The exact figures, of course, vary with the variations in customs duties. Forty per cent is true of textiles. The ratio of stock carried to the actual cash capital invested in piece goods, hardware, and tools is even. Sales run on an average from 10 to 15 per cent per month of the total value of stocks. In provisions and groceries this may reach 25 per cent. The turnover in provisions in a prosperous business is four to five times a year; in jewelry, about once; in general merchandise, twice; in clothing, three times; and in automobiles, three to four times. A fair profit, taking a firm's sales at $100,000, would be 12 to 15 per cent net or 25 per cent gross. The expenses are estimated at 5 to 10 per cent of sales.

Including customhouse delays, examinations, etc., it takes a Spanish merchant 2 months to receive his goods at Madrid from New York and about 5 weeks from London. In seaports 2 weeks may be deducted from this. The customs charges for storage are about 1 peseta per 100 kilos per month, 15 days of grace being conceded after the date of the arrival of the goods. After the first month the rate is doubled; that is, for the second month the charge is 2 pesetas per 100 kilos, the next month 4 pesetas, the next 8, 16, and so on progressively. The merchandise, while in storage, is held at the risk of the consignee.

Financing Trade—Banking Facilities Adequate.

In financing the crops from the grower to shipper, advances are made by agricultural banks to farmers for purchase of seed, with a mortgage on the crop and crop insurance in favor of the banks; such advances being made only to landowners or renters having stock and agricultural implements. Usually lessees are financed by landlords, who may themselves advance the funds or secure them from the banks. From 8 to 10 per cent is the rate of interest charged. Small owners without land and without stock often have to pay as high as 25 per cent for advances made them by country grocers and commission merchants. Farmers do not hold their crops any length of time after harvest, as they are forced to raise money to pay interest and other charges, and usually sell to speculators. These speculators hold the grain and sell to millers. Insurance premiums on grain crops are charged at the rate of 1 per 1,000.

Banking facilities of Madrid, Barcelona, and Bilbao, and in fact all of the cities of Spain, are considered as being more than sufficient to meet any demands that may be made upon them by merchants. The rates of interest charged by banks for loans and the ease with which financial accommodations are obtained by merchants depend on many things—the quality of the risk involved, the condition of the money market, the terms of the loan (that is, whether it be call, long, or short time), local conditions, and competition. The Government is at present paying 5½ per cent for its loans, and first-class commercial risks run from 6 to 7 per cent. The Bank of Spain discounts paper having a State guaranty at 5½ per cent and on personal credits at 6 per cent.

Bank Charges—Protest of Drafts.

Commissions charged by banks for opening letters of credit are from one-fourth to one-half of 1 per cent, plus correspondents' charges. Charges for collecting drafts vary, depending on local conditions and whether the payee is a client, also whether the bank has a branch in the place in question. Sometimes there is no charge.

With regard to the advisability of protesting drafts if not paid, and the advantage of protest if drafts have already been accepted, protest gives a right to embargo property. The most important benefit secured from protesting is that it gives legal proof of the presentation of the draft in question, without which one has no standing in court in case legal procedings are brought against drawee or acceptor. The present tariff for protesting a draft in Madrid is: Up to 1,000 pesetas, 13.50 pesetas; up to 2,000 pesetas, 14.50 pesetas; up to 4,000 pesetas, 15.50 pesetas; up to 10,000 pesetas, 17.50 pesetas; from 10,000 pesetas upward, 22.50 pesetas. If the protest is effected outside the city limits, the tariff is increased 20 pesetas.

In addition, there is a Government documentary stamp tax to be paid, which ranges from 2 pesetas for the sum of 1,000 pesetas up to 50 pesetas for the sum of 35,000 pesetas.

No Arbitration Machinery—Litigation Inadvisable.

No machinery is provided in Spain for the arbitration of disputes. There is an American Chamber of Commerce, Rambla de los Estudios 8, Barcelona. The Spanish Chamber of Commerce is an official organization under the ministry of public works and is supported by an allotment of 2 per cent of the industrial tax. Each of the larger cities of Spain, such as Valencia, Madrid, and Barcelona, has its own chamber of commerce and industry. There is a superior chamber made up of delegates from various local chambers of commerce.

Claims against debtors in Spain are valid for 20 years. There is no fixed charge by lawyers for the collection of accounts, the cost in each case being governed by the difficulties encountered, the amount of investigation required, and the standing of the lawyer. Legal action is not advisable except as a last resort, as litigation is expensive, always long drawn out, and almost never satisfactory in its results. The foreigner is at no disadvantage in Spanish courts because he is a foreigner but rather because he is usually not content to await the outcome of the deliberate workings of Spanish legal practice. There are good attorneys as willing to serve foreigners as natives, but the sum involved must be considerable to justify suit. For smaller amounts there is almost no way to collect except through an understanding reached by mutual concession.

Credit Terms.

There are no local laws or business customs which have special bearing on credit, the Spanish banks being thoroughly familiar through practice with accepted international usages. The credit market in Spain at the present time is rather upset, but English and French merchants regularly grant 90 days on textiles, the English also granting this time on hardware and machinery. The Germans have granted as long as six months, and recently in a locomotive order to the Government nine months. The tendency is to restrict credits as much as possible on foodstuffs, but English houses usually give from 30 to 60 days, and at times a longer period to their long-established clients.

The safety of the practice of shipping goods with payment draft against documents depends upon the individual case. When dealing with reputable banking institutions and the reimbursement draft is drawn under a confirmed credit, the operation is what could be called safe from a banker's standpoint. Usually it is believed the interests of the consignor are properly protected. The question of drafts being refused if the exchange or other conditions become unfavorable on arrival of goods requires the taking into consideration of the personal and business standing of the client with whom the exporter is dealing. In this Spanish merchants do not differ from those of other countries.

With regard to selling on open credit, this is done to some extent. Large quantities of British and French merchandise are sold on consignment, the importer remitting when payment is made to him by the buyer.

Credit Information.

A number of cases wherein losses have been incurred by American exporters in shipping to the Spanish market have come to my attention during the past two

years. Some losses were also incurred by exporters of other nationalities. It appears that most of these losses were the result of overenthusiasm for the export trade, lack of sufficient reflection, and failure to conduct sufficient inquiry and to take proper precautions. As already stated, there is no way of enforcing arbitration in Spain and no arbitrational tribunals. Further, there is no way to force payment except through expensive legal proceedings. This phase of Spanish mercantile law is difficult and unsatisfactory, but ill consequences can quite easily be evaded by carefully investigating the credit standing of prospective buyers. There are plenty of facilities for this in the various credit-reporting agencies and through the banks.

With regard to credit information, one American mercantile agency has more than a dozen branches in the leading cities of Spain and there are a number of Spanish credit-reporting agencies as well. [The names of these agencies are on file in the Bureau of Foreign and Domestic Commerce, Washington.] The regular price of reports is 2 pesetas each. Banks also give reports to their clients, no charge being made for this service.

REGISTRATION OF BUSINESS NAMES IN TRINIDAD.

Consul Henry D. Baker, Trinidad, British West Indies, March 7.

At the instance of the Trinidad Chamber of Commerce a bill has been introduced into the Legislative Council, with the support of the local government, providing for the registration of business names.

The object of the legislation is to provide that persons who do not carry on business under their true surnames shall register their full names in order that people having business with such concerns may ascertain with whom they are really dealing. The bill requires registration in the case of (*a*) every firm carrying on business under a business name not consisting of the true names of all the partners and (*b*) every individual carrying on business under a name which does not consist of his true surname without any addition other than his true Christian names or initials thereof. When the local firm or individual carries on business as general agent for any foreign firm, it will be sufficient to state the fact that the business is so carried on, specifying the country in which the foreign firm is located.

The legislation thus introduced is copied, with necessary alterations to adapt it to local conditions, from the registration of business names act, 1916, of the Imperial Parliament (6 and 7 Geo. 5, c. 58).

Protection Against Bogus Firms.

It is believed that the passage of this law would tend to eliminate bogus concerns which, having high-sounding firm or corporate names and impressive letterheads but no capital or standing, and sometimes not even an office, solicit foreign business and often receive goods, or at least samples, for which they do not pay.

The Port of Spain Gazette, in its issue of February 1, editorially explains the desirability of the proposed legislation:

> The chamber of commerce at its last meeting had under consideration a representation by the American consul on behalf of certain suppliers in the United States with regard to frauds practiced on them by persons professing to constitute a responsible trading concern in Trinidad and receiving, on the strength of such professions, consignments of goods for which they had failed to pay. Legislation was advocated on the lines of the registration of trade names act in Great Britain.
>
> Nearly a year ago we urged the passing of similar legislation in Trinidad. It is high time that irresponsible persons, acting individually or in combination, should be debarred, under penalty of criminal prosecution and resultant imprisonment, from defrauding foreign suppliers of goods for which payment is neither made nor planned. For many reasons it is desirable that trade names, carefully designed to conceal the identity of the individuals, should be prohibited except upon condition that the names of the members constituting such firms, their full addresses, and the share they hold in the business be registered officially, and that such registration be open to public inspection.
>
> We go further and suggest that before registration of a trade name be permitted formal application for a license to register be required, such application to be advertised for a month in all the newspapers of the colony; and that only in the absence of objection should registration be permitted and a license granted.

Application of British Income Tax to Foreign Companies.

Commercial Attaché Walter S. Tower, London, February 19.

In view of numerous questions received from American companies trading in the United Kingdom as to the manner in which British income-tax regulations affect them in the course of their operations, the American Embassy in London requested an authoritative statement from the British Government, and the Board of Inland Revenue furnished the following information:

> Liability to income tax extends, under rule 1 of Schedule D, first schedule to the income-tax act, 1918, "to any person, whether a British subject or not, although not resident in the United Kingdom, from * * * any trade, profession, employment, or vocation exercised within the United Kingdom." Rule 5 of the general rules to all schedules of the income-tax act, 1918, provides that a person not resident in the United Kingdom, whether a British subject or not, "shall be assessable and chargeable in the name * * * of any factor, agent, receiver, branch, or manager, whether such factor, agent, receiver, branch, or manager has the receipt of the profits or gains or not." Further relevant provisions are contained in the succeeding rules.
>
> The question whether in any particular case the circumstances are such as to constitute trading within the United Kingdom is one primarily for the determination of the appropriate body of income-tax commissioners in the light of all the facts. Several cases have been carried into the courts, and the courts have had to decide whether in those cases the evidence before the commissioners justified the conclusion of fact which was reached; they have, however, laid down no exact definition of what constitutes trading within the United Kingdom. The circumstances vary from case to case, and each case requires to be considered according to the particular facts which it presents.
>
> It is therefore not possible to give any definite reply to the inquiry of the American chargé d'affaires. Important factors bearing on the liability in any case are the questions where the contracts are made and where the delivery of the goods takes place, but probably neither of these can of itself be regarded as necessarily decisive.

[A copy of the British income-tax act, 1918, is on file in the Division of Commercial Laws, Bureau of Foreign and Domestic Commerce, Washington.]

Bankruptcy and Insolvency Laws of Bulgaria.

An exhaustive report on the bankruptcy and insolvency laws of Bulgaria, by Consul Graham H. Kemper, Sofia, has been received in the Washington office of the Bureau of Foreign and Domestic Commerce and will be loaned to those interested by the Division of Commercial Laws under file No. 90077.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

RAILWAYS.

SALES INFORMATION ON LATIN AMERICAN RAILWAYS.

The following article is the fourth in a series on individual railways in Latin America. All available published sources of information have been used, and additional specific data have been obtained from consuls. A handbook containing this information in greater detail for all the railways in Latin America will be published later.

FERROCARRIL DEL PACIFICO DE NICARAGUA.

W. R. Long, Transportation Division.

Preliminary studies for the construction of a railway in Nicaragua were begun in 1878. The first section—that from Corinto to Chinandega on the western division—was opened for service January 1, 1881. The line was extended from the latter point to Leon, and the western division was formally opened to traffic November 15, 1882. The extension from Leon to Monotombo, the port terminus of the road, was completed December 30, 1883; the eastern division from Managua to Granada was opened March 1, 1886; and the central division from Managua to Leon was ready for traffic a few years later. The road at present has a total main-line mileage from Granada to Corinto of 120.046 miles, with a branch 27.015 miles long from Masaya to Diriamba, and one 3.72 miles long from Chinandega to El Viejo, together with yards and sidings aggregating 9.66 miles—a grand total of 160.441 miles. No plans for new branches or extensions or for the electrification of the line are being considered for the near future.

Grades, Curves, and Altitude.

The maximum grade of the road—3.5 per cent—occurs in the approach to Masaya from Managua, in a grade 9 miles long averaging 1 per cent. Between Masaya and Grenada there is a 5-mile grade averaging 2.2 per cent, with a maximum of 3 per cent. From Managua to Asososca there is a 5-mile grade averaging 1.07 per cent; from Asososca the grade is 3 miles long and averages 1.8 per cent. On the Diriamba branch, just after leaving Masaya, there is a 6-mile grade averaging 3 per cent, with a maximum of 3.2 per cent. The radius of the sharpest curve on the road is 12°. Diriamba, 1,188 feet above, and Corinto, at sea level, represent the highest and lowest points on the road.

Bridges and Tunnels—Clearances.

There is one tunnel of approximately 300 feet; there are 10 bridges, running from 25 to 1,350 feet in length.

The maximum clearance throughout the entire system, except on the Diriamba branch, is 9 feet 6 inches wide, 12 feet high, and 33 feet long. On the Diriamba branch a tunnel limits the height to 11 feet.

Trackage.

Rails.—The present track is laid for 12 miles with rails weighing 60 pounds per yard, for 15 miles with rails weighing 50 pounds per yard, and for the remaining 130 miles (approximately) with rails weighing 40 pounds per yard. Sections 33 feet in length are commonly used.

The profile of the rails, in inches, is as follows: 60-pound rails—height 4-1/4, width 4-1/4, flange 1-15/64, throat 1-5/32, face 2-1/4; 50-pound rails—height 3-7/8, width 3-7/8, flange 1-1/8, throat 7/16, face 2-1/8; 40-pound rails—height 3-1/2, width 3-1/2, flange 1-1/64, throat 25/64, face 1-7/8.

Ties and ballast.—The ties are in good condition, as most of them have been placed within the last three years. The average spacing of ties is about 2½ feet.

The roadbed and track are in good condition. Nothing but a dirt ballast is used, but the right of way is well ditched and the drainage is good.

Rolling Stock.

The rolling stock owned by the Pacific Railway on June 30, 1922, was as follows:

	Number.
Locomotives (1 wood burner and 16 oil burners)	17
Passenger cars:	
First class	7
Second class	14
Baggage cars	7
Chair cars	2
Private or special coaches	2
Total	32

	Number.
Freight cars:	
Box cars	93
Flat cars	29
Wood racks	9
Oil-tank cars	9
Water-tank cars	1
Gasoline cars	2
Caboose	1
Total	144

Brakes and Couplers.

Installation of Westinghouse air brakes, hand brakes, and automatic couplers has been carried on almost continuously, with the result that the greater part of the rolling stock is in good condition for safe and efficient operation. The couplers used on the rolling stock are medium M. C. B., 29 inches from top of rail to center of coupler. The draft-rigging, buffer, and coupler regulations are all M. C. B. specifications.

Fuel and Water Supply—Signaling Equipment.

Oil is the fuel used throughout the entire system. The company has an oil-storage tank of 37,500 barrels capacity at Corinto, and fuel-oil storage and supply tanks at four principal junction and terminal points, from 12 to 85 miles apart.

The water supply is poor on certain parts of the road during the dry season, principally along the Diriamba branch. At this time it is necessary to transport water in tank cars to the nine places were water tanks exist—from 10 to 34 miles apart along the line.

Dispatching of trains is done entirely by telegram.

Shops and Appurtenances.

There are no facilities for repair work at Corinto, the company's shops, roundhouses, and general offices being at Managua. Two drive-wheel centers have been installed, together with oil-burning furnaces for foundry work, made from an oil-burner shell. With this equipment the local staff makes all castings required for the road and does an additional commercial business. All of the old engines were converted to oil burners in these shops, and practically all of the rolling stock purchased outside has been rebuilt there. Some rolling stock has been constructed in the shops, the advantage lying in the fact that the wood used in local construction can stand Nicaraguan climatic conditions, which is not the case for wood used in construction from the United States; furthermore, the structural difficulties involved in the reassembling of a car after shipment are avoided. The greater part of the company's freight cars are of wood-frame construction.

Financial History of the Ferrocarril del Pacifico.

The current financial history of the Ferrocarril del Pacifico dates from October 22, 1913, when the firms of Brown Bros. & Co. and J. & W. Seligman & Co., of New York City, purchased 51 per cent of the stock of the railroad from its owner, the Republic of Nicaragua. The remaining 49 per cent was retained by the Republic. At the time of this purchase the capital stock outstanding was $3,300,000. For more than a year preceding the purchase the road had been under the management of the J. & G. White Management Corporation, which continued in charge.

Under the terms of the contract of sale a board of directors was to be appointed. From 1913 to 1920 this board controlled the activities of the road. On August 31, 1920, the Republic of Nicaragua entered into a contract with Brown Bros. & Co. and J. & W. Seligman & Co. for the repurchase of their controlling 51 per cent of stock in the Ferrocarril del Pacifico. The terms of the contract called for $300,000 in cash and for $1,450,000 in Treasury bills, with interest at 9 per cent to run for five or six years.

During the year ended June 30, 1922, the road showed a net income of $170,905, as compared with $221,075 during 1914.

Finances of the Ferrocarril del Pacifico.

The balance sheet of the Ferrocarril del Pacifico de Nicaragua for the year ended June 30, 1922, is as follows:

ASSETS.

Road and equipment	$3,916,549
Cash	147,705
Accounts receivable	5,829
Accounts receivable, Government of Nicaragua	41,139
Materials and supplies	152,531
Prepaid accounts	3,872
Items in transit	15,689
Total	4,283,314

LIABILITIES.

Capital stock, common	$3,300,000
Accounts payable	9,378
Deferred credits-prepaid rentals	15,500
Reserve for retirements	298,792
Surplus	659,644
Total	4,283,314

Operating Statistics.

The operating statistics of the road for the year ended June 30, 1922, are as follows:

Average revenue per ton-kilometer	$0.068
Average ton of freight per loaded freight car	8.340
Average revenue per revenue-ton of freight	$6.155
Average revenue per revenue-passenger	$0.484
Gross-ton kilometers per freight-train kilometer	184.980
Gross-ton kilometers per mixed-train kilometer	124.490
Gross-ton kilometers per engine-train kilometer	119.850
Gross-ton kilometers	5,254,808
Freight-train kilometers	28,407
Freight-train car-kilometers	377.405
Revenue per passenger-kilometer	$0.013
Passenger revenue per kilometer of road	$968.220
Total passengers carried	476,180
Per cent of passengers traveling second class	81.400

Character of Traffic.

Coffee is the principal commodity transported by the railroad. It is estimated that a poor coffee crop decreases the revenue of the road 10 per cent. Traffic statistics for the year ended June 30, 1922, are as follows:

Traffic items.	Revenue.	Number.
Passenger traffic:		
First class	$78,861	73,851
Second class	125,402	387,494
Third class	26,174	14,835
Total	230,437	476,180

Traffic items.	Revenue.	Tons.
Freight traffic:		
Agricultural products	$149,729	18,441
Animal products	9,185	1,404
Mineral products	911	333
Forest products	20,284	6,366
Manufactures—		
Refined sugar	57,015	11,969
Imports	98,496	16,019
Miscellaneous	1,345	214
Total	336,965	54,746

Purchasing agents and operating personnel.

The names of parties responsible for purchases made by the Ferrocarril del Pacifico, together with the names and addresses of the railway's operating staff, may be obtained from the Transportation Division of the Bureau of Foreign and Domestic Commerce on request.

South African Railway and Harbor Estimates, 1923-1924.

Consul Charles J. Pisar, Cape Town, February 20.

Expenditures for the South African railways and harbors for the fiscal year ending March 31, 1924, are estimated at £23,178,532, being £884,862 less than for 1922-23. This decrease is due principally to reductions in wages and number of employees, consequent upon a reorganization and curtailment of work; but materials can be purchased now at lower prices than formerly; and, in addition, some services will be suspended, resulting in a 6.74 per cent reduction in train mileage.

South African railway expenditures, fiscal year ending March 31—

Items.	1923	1924 (estimate).
Railways	£22,753,653	£21,890,355
Harbors	1,093,735	1,107,249
Steamships	216,006	180,928
Total	24,063,394	23,178,532

Earnings during the nine months ended November 30, 1922, decreased £1,016.000, as compared with the same period in 1921. The accumulated deficit was reduced by £2,000,000, which was taken from the renewal fund during the year ended March 31, 1923. The remaining deficit must be paid out of the earnings.

Exhibits Available.

Interested persons may obtain the following exhibits from the Transportation Division, or through the proper cooperative or district office, by referring to the number in each case:

87453—Java and Madoera.—Statement of income from the railways and tramways of Java and Madoera during 1922. (Consul P. W. Buhrman, Soerbaya, January 26.)

88045—Java and Sumatra.—Railways in Netherlands India; mileage, equipment, repair facilities, etc., on January 1, 1922. (Consul C. L. Hoover, Batavia, January 22.)

87456—Germany.—Cylinder bearings in railway vehicles; translation from Industrieblatt (Stuttgart), of February 7, 1923. (Consul M. K. Moorhead, Stuttgart.)

87151—Siamese State Railways.—Twenty-fifth Annual Report, for the year ended March 31, 1922; with map and plates. (Consul M. P. Dunlap, Bangkok.)

7787—*London.*—Report on interlocking directorates in British trade, showing how railway and shipping companies are linked with other industries. (Assistant Trade Commissioner H. B. Allin Smith, London.)

Additional information regarding railways appears in this issue under the following sections:

Africa: South African railway and harbor estimates, 1923-24.

SHIPPING.

CURRENT AMERICAN SHIPBUILDING.

On April 1, 1923, American shipyards were building or under contract to build for private shipowners 236 steel vessels of 269,911 gross tons, compared with 242 steel vessels of 280,278 gross tons on March 1, 1923.

These figures do not include Government ships or ships building or contracted for by the United States Shipping Board.

Following is a summary of reports of shipyards to the Bureau of Navigation, Department of Commerce, showing the number and gross tonnage of steel vessels under construction or contract for private owners on April 1, 1923:

Companies.	Number.	Gross tonnage.
American Bridge Co., Ambridge, Pa	91	42,190
American Car & Foundry Co., Wilmington, Del	7	3,350
American Shipbuilding Co., Cleveland, Ohio	6	43,300
Bath Iron Works, Bath, Me	1	800
Bethelehm Shipbuilding Corporation (Ltd.):		
Baltimore dry docks plant, Baltimore, Md	1	920
Harland plant, Wilmington, Del	5	2,626
Sparrows Point plant, Sparrows Point, Md	4	11,650
Union plant, San Francisco, Calif	2	26,700
Chas. Ward Engineering Works, Charleston, W. Va	5	1,240
Dravo Contracting Co., Pittsburgh, Pa	31	15,140
Federal Shipbuilding Co., Newark, N. J	5	10,486
Geo. Lawley & Son Corporation, Neponset, Mass	1	300
Great Lakes Engineering Works, Ashtabula, Ohio	2	3,200
Great Lakes Engineering Works, River Rouge, Mich	2	8,550
Herreshoff Manufacturing Co., Bristol, R. I	1	.....
Howard Shipyards Co., Jeffersonville, Ind	2	995
James Rees & Sons Co., Pittsburgh, Pa	1	175
John H. Mathis Co., Camden, N. J	2	.....
Johnson Iron Works, Dry Docks & Shipbuilding Co., New Orleans, La	3	1,000
Los Angeles Shipbuilding & Dry Dock Corporation, Los Angeles, Calif	3	712
Manitowoc Shipbuilding Corporation, Manitowoc, Wis	1	175
Marietta Manufacturing Co., Point Pleasant, W. Va	15	4,748
Nashville Bridge Co., Nashville, Tenn	2	500
Newport News Shipbuilding & Dry Dock Co., Newport News, Va	2	13,000
New York Shipbuilding Corporation, Camden, N. J	3	20,195
The Pusey & Jones Co., Wilmington, Del	5	4,990
Riter-Conley Co., Pittsburgh, Pa	10	9,000
Staten Island Shipbuilding Co., Mariners Harbor, N. Y	5	1,200
Sun Shipbuilding Co., Chester, Pa	8	14,919
Todd Dry Dock & Construction Corporation, Tacoma, Wash	1	3,000
Tebo Yacht Basin Co., Brooklyn, N. Y	2	450
Toledo Shipbuilding Co., Toledo, Ohio	3	21,200
Union Construction Co., Oakland, Calif	1	1,100
Wm. Cramp & Sons Ship & Engine Building Co., Philadelphia, Pa	3	2,100
Total	236	269,911

Details of New Contracts.

Following are the particulars of new contracts entered into during the month of March, 1923:

Vessel.	Gross tonnage.	Speed.	Owner.	Trade.
Los Angeles Shipbuilding & Dry Dock Corporation, Los Angeles, Calif.: Hull No. 41	230	(1)	Associated Oil Co	Bulk oil.
Marietta Manufacturing Co., Point Pleasant, W. Va.: Hull No. 137	105	(2)	Vesta Coal Co	Cargo.
Hull No. 138	105	(2)	.....do	Do.
John H. Mathis Co., Camden, N. J.: (2)	(2)	(1)	Reading Co	Car float.
(2)	(2)	(1)	.....do	Do.

New York Central No. 32.	235	12	.....do	(1)

[1] Not given. [2] No power.

GERMAN SHIPBUILDING IN 1922.

Consul Orsen N. Nielsen, Berlin, March 8.

Vessels under construction in German yards in 1922 for both German and foreign accounts totaled 1,353, of 1,495,700 gross tons, a decrease of 14.9 per cent from the 1921 figure, according to the Statistische Reichsamt. However, the comparatively low construction costs in Germany resulted in an increase in the number of foreign orders from 66 in 1921 to 100 in 1922. German orders increased in number from 1,141 to 1,253.

In contrast to the decrease in gross tonnage of vessels under construction the actual tonnage output of German yards was greater in 1922 than in 1921 by 64.5 per cent.

German and Foreign Orders Constructing and Completed.

The following table compares tonnage under construction and tonnage completed in 1920, 1921, and 1922, and indicates the total German and foreign orders under each classification:

Tonnage under construction and tonnage completed, 1920, 1921, and 1922.

Year.	For German account.		For foreign account.		Total.	
	Number.	Tonnage.	Number.	Tonnage.	Number.	Tonnage.
1920—Under construction	833	1,572,800	59	141,600	892	1,714,300
Completed	290	243,000	40	84,700	330	327,700
1921—Under construction	1,141	1,681,400	66	59,600	1,207	1,741,100
Completed	343	409,900	54	40,900	397	450,900
1922—Under construction	1,253	1,393,200	100	102,500	1,353	1,495,700
Completed	648	710,100	37	32,000	685	742,100

Of the total under construction for German accounts in 1921, 1,086 vessels, of 1,667,000 tons, were seagoing

merchant ships; in 1922 this class of vessel being built for German companies dropped to 407, with a total tonnage of 1,171,600, a decrease in tonnage of 29.6 per cent.

The German tendency toward construction of motor ships is shown by the fact that in 1920 motor ships aggregating 73,000 tons were under construction; in 1921, 135,000 tons; and in 1922, 121,000 tons.

In both 1921 and 1922 there were under construction in foreign yards for German accounts between 40,000 and 50,000 gross registered tons. These consisted of orders placed in the hands of former German companies in Danzig and Memel before the separation of those districts from Germany, and now represent tonnage intended for the reparations account.

In 1920 about 67 per cent of the vessels completed came from the North Sea yards; in 1921, 60 per cent; and in 1922, 56 per cent. The Baltic Sea yards, on the other hand, show increasing business in 1921 and 1922, in the latter year delivering 34 per cent, as compared with 33 per cent in 1921 and 29 per cent in 1920. Inland shipyards built approximately 12,000 tons in 1920, 72,000 tons in 1921, and 31,000 tons in 1922.

Schedule for Nailing Export Boxes.

Cheaper export packing is usually the result of a careful consideration of correct nailing. The proper spacing of nails and the use of the right kind and weight for the wood being used effects a saving in the amount of lumber required to give ample protection to the commodity shipped.

The following nailing schedule has been worked out from actual tests made at the Forest Products Laboratory, Madison, Wis., and is accepted as standard by box makers all over the country:

Size of nail for various kinds and thicknesses of wood.

Kind of wood.	Thickness of wood, in inches (ends or cleats to which sides, top, and bottom are nailed).						
	3/8	7/16	1/2	9/16	5/8	3/4	7/8
	Size of nail (cement coated).						
Group 1 (white pine, Norway pine, spruce, aspen, cypress, fir, western yellow pine)	4d	5d	5d	6d	7d	8d	9d
Group 2 (southern yellow pine, Virginia pine, Carolina pine, hemlock)	4d	4d	5d	5d	6d	7d	8d
Group 3 (white elm, sycamore, black ash, black gum, red gum, tupelo, maple)	3d	4d	4d	5d	5d	6d	7d
Group 4 (hard maple, beech, oak, birch)	3d	3d	4d	4d	4d	5d	7d

Estimating Number of Nails Required.

To determine the number of nails to be used, divide the width of the side, top, and bottom (or length of cleat) by the spacing specified below. Fractions greater than one-fourth (if nail points are held in end grain) and greater than one-half (if held in side grain) will be considered a whole number.

Size of nail.	Spacing of nails driven into—	
	Side grain of end.	End grain of end.
	Inches.	*Inches.*
6d. or less	2	1¾
7d	2¼	2
8d	2½	2¼
9d	2¾	2½

SHIPPING NOTES.

Service Between Barcelona and Italy Reestablished.

The "Adria" Societa Anonima di Navigazione Marittima has reestablished a weekly service from Barcelona as follows: Marseille-Porto Maurizio, Genoa, Liverno, Naples, Palermo, Messina, Malta, Catania, Bari, Trieste, Venice, Fiume, and the same route on return. (Consul Frank A. Henry, Barcelona, Spain, February 26.)

Further Expansion of German Orient Line.

The service of the German Orient Line from Stettin and Hamburg has been extended to include the following ports on the Adriatic Sea: Fiume, Trieste, Venice, Ancona, Bari, and Brindisi. Calls will be made at other ports on demand. The *Kolberg* was scheduled to make the first trip from Stettin on March 2, and from Hamburg on March 9. (Vice Consul Lewis B. R. Sparks, Stettin, February 22.)

East African Coal for Europe.

An interesting development in Suez Canal traffic is the appearance of northbound coal cargoes. Cardiff coal, bound for Indian and oriental ports, forms a large proportion of the southbound canal traffic; but the coal crisis in central and eastern Europe, caused by the French occupation of the Ruhr, has resulted in a demand for tonnage in Durban to carry East African coal to Trieste and Danzig. (Consul Coert du Bois, Port Said, February 26.)

Establishment of Finnish Harbor Union.

The first Finnish Harbor Congress, which met at Helsingfors January 22 and 23, decided unanimously to establish a Harbor Union to make uniform regulations for all ports of the country, fix similar rates, and arrange for uniform methods of bookkeeping and compiling statistics, yearbooks, etc. Provisions are also being made for storm signaling, information about ice conditions, etc. Committees were appointed to work out necessary plans. (Consul Leslie A. Davis, Helsingfors, February 13.)

Inauguration of Denmark-Canada Service.

The United Steamship Co. of Copenhagen has announced that it will open a regular steamship line between Copenhagen and Montreal in May, for the delivery of western grain and other goods to Danish, Scandinavian, and Baltic ports. It is believed that sufficient traffic can be developed to warrant one sailing a month. (Consul General Marion Letcher, Copenhagen, March 15.)

Additional information regarding shipping appears in this issue under the following sections:

Petroleum: Fuel-oil trade in the Canary Islands.
Tariffs and trade regulations:
Authorization of free ports in Latvia.
Merchandise lost during Cuban port congestion exempt from

COMMUNICATIONS.

PRIVATE OPERATION OF TELEPHONES IN ITALY.

Commercial Attaché H. C. MacLean, Rome, March 6.

The Minister of Posts and Telegraphs has recently made public the most important provisions of a decree soon to be issued, transferring the telephone system of Italy to private operation. A brief summary of this announcement follows:

Reasons for State Withdrawal—General Terms.

The Government's decision to withdraw from the telephone field is based on two considerations—first, to improve the service through additions, extensions, and modernization of the plant and reorganization of the personnel; second, to relieve itself of the present deficit and, if possible, to create a source of revenue.

The decree authorizes the Government to give to public bodies, to private companies, or to individuals concessions covering the operation of the State telephone systems in whole or in part. The concessionnaires in each case must contract to reorganize, extend, or perfect the existing plants in accordance with Government plans, local manufacturers being given the preference in the purchase of supplies. A minimum period of 25 years is established for such concessions, and at the expiration of any concession the State need not exercise its right to take over the plant until after an additional period of 15 years.

Terms of Compensation to State—Reversion Terms.

Concessions can be made either against payment for the value of plants taken over or by participation of the State in the capital of the new company. Under the first condition, interest must be paid annually; but the payment itself may be postponed until the end of the concession and charged against the amount credited to the company, in case the plants are returned to the Government, or it may be amortized in annual installments covering a period of not more than 25 years. In the district allotted the concessionnaire will enjoy exclusive rights; furthermore, where old concessions exist they may be extended so as to expire at the same time as new concessions that may be granted on the basis of the decree. The State will receive annual payment of not less than 5 per cent of the gross receipts of the operating companies and a graduated percentage of the net profits in excess of 7 per cent.

In the case of plants reverting to the State the price fixed can not exceed the value of the material in use at the time the appraisal is made—from which there shall be deducted a portion of any contribution received from public bodies for the establishment or extension of the lines and an amount equal to one-half of the net surplus belonging to stockholders over and above the amount actually paid when the stock was issued. Furthermore, the State reserves the right to take over all of the shares, making payment at the average price for the five years previous.

Single or Multiple Concession Not Decided.

No definite decision has been made as to whether a concession for the entire telephone system should be granted to one single company or whether a number of concessions should be made to local companies in order to interest local capital. If the latter plan is followed, provision will be made for the unification of all the various telephone companies in a national syndicate in such a manner as to insure their technical and financial operation, which is considered essential if efficient service is to be maintained.

It is reported that many applications for concessions have already been received, not only from Italian groups but also from American, British, and Scandinavian interests. It is intended to carry out the reorganization of the telephone service along the lines indicated above during the current year.

Air Mail Notes.

Proposed Air Line, Plymouth to London.

In order to expedite the arrival of mails in London from boats touching at Plymouth, the Instone Air Line Co. has offered, as an experiment, to run an air mail delivery from Plymouth each Friday for one month. (Commercial Attaché Walter S. Tower, London, February 26.)

Air Mail to Prince Edward Island.

Owing to difficulties and delays experienced in the delivery of mail to Prince Edward Island, especially during winter months, an investigation is being made by the Canadian Government with a view of establishing an air mail service to the island, if possible. (Vice Consul Arthur B. Giroux, Charlottetown, February 15.)

Additional information regarding communications appears in this issue under the following sections:

Electrical equipment:
Chilean interest in radio.
Italian radio operation opened to private interests.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

IMPORT AND EXPORT RESTRICTIONS.

PERU.

Acting Commercial Attaché W. E. Dunn, Lima, March 17.

Restrictions Governing Importations of Drugs and Narcotics.

The importation of drugs and narcotics into Peru is allowed only through the port of Callao, according to a recent ruling in regard to law No. 4428, regulating imports of drugs and narcotics. Opium, cocaine, and all by-products, substitutes, and preparations of such drugs, including vials for hypodermic injections and tablets for preparing same, are subject to these restrictions.

Parcel-post packages containing drugs and narcotics shall not be received in any post office except that of Lima. All customhouses shall dispatch to Callao all packages of such drugs already received or that shall be received by them for distribution. The post offices shall dispatch to Lima likewise the parcel-post packages containing such drugs, etc., to be distributed there through the post-office department. No drugs shall be dispatched through the post office of Lima without the corresponding bill of lading from the customhouse of Callao.

POLAND.

Consul General L. J. Keena, Warsaw, March 14.

Removal of Export Prohibition on Cylinder and Lubricating Oil.

An order of the ministers of commerce, finance, agriculture, and the interior dated February 28, 1923, and published in the Monitor Polski, No. 59, removes cylinder and lubricating oil (item 85–1) from the list of prohibited exports.

PORTUGAL.

Diario do Governo, Lisbon, March 13.

Permission for Limited Importation of Wheat.

Permission is given for the importation into Portugal of 5,000,000 kilos of foreign wheat, according to a decree of March 27, 1923. This wheat must be exclusively for use in alimentary pastes. A special import duty of 0.01 escudo per kilo is established for this product.

[The importation into Portugal of wheat and wheat flour is governed by special restrictions.]

RUMANIA.

Consul Ely E. Palmer, Bucharest, March 12 and 16.

Export Prohibition on Cattle.

The exportation of all kinds of cattle from Rumania is prohibited until June 1, 1923, according to a decision of the council of ministers published in the Monitorul Official for March 4, 1923. The exportation of cattle had previously been subject to license. The avowed purpose of the prohibition is to prevent a shortage of meat in the local market.

Removal of Export Prohibition on Onions.

The exportation of onions from Rumania is now subject to license, according to a decision published in the Monitoral Oficial for March 13, 1923, which removes the prohibition on the exportation of these products. In connection with the removal of this prohibition, the local press reports that there are large surplus stocks of onions in the country, particularly in Transylvania.

Consul Ely E. Palmer, Bucharest, March 20.

Removal of Export Prohibition on Mustard Seed.

The exportation of yellow mustard seed from Rumania is again permitted, provided, however, that special authorization be obtained from the ministry of industry and commerce, according to a decision published in the Monitorul Oficial for March 15, 1923, and effective on that date. The export duty is fixed at the equivalent of 30,000 lei per carload of 10 metric tons, paid in the so-called "high currencies" at rates which are to be published periodically.

Removal of Export Prohibition on Hare and Rabbit Skins.

The exportation of hare and rabbit skins from Rumania is now free of all prohibition or restriction, according to a decision published in the Monitorul Oficial for March 8, 1923.

SIBERIA.

Consul S. Pinkney Tuck, jr., Vladivostok, March 2.

Licenses Required for All Importations and Exportations.

All government, economic, or cooperative establishments and organizations, as well as private persons, will have to obtain special licenses or certificates from the license department attached to the Far Eastern People's Commissariat of Foreign Trade in order to carry on export and import operations, according to an order published in the Red Banner (Vladivostok) for February 25, 1923.

Licenses for exportation to the United States may be obtained at the license bureau at Vladivostok or at Chita.

A tax of 2 per cent of the selling price will be collected on the issue of export licenses and 2 per cent of the purchasing price on import licenses. These charges are in addition to the regular duties.

[Announcements of recent developments in the changed policy of foreign-trade control in Siberia appeared in COMMERCE REPORTS for February 26, 1923, page 573, and for March 26

SOUTHERN RHODESIA.

Consul Charles J. Pisar, Cape Town, South Africa, March 7.

Restriction on Importation of Japanese Shaving Brushes.

The importation into Southern Rhodesia of shaving brushes manufactured in or exported directly or indirectly from the Empire of Japan is prohibited, except by permit from the Medical Director, according to a notice published in the Government Gazette of the British South Africa Co. for March 2, 1923, by the Department of the Administrator, acting under the provisions of the Injurious Substances of Animals Ordinance, 1909. All such articles when imported shall be detained for examination at the public health laboratories, at the risk and expense of the importer.

GENERAL TARIFF CHANGES.

BELGIUM.

Proposed New Customs Tariff.

A copy of the bill containing the proposed Belgian tariff has been forwarded to the bureau by Leigh W. Hunt, secretary to Commercial Attaché S. H. Cross at Brussels, under date of March 21, 1923. While this tariff is not final, it will probably be adopted largely in its present form, although certain of its provisions are subject to pending negotiations with various countries.

The exposé des motifs of the bill states that although the duties on certain articles have been increased, the traditional liberal tariff policy of Belgium has been retained.

The principal features of the proposed tariff are:

(1) A longer and more differentiated classification of articles for customs purposes, the classification of the present tariff being regarded as out of date.

(2) The establishment of a two-columned tariff with minimum and maximum rates, the maximum rates being three times those of the minimum tariff. It is the intention to apply the maximum rates, or rates intermediate between the maximum and minimum duties, in whole or in part, to goods from countries which (*a*) do not have a treaty with Belgium and do not accord Belgian products most-favored-nation treatment, or (*b*) which impair Belgian commerce, navigation, or industry by import or export prohibitions or restrictions or by the application of excessive duties or taxes. The higher rates may also be applied temporarily to goods from countries with depreciated currencies when domestic industries are imperiled by the effects on trade of such depreciation.

(3) Although it is proposed to retain the present system of "coefficients of increase," these coefficients may be reduced, abolished entirely, or reestablished, provided that when reestablished they shall not in any case exceed the rates fixed by the new law.

(4) For the most part the new duties in the proposed tariff are specific, but certain ad valorem duties are retained. Under a law of June 16, 1905, however, the Government retains the power to convert the ad valorem duties into specific duties, if considered necessary.

MADAGASCAR.

Journal Officiel de Madagascar, Tananarive, January 13.

Statistical Tax on Imports and Exports Increased.

The statistical tax in Madagascar is increased from 25 centimes (fixed by decree of August 30, 1921) to 30 centimes, according to a decree of January 8, 1923, effective January 15. By this increase the tax in Madagascar is made equal to that levied in France.

[The statistical tax is assessed on each package for merchandise in casks, cases, sacks, or other packing, on each 1,000 kilos or each cubic meter for merchandise in bulk, and on each animal alive or dead. It applies both to imports and exports.

NEW GUINEA.

Vice Consul Ray Fox, Melbourne, Australia, February 19.

Revision of Import and Export Tariff Schedules.

The new schedule of import and export duties for the mandate territory of New Guinea has recently been issued. The most noticeable changes in the import tariff are those relating to the importation of automobiles, cycles, and accessories (when not for industrial or commercial purposes); tobacco and cigarettes, and spirituous liquors. The free list has been somewhat enlarged and made more specific. Commercial samples to be reexported remain on the free list. The export duty on copra has been increased.

The principal changes affecting United States commerce are as follows:

Tariff No.	Article.	Former duty.	New duty.
	IMPORT DUTIES.		
6	Tobacco and all unspecified tobacco manufactures	1s. 6d.....	2s. 6d.
7	Cigars (unchanged).....per M..	£1.....	£1.
8	Cigarettes.....per M..	10s.....	15s.
10	Films for rent, 10% ad valorem, based on the amount of rent.	.....	
11	Cinema machines, apparatus and parts, 10% ad valorem.	.....	
14	Autos, cyclos, and accessories, other than those imported for purely industrial or commercial purposes.	Free.....	10% ad valorem.
	EXPORT DUTIES.		
1	Copra.....per ton..	£1.....	25s.

TARIFF CHANGES ON SPECIFIC ARTICLES.

FRENCH INDO-CHINA.

Journal Officiel, Paris, March 25.

Decreased Export Duties on Rice.

Export duties on rice in French Indo-China have been reduced by decree of March 22, 1923, as follows:

Articles.	Export duties.	
	Former.	Present.
	Francs per 100 kilos.	*Francs per 100 kilos.*
Paddy and cargo rice, containing more than 33 per cent of paddy, gross	7.60	3.04
Cargo rice, containing less than 33 per cent of paddy, gross	4.20	1.68
White rice, gross	3.20	1.28
Rice flour and ground rice, gross	.30	.12

GREECE.

Cable from Acting Commercial Attaché R. O. Hall, Athens, April 28.

Abolition of Exchange Control.

A decree of April 23 practically abolishes Greek exchange control, except respecting currants. Instead, export taxes have been imposed, payable in sterling exchange, on a number of articles, including a tax of 20 per cent on hides and skins, raisins, and tobacco grown during the last 2 years; 12 per cent on olive oil. Figs and older tobacco are free.

Tobacco is exempted from duty if exchange was imported under the consortium and recent administration.

[The Greek exchange regulations formerly required that 40 per cent of the exchange derived from exportation must be turned over to the Government at the official rate of 155 drachmas to the pound sterling, and the remaining 60 per cent of the exchange had to be sold to approved Greek banks within certain time limits, except that for a few articles, including hides, skins, cocoons, tobacco, currants, and figs, the full proceeds of the foreign exchange were formerly required by the Govern-

HONDURAS.

Consul Robert L. Keiser, Tegucigalpa, March 24.

Increased Import Duty on Cattle.

The duty on live cattle imported into Honduras has been increased from 2 to 5 pesos per head, according to a decree of March 2, 1923. Cows and blooded bulls may be imported free of duty.

Duty Exemption on Lumber and Other Construction Material.

A decree of March 17 places lumber for construction purposes on the free list when it is imported into the Departments of Cortes, Atlantida, Colon, and Bay Islands. Cement, bars or beams of iron or steel for reinforced and concrete construction, and iron and zinc sheets for roofing remain on the free list for the entire Republic.

ITALY.

Cable from Commercial Attaché H. C. MacLean, Rome, April 14.

Temporary Reduction of Import Duty on Kerosene for Certain Uses.

A royal Italian decree of April 12 makes effective the reduction of import duty on kerosene for use in agricultural motors from 24 gold lire per 100 kilos to 10 gold lire until December 31, 1923, on the condition that 1 gram of red Soudan No. 4 must be added, under customs supervision, to every 102 kilograms of oil imported. The decree also exempts such kerosene from payment of the sales tax.

Gazzetta Ufficiale, Rome, March 12, 1923.

Increased Export Tax on Archeological Articles.

The export tax on articles of historical, archeological, paleontological interest, ancient manuscripts, incunabula, rare prints, cuts, and old coins has been increased according to an Italian decree effective on date of publication March 12, 1923, as follows:

	Per cent.
Former tax:	
First 5,000 lire	12
Second 5,000 lire	16
Third 5,000 lire	20
Fourth [1] 5,000 lire	24
Present tax:	
First 15,000 lire	20
Second 15,000 lire	30
Third 15,000 lire	40
Fourth 15,000 lire	50
Fifth [2] 15,000 lire	60

[1] Over 20,000 lire, 40 per cent of the total value.
[2] Over 75,000 lire, 40 per cent of the total value.

MEXICO.

Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City, April 16.

Reduction in Duty on Small Pneumatic Tires and Tubes.

The classification of pneumatic tires and tubes has been changed by a Mexican decree, effective April 13, 1923, so that the import duty is reduced on certain small sizes of tires and tubes. Item 633–A is now qualified by the words "not specified," so that it reads: "Item 633–A. Pneumatic tires of rubber and inner tubes for the same not specified, 2 pesos per gross kilo." (This item formerly included all pneumatic rubber tires.) A new item is created to read: "Item 633–E. Pneumatic tires of rubber, including casings, weighing from 4,400 grams up to 10,000 grams net, and inner tubes weighing from 600 grams up to 1,500

RUMANIA.

Commercial Attaché Louis E. Van Norman, Bucharest, March 9.

New Regulation for the Payment of Export Duties on Cereals.

The Rumanian Government has ruled that the privilege heretofore accorded grain exporters of paying export duties in any of the high "valuta" currencies is now withdrawn. In the future all export duties on cereals must be paid either in the currency of the country of destination or (if this currency is lower than the Rumanian leu) in French francs.

POLAND.

Consul General L. J. Keena, Warsaw, March 10.

Additional Articles in Luxury Duty List.

The following tariff items are now subject to the luxury coefficient of 3,000, instead of the general duty coefficient of 2,000 as heretofore, according to an order on January 25, 1923, published in the Polish Journal of Laws for February 9, 1923:

(Item 77–6a) sheet glass, blown or cast, not ground and not polished, having a thickness of 5 mm. or less, white (transparent), half-white, or of natural bottle-green color, plain, without patterns or embellishments, and having a superficial area of 1 square meter or less; (item ex108–4) acetic acid; (item 112–1d) methyl alcohol and acetone; (item ex217–3) fuses, tarred, but not vulcanized.

UNITED KINGDOM.

Cable from consul general's office, London, April 21.

Proposal to Establish Import Duty on Malting Barley.

An import duty of 10 shillings per quarter would be imposed upon malting barley by a bill which the Minister of Agriculture has announced in the House of Commons will be introduced by the Government. The bill would provide a preference of one-third for barley from the British dominions. The bill is to be introduced shortly and provides for the payment of the duty at the brewery, distillery, or malt house.

A similar proposal to impose a duty on wheat offal has been rejected by the British Government, according to a later cable received from Special Trade Commissioner Alfred P. Dennis under date of April 22.

YUGOSLAVIA.

Vice Consul H. R. Brown, Belgrade, March 7.

Changes in Export Restrictions and Duties on Olive Waste.

The exportation of waste from olives is to be permitted to the limit of 1,000 car loads (10,000 metric tons) upon payment of an export duty of 5 dinars per 100 kilos, according to a circular issued by the Director of Customs on February 6, 1923.

Reduction of Export Duties on Maize and Goose Fat.

The export duty on maize has been reduced from 150 dinars to 40 dinars per 100 kilos, and on goose fat from 2,500 dinars to 600 dinars per 100 kilos, by an order effective January 31, 1923.

CUSTOMS REGULATIONS.

CUBA.

Assistant Trade Commissioner C. A. Livengood, Habana, April 10.

Merchandise Lost During Port Congestion May be Exempt from Import Duty.

A decree has been issued by the President of Cuba which has for its purpose the exemption of importers from the payment of duty on missing portions of importations made during the period of port congestion. The decree provides that where, by means of examinations made by customs appraisers, a shortage of packages or of contents is noted as compared with the notations on the covering invoices, the collector may accept the declaration of the interested party for the purpose of waiving the duty charges on such missing portions, provided it is shown that the importation concerned was made after September, 1918, and that the deficiency of packages or contents occurred prior to April 30, 1921. Each claim is to be decided by the Collector of Customs on its individual merits.

GREECE.

Acting Commercial Attaché R. O. Hall, Athens, March 15.

Regulations for the Importation of Molasses.

The Greek ministry of finance is authorized to permit each year the importation free of duty of such a quantity of molasses as is considered necessary for the distillation of alcohol for domestic needs and for export in excess of the amount of alcohol produced in Greece from Zanti currants and other domestic products.

The ministry believes that the necessary quantity of molasses has already been imported, but molasses ordered for that purpose prior to December 14, 1922, which was afloat on January 6, 1923, can be imported duty free.

Alcohol distilled from molasses after January 13, 1923, can not be used for the manufacture of drinks, but only for lighting purposes and for mixing with wine or grape juice. The free importation of molasses is also allowed for the manufacture of alcoholic drinks intended for export but not for local consumption.

[Molasses may be imported at any time on payment of the duty of 0.25 gold drachma per oke (2.82 pounds).]

LATVIA.

Minister F. W. B. Coleman, Riga, March 5.

Authorization for the Establishment of Manufacturing Free Zones.

The minister of finance is empowered under a new law to establish free zones for industrial enterprises manufacturing for export, into which they may import, exempt from duty and excise, although under customs control, raw materials and other articles or supplies essential for the operation of their plants. Instructions concerning the application of this law will be issued at a later date by the Minister of Finance.

MADAGASCAR.

Journal Officiel, Tananarive, February 10.

Requirement of Direct Shipment to Secure Preferential Treatment Reestablished.

In order to enjoy the preferential treatment accorded merchandise due to its origin, goods imported into Madagascar from France, the French colonies, or foreign countries on a favored basis must henceforth be transported direct, according to an official notice. Their transshipment, notably at Zanzibar, Durban, Maurice, Mombassa, and Port Said, will deprive them of the enjoyment of this preference.

[This measure was taken in consequence of a notice from the French Minister for the Colonies that all exceptions to the rule

FOREIGN PATENTS AND TRADE-MARKS.

ALGERIA.

Ambassador Myron T. Herrick, Paris, February 28.

Increased Patent Taxes.

A decree of December 5, 1922, extends the effect of the law of December 31, 1921, increasing the annual payments on French patents to Algeria. The new taxes are payable on annuities falling due and beginning on January 1, 1922. The following fees published in COMMERCE REPORTS of March 13, 1922, for French patents, are applicable on patents granted in Algeria: For the first five annuities, 125 francs each; for the second five annuities, 200 francs each; for the remaining annuities, 300 francs each.

AUSTRIA.

La Propriété Industrielle, Berne, February 28.

Increased Fees for Patents and for Trade-Mark Registration.

An ordinance of the Minister of Commerce, Industry, and Public Works, dated December 7, 1922, increases all fees charged on the filing and grant of patents, annuities, and the registration of trade-marks and designs. The new application fee for patents is 50,000 crowns, followed by annuities ranging from 100,000 crowns for the first year to 1,500,000 crowns for the fifteenth and final year of the patent term. Patents of addition are subject to a single tax of 150,000 crowns. The increased registration fee for trade-marks amounts to 50,000 crowns and for designs 2,500 crowns.

All taxes are quoted in paper currency, which accounts for the abrupt increase of approximately five times the fees in effect since August 2, 1922, applying on all actions in connection with patents, trade-marks, and designs.

[The previous increase was announced in COMMERCE REPORTS for December 4, 1922.]

DANZIG.

La Propriété Industrielle, Berne, February 28.

Adherence to Madrid Trade-Mark Convention.

By an exchange of notes dated January 31 and February 1, 1923, between the Government of Poland and the Swiss Federal Council, the Free City of Danzig had signified its intention of adhering to the Madrid Convention for the Registration of Trade-Marks and the arrangement for the repression of false indications of origin. Notice of the adherence had been transmitted to the signatory countries on February 20, and the ratification will become effective on March 20, 1923.

GERMANY.

Consul General William Coffin, Berlin, March 28.

Increased Patent and Trade-Mark Fees.

An order dated March 20, and effective April 1, 1923, increases the fees for the registration of patents, designs, and trade-marks to fourteen times the fees in effect since December 1, 1922. This increase applies to all fees falling due on or after April 1. One month is allowed within which to make up the difference between the old and new fees, if payment falls due within the first month following the date on which the decree becomes effective.

[The previous increase was announced in COMMERCE REPORTS for January 22, 1922.]

WESTERN EUROPE

Charles E. Lyon, Acting Chief, Western European Division

PORTUGUESE GOVERNMENT FINANCES.

Consul General W. Stanley Hollis, Lisbon, March 16.

The statement of the Bank of Portugal for December 27, 1922, shows that the gold note circulation now exceeds 1,000,000,000 escudos, while the gold reserve is less than 10,000,000 escudos. The following table shows the amount of the circulation and of the metallic cover:

	Escudos.
Note circulation:	
Gold	1,005,807,420
Silver	41,221,040
Total	1,047,028,460
Reserves:	
Gold	8,577,180
Silver	17,596,123
Nickel	2,908
Copper	646,343
Total	26,822,554

The principal cause of the large note circulation is the constant drawing upon the bank by the Treasury which is necessitated by continued large deficits in Government accounts.

Estimated Budgetary Expenditures.

The complete budget for the fiscal year 1923–24, which is now under legislative consideration, has not yet been published. The expenditures, however, are available, partially itemized. It is possible that considerable changes may be made before the adoption of the budget; but, as it now stands, estimated expenditures are as follows:

Estimated expenditures in Portuguese budget.

Items.	Ordinary.	Extraordinary.
	Escudos.	*Escudos.*
Public debt	216,137,000	.....
General expenses	5,195,000	.....
Ministry of Finance	18,557,000	61,804,000
Ministry of Interior	29,118,000	34,724,000
Ministry of Justice	3,027,000	8,035,000
Ministry of War	80,545,000	58,741,000
Ministry of Marine	31,869,000	35,775,000
Ministry of Foreign Affairs	22,595,000	5,059,000
Ministry of Commerce	20,113,000	21,476,000
Ministry of Colonies	3,089,000	7,927,000
Ministry of Education	17,106,000	72,633,000
Ministry of Labor	1,888,000	32,222,000
Ministry of Agriculture	3,722,000	22,045,000
Total	452,961,000	360,441,000

The total of these items, 813,402,000 escudos, is an increase of 240,089,000 escudos over 1922–23. Estimated receipts are 674,076,163 escudos, leaving an anticipated deficit of 139,325,837 escudos.

Taxation and the Public Debt.

Reduced to a gold basis, per capita taxation in Portugal is decidedly low compared with other nations except Germany. In spite of the large amount of the Portuguese debt as expressed in escudos, reduced to dollars at the present rate of exchange it amounts to less than that of the other nations. The following table gives taxation and public debt, in dollars per capita, for various countries, as compiled recently by the Bankers' Trust Company of New York:

	Taxation.	Debt.
United Kingdom	$101.00	$744.00
Belgium	56.00	426.00
France	52.00	730.00
United States	39.00	215.00
Italy	24.00	228.00
Portugal	6.25	76.66
Germany	6.00	22.00

In connection with the above figures it must be borne in mind that per capita wealth in Portugal is very low because of its failure to increase in proportion with the decline in the value of the escudo. This makes it difficult, if not impossible, to raise taxes to an extent to meet the Government deficits and to reduce the debt.

A bill has recently been introduced in the Portuguese Parliament for the flotation of an internal loan of £4,000,000 gold in order to reduce the Government's overdraft at the Bank of Portugal and meet anticipated expenses. The interest on this loan is to be 6½ per cent per annum, and the bonds are to be exempt from all present and future taxes.

ITEMIZED ESTIMATES IN NEW BRITISH BUDGET.

Cable from Assistant Commercial Attaché Candler Cobb, London, April 18.

The Chancellor of the British Exchequer has now made public the detailed estimates of the British budget for the fiscal year 1923–24. In COMMERCE REPORTS of April 23 it was reported that revenues for the year were estimated at £818,500,000 and expenditures at £816,616,000, leaving a surplus of £1,884,000. The chancellor stated that at present rates of taxation next year's revenue would amount to over £852,000,000; accordingly he proposed a cut of 6d. in the basic rate of the income tax; reduction of the duty on beer, mineral water, and cider; and a cut of 50 per cent in the corporation profits tax. The detailed estimates of revenue and expenditure under the proposed new budget follow:

REVENUES.

Customs	£116,900,000
Excise	143,850,000
Motor vehicle duties	13,250,000
Estate, etc., duties	52,000,000
Stamps	20,000,000
Land tax, house duty, and mineral rights duty	3,000,000
Property and income tax (including income tax £261,000,000 and supertax £58,000,000)	319,000,000
Excess profits duties, etc	12,000,000
Corporations profits tax	20,000,000
Postal service	33,200,000
Telegraph service	5,250,000
Telephone service	14,150,000
Crown lands	900,000
Interest on sundry loans	12,500,000
Miscellaneous ordinary receipts	12,500,000
Special receipts	40,000,000

EXPENDITURES.

Interest on public debt	£310,000,000
Sinking fund for debt redemption	40,000,000
Road fund	12,650,000
Payments to local taxation accounts, etc	10,411,000
Payment to Northern Ireland exchequer	3,000,000
Land settlement	1,500,000
Other consolidated fund services	2,972,000
Army estimates	52,000,000
Navy estimates	58,000,000
Air-service estimates	12,011,000
Total civil services	251,670,000
Customs, excise, and inland revenue	11,591,000
Post office (post office, telephone, and telegraph)	50,874,000
Total estimated expenditure chargeable against revenue	816,616,000

Hungarian Economic Situation Unfavorable in February.

Consul Edwin C. Kemp, Budapest, March 23.

Business conditions in Hungary for the month of February suffered from the increased stringency of the Government policy of restricting the purchase of foreign currency from the Devisencentral (Foreign Exchange Bureau). The Government took the position that sufficient imports had arrived during the preceding three months to satisfy the present demand, and that a further increase of Hungarian imports would tend only to increase the depression of the crown.

The yearly import and export statistics recently compiled and certain figures in the budget, as submitted to the National Assembly, show a continued adverse balance of trade and a continued deficiency in State finances. There is no apparent opportunity of improving the situation except through stringent Government regulations, and these are particularly difficult to apply under present conditions.

Czechoslovakia's Exports to the United States.

Consul Charles S. Winans, Prague, April 3.

The value of declared exports from Czechoslovakia to the United States for March, 1923, amounted to 47,017,391 crowns, as compared with 41,950,430 crowns for February. The following table shows the quantity and value of the principal articles:

Articles.	Crowns.	Articles.	Crowns.
Imitation stones	4,841,000	Bentwood furniture	1,146,000
Musical instruments	728,000	Beads	9,128,000
Cotton goods	2,639,000	Earthenware	1,252,000
Linen goods	3,566,000	Glassware	6,708,000
Artificial fruits	680,000	Jewelry	3,555,000

Additional information regarding western Europe appears in this issue under the following sections:

Commercial law:
- Credit and collection factors in Spain.
- Consignment laws in France.

Transportation (communications):
- German air-travel and railway-travel time.
- Private operation of telephones in Italy.

Transportation (shipping): German shipbuilding in 1922.

Tariffs and trade regulations:

FAR EAST

F. R. Eldridge, Chief, Far Eastern Division

INDIA'S FOREIGN TRADE IN MERCHANDISE SHOWS INCREASE IN 1922.

India's foreign trade during 1922, amounting to 5,195,323,000 rupees ($1,731,774,000), showed an increase of 5 per cent compared with 1921, notwithstanding the general trade depression. With a decrease of imports from 2,782,909,000 rupees in 1921 to 1,985,997,000 rupees in 1922, and an increase of exports from 2,122,694,000 rupees to 2,522,691,000 rupees during the same period, India enjoyed a favorable trade balance for the year 1922. In this movement the United States suffered in common with other countries, supplying practically $40,000,000 less of India's imports in 1922 than in the previous year and taking about $20,000,000 more of India's exports. England and Japan also lost heavily in sales to India; Germany's share of India's imports increased by approximately $19,000,000 in 1922; and smaller increases were reported in the imports from other European countries and from China. Czechoslovakia entered the market in 1922 with heavy sales of glass.

European purchases of Indian products increased in 1922, with Great Britain leading and France, Italy, Belgium, and Norway proving good customers. The volume of export trade to Asiatic countries and to South America also showed improvement.

The following table contains the principal commodities imported into and exported from India for the calendar years 1913, 1921, and 1922. Quantities are given wherever possible. Values are shown in rupees, which may be converted to United States currency at the rate of 3 rupees to the dollar. The 1922 figures are taken from the monthly returns of trade and are subject to revision.

[2] A chest of opium equals practically 165 pounds.

UNITED STATES TRADE WITH THE ORIENT.

During 1922 nearly one-fifth of the total world trade of the United States was done with the countries of the Far East. Of a total trade of $6,944,841,000 transacted by the United States with all countries, $1,322,892,000 was done with the Orient. This latter figure represents 19 per cent of the total world trade of the United States for 1922—an increase of 2 per cent over the figures for the preceding year.

The following table shows the amount of United States trade carried on with the oriental countries in 1921 and 1922, as compared with its trade with all other countries:

Total United States trade in 1921 and 1922.

Countries.	1921	1922
Far East:		
Japan	$486,692,000	$572,808,000
China	209,426,000	234,956,000
British India	134,959,000	121,889,000
Australia	105,577,000	116,302,000
Philippine Islands	98,678,000	105,041,000
Straits Settlements	64,255,000	98,973,000
Dutch East Indies	64,482,000	42,520,000
New Zealand	37,911,000	30,403,000
Total Far East	1,201,980,000	1,322,892,000
All others	5,792,198,000	5,621,949,000
Grand total	6,994,178,000	6,944,841,000

Far Eastern Trade and Economic Notes.

Calcutta Exposition.

Arrangements are proceeding for a general exhibition of the industry and products of Bengal Province, India, to be held next December. While the exhibition will primarily emphasize factory products and raw materials grown in the Province, other phases of Indian life, such as art and education, will be included. The best exhibits at the Calcutta exposition will be sent to the British Empire exhibition in London in April, 1924.

Increase in Companies Doing Business in Chosen.

During January the number of companies with head offices in Chosen increased by six, with a capitalization of $526,416, according to the findings of an investigation instituted by the Keijo Chamber of Commerce. Altogether there were 904 companies, capitalized at $31,602,731, and 100 branch houses with head offices in Japan and foreign countries doing business in Chosen at the end of January. (Consul General Ransford S. Miller, Seoul.)

Growth of Cooperative Societies in Southern India.

The cooperative movement developed rapidly in southern India during 1922. Five years ago there were only 45 cooperative societies in the State of Travancore, with an average working capital of 150,000 rupees ($50,000). In 1922, according to the official report, there were 367 societies (an increase of 100 for the year) with an average capital of 400,000 rupees ($133,333). The total paid-up share capital also rose from 30,000 rupees in 1918 to 230,000 rupees in 1922, and the net profit earned advanced from 4,500 rupees to over 25,000 rupees. Proposals submitted by the economic development board for the further progress of the cooperative movement are being considered by the Government of India.

Additional information regarding Far East appears in this issue under the following sections:

Textiles:
Chosen's 1922 trade in textiles.
Japanese silk export trade.
Minerals and metals: Japan's trade in iron and steel.
Industrial machinery: The Sukkur Barrage project.

LATIN AMERICA

J. R. McKey, Acting Chief, Latin American Division

UNITED STATES EXPORTS TO ARGENTINA.

American exports to Argentina during 1922 amounted to $94,829,690, compared with $110,833,049 for 1921. Although this represents a decrease of about 14 per cent from 1921, the values are more than double the prewar figures. The fact is that while 1921 exports included some of the earlier inflated values, 1922 was characterized by a slow return to normalcy, and the greater part of the commodities shipped to Argentina during that year showed increases in both quantity and value over 1921 shipments, certain conspicuous exceptions being responsible for the decline in the general total.

American Products Finding Large Market.

The greatest increases occurred in the exports of automobiles, binding twine, cotton cloth and hosiery, and barbed wire, and figures covering these commodities are of particular interest in that they indicate a recuperation in an established trade. Exports of passenger automobiles, which fell from nearly $6,000,000 in 1920 to $851,000 in 1921, showed a value of $2,307,067 in 1922. Exports of binder twine, which fell from $1,003,494 in 1920 to $355,559 in 1921, rose again to $1,224,454. It is noteworthy that the quantity of binder twine shipped was 6,573,979 pounds in 1921, and 12,822,943 pounds in 1922, bringing the price level very near to that of 1913–14, when 13,632,648 pounds brought only $1,200,590. Cotton cloth, which dropped from $15,000,000 in 1920 to $4,000,000 in 1921, rose to over $6,500,000. Cotton hosiery values also showed the effect of sharp price declines. In 1920, 501,857 dozen pairs brought $2,213,633; in 1921, 340,845 dozen pairs brought only $969,988; and in 1922, 729,804 dozen pairs brought $1,885,389. Barbed-wire shipments amounted to $1,203,286 in 1922, as compared with $484,247 in 1921 and $2,549,428 in 1920.

Important decreases also took place, the products suffering the heaviest decline including coal, steel sheets, steel rails, print paper, paraffin, rubber shoes, and leaf tobacco. The conspicuous decline in the coal trade, which fell from $20,157,356 in 1920, and $6,467,315 in 1921, to only $547,647 in 1922, was to be expected with the end of the British coal strike, American shipments having only temporarily displaced English coal, which, under ordinary circumstances, easily undersells our product because of the very reduced freight rates for ballast from England to South America, as against the high rates on southbound trips between North and South America.

Foreign Competition Keen.

Competition for Argentine trade has been keen, but American lines are opening up with good prospects for the coming year. American advertised quality goods are holding the market in spite of higher prices, but goods that are not sold specifically on a quality basis, and which can be furnished by other countries, are meeting competition from European products, which have the advantages of low production costs and depreciated exchange. Cotton textiles (one of the most highly competitive lines) are supplied by England and to a somewhat less extent, by the United States and Italy. Coal, as explained above, is supplied by England. Raw petroleum comes chiefly from Mexico and refined products from the United States. The United States leads in such lines as hardware and tools, agricultural implements and automobiles, in which business has been picking up although orders are still conservative. Both British and German houses have also been advertising these lines but no great increases of sales have been reported. Iron and steel products come from the United States, England, Germany, France, and Belgium, and shift more or less from one country to the other according to price quotations.

American Sales Increasing.

The encouraging feature of the Argentine trade is that imports from the United States, although showing a reduction for last year, are on the increase. Export values, having risen fairly steadily throughout the year, amounted to $9,870,780 for December, 1922, as compared with only $6,187,001 for January of the same year.

The following table shows comparative exports from the United States to Argentina in 1921 and 1922:

United States exports to Argentina in 1921 and 1922.

Months.	1921	1922	Months.	1921	1922
January	$24,227,828	$6,187,001	July	$7,256,675	$7,377,885

June	7,388,275	9,023,355	December	7,237,166	9,870,780

IMPROVED BUSINESS CONDITIONS IN PERNAMBUCO.

Based on reports from Consul C. R. Cameron, Pernambuco, Brazil.

During 1922 a considerable advance was made in the Pernambuco district toward normal conditions. This recovery was attributed to the general betterment in world trade conditions and specifically to a large crop of sugar and a fair cotton crop. The latter crop was sold at very remunerative prices. The complete figures for importations during 1922 are not yet available, but they will probably show increased consumption in Pernambuco of many imported articles. Such figures as are available, however, show that the value of imports into the Pernambuco consular district in 1922 decreased by 5 per cent from the previous year, while the value of 1922 exports increased 8 per cent. Although the declared exports to the United States decreased 3,921,946 pounds in quantity, they increased in value by $542,151. This increase in value of 23.6 per cent over 1921 is due to the high prices obtained for skins, cotton, coffee, and various other articles.

Industrial Conditions—Public Works.

Aside from sugar making, the principal manufacturing industries are cotton and jute spinning and weaving, fruit preserving, tanning, and the making of

There are 21 cotton mills in the district, which produce from 35,000,000 to 45,000,000 milreis' worth of goods a year, consisting largely of the cheaper grades of suitings, dress prints, lawns, drills, and sacking. The cotton factories have not had a very prosperous year. Few statements for 1922 have been published, but it is known that 4 and 5 per cent dividends have been the rule.

On the whole, manufacturing in the consular district can be said to have passed a year which, if not particularly prosperous, has not been discouraging, and better times are confidently expected.

During the calendar year 1922 the State spent 553,612 milreis on the construction of 40 kilometers (1 kilometer=0.62137 mile) of roads and the upkeep of 398 kilometers. During the same period 1,355,905 milreis was spent on the construction of bridges. The important bridge of Buarque de Macedo in the central part of Recife is now under repairs for a contract price of 1,070,000 milreis. The important construction work of the consular district, however, has been done by the Federal Government, or, as in the case of the port of Recife, by the State government using ceded Federal resources. The contract for the dredging of the Port of Recife calls for the removal of 3,500,000 cubic meters within 22 months. Work was officially begun on October 24, 1922, and up to the end of the year 916,991 cubic meters had been dredged, at a cost of 2,732,419 milreis.

Expenditure was continued during the year on the five great irrigation dams, besides railroads and other roads tributary to the irrigation works. Three foreign companies have contracted to administer the construction of the larger dams, each company to expend a sum not to exceed 50,000,000 milreis. It is rumored that these amounts have already been largely spent and that the new Federal administration may not renew the contracts. Smaller irrigation dams are being constructed directly by the Federal Government.

NICARAGUAN ECONOMIC SITUATION SHOWS STEADY IMPROVEMENT.

Consul Harold Playter, Corinto, March 16.

Local trade in the Republic of Nicaragua continued to improve during February, 1923, and, although many merchants complain that the increase is small, it is generally admitted that sales have bettered. Good coffee and sugar prospects and realizations have not been followed by reckless importations. This precautionary tendency is due, in part, to the necessity for meeting old obligations, and also to lessons learned from improvident buying during 1920. Stocks in general are normal for the season, and importations were about the same as in January, with a slight increase in cotton goods, which, with chemicals, hardware, and minor foodstuffs, tend to act as barometers of trade.

Credits show a slight improvement, although little money is being loaned except for crop movements at interest rates of from 12 to 18 per cent. Most of the import business is handled through local banks by draft acceptances with two or three months' credit. Selling rates for New York drafts dropped from 102 to 101 during February, with buying prices firm at 99½. Customs receipts at the port of Corinto increased about 15 per cent over January.

Exports of coffee and sugar increased over those of the preceding month, and early March shipments were unusually heavy. The proportion to the United States Coffee shipments to France are lower than usual. The total coffee crop is estimated at from 25,000,000 to 30,000,000 pounds, or 5,000,000 to 7,500,000 above normal, and it is believed shipments of unrefined white granulated sugar of good quality will reach approximately 22,500,000 pounds.

The cattle industry is very quiet, with only a local market. The two producing mining companies continued usual operations, but development work on another new property has been temporarily suspended. No additional construction or industrial activities have resulted from the improved general situation.

Extension of Law Aiding Chilean Nitrate Producers.

Assistant Trade Commissioner W. E. Embry, Santiago.

Law No. 3795, of September 13, 1921, which provided for the advance of money to nitrate producers against nitrate ready for exportation either at ports or in the plants, has been extended until December 31, 1924. Under this law nitrate producers are advanced money on their stocks of nitrate in the amount of 7.50 paper pesos for each 46 kilos of nitrate at port ready for shipment and 6 paper pesos for the same quantity at plant.

The measure operates in the following manner: A nitrate producer with stocks of unsold nitrate on hand either at ports or at the plants and in need of money to continue operation goes to a local bank and presents documents to show that he has a given amount of nitrate, and accordingly borrows money from the bank up to the amount prescribed in the law, the producer giving in effect a mortgage on the nitrate involved. The banks, in turn, when in need of money present these papers to the Government and are reimbursed. The law provides for the cancellation of these papers in six months, but with the privilege of extension for an additional period of six months. However, the proceeds of the first exportation which is made following the loan must be applied to the payment of these obligations.

Mexico City Office Needs American Trade Directories.

The office of the commercial attaché of the United States in Mexico City is inadequately supplied with American city and trade directories, according to Assistant Trade Commissioner H. Bentley MacKenzie, in a letter of March 28. Visitors frequently call at that office to consult classified lists of dealers, as, for instance, wholesale grocers or dry-goods manufacturers, in some specific city of the United States. Commercial directories of chambers of commerce, giving classified lists of members, are especially valuable for inquiries of this nature, but only two (from southern cities) are on file. Mr. MacKenzie will appreciate and make use of city or telephone directories, and commercial or trade publications, with classified lists of business houses, which are turned over to any of the district or cooperative offices of this Bureau for transmission to him at Mexico City.

EASTERN EUROPE AND LEVANT

E. Dana Durand, Chief, Eastern European and Levantine Division

PROPOSED FISCAL REFORMS IN POLAND.

Based on documents transmitted by H. B. Smith, acting commercial attaché, Warsaw, March 8, 1923.

As the constant inflation of the Polish currency is the principal obstacle now existing to economic progress in that country and to the development of American trade with it, the recently proposed measures for rehabilitating Polish finances are of much interest, although they have not yet been enacted into law and although even after enactment success will be fundamentally dependent upon effective administration.

Mr. Grabski, the newly appointed Minister of Finance, early in March introduced into the Polish Diet measures looking to a general reorganization of the budget and ultimate balancing of it, which it is aimed to achieve in the course of three years. The chief features of these bills are as follows:

Proposed Methods of Balancing Budget.

The State budget is to be divided into an administrative budget and a series of budgets for Government enterprises and monopolies. For the years 1924 and 1925 the ordinary expenditures in the administrative budget may not exceed 90 per cent of the sums voted for 1923, except in the case of elementary school expenditures. Extraordinary expenses, and especially investment expenditures, will by law depend on the obtaining of means to cover them other than by loans based on paper money. In case they can not thus be covered, they will not be incurred.

For the purpose of assuring that the income of the Treasury will not shrink as a consequence of a fall in the value of Polish currency a nominal gold unit will be used as a standard of expenditures and receipts—this to be known as the "zloty," equivalent to the Swiss franc (19.3¢). The value of this gold unit in terms of Polish marks will be calculated from the index of wholesale prices. This means, in substance, that taxes, charges for Government services, prices of monopoly articles, etc., in terms of Polish paper money will increase proportionately to the advance in prices of commodities in terms of that money. Experience in the past has shown the great need of such a basis for Government income.

Government Enterprises Must Pay Their Way.

One of the most important proposals is that Government enterprises and monopolies must operate as independent business entities, paying their own way. Each such enterprise or monopoly is to have its own budget, and for each there will be fixed a standard amount of clear income, which it is expected to turn into the State Treasury during each of the three years. Each may contract loans for indispensable investments, secured on its property and income. In the case of the railways, reforms are proposed which will free the railway administration of all characteristics incompatible with a commercial institution. Branch railways will be leased or sold, and new railway lines, unless separate loans can be obtained for their construction, will be left to private enterprise.

School Budget to Localities—State Salaries.

It is also proposed to transfer school expenses gradually from the national to the local Governments. The salaries of State employees are to be increased monthly in accordance with the advance in paper-money prices of commodities, the basis of reckoning to be the salary paid in February, 1923. Salaries in real value can be increased only if the number of officials is decreased correspondingly.

Taxes to be Increased—Loans Authorized.

The project provides for an increase of direct and indirect taxes and charges for Government services to the pre-war level. As an important means of balancing the budget, the general State property tax, commonly called "capital levy," is to be renewed. A tax of this character was collected during 1922, a percentage on the value of property but as a specified sum which must be collected—totaling 600,000,000 zloties in three years. The rates are to be progressive but the highest rates shall not exceed five times the lowest. This tax is assigned to cover that part of the extraordinary deficit in the administrative budget which corresponds to expenditure for military purposes during 1923 and 1924, estimated to amount to 460,000,000 zloties, also the extraordinary expenses for the restoration of the country during that period amounting to 55,000,000 zloties. The Minister of Finance is empowered to contract loans to cover the remainder of the deficit of the administrative budget, amounting to 110,000,000 zloties.

Plan to Treble Income by 1925.

In his exposé at the time of the introduction of these measures, the Finance Minister stated that during 1922 the income of the Polish State—apart from loans and paper money emissions—amounted net to 434,000,000 zloties, while before the war the income collected by Russia, Germany, and Austria in the present Polish territory amounted to 1,283,000,000 zloties. Under the proposed measure, the income is intended to be raised by the year 1925 to 1,417,000,000 zloties, not including the extraordinary capital levy.

Financial Condition of the Ural Industries.

Abstracted from Economic Life (Moscow) of February 9.

The financial budget of the Ural industries, now under consideration by the Supreme Council of National Economy, is closed with a net deficit of 47,590,000 rubles of 1923 (of which 1 ruble equals 1,000,000 soviet rubles) for the metallurgical, coal, ore mining, chemical, and timber industries. The largest deficit is expected in the metallurgical industry—about 40,000,000 rubles; the coal industry next, with 14,420,000 rubles; and the chemical industry with 2,670,000 rubles. The timber industry and ore mining are expected to yield profits of 9,140,000 rubles and 360,000 rubles, respectively, during the coming fiscal year. Apart from the above, new capital to the amount of 19,550,000 rubles will have to be invested in capital repairs of the plants and 179,720,000 rubles in additional supplies of materials. It is also found necessary to supply additional operating capital to the budget of the Ural industries to the extent of 238,000,000 rubles, making up the difference between the available operating capital of 149,000,000 rubles and the 387,000,000 rubles that is required for a production valued at 308,000,000 rubles, at the present rate of turnover of capital in the Ural industries.

Latvian Land Distribution.

Abstracted from the Latvian Statistical Annual, 1922.

As four-fifths of the population of Latvia earn their living in agriculture, the just distribution of land and the furnishing of necessary implements is the chief aim of the agricultural policy of the Latvian Government. For this purpose the State land fund has been created, chiefly by expropriation of large estates.

The fund comprises: Former private estates, 3,015,849 hectares (1 hectare=2.47 acres); State lands, 627,734

December 31, 1921, parceled out 461,930 hectares into 27,386 allotments for new farms, as follows:

Size of allotment.	Number of farms.	Total hectares.
10 to 15 hectares	4,733	62,268
15 to 22 hectares	16,260	303,222
Over 22 hectares	3,508	85,247

The undistributed part of the land fund was leased, and during the economic year 1921–22 the rents received amounted to 799,384 poods of rye (62 poods= 1 long ton) and 37,107,481 Latvian rubles (about 340 rubles to $1).

During 1921 the Latvian Government bought agricultural machinery and implements to the value of 30,670,288 Latvian rubles for distribution among the farmers.

Areas Sown to Cereal Crops, 1913, 1920–1922.

The sowing areas falling to different cereals during 1920–1922 are shown in the following table, in comparison with the 1913 areas:

[In thousand hectares.]

Principal cereal crops.	1913	1920	1921	1922
Rye	356.6	196.7	226.8	236.3
Wheat	34.3	15.7	18.6	28.5
Oats	316.6	215.6	251.6	273.4
Barley	199.6	123.8	146.1	156.7
Flax	67.3	30.5	34.1	37.7
Potatoes	35.3	49.2	58.9	69.1
Total	1,059.7	631.5	736.1	801.7

Exports Declared From Kovno to United States.

Consul Clement S. Edwards, Kovno, Lithuania.

The value of Lithuanian exports to the United States, declared through the American consulate at Kovno, amounted to $149,971, nearly seven times the value of goods declared in 1921 ($22,432).

The main items contributing to this increase were: Calfskins valued at $111,998, bristles valued at $7,770 (neither listed in 1921), and furs valued at $22,560, as compared with $1,149 in 1921. Exports of dried mushrooms decreased from $21,032 in 1921 to $1,428 in 1922.

Returned American goods in 1922 comprised shoe leather valued at $847 and tire fillers valued at $1,275. No American goods were returned during 1921.

BALKANS AND LEVANT.

James A. Robertson, Chief, Levantine Section.

FOREIGN TRADE OF THE SUDAN, 1922.

The total value of imports and exports of the Sudan during the calendar year 1922 amounted to £E5,966,884 ($27,089,653), a considerable falling off from the £E7,636,532 ($30,164,310) representing its foreign trade values in 1921. This decrease was brought about during the last six months of the year by a decline in both imports and exports. (See COMMERCE REPORTS, November 13, p. 435, for statistics of Sudan's foreign trade for the first six months of 1922.)

Value[1] of Sudan's foreign trade, 1921 and 1922, by countries.

Country of origin and destination.	Imports.		Exports.	
	1921	1922	1921	1922
Abyssinia	£E170,135	£E244,640	£E13,922	£E16,460
Arabia	14,365	10,785	94,778	44,200
Egypt	2,259,206	1,060,342	773,243	607,182
Eritrea (overland)	33,109	15,770	6,334	1,371
France	57,629	47,148	39,837	98,523
India and Aden	578,640	310,008	7,185	6,886
Italy	74,487	56,556	74,232	35,624
Japan	(2)	59,990	14,059	15,497
United Kingdom	1,585,077	1,034,000	796,893	789,085
Union of South Africa	576,013	181,359	.....	.....
United States	55,511	105,974	106,332	175,687
Parcel-post shipments	151,212	122,225	9,463	7,644
Other countries	250,086	404,093	120,952	195,277
Total	5,806,070	4,252,890	2,057,230	1,993,436

[1] The Egyptian pound (par value, $4.9431) is equivalent to 100 Egyptian piasters. The pound sterling is equal to 97½ Egyptian piasters; hence, the exchange value of the Egyptian pound may be ascertained at any time from the exchange value of the pound sterling.
[2] Figures not given.

Relative Importance of Trade with United States.

It is apparent from the preceding table that, while there was a marked decrease in the value of imports during 1922 as compared with 1921 and that this decrease was felt to a considerable extent by the United Kingdom, Egypt, Union of South Africa, France, India, States showed an increase of about 89 per cent. In the value of Sudan exports, the United States, as a market, advanced from £E106,332 in 1921 to £E175,687 in 1922—a gain of about 66 per cent; it was surpassed only by France, which advanced by over 100 per cent, as compared with 1921. Exports to the United Kingdom, Egypt, Arabia, and India showed a considerable falling off.

Value of Reexports from the Sudan.

Reexports during 1922 had a value about 17 per cent greater than during 1921. This increase is noticeable in the trade with the United Kingdom, Egypt, Abyssinia, and the Congo and Uganda.

Destination and value of reexports from the Sudan, 1921 and 1922.

Route and destination.	1921	1922
Via Red Sea and Nile routes:		
United Kingdom	£E9,659	£E12,316
Egypt	161,035	167,990
Arabia	8,906	6,497
Parcel post	2,923	1,993
Other countries	4,548	5,235
Via frontier posts:		
Abyssinia	44,425	66,083
Congo and Uganda	25,967	39,380
Eritrea (overland)	3,840	5,840
Total	261,303	305,334

The principal articles entering into reexport trade during 1922 were animals (horses, donkeys, and mules), saddlery, rice, flour, coffee, tobacco products, manufactures of wood, soap, cotton fabrics, cordage and cables, clothing, iron and steel manufactures, copper and brass, machinery, photographic goods, used personal effects, and military stores.

Articles Entering Into Sudan's Foreign Trade.

The foreign-made articles most in demand in Sudan

and refined sugar, followed at a considerable distance by iron and steel manufactures, coal, and machinery, then by cigarettes, timber, and flour in the order named. Parcel-post shipments comprised slightly more than 3 per cent of the total import values.

Sudanese products reaching greatest export values were gum hashab, ginned cotton, and durra, followed at some distance by sesame and cattle.

Articles imported and exported by the Sudan during 1921 and 1922.

Grand total value (dollars)[2].	.....	$30,164,301	.....	$27,089,653

[1] 1 cantar=99.0493 pounds.
[2] Conversions have been made at the following average rates: For the year 1921, £E1=$3.95; for 1922, £E1=$4.54.

An increase in quantity is noticeable in the 1922 importations of boots and shoes, refined sugar, and petroleum; there was a decrease in the quantity of wheat, rice, flour, liquors, soap, cotton fabrics, and sacks. A decrease is shown also in the value of the following articles, whose quantities are not given: Clothing, iron and steel manufactures, machinery, motor cars, stationers' sundries, small wares, military stores, and used personal effects; but an increase in the value of tobacco and cigarettes.

In exports there was an increase in 1922, as compared with 1921, in the quantity of cattle, sheepskins, goatskins, ivory, durra, gum hashab, charcoal, and garad; on the other hand, a decrease will be noted in the case of cattle, sheep, and goats, dukhan, sesame, cottonseed, groundnuts, and ginned cotton. The exports of gold bullion were almost doubled during 1922.

Transit Trade.

The total value of the transit trade during 1922 was £E69,720, as compared with £E54,686 during 1921. The principal articles entering into this trade were cotton goods, beeswax, ivory, and rhino horns.

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The following further figures are available upon national production and distribution during March.

A total of 35,501,000 cotton spindles were active during March, with an average activity of 255 hours per spindle, compared with the previous maximum of January, 1923, when the average activity was 249 hours.

Sheet production of the independent steel mills rose to almost 93 per cent of capacity.

There were 122,194,000 pounds of copper produced in March, compared with 102,641,000 pounds for February, and 62,305,000 pounds for March, 1922.

The output of motor cars during the month was 318,424 passenger cars and 34,593 trucks, compared with the previous maximum of June, 1922, when production of passenger cars amounted to 263,027 and trucks to 25,984.

The production of southern pine amounted to 480,966,000 feet, compared with the maximum last June of 499,247,000 feet. The production of North Carolina pine, at 61,460,000 feet, compares with 41,090,000 feet for February, 52,290,000 feet for March a year ago, and 57,400,000 feet the previous maximum production in November, 1922.

The relative average price to farmers of the 10 leading crops, at 134, compares with 130 for February and 112 a year ago. The relative average price to farmers of live stock, at 106, compares with 107 for the previous month and 117 for March, 1922.

Data from Survey of Current Business.

The following table gives such data from the next issue (No. 21) of the Survey of Current Business as have been received since April 17, 1923. Some data not included in the advance statements from the preceding issue (No. 20) are also given here. Another set of advance figures will be issued giving the remaining figures for the month of March.

All items given in the following table correspond with similar information in the issues of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. The figures given are in some instances collected by governmental agencies and in other cases by trade associations or technical journals. All of this is explained in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for $1 per year.

[Footnotes are printed at end of table.]

[1] Revised.
[2] February, 1922.

FOREIGN TRADE OPPORTUNITIES.

Reserved information may be obtained from the **Bureau and its district and cooperative offices** by duly registered firms and individuals upon written request by **opportunity number.** The **Bure au** does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Correspondence may be in English unless otherwise stated. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

FUNCTIONS OF THE TRANSPORTATION DIVISION.

The Transportation Division of the bureau helps exporters in the solution of problems concerning the packing, routing, and shipping of their goods. It furnishes information on rail and ocean freight rates, port equipment, steamship services, cable and radio communication, warehouse and transshipping facilities abroad, etc. It has been carrying on an extended investigation into the best methods of packing for export, and is able to give technical advice concerning box, crate, and bale construction, proper interior packing and climatic and transportation conditions abroad in so far as they affect the safe delivery of goods. It follows the market abroad for railway rolling stock and motive power, and distributes information on opportunities in this field. It publishes trade information bulletins on such important topics as British railway reorganization; the French transportation act of 1921, etc. Information on shipping and ship building conditions abroad is furnished regularly to shipowning and ship-building companies. The division has available detailed statistics on the volume of waterborne trade and the flow of traffic between ports. Lists of reliable freight forwarders have been prepared for the principal American ports and for many foreign ports. Briefly, its purpose is to assist in the prompt and economic delivery of American goods abroad.

COMMERCE REPORTS

A WEEKLY SURVEY OF FOREIGN TRADE

HERBERT HOOVER, SECRETARY OF COMMERCE

JULIUS KLEIN, DIRECTOR BUREAU OF FOREIGN AND DOMESTIC COMMERCE

Preliminary Investigation Prevents Loss.

A suave gentleman with all the attributes of a successful foreign merchant called on a number of responsible American houses last summer. Later he departed with contracts, agency agreements, and trunks filled with valuable American merchandise. In time some of the American merchants and manufacturers became concerned, not alone about the lack of the business that they had been led to expect, but also about payment that had been promised for the sample lines taken.

One or two of the merchants wrote to the Department of Commerce for help. An American commercial attaché, acting under instructions from the Washington headquarters of the Bureau of Foreign and Domestic Commerce, was able to effect settlements or compromises which the American merchants were glad to accept. If, before entering into relations with this individual, they had written to the Department of Commerce for information about his standing and commercial integrity, they would have been told within 24 hours that his record was not good and that he was entirely unworthy of support from or dealings with American merchants.

American exporters should carefully investigate prospective customers, agents, or representatives and should be guided by reason (based upon statistical and economic facts) rather than by emotion and ill-considered eagerness. They should take advantage of every facility that the Department of Commerce has to offer.

Allocating the Product for Export.

The American manufacturer must take his foreign trade when he can get it. Otherwise he can not expect to get it when he needs it. Once he has entered a foreign market he can not withdraw from it at will and then reenter it later with his standing unimpaired. In other words, when the manufacturer has captured a foreign market he must maintain his hold on it. To do this he should be prepared to allocate a certain proportion of his production each month for export purposes.

The advantages of a practice of this kind are manifold. The export department, being sure of a definite supply and knowing its exact amount, will be in a position to fill its foreign demand to the maximum advantage of both the firm and its customers. It can pick and choose between these latter according to their credit standing and their importance as a source of demand, actual and potential. The export department can further determine the proportion of the export quota which should apply on markets already secured and that which should be used for the development of sales in new territories. By definitely allocating a fixed percentage of his product for export, the manufacturer can place his foreign business on a definite footing, and his customers abroad, with orders promptly filled and delivered on time, will be far less likely to change to some other source of supply.

Kinds of Paper Permissible for Letters in "Window" Envelopes.

"Window" envelopes are convenient and economical and are very extensively utilized by American business houses. Many firms are apparently unaware, however, that there is an official post-office regulation governing the kind of paper that may be mailed in envelopes of this kind.

This question recently came to the notice of the Bureau of Foreign and Domestic Commerce through a letter from a paper manufacturers' association. One of the member firms had received a complaint from a customer to the effect that green bond paper was unsatisfactory to the postal authorities.

The bureau brought to the attention of the paper association the following excerpt from a circular issued January 27, 1923, by the office of the Third Assistant Postmaster General:

> The stationery used in window envelopes, or at least that portion upon which the address appears, must be white or, if colored, of a very light tint or shade. The use of dark-colored stationery is not permissible.

The Rules and Regulations Division of the Post Office Department states that "green is probably the most difficult color for the mail distributers to handle under the trying conditions under which they have to work."

Allowing Sufficient Time in Making Foreign Trips.

The results of an extensive trip abroad for the purpose of selling goods, arranging agencies, or similar purposes, frequently are nullified through the fact that too little time is allowed for stops at the various places to be visited.

It sounds like a truism to say that it is impossible to secure full advantage of a commercial trip in foreign countries unless ample time is employed to do the job well. Nevertheless, there are numerous instances of expensive journeys abroad that have been largely ineffective because the traveler has not stayed long enough in the several cities. This is all the more lamentable when a small additional expenditure of time and money might spell the difference between failure and success.

There are still a considerable number of business men in the United States who believe it feasible to make a commercial circuit of South America and be back in New York within two months from the date of departure. It seems scarcely necessary to say that such a "whirlwind" trip is not likely to garner much business.

Plenty of time should be allowed for the field to be thoroughly covered, with a margin for contingencies. One should not lose sight of the fact that practically a whole day is frequently required in disembarking from a steamer and getting installed in a hotel. The traveler should make a special effort to become as cordially acquainted as circumstances permit. The benefits of a personal acquaintanceship are likely to be very real. It is well to keep this bond intact after one returns to the United States. Seasonal greeting cards and an occasional personal letter, as occasions warrant, are valuable factors in maintaining contact with acquaintances abroad. All correspondence from the firm should preferably be signed by the same officer of the company wherever this is practicable.

Naturally, too, a trip should be planned to avoid the delays that might be occasioned by rainy or hot seasons, unfavorable transportation conditions, etc. It is well to remember, for example, that the Transandine Railway from Argentina to Chile is often closed during several winter months (winter in the Southern Hemisphere prevailing during the time of the North American summer).

Samples Should be Restricted to Firms of Known Reliability.

American firms that receive requests from Asia for samples of their goods, "preliminary to the placing of orders," should proceed with caution and discrimination in the matter of sending out such samples.

Probably in the majority of cases such requests are made in good faith, but it is desirable to remember that oriental merchants sometimes ask for samples, not with the idea of initiating real business but simply for the purpose of obtaining goods to be sold in the local bazaars.

An American concern receiving a request for samples from an unknown oriental firm should investigate and, if possible, ascertain definitely the commercial standing and reliability of the Asiatic correspondent. The American house should find out whether there is a report on the firm in the Commercial Intelligence files of the Bureau of Foreign and Domestic Commerce and, if so, what the character of that report is.

COMMERCIAL INFORMATION CONVERTED INTO DOLLARS.

From the Chamber of Commerce of San Antonio, Tex., the following letter comes:

We wish to congratulate your department on its practical and efficient activities in extending the foreign trade of the United States in all parts of the world and to assure you that through the Bureau of Foreign and Domestic Commerce we have been greatly assisted in increasing San Antonio's trade with Mexico, Cuba, and Porto Rico from the small amount of $6,000,000 in 1919 to upward of $20,000,000 in 1921.

Certain ways in which business houses take advantage of the bureau's service are illustrated in the following communication from a textile corporation in New York City:

We much appreciate the service rendered and believe there is no other government that supplies such information, reaching export merchants in printed form 9 or 10 days after it is sent from the foreign country.

For instance, on one of your recent reports, we stopped our traveler going to Mexico and held him in Cuba, we cabled our offices in Buenos Aires and received three good orders on silks; we advised our South African agents to get after the silk business; we told our representative in Caracas, Venezuela, to cooperate with the American consul and have already received about $12,000 worth of business.

These reports, joined to our personal knowledge, probably make thousands of dollars difference in our expenditures or gains in a year.

MONTHLY CABLE REVIEWS

FAR EAST.

F. R. Eldridge, Chief, Far Eastern Division.

PHILIPPINE CONDITIONS IMPROVING.

Trade Commissioner John A. Fowler, Manila, April 20.

[General business conditions in the Philippine Islands have maintained the level of the past two months. A favorable balance of 10,000,000 pesos is an encouraging feature of the March trade.]

The total foreign trade of the Philippine Islands in March amounted to 40,000,000 pesos, compared with 31,000,000 pesos in February, and resulted in a favorable trade balance of 10,000,000 pesos. This brings the excess of exports over imports for the first quarter of 1923 to 17,000,000 pesos, compared with a favorable balance of 8,000,000 at the end of March, 1922. Exports in March, 1923, amounted to 25,000,000 pesos and imports totaled 15,000,000 pesos. Details of the leading items entering into the foreign trade of the Philippines for the first three months of the current year are shown in the following table:

Principal Philippine imports and exports during first three months of 1923.

Articles.	January.	February.	March.
IMPORTS.	*Pesos.*	*Pesos.*	*Pesos.*
Iron and steel and manufactures	1,507,000	1,944,000	1,485,000
Cotton and manufactures, except cloths	1,179,000	736,000	1,479,000
Cotton cloths	3,488,000	2,073,000	3,512,000
Meat and dairy products	603,000	631,000	636,000
Automobiles and accessories	380,000	119,000	475,000

Leather and manufactures	196,000	101,000	165,000
EXPORTS.			
Hemp	3,134,000	5,412,000	5,600,000
Sugar	2,845,000	7,673,000	9,320,000
Coconut oil	3,124,000	1,177,000	3,388,000
Copra	2,323,000	1,900,000	1,685,000
Cigars and cigarettes	1,145,000	1,942,000	1,621,000
Leaf tobacco	99,000	600,000	44,000

Building and Construction Active.

Considerable activity has been shown in building and construction despite the present money tightness. Permits issued for strong construction during March amounted to 592,000 pesos. Public works are proceeding slowly on account of a cautious use of appropriations. The expenditure of 2,000,000 pesos out of the year's appropriation has been partly sanctioned and approval of the balance, principally for port works, road maintenance, and building repairs, is probable.

Market for Islands' Products Favorable.

Good prices received for sugar, copra, and abaca (hemp) are providing money for absolutely necessary supplies and collections are improving. Considerable interest has been centered in the policy of the national-bank sugar centrals and the planters of Negros toward the sale of the Government-owned sugar centrals to private owners. A thorough study of present conditions in the plantations and centrals is being conducted, while a definite decision is held in abeyance.

Sugar planting is progressing satisfactorily in Pampanga and Laguna and western Negros districts, with every indication of favorable crops for next season. Planting in eastern Negros has been delayed, but is now in progress, with fair indications. Latest estimates are that the crop now being harvested will approximate 265,000 tons for export. The high prices being offered in China for muscovado sugars are attracting considerable quantities of cane from centrifugal mills in Pampanga to the muscovado mills.

Abaca prices have declined sharply in consuming markets and all hemp markets are very quiet. The introduction of hemp-stripping machinery is working important changes in the industry in the district of Davao, where it has resulted in a material reduction of the number of laborers on the abaca plantations. No distress from unemployment is expected, however, as a large part of the labor is recruited from the mountain peoples, who have gone back to their original occupations.

Shipping Active—Exchange and Banking.

To avoid the payment of the steamship conference rate of $3 a bale to Atlantic coast ports prominent abaca shippers of Manila have chartered three tramp steamers. As a result of this competition the conference has reduced the freight rate on hemp to $2.50 to Atlantic ports.

Vessels entering Philippine ports in March totaled 142,000 tons, of which 59,000 were American, 35,000 British, and 45,000 Japanese. Of the total outward tonnage of 92,000 tons, American ships represented 49,000 tons, British 22,000 tons, and Japanese 2,000 tons. These figures show an increase of 61,000 tons in entrances for March over February and of 44,000 tons in clearances. Berthing facilities are insufficient to accommodate vessels now arriving, and discharging is going on in the bay.

The banks' selling rate for telegraphic transfers to New York ranged during March from three-seventh per cent discount to 1 per cent discount, closing at three-eighths per cent, with upward tendency. The drop was due to sales of exchange by the banks to the treasury at the legal rate of 1⅛ per cent discount early in the month. On April 7 the bank examiner made the statement that total cash on hand in all Manila banks amounted to 14,568,000 pesos; resources to 257,466,000 pesos; deposits 108,469,000 pesos; working capital of foreign banks doing business in the Philippines, 38,728,000 pesos; and total circulation, 106,424,000 pesos.

IMPROVEMENT IN INDIA'S ECONOMIC CONDITIONS.

Based on cable from Vice Consul Harold Shantz, Calcutta, April 26.

[India's foreign trade shows a greatly increased favorable balance. General business is good. Crop conditions continue promising, forecasts showing generally increased acreage and production in staple products. Money is in demand but conditions tend toward easier terms. Both gold and silver are active and shipments to the interior are heavy. Raw cotton prices have declined, but rice quotations have advanced. Local markets are quiet.]

Further Increase in Favorable Trade Balance.

The total foreign merchandise trade of India for March, 1923, aggregating 601,800,000 rupees (3 rupees=$1) shows an increase of 110,900,000 rupees compared with March, 1922, and an increased favorable balance of 159,700,000 rupees for the same period. Compared with February of the current year the increase amounts to 82,100,000 rupees. March exports totaled 416,400,000 rupees, including 104,400,000 rupees' worth of reexports—an increase of 100,400,000 rupees over February and of 139,291,000 rupees, or 50 per cent, over March, 1922. Imports declined from 193,700,000 rupees in February to 185,400,000 rupees in March, and showed a decrease of 11.5 per cent in March as compared with the same month of 1922.

For the first three months of the present calendar year Indian exports totaled 1,027,000,000 rupees and imports amounted to 592,400,000 rupees, as against 728,000,000 rupees and 690,300,000 rupees, respectively, for the first quarter of 1922. This gives a favorable balance of 434,600,000 rupees for this quarter of 1923, in contrast with a favorable balance of only 37,700,000 rupees for the same period of last year.

The following table shows the principal Indian imports and exports for February and March, 1923, and the totals for the same commodities during the first quarter of 1922 and 1923:

Principal Indian imports and exports in February and March, 1923, and the first quarter of 1922 and 1923.

Money Market Still Stringent—General Business Improving.

The expected reduction in the bank rate of 8 per cent has not been realized. The demand for money is increasing, as more is required for crop movements. While money is tight, a tendency toward easier conditions is reported.

Government securities are running strong, and applications for treasury bills are being made on a considerable scale. On March 15 (the latest report available) the total amount of treasury notes in circulation was 1,743,494,838 rupees, and the ratio of metallic reserve to the circulation was 63.70.

The demand for bullion is continuing, with Bombay apparently the center of operations. Shipments from Bombay to the interior during the last week in March amounted to approximately 1,350,000 rupees' worth of silver and 9,000,000 rupees' worth of gold.

Following the trend of silver prices, the Calcutta cross rate of rupee-dollar exchange on New York showed considerable fluctuation during April. The month opened with the rupee valued at $0.3142. This rate dropped to $0.3129 by April 10, rose again to $0.3140 in 10 days, and then declined slowly to $0.3129 on April 26. Fluctuation of London exchange affected the markets to some extent, but general business is encouraging, and conditions in the entire country show improvement, although the bubonic plague is retarding the expected advance. Shipping was dull in March, and foreign trade suffered to some extent from labor difficulties.

Crop Conditions Good.

In Bengal Province field operations are progressing for the next autumn crops as well as for deep-water paddy. Prospects for summer rice are favorable. The United Provinces report wheat prospects to be normal with harvesting and threshing in full swing. Punjab crops are promising and the output of sugar cane in Assam is up to the average.

The final forecast for peanuts estimates the total area for 1922–23 at 2,530,000 acres, as compared with 2,144,000 acres for the previous year—an increase of 18 per cent. The total yield is estimated at 1,157,000 tons, as against 957,000 tons for the previous year—an increase of 21 per cent. The crop is good but below normal. Prices have declined somewhat as the result of the depressed condition of the Marseille market, which is the chief outlet for this crop of southern India.

The final acreage of sugar cane for 1922–23 is placed at 2,721,000 acres—an increase of 14 per cent over the previous year—while the total yield of gur (raw sugar) will be 2,999,800, as compared with 2,599,000 tons last year and 2,820,000 tons as an average yield for the preceding five years.

The third forecast for the wheat crop of 1922–23 estimates 30,500,000 acres and 11,399,000 tons, representing an increase of 2,316,000 acres and 1,586,000 tons over 1921–22. It is also estimated that 1,247,000 tons of wheat are now available in India for the foreign trade, and the recent drop in price is encouraging export.

A local firm estimates that the sowings of the 1923–24 jute crop will reach approximately 35 per cent more than last year.

Due to climatic conditions and systematic fertilizing, prospects are favorable for an increased output of tea in Ceylon, although a decrease in quality is anticipated.

The labor difficulties in the Burma oil field, which involved all of the companies operating there, have been settled. A strike of 20,000 workmen, involving not only the dockyards but other business enterprises in Colombo, Ceylon, interrupted the export and import

business through the inability of steamers to complete either loading or unloading.

Ten thousand workers in two jute mills of Bengal and 20,000 in the cotton mills of the Bombay district are out on a strike, but as yet the cotton market has not been affected.

Markets Steadier—Piece Goods More Active.

For several months the linseed market has remained fairly steady, with very slight decreases recorded at intervals. The wholesale price of 14 rupees and 3 annas per hundredweight, quoted April 26, is an increase of 1 rupee and 1 anna for the month.

On the same day raw cotton was quoted at 514 rupees per 784 pounds, or a decrease of 40 rupees as compared with the preceding month. The market is steady.

The price of rice continued to advance, the quotation of 454 rupees per 7,500 pounds representing an increase of 4 rupees.

There is a good demand for hides and skins in Madras, notwithstanding the depressing effect of the decrease in Germany's purchases. A hopeful sign reported is America's increased demand.

The market for raw jute is steady, with manufactured jute products quiet. Some increased activity is noticeable in the market for imported piece goods in the principal centers of India. There is a steady retail business, but the volume of demand from upcountry consuming centers continues to be restricted. Prices remain steady and there seems to be little evidence of immediate improvement. Comparing the total importation of piece goods into India for March with that of February, Great Britain's share was less by 20,489,430 yards, and the quantity from the Netherlands declined by 1,168,360 yards, while Japan's share increased by 2,384,820 yards.

IMPROVEMENT MAINTAINED IN INDO-CHINA.

Consul Leland L. Smith, Saigon, April 20.

[Improvements which were noted in February have been well maintained, largely because of an increased demand for cheap rice. The business stagnation in Tonkin, due to low prices of tin and zinc, also gives promise of improvement and prospects are better than at any time since the armistice.]

Budget Decision Delayed.

The final decision concerning the 1923 budget of Indo-China has been delayed on account of the absence of a governor general, but the total will probably reach 72,000,000 piasters (1 piaster=$0.548). The actual surplus of the 1922 budget receipts over the estimated receipts was 7,600,000 piasters.

A government loan for railroad and canal building, to be offered in France and Indo-China, is awaiting approval upon the arrival of the new governor. Railroad receipts in January amounted to 733,000 piasters—an increase of 32,000 piasters over January of the previous year. For the year 1922 receipts totaled 7,900,000 piasters, an increase of more than 1,000,000 piasters over receipts of 1921.

The government is planning the construction of canals for draining and irrigation of the Mekong delta. It is probable that a working agreement will be made with the Banque de Paris et des Pays Bas.

Increased Demand for Rice.

Since the French Government passed the law permitting rice to be used in the manufacture of bread, large orders for broken rice at unusual prices have entirely absorbed the carry-over stock. It is estimated that France will now take from 500,000 to 600,000 tons of broken rice yearly instead of 200,000 tons, and it is expected that the present year may prove better than the average for rice, although the crop is estimated at only 50 per cent of the average yield. China is buying heavily, important quantities going to Shanghai, which has not before entered largely in the market. Exports of rice for the month of March amounted to 150,000 metric tons, compared with 115,000 tons in February.

Better Prices for Tin.

Tin mines of Tonkin are reopening, and two are working at full capacity. The improved price at the close of 1922 has been maintained, and it is predicted that if this condition continues the value of exports of tin in 1923 will equal that of the war years. Two mining companies have applied for water rights at the falls of Song Nam for the production of electric power to be used in mining.

Increased Interest in Agriculture.

An increased interest in Indo-China in agricultural pursuits other than the cultivation of rice is evidenced. The Banque de Paris et des Pays Bas has sent a mission to encourage cotton production in Cambodia, and the government is endeavoring to introduce modern agricultural methods by the inauguration of a "motor culture week." Gratifying sales of American tractors and plows have been made.

Shipping Improved with Increased Rice Exports.

Local shipping prospects have greatly improved with the increased rice shipments. The net tonnage of vessels entering the port of Saigon in March was 82,000 tons, and clearances totaled 85,000 tons. Of these amounts American shipping was represented by 10,000 and 16,000 tons, respectively. The Shipping Board run from Hongkong to Java has been discontinued. There were a number of charters of Philippine vessels for China ports in March.

FAVORABLE CONDITIONS IN SIAM.

Consul Maurice P. Dunlap, Bangkok, April 20.

[General economic conditions in Siam are good. Silver is returning into circulation, amounting to 46,000,000 ticals, or 54 per cent of the note circulation. Exchange is steady at $0.43½. The Minister of Finance has stated that the Government has no present intention of further reducing the rate of exchange.]

The condition of the rice market (the most important economic factor in the country) has been favorable to Siam. Prices for the foreign market in foreign currency have been maintained and rice dealers have therefore benefited by the recent decline in tical exchange. The market remains firm, with Cuba and Shanghai buying, but a very poor demand from Europe. A shortage of tonnage for carrying rice to Cuba has resulted, with a tendency to higher freight rates. Both Siamese shippers and Cuban dealers are interested in establishing regular connections and a direct route

through Panama, as transshipment at Hongkong is considered unnecessary.

The yield of paddy for 1923 is estimated at about 4,023,000 short tons. The condition of the present crop is reported as fair to medium, with the available crop of cleaned broken and meal reckoned at 1,250,000 long tons.

There is renewed activity in building and construction in the business district of Bangkok. Work on the Government Railway hotel will soon begin and the erection of a new prison and customhouse is being discussed. It is rumored that a match factory is to be started in Bangkok. American firms are showing interest in the rail tenders offered by the Siam State Railways.

There have been several American traveling agents in Siam recently representing important interests in steel, rubber, and office supplies. German salesmen were expected in February, but permission for them to enter has been indefinitely postponed.

CONDITIONS IN SUMATRA EAST COAST AND STRAITS SETTLEMENTS.

The export trade of the Sumatra East Coast is showing improvement and the retail trade of the district, though still weak, is in better condition, according to a cable from Consul C. O. Spamer, at Medan, dated April 20. New merchandise is appearing on the market at somewhat lower prices. There is no construction work of importance. Although there is abundant evidence of unemployment, labor continues undisturbed. Preliminary arrangements have recently been made by an American salesman representing office specialties for the establishment of an agency in this district.

Activities in the Straits Settlements.

Reports from Consul General Ernest L. Harris, Singapore, and Consul Renwick S. McNiece, Penang, state that the foreign trade of the Straits Settlements in March showed a considerable increase over the previous month and resulted in a substantial credit balance. Exports amounted to 62,005,000 Straits dollars and imports totaled 46,055,000 Straits dollars—an increase of over 11,000,000 dollars in exports and of 7,000,000 dollars in imports compared with February. These figures bring the total export trade for the first quarter of 1923 to 151,000,000 dollars and imports to 122,000,000 dollars, leaving an excess of exports amounting to 29,000,000 dollars.

Rubber exports in March amounted to 24,000 short tons, compared with 20,000 tons in February and 23,000 tons in January. Of the total rubber exports in February, the United States took 74 per cent, the United Kingdom 14 per cent, continental Europe 7 per cent, and Japan 4 per cent. Tin exports in March amounted to 6,000 tons, against 5,000 tons in February. In the latter month the United States took 80 per cent of these shipments, the United Kingdom 6 per cent, and Europe 13 per cent.

The bazaar trade of Penang is reported to be in fair condition. Most small traders have liquidated old accounts and are now meeting current obligations, but are buying cautiously. The new Penang-Colombo cable is completed and several miles of additional underground cable are being laid in Penang. It is reported that Crown agents are calling for bids for new telephone apparatus for Penang and tenders will be asked through Crown agents for electric-light plant for Penang and the new Prai docks. A joint committee of the Straits Settlements and the Federated Malay States has been appointed at Singapore to consider the development of the port of Prai to accommodate ocean-going steamers. Shipping is normal, with a good demand for space to New York. There is little unemployment in the Penang district and wages are fairly well stabilized. It is stated that an American company is opening up 10,000 acres for rubber cultivation in Kedah.

LATIN AMERICA.

J. R. McKey, Acting Chief, Latin American Division.

ECONOMIC CONDITIONS IN BRAZIL.

Based on cable from Commercial Attaché W. L. Schurz, Rio de Janeiro, April 27.

[Sterling exchange is lowest in the history of Brazil. Federal Congress convenes. Demand for agricultural implements anticipated.]

The sight rate for dollars during the past month ranged from 9.100 to 9.766 milreis to the dollar, giving an average for the month of 9.433, as compared with an average of 8.920 for the month ending March 24.

The customs receipts at Rio de Janeiro for the period April 1 to April 20 amounted to 6,478,000 milreis, as compared with 4,092,000 milreis during the same period last year. This increase was largely due to the heavy clearances of goods, which began a month before the 60 per cent gold ratio of customs duties was put into effect. Receipts at Santos are running small, amounting to only 5,827,000 milreis during the period under review. The Federal District collected 8,012,000 milreis, as compared with 5,652,000 milreis during the corresponding period of 1922.

Exports during the first two months of 1923 were valued at 504,721,000 milreis and imports during the same period amounted to 322,639,000 milreis.

Coffee, Sugar, and Stocks of Other Export Commodities.

Stocks of coffee at Santos on April 27 amounted to 1,619,795 bags and there were 962,776 bags at Rio de Janeiro on the same date. These are decreases of 266,533 bags and 151,686, respectively, from the stocks on hand on March 23. During the period from April 1 to April 24, 937,355 bags were shipped from Santos and 142,512 bags from Rio de Janeiro. Type 4 coffee is quoted at 23.40 paper milreis per 10 kilos and Type 7 at 22.876 paper milreis. Santos' share of the coffee crop is estimated at 12,377,040 bags by the French Italian Bank.

On April 24 there were 10,000 bales of cotton on hand at Pernambuco, as compared with 12,000 bales on March 23. In Rio de Janeiro on those two dates stocks of cotton amounted to 18,416 bales and 15,879 bales, respectively, and at Sao Paulo, 3,866 tons and 4,282 tons.

During the month there were considerable shipments of sugar from Pernambuco. Stocks on hand were as follows: Rio de Janeiro, 157,092 bags; Pernambuco,

232,000 bags; Sao Paulo, 90,380 bags. The coming crop is estimated at 3,000,000 bags.

Exports of manganese ore from January 1 to April 14 of this year amounted to 90,377 tons. Hard rubber was quoted on April 14 at 4.700 paper milreis per kilo.

Brazilian cotton, rice, cacao, and tobacco crops are in good condition.

The Argentine market for babassu oil nuts is very active. There has also been a fair movement of cacao and tobacco from Bahia.

Imports and Markets.

Iron and steel is dull because Germany continues out of the market. American and Belgian prices have advanced considerably and the English are making every effort to get business. The demand for cement is slack with the largest imports coming from Scandinavia.

The demand for hardware is not good in spite of the fact that stocks are very low. The market for electrical goods is small.

There is little change in the machinery market, except that Belgium is taking an increased share of the business. German competition continues important in this line. The demand for agricultural implements is normal, but is expected to increase in May.

The market for automobiles shows favorable prospects for the next three months, although it will be somewhat restricted by the unfavorable exchange rates. During the period from March 25 to April 22, 175 American automobiles were imported at Rio de Janeiro and Santos. Imports from other countries were very small. During March, 572 cars of a popular American make were assembled at Sao Paulo.

The paper market is unsteady and American prices are generally high. Between March 25 and April 22, 805 metric tons of Scandinavian paper were imported at Rio de Janeiro and Santos.

The market for chemicals is dull. The caustic-soda price war has been ended and the leading British and American exporters have agreed that prices are not to drop below 0.95 milreis per kilo.

Construction—Transportation Activities.

Building and construction is generally quiet although there is a certain amount of activity in Sao Paulo. Work on public improvements, which has been begun in Fortaleza, State of Ceara, and Sao Luiz, State of Maranhao, was financed by loans floated in the United States. Contracts have been let for port works at Ilheos Bahia which will cost 4,600,000 milreis.

The shipping business is dull, but new freight lines have been inaugurated between Norfolk and Brazil. The bids of the Sorocobana Railroad for locomotives and of the Sul Mineira Line for rails have been annuled. The Sul Mineira Line, however, has made a new call for bids, to be opened April 30, on 100 kilometers of rails, the specifications being the same as for the previous bids. The Sao Luiz and Theresina Railroad is to order 15 closed freight cars. The receipts of the principal railroads during the month have been generally higher than they were during the same period last year.

PROSPERITY IN ARGENTINA CONTINUES.

Based on cable from Trade Commissioner George S. Brady, Buenos Aires, April 28.

[Heavy exports and high prices prevail in Argentina. Financial condition is secure. Money is still plentiful. Extensive public works are planned.]

A gradual improvement in the commercial situation of Argentina is apparent. Customs receipts are averaging 44 per cent higher than last year, and commercial failures, though still occurring, are fewer. The banking and financial situation is satisfactory. Clearing-house operations are increasing and money is plentiful, with discounts running at 5 and 7 per cent. Dollar exchange continues to show an upward tendency, the advance during the month being from 1.19 to 1.21 pesos to the dollar, with the probability of further advancement to 1.25. Immigrants are sending heaving money remittances to Spain and Italy. The bond market is active. Industrial and public utilities are paying dividends of 5 to 10 per cent for 1922, and railway receipts are higher than for last year.

The chief factor responsible for Argentina's present improved condition is the continued heavy exports and good prices, especially in the case of grain, hides, wool, and sheep.

Imports Show Increase.

Imports, as indicated by the customs receipts and bank settlements, are also higher, but buying is still cautious, and fall retail offerings are generally lower in price than for last year. Great Britain's position in the textile market is strengthened, Italy's is weakened, and Japan is furnishing the market with grey goods and flannels. The yarn market is fully stocked. The industrial machinery market is also inactive, but there is some interest in construction machinery on account of the extensive public-works plans of the Government. Agricultural implements continue in steady demand, as farmers are planting for increased acreage next season. Germany is still in the market sending hardware, toys, paper, glassware, chemicals, and large quantities of wire to Argentina.

GENERAL PROSPERITY IN BOLIVIA CONTINUES.

Based on cable from Consul Dayle C. McDonough, La Paz, April 23.

[General conditions in Bolivia, although optimistic, are somewhat unsettled, awaiting the outcome of the general elections which are scheduled to take place on May 6. The mining industry is active. Crops are reported good. Railroad construction continues.]

Exchange declined from a high point of 2.90 to 3.18 bolivianos to the dollar during the course of the past month, the latter rate being equivalent to $0.3144. This is to be compared with an average rate of 3.02 bolivianos to the dollar for the first 25 days of March, and an average rate for February of 3.14. Although this decline has had the effect of temporarily curtailing imports, stocks on hand are in general approximately normal and local merchants have not felt the effect of the reduced value of the boliviano.

Tin exports for the past two months by countries of destination are as follows: Great Britain, 270 metric tons in March and 2,514 tons in February; France, 111 metric tons in March; United States 60 metric tons

in March and 2,643 in February. The large proportion of exports to Great Britain is influenced by cheaper smelting charges. A tendency to hold stocks is also noticeable. While exports of tin have been smaller than last month, and prices have declined somewhat, conditions continue good in the mining industry, and imports, particularly in the line of mining supplies, should increase within the next few months. The Indian farmers have had good crops and this gives additional confidence in the prediction that imports will increase in the near future.

The present price of rubber is causing a revival of interest in that industry, but as yet no work appears to have been actually undertaken to increase production.

The increased duty on exported silver, which became effective on February 15, has been withdrawn.

Work on the three railroads now under construction is continuing. These include the Atocha-Villazon Railroad, which will connect La Paz and Buenos Aires and form the last link in a new transcontinental route. This railroad, when completed, will become a part of the shortest route between the United States and Buenos Aires. The two other lines referred to are the line from La Paz to the Yungas region and the Potosi-Sucre line.

BUSINESS CONDITIONS IN CHILE.

Based on cable from Assistant Trade Commissioner W. E. Embry, Santiago, April 27.

[No marked change occurred in Chilean business conditions during April. Nitrate exports showed an increase. Customs collections were the highest since February, 1920. Building and construction are continuing active. The freight market is somewhat easier.]

During the past month there has been no notable change in general business conditions in Chile. The activities of the Pan American conference are naturally arousing particular interest in local business circles and confidence is expressed that material advantages in a commercial way will result from the meeting.

Crops generally are plentiful and the production of wheat, oats, and barley is estimated to be larger than last year.

Imports during March, as compared with February, show an increase, particularly in flour, pig iron, and pine, although the total March figures are not yet available. March exports, too, are unusually heavy in peas, beans, oats, wheat, frozen meats, barley, copper bars and ore, sheepskins and wool. Considerable interest continues to be manifested in the exportation of fresh fruit to the United States. Prices ruling this month in general, on both export and import commodities, are approximately the same as last month, though the advance in the world price of sugar is reflected in the Chilean market. There is a tendency toward cautious buying on the part of Chilean merchants. Building and construction continue fairly active.

A feature of the local buying market in the recent past has been the large movement in the tire market, which has exceeded all expectations, although during the past few weeks the sales have slackened.

Partial cessation of activity in the coal industry has resulted from a dull market and large stocks on hand. A settlement of the labor difficulties in the southern coal fields has been agreed upon as a result of the State Railway's decision to purchase 200,000 tons of native coal this year and 250,000 tons during the following year.

Nitrate Exports Increase.

Exports of nitrate during March amounted to 253,000 metric tons, of which 110,000 tons went to the United States. Exports for the first half of April totaled 295,000 metric tons, of which 62,000 went to the United States. Total March sales amounted to 197,000 tons, as again 31,000 tons during the first 21 days of April.

Financial Institutions Secure.

The last report of the Federal Bank Inspection shows the general sound position of Chilean banking institutions. There has been a steady withdrawal of what is commonly known as the nitrate currency following the large sales of nitrate stocks. The issue of this currency was a part of the assistance rendered to the nitrate industry during its period of extreme difficulty. Estimates place the amount of this currency withdrawn since April, 1922, at 22,000,000 pesos. Interest on Chile's foreign indebtedness continues to be paid promptly. Customs collections during March amounted to 15,000,000 gold pesos. This is the largest amount received since February, 1920.

No further action has been taken in the matter of depositing the Chilean conversion funds abroad and doubt is expressed in some quarters as to whether these funds will be permitted to leave the country.

Freight Rates and Shipping.

The freight market is somewhat easier than last month, rates to the United States at the present time running between $5.50 and $6 per ton. In connection with the shipping situation there is considerable agitation at the present time in favor of making San Antonio a major port, competing with Valparaiso.

Germany has been practically eliminated from the local iron and steel market, leaving a clear field to the United States, except for some Belgian and English competition.

PERUVIAN BUSINESS CONDITIONS.

Cable from Acting Commercial Attaché W. E. Dunn, Lima, April 26.

[Little change in the general situation of Peru during April. Excellent cotton crop being ginned in central region. The budget bill has been passed, while the effective date of the new tariff has been delayed. Sanitation loan floated locally. Imports at Callao increase.]

The general business situation in Peru shows practically no change from last month. The higher prices prevailing for certain Peruvian raw products is producing optimism, though business in southern Peru is reported inactive.

The increased shipments of sugar have practically exhausted the stocks on hand for export and as the large centrals are closing for annual repairs, further shipments will be negligible until the new crop becomes available for export in July.

Cotton ginning has commenced in the central coastal region and in the valleys and excellent crops are reported. Present price quotations are for Tanguis and smooth varieties 60 soles, and for Mitafifi 56 soles per quintal (1 sol=$0.422 at present rate of exchange). Serious floods that have occurred in the Piura district of northern Peru have damaged the crop of full rough,

which is expected to result in a shortage of that variety in the September and October harvests. Although wool prices are higher and the market is more active, the general situation in the south is dull.

Congressional Activities.

Congress adjourned on April 7 after having concluded consideration of various important measures. Among these were the budget bill and various taxation provisions. Due to conditions in the typographical trade, the delays in the printing of the new tariff law will probably necessitate postponement of the effective date of that measure until June 1 or later.

The terms of the Dunsmuir railroad concession have been somewhat liberalized and Mr. Robert Dunsmuir sailed for New York on April 21 hoping to arrange there for financing the undertaking. The sanitation loan, which has been under advisement for some time, has finally been taken up locally by the Banco Italiano to the amount 500,000 Peruvian pounds.

Peruvian Imports and Exports for the Month.

An increase in the quantity of imports from all of the principal countries of origin in Europe and North America is noted. Total imports at the port of Callao during the month of February were valued at 771,000 Peruvian pounds. Imports of merchandise from the United States during the period from March 22 to April 24 were 39,644 cases, as against 23,489 cases during the period from February 22 to March 21. The number of cases imported from other countries during these two periods were, respectively: Great Britain, 13,005 and 2,870; Germany, 10,656, and 10,240; France 2,188 and 640; and Belgium, 866 and 200. Total exports from Callao for the period March 22 to April 24 were valued at 1,210,000 Peruvian pounds.

VENEZUELAN SITUATION IMPROVED.

Based on cable from Consul Thomas W. Voetter, Caracas, April 28.

[Commercial conditions in the central part of Venezuela manifested a decided improvement during April as a result of the receipt of the funds from the sale of the coffee crop and the continued activity on the part of the oil companies operating in the Lake Maracaibo district.]

Dollar exchange held firm during April at 5.23 bolivars, after having been quoted at 5.28 bolivars in February and slightly lower during March. Discount rates were steady during April.

With the approach of the rainy season the marketing of the coffee crop is practically finished, but cacao continues to arrive at coast ports. Coffee prices declined during April, the best grade (Caracas "descerezado") having dropped from about 86 bolivars per bag of 46 kilos during March to 76 bolivars per bag during April. "Threshed" coffee sold during April at 68 bolivars per 46 kilos—a decline of about 4 bolivars per bag from March levels. Reports from the region about Ciudad Bolivar estimate the tonka-bean crop, which is now beginning to arrive on the market, at four times that of last year, when it amounted to less than 100,000 pounds.

Balata production for the crop which is just drawing to an end is estimated at 1,000 tons, which is approximately equal to the preceding crop. It is expected that large quantities of hides will arrive in this market from the Orinoco region when upriver navigation begins. It is estimated that 100,000 hides will be exported this year.

New Roads and Bridges to be Built.

The Venezuelan Government has authorized two new road projects, and two bridges are to be built at Caracas. Construction work on these projects will probably be carried out by the Government—instead of by contract.

The La Guaira and Caracas Railroad is making a detailed study in connection with the electrification of its lines.

Import Trade Light at Present.

Imports at the port of Ciudad Bolivar continue small, due to the lack of funds on the part of the merchants there, but it is expected that the money entering this region in payment for tonka-bean and balata shipments will ease the financial stringency and assist in the liquidation of commercial accounts.

MEXICAN TRADE SLOW—SILVER AT DISCOUNT.

Based on cable from Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City, April 27.

[General trade conditions in Mexico remain slow, with small orders. Automobile stocks are rather large, with only fair sales. Silver currency is weak and banks are favoring gold deposits. Mercantile houses discount payments in gold. Wheat and cotton prospects indicate larger crops. Activities in west-coast vegetables and Guayule rubber.]

General trade conditions in Mexico during March presented but little change from the stagnation of recent months. The principal demand for imported goods was in such staples as hardware, groceries, and dry goods, with some improvement in machinery sales. Automobile dealers are holding rather large stocks of cars on hand and report only a fair business in the region about Mexico City. Commercial conditions in the city of Tampico were better in April than during recent months, several petroleum companies having resumed developments, and increased import and export traffic having been diverted from Vera Cruz on account of numerous labor difficulties at that port. Reports as to collections are conflicting, but they seem to be slightly poorer in the Federal District, in which the capital of the Republic is located, while in certain portions of the interior there is evidently an improvement.

Financial Conditions.

The weakness of silver currency was the outstanding feature of the financial situation during March. Mexican silver coin was quoted at 3 per cent discount from gold and is still weak. Apparently this is due to the continued coinage of silver and to large receipts of such coin from the interior, as well as to a recent agreement of the Mexico City Clearing House Association. Effective May 1, 1923, banking houses in this association will no longer pay interest on silver deposits, and furthermore will charge 1 peso per thousand on all silver deposits and collections made in silver. The same agreement fixes a maximum of 2 per cent interest annually on gold checking accounts of over 1,000 pesos and abrogates payment of interest on accounts of less than that amount. The question of payment of interest on savings accounts and "dollar" deposits is left to the discretion of the individual banks. A slight increase in the present scale of all collection charges has

been effected by an agreement of all the banks of Mexico City, with one exception. Wholesale merchants and manufacturers display a growing tendency to give their customers discounts on bills when payments are made in gold.

The Compañia Bancario Mexicana, originally created as a subsidiary institution of the Banco Nacional, has been reabsorbed by the latter. The consolidation was not the result of financial difficulties.

Exchange rates for the Mexican peso were firm throughout the month, ranging from $0.48\frac{1}{2}$ to $0.48\frac{5}{8}$ and closing April 27 at $0.48\frac{9}{16}$.

Petroleum Developments.

Petroleum exports for March are reported as 12,222,292 barrels (an increase of about 2,400,000 over February and 400,000 over January, 1923, but approximately 4,700,000 barrels less than in March, 1922) and other reports mention heavy withdrawals from storage during March, 1923. The oil companies are reported as leasing lands in the State of Nuevo Leon and undertaking additional development work in the Tampico fields. The Chamber of Deputies has passed the new petroleum law, which is still to be approved by the Mexican Senate and the Executive.

Favorable Crop Reports.

Good wheat crops, due in May, are reported in the northern States of Coahuila, Nuevo Leon, and Tamaulipas, where the rainfall has been plentiful, and also in the western part of the State of Guanjuato. Estimates place the August cotton crop of the Laguna district (in the vicinity of Torreon, and the principal source of supply for the Mexican cotton mills) at 60,000 bales, which is very much better than had been expected. Probable cotton production in other districts, outside of the Lower California fields, is given as 18,000 bales. The west coast tomato growers are reported as having a successful season, about 300 carloads having been shipped so far from the State of Nayarit. The first shipment of Sinaloa canteloupes to the United States has gone forward in 21 cars.

The guayule rubber industry of the States of Coahuila, Nuevo Leon, and San Luis Potosi is showing increased activities. The guayule factories of Saltillo and Cedral, in the States of Coahuila and San Luis Potosi, will open May 1, and the one at Torreon, Coahuila, is already in operation.

[Other Mexican information will be found in the Latin American section of this issue.]

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

AMERICAN FRESH FRUITS IN BRAZIL, ARGENTINA, AND URUGUAY.

About 95 per cent of the apple imports into Brazil come from the United States. American fresh fruits have gained a strong foothold in the Argentine market. The United States exported 2,261 barrels of apples to Uruguay during 1922.

Commercial Attachés W. L. Schurz, Rio de Janeiro, and Edward F. Feely, Buenos Aires.

The market for North American apples and pears has been developed to a considerable extent in Brazil, and there is also a good market for dried fruit such as is produced in California. Canned fruit from California is imported to a small extent.

Approximately 95 per cent of the apples imported by Brazil during the last five years have come from the United States, pricipally from the west coast. Most of the shipments go to Rio de Janeiro, while smaller amounts go to Para, Bahia, and Santos. United States exports of apples to Brazil are illustrated by the following table.

Apples exported from the United States to Brazil.

Years.[1]	Barrels.[2]	Years.[1]	Barrels.[2]
1913	14,172	1918	5,573
1914	25,314	1919	16,800
1915	36,297	1920	24,656
1916	28,486	1921	13,760
1917	25,297	1922	13,667

[1] Fiscal years, 1913 to 1917; calendar years, 1918 to 1922.
[2] 1 barrel is equivalent to 3 boxes.

During recent years imports of pears into Brazil from the United States have been about one-half as great, measured by value, as imports of apples.

High prices reduce consumption.

Imports of apples and pears into Rio de Janeiro amount to approximately 32,000 boxes per year, according to one of the largest importers of fresh fruits in that city. This importer believes that the amount could be doubled if the retail price could be sufficiently reduced. During the 1922–23 season fancy apples sold for 700 to 800 reis each, and medium-grade apples for 500 to 600 reis each. The exchange rate was the principal reason for these high prices. At the prevailing rate these prices were approximately equivalent to 8 to 9 cents for fancy apples and 6 to 7 cents for apples of medium quality. The imports of 1920 may be taken as the present maximum capacity of the market when prices are within the purchasing power of a large number of people.

Citrus fruits are not imported into Brazil, as that country is one of the world's largest producers of oranges and lemons.

Apples and pears lead in Argentina.

Although in Argentina the season of production of all fruits is the opposite from that of the United States, apples, and to a lesser extent pears, are the only North American fresh fruits that have gained a strong foothold in the Argentine market. There have been some small shipments of oranges and grapefruit, but the production of these fruits in the River Plate countries and Brazil is sufficient for the ordinary demands of Argentina. Occasional importations will probably be made, but only in response to unusual market conditions.

Some fruits that have a winter market in Argentina can not be profitably imported from the United States because of the competition of European countries whose fruit ripens at the same time. The latter countries have the advantages of lower initial cost, a depreciated exchange as compared with the appreciated exchange of the United States, and excellent direct steamer connections with Buenos Aires. Grapes are imported in large quantities from Spain and Portugal.

An important factor in favor of apples and pears as leaders in the Argentine market is the fact that the speed and efficiency of transportation and refrigeration need not be as great in the case of apples as in the case of the more perishable fruits.

Most of the North American fruit exported to Argentina is grown on the west coast of the United States. The common practice has been to ship it by rail to New York and then by fast passenger steamer to Buenos Aires. The United States Shipping Board is now starting a fast passenger service direct from the west coast of the United States to Buenos Aires, with facilities for the transport of fresh fruits. As the expense of the transcontinental haul can be avoided by shipping over this new line and the cost of the apples c. i. f. Buenos Aires reduced by about 15 per cent, this service will undoubtedly play an important part in increasing the Argentine market for North American apples and pears. However, because of the fact that only one sailing a month is planned, many shipments at the height of the season will continue to be routed via New York.

Native Argentine and imported Chilean apples come on the market from January until April, and sometimes later by refrigeration. In general they are not comparable in quality with the North American product, although last season a selected lot was sold at prices equal to those of the imported apples. Before the war apples from New Zealand came on the Argentine market from March to September. Shipments of these apples will probably be resumed when communications are reestablished. North American apples begin to appear in August and reach their heaviest importation during November and December. They continue to appear as quality fruit in competition with the native and Chilean apples through the early part of the year. During the latter months of the year there is no competition with native fruit, therefore the volume of sales is governed more or less by the price at which North American apples can be retailed in Buenos Aires.

Imports from the United States.

From 1913 to 1917 imports of apples into Argentina from the United States increased steadily. Transportation difficulties caused a notable decrease in 1918 and 1919, but in 1920 imports were again large. In 1921, because of the marked appreciation of the dollar, the imports were small. Statistics of these imports from 1913 to 1922 are as follows:

Apples exported from the United States to Argentina.

Years.[1]	Barrels.[2]	Years.[1]	Barrels.[2]
1913	7,239	1918	4,704
1914	36,266	1919	15,159
1915	49,179	1920	32,688
1916	44,033	1921	9,829
1917	58,453	1922	28,079

[1] Fiscal years, 1913 to 1917; calendar years, 1918 to 1922.
[2] 1 barrel is equivalent to 3 boxes.

Argentine imports of pears from the United States during 1913 to 1922 were equivalent to approximately 20 per cent of imports of apples during the same period, computed on the basis of value.

Uruguayan and Argentine Markets Similar.

In general, the market for fresh fruits in Uruguay follows the Argentine market, although it is smaller. United States exports of apples to Uruguay from 1913 to 1922 are shown in the following table.

Apples exported from the United States to Uruguay.

Years.[1]	Barrels.[2]	Years.[1]	Barrels.[2]
1913	280	1918	987
1914	2,925	1919	1,777
1915	6,670	1920	3,767
1916	3,023	1921	1,429
1917	7,040	1922	2,261

[1] Fiscal years, 1913 to 1917; calendar years, 1918 to 1922.
[2] 1 barrel is equivalent to 3 boxes.

The value of pears imported into Uruguay from the United States is equivalent to approximately 8 per cent of the value of imports of apples during similar periods.

It is the general opinion of fruit importers who serve the Argentine and Uruguayan markets that apples and pears will continue to be the important North American fruits for these markets, and that with the present improved shipping facilities, the lower cost of transportation, the introduction of better marketing practices, and more favorable exchange an even larger demand for these fruits may be anticipated.

THE COST OF LIVING IN AUSTRIA.

Consul Robert W. Heingartner, Vienna.

The rise in the cost of living in Austria during January and February, 1923, after prices had been steadily falling during October, November, and December, 1922, has caused a great deal of surprise. It was generally believed that depreciation alone was the cause of the uninterrupted rise in commodity prices during the eight-year period which began early in the war and ended in September, 1922, when the crown was practically stabilized at about 70,000 crowns to the dollar.

Commodity prices began to drop in October, 1922, immediately after the beneficial effects of a stabilized although heavily depreciated currency were felt. This was to be expected, since, with depreciation eliminated, the law of supply and demand was again the guiding factor in business. The relations between seller and consumer changed completely.

Consumers Use Hoarded Stocks.

In the era of depreciation the consumer usually considered it a favor if the dealer would sell him commodities in exchange for crowns that decreased in value overnight. Retailers preferred not to sell at that time, well knowing that their stocks had permanent value while the purchasing power of the crown diminished almost from hour to hour. Many consumers hoarded large quantities of food supplies of all kinds in anticipation of still higher prices. When depreciation ended, higher prices were no longer to be feared. These people ceased buying entirely until their hoarded stocks were used up, while others bought only small quantities in the hope that prices would drop rapidly. Thus for the first time in years buying was

reduced to a minimum and the seller was forced to sacrifice his stock under cost price, fearing that the coming market price would be still lower. This state of affairs continued during October, November, and December, 1922. Finally the law of supply and demand brought prices to their natural level, with the result that there has been a steady rising tendency since.

Prices Affected by Neighboring Countries.

That prices have gradually increased since December, 1922, is shown by the index figures for January and February, 1923. This is undoubtedly due to the fact that Austria is to a very great extent dependent on foreign markets for food supplies and raw materials. Austria's grain production is only one-fourth of the country's grain consumption. For this reason bread and flour prices rise and fall with world market prices and freight rates. Austria's position with regard to some other products is still less favorable. Any slight change in foreign markets is felt immediately, particularly with regard to commodities that are not produced in Austria or that are produced in inadequate quantities, such as sugar and coal. Sugar was relatively cheap in Austria for a short time last autumn, but the sudden rise in value of the Czecho-Slovak crown immediately sent the price up to its present level of 12,444 crowns per kilo. Czecho-Slovak prices are so high that quantities of sugar have been ordered from Java. Importation of Java sugar into Austria was found profitable two years ago, in spite of the fact that the Czecho-Slovak refineries are only a few hours from Vienna by rail.

Retail Trade Now Normal.

It is evident, therefore, that a stabilized crown could not keep down commodity prices for any length of time. The falling tendency from October to December, the period immediately following stabilization, was due to three factors: Hoarding ceased and hoarders consumed their reserve supplies, speculation in food supplies stopped because prices ceased to fluctuate, and retailers unloaded their stock at cut prices. In short, relations between seller and consumer are again normal; competition is keen and profits are low, and prices are regulated by the law of supply and demand. The only uncertain element in the cost of living in the near future is the unsteadiness in the currencies of near-by countries which supply Austria with food products. Any improvement in these currencies is immediately felt in higher prices and higher freights.

At present the prices of many commodities are higher in Austria than in world markets. This is explained by the fact that freight and other foreign charges, as well as customs in the case of dutiable goods, must be added to the Austrian retail prices of commodities before they reach the consumer.

CEREALS AND POTATOES IN EUROPE.

Cablegram from Alfred P. Dennis, special representative of Department of Commerce, London, April 27.

Imports of Wheat and Flour.

European imports of wheat and flour for the period from August 1, 1922, to April 7, 1923, are 406,000,000 bushels, as compared with 390,000,000 bushels for the corresponding period of the previous year and 350,000,000 bushels for the corresponding period of the cereal year 1920–21. These figures indicate that buying is well maintained and that previous estimates of European purchases have not been too high. The general estimate is about 202,000,000 bushels for import during the balance of the cereal year.

Imports of Corn.

European imports of corn from November 1, 1922, to March 24, 1923, show a heavy decline as compared with the same period of the previous season. This falling off has been largely through the reduction of American shipments, which were 37,920,000 bushels, as compared with 68,344,000 bushels for the corresponding period last year. At the same time imports from Argentina increased from 31,560,000 bushels last year to 50,552,000 bushels for the period covered in the current year. Corn supplies are light in Great Britain and on the Continent, with the market bullish, but dealers anticipate heavier American shipments on the reopening of navigation on the Great Lakes.

Acreage of Winter Cereals.

It is now apparent that the European acreage of winter wheat and rye will not vary widely from that of last year. Certain countries have definitely increased the areas under winter wheat as compared with last season. Notable examples are France with an increase of 9 per cent, Russia with an estimated increase of 13 per cent, Belgium with an increase of 7 per cent, and Spain and Italy with increases of 2 and 1 per cent, respectively. Poland also has a slight increase. These gains are offset by an estimated decrease of 10 per cent in Germany, 10 per cent decrease in Rumania, 6 per cent in Czechoslovakia, 2 per cent in Bulgaria, and a definite reduction in Great Britain. Weather conditions, however, have been more favorable for plant growth throughout Europe than they were during the last winter. Present indications point to better yields per acre than last season, particularly in France.

The Cereal Situation in Russia.

A drop of 35 per cent is reported in the case of Ukraine winter cereal acreage, attributed chiefly to deficiency in seed grain. Owing to the increases in other parts, it may be expected that Russia as a whole will show a substantial increase, estimated at 13 to 15 per cent.

Some native rye is being exported from Russia to Finland and Germany. The Russian pre-war grain consumption for all purposes, estimated at 26 poods per capita, fell to approximately 15 poods during the famine year of 1921, and is now approximately 20 poods.

Spring Cereal Acreage Promises Little Increase.

While active effort is being made in certain countries to increase cereal production through enlargement of spring-sown areas, it is doubtful whether any considerable expansion over last year may be anticipated. British farmers find cereal growing unprofitable at present values and are giving more attention to stock raising. Owing to the high prices of raw cotton, farmers in such countries as Rumania, Belgium, and Italy are increasing the areas sown to flax and hemp at the expense of spring cereals. (The 1922 European production of flax was 18 per cent and of hemp 15 per cent under that of 1921, with flax 21 per cent and hemp 24 per cent under pre-war average.) The high price of sugar also tends to divert lands from cereal to beet cultivation.

Shortage of farm labor is proving an obstacle to increased spring sowings in Germany, Czechoslovakia, Belgium, and France. However, slackened coal de-

liveries from the Ruhr to French metallurgical industries tend to release factory hands for farm work. It is reported that 25,000 Belgian field laborers have gone to France, attracted by high wages, and that in consequence agriculture in Flanders will suffer.

Potato Crop Supplements Cereal Supplies.

The effect of the shorter grain crop in central Europe at the last harvest has been tempered by huge crops of potatoes in Germany, Belgium, Czechoslovakia, and Poland. The potato crop in Poland is now officially reckoned at 33,000,000 tons, or 100 per cent in excess of the previous year. While these figures must be accepted with caution as a probable overestimation, enormous stocks of cheap potatoes are entering freely into human consumption and stock feeding, and Polish potatoes in desiccated form are being exported to such countries as Germany and Switzerland. Despite the heavy German potato crop, which exceeds that of last year by about 12,000,000 tons, the number of hogs in Germany is still declining. In the year ended December 1, 1922, the number of hogs in Germany decreased from 15,817,000 to 14,683,000, a loss of 7.2 per cent. The demand for American hog products in Germany is insistent, but financial confusion restricts actual purchases.

Austrian Sales Tax Affects Foodstuffs.

The Austrian sales tax, effective April 1, applies to foodstuffs, and American shippers of grain, flour, lard, and meats should readjust their business to meet these new conditions. A bill is now before the Austrian Parliament for the purpose of reimposing suspended duties on fruits and vegetables, canned fish, and canned meats. The proposed change leaves staple foodstuffs unaffected.

Notes on Food Products.

Italian Lemon Crop Damaged.

The lemon crop in Italy has recently suffered much damage by windstorms. It is estimated that one-third of the production is not suitable for export. (Consul Edward I. Nathan, Palermo, April 23.)

Bananas Offered by Mexican Firm.

A firm of producers on the west coast of Mexico desires to contract for furnishing bananas in large quantities to American importers. (Consul Geo. A. Bucklin, Acapulco.) Importers wishing to get in touch with this firm may do so by addressing the Foodstuffs Division of the Bureau of Foreign and Domestic Commerce, and specifying file No. 91143.

Imports of Edible Oils in Guadeloupe.

Peanut oil from France has practically displaced cottonseed oil and corn oil from the United States in the Guadeloupe market. This is due partly to the depreciation of the franc and partly to the increased price of the American cottonseed and corn oils. The American oils are considered superior to the French oil in body and flavor, but this superiority is not great enough to overcome the handicap of higher price. (Vice Consul E. St. George Lough, Basse Terre.)

Movement of Canadian Wheat.

During the past season wheat from Argentina has been a serious competitor of Canadian wheat and has supplied a large part of the requirements of Great Britain. However, Canadian wheat has sold readily whenever tonnage could be secured at rates sufficiently favorable to enable Canadian wheat to reach the British market even at a slight advance over the Argentine product. Shipments of Canadian wheat to the Orient are approximately one-third of the amounts shipped during the season of 1921–22, when Japanese crops were very light. (Consul Dudley G. Dwyre, Fort William and Port Arthur, Ontario.)

Scarcity of Maize in Albania.

There is a serious shortage of maize in Albania, according to a report from the Foreign Office and Board of Trade, London. This condition is caused by the poor harvest of 1922 and subsequent damage by floods. A year ago the price of maize bread in central Albania was 1 Italian lira per oke. It is now rapidly approaching 3 lire, and in some districts has reached 4 lire. To alleviate this condition the Albanian Government has given permission to the municipalities (probably Durazzo, Tirana, Elbasan, and Avlona) to import maize free of duty, and 1,000,000 kilos have been ordered from Rumania. This permission has not been given to private merchants.

Imports of Wheat Flour in Manchuria.

During the Chinese New Year holidays special delicacies, such as pastry and noodles, are substituted for the regular Chinese diet. Wheat flour is the principal ingredient of these delicacies. About 150,000 sacks of American flour were imported in Dairen, Manchuria, during January and early February to meet this demand. North of Mukden in Manchuria flour is supplied by domestic production, there being 20 flour mills at Harbin.

The total imports of wheat flour into Manchuria in 1922 amounted to 2,551,279 sacks, valued at $3,847,309, as compared with 195,981 sacks, valued at $318,156, in 1921. Most of this flour came from the United States via Japan. (Consul J. W. Ballantine, Dairen, Manchuria.)

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Far East:
- Indian crop forecasts.
- Philippine sugar-crop forecast.
- Increased demand for Indo-China rice.
- Conditions in Siam rice industry favorable.

Cable review, Latin America:
- Peruvian sugar situation.
- Chilean exports of grains and meats.
- Argentine grain crops.

Tariffs and trade regulations:
- Import duty established on salted fish in India.
- Import duty increased on salt in India.
- Abolition of Egyptian sugar monopoly.
- Imports of unhusked rice prohibited in Federated Malay States.
- Fiji export tax on copra further reduced.
- Changes on Greek import tariff on tobacco.
- Removal of export prohibition on olive oil in Greece.
- Polish exemption of certain fish and milk from import duty.
- Proposed export bounties on beef and cattle in South Africa.
- Reduced export duty on wheat in Yugoslavia.

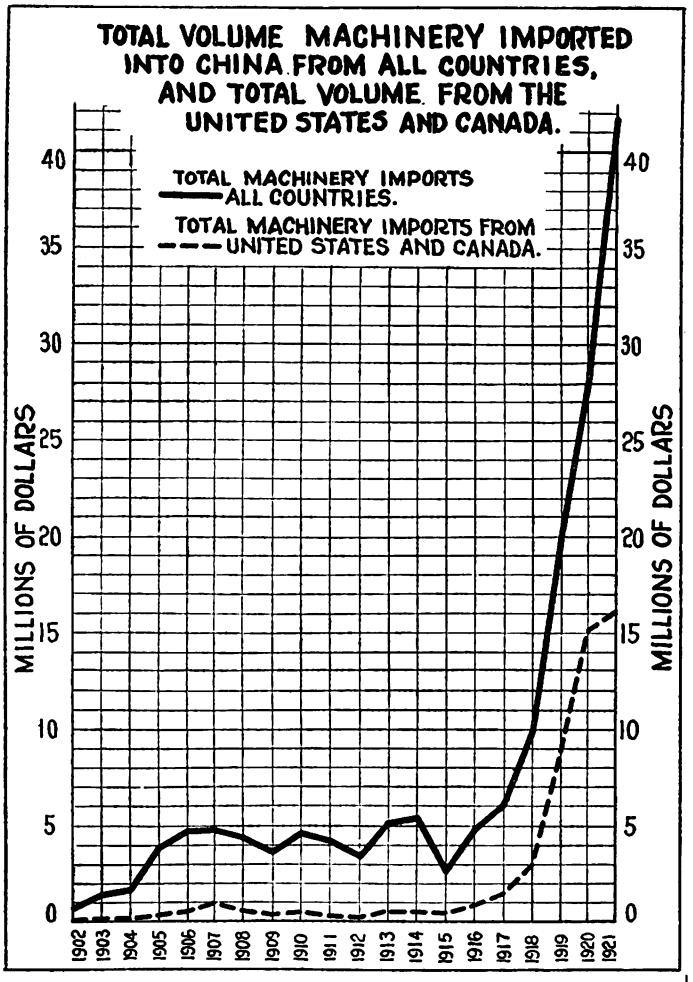
INDUSTRIAL MACHINERY



MACHINERY TRADE OF CHINA.[1]

W. H. Rastall, Chief Industrial Machinery Division.

The Chinese market for industrial machinery is developing rapidly and American products occupy an important position in the trade. China imported over $41,000,000 worth of industrial machinery in 1921, of which the United States furnished an important share.

An analysis of the Chinese Maritime Customs, as applied to the machinery trade, provides information that is interesting as illustrating the position of the several countries in this trade. The situation is unique in that the country has long been considered as being unchanging. On the contrary, however, the situation illustrated by Chart I reveals the fact that in 1921 China absorbed over $41,000,000 worth of industrial machinery. While this total is not large compared with the quantity absorbed by the important occidental countries, it is obvious that very substantial progress has been made.

CHART I.

[1] This article is intended to bring to date a report entitled "Asiatic Markets for Industrial Machinery," published by the Bureau of Foreign and Domestic Commerce, in so far as it refers to conditions in China. This report can be purchased from the Superintendent of Documents, Government Printing Office, Washington, D. C., price 60 cents. It is a book of 332 pages and provides a great amount of information regarding the machinery trade for the entire Orient.

The total imports of machinery into China, and the extent to which the United States and Canada participated therein are shown in the following table:

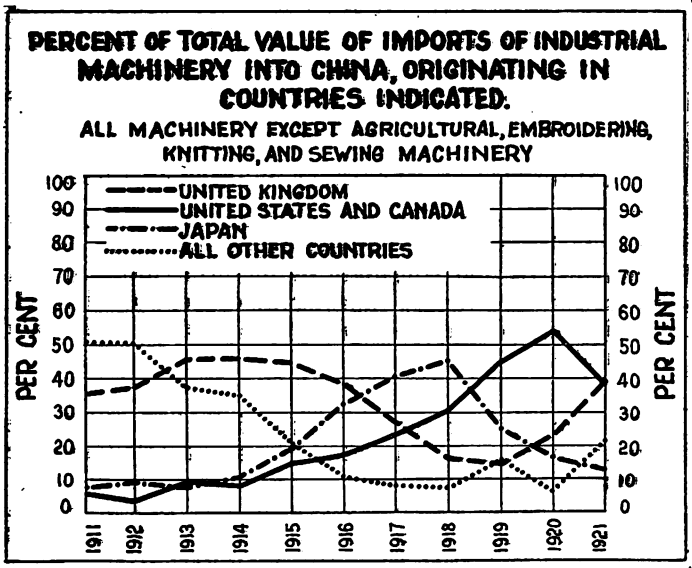
Total machinery imports into China and the participation of United States and Canada.

Year.	Total.	United States and Canada.	Per cent supplied by United States and Canada.	Total.	United States and Canada.
	Haikwan taels.	*Haikwan taels.*			
1902	1,008,295	122,462	12.1	$635,226	$77,151
1903	2,145,026	291,141	13.6	1,372,817	186,330
1904	2,708,648	221,898	8.2	1,787,708	146,453
1905	5,383,363	410,505	7.6	3,929,855	299,669
1906	6,041,944	579,667	9.6	4,833,555	463,734
1907	6,199,174	1,255,061	20.2	4,897,347	991,498
1908	6,786,656	810,756	11.9	4,411,326	526,991
1909	6,010,212	342,298	5.7	3,786,434	215,648
1910	7,103,137	576,321	8.1	4,688,070	380,372
1911	6,561,020	382,054	5.8	4,264,663	248,335
1912	4,704,485	179,803	3.8	3,481,819	133,054
1913	7,137,048	673,227	9.4	5,210,045	491,456
1914	8,157,270	681,170	8.3	5,465,371	456,384
1915	4,485,867	659,722	14.7	2,781,238	409,028
1916	6,131,258	1,078,530	17.6	4,843,694	852,038
1917	5,982,715	1,411,141	23.6	6,162,196	1,453,475
1918	7,800,290	2,390,332	30.4	9,903,965	3,011,818
1919	14,328,249	6,407,727	45.0	19,916,266	8,906,741
1920	22,536,254	12,181,382	54.1	27,944,955	15,104,914
1921	54,898,590	21,199,400	38.6	41,722,928	16,111,544

China an Important Market for American Machinery.

It will be noted that the United States and Canada furnished $16,111,544, or 38.6 per cent of the machinery imported into China during 1921. This, compared with a total of $18,184,978, as reported in the export returns of the United States customs (a very satisfactory check, if allowances be made for the difference in classification and the period covered), indicates that China ranked fifth in importance among the foreign markets for American machinery. Such a showing is satisfactory when it is remembered that this country ranked only twenty-eighth in 1913 and fifteenth in 1910. American machinery exports to China in 1921 were 30 times as great as in 1910.

From the Chinese point of view the information conveyed by the above chart is deceptive because the currency of China is on a silver basis. The original returns, from which these curves were prepared, were in haikwan taels, the value of which has varied from $0.63 to $1.39 in the period indicated (1902 to 1921).



Imports from Great Britain, Japan, and Other Countries.

Corresponding information regarding the participation of other countries is shown in Chart II, which follows. The hold which British manufacturers had on this trade prior to the war and the extent to which British interests suffered subsequently is here illus-

trated. Marked recovery has more recently been observed, and 1921 figures show that the British total slightly exceeded that of the United States.

The Japanese curve is interesting as showing to what extent the manufacturers in that country supplied equipment to China during the war period, although this record has not been maintained since the armistice. It should be remembered, however, that the total volume of this Japanese machinery trade has expanded to such an extent that, even with this reduced participation, the yearly totals show consistent increase, as is indicated more clearly in the following table, which shows the value of machinery imports into China, with the exceptions of agricultural, embroidering, knitting, and sewing machinery.

CHART II.

Value of machinery imports into China.

Year.	United States and Canada.	United Kingdom.	Japan.	Total from all sources.
	Haikwan taels.	*Haikwan taels.*	*Haikwan taels.*	*Haikwan taels.*
1911	382,054	2,330,209	465,122	6,561,020
1912	179,803	1,762,916	388,475	4,704,485
1913	673,227	3,241,590	548,522	7,137,048
1914	681,170	3,749,149	852,934	8,157,270
1915	659,722	1,994,518	851,135	4,435,867
1916	1,078,530	2,350,903	1,991,031	6,131,258
1917	1,411,141	1,648,869	2,419,813	5,982,715
1918	2,390,332	1,313,604	3,569,909	7,860,290
1919	6,407,727	2,073,968	3,604,935	14,328,249
1920	12,181,382	5,229,026	3,727,674	22,536,254
1921	21,199,400	21,267,694	7,142,163	54,898,590

In Chart II the curve marked "All other countries" includes the German participation in this trade as well as that of a number of other countries, but it is largely because these German returns are included that the curve is so high at the left of the diagram. Up to the end of 1921 German participation in the machinery trade of China had not recovered, and the general conclusion is that the United Kingdom and the United States will be the most important factors in the machinery trade of China from now on. This diagram also suggests that American machinery deserves more active representation in the markets of China.

Volume of Trade in General Types of Machinery.

As further illustrating the situation in the machinery market of China, the following table shows the volume of the trade in each of the several general types of machinery enumerated in the returns of the Chinese customs.

Imports of industrial machinery into China, 1921.

	Total.	Japan.		United Kingdom.	
		Value.	Per cent of total.	Value.	Per cent of total.
	Haikwan taels.	*Haikwan taels.*		*Haikwan taels.*	
Machine tools	940,337	292,772	31.1	295,877	31.5
Propelling machinery	5,163,781	255,433	49.5	3,350,784	64.9
Textile machinery	26,792,072	3,622,553	13.5	11,160,313	41.7
Brewing machinery	634,973	575,626	90.1	1,311	.002
Other machinery	21,367,427	2,395,779	11.2	6,459,409	30.2
	[1]54,898,590	7,142,163	13.0	21,267,694	38.8

	United States and Canada.		Germany.	
	Value.	Per cent of total.	Value.	Per cent of total.
	Haikwan taels.		*Haikwan taels.*	
Machine tools	277,827	29.5	34,073	3.6
Propelling machinery	1,051,333	20.3	115,137	2.2
Textile machinery	11,768,272	43.9	131,492	.49
Brewing machinery	58,036	9.1		
Other machinery	8,043,992	37.7	681,435	3.2
	21,199,400	38.6	962,142	1.75

[1] This value is equivalent to $41,722,928 at the average rate of exchange for the year, which was $0.76.

It should be explained that in this report the returns from the United States and Canada have been combined, because large quantities of machinery manufactured south of the border are shipped through Vancouver, and therefore important quantities of American-made machinery are credited to Canada in the returns of the Chinese Maritime Customs. It is true that a certain amount of error probably creeps into the figures as they are published, because some machinery manufactured in Canada and shipped to China may be credited with that from the United States.

The Different Markets of China.

It should also be remembered that China approximates the size of the United States, and in this area there are several markets that are more or less distinct. In order that the comparative importance of these different markets may be estimated, as applying to the different classes of machinery indicated above, the data in the following table are also included.

Comparative markets for machinery.

Markets.	Machine tools.	Propelling machinery.	Textile machinery.	Brewing machinery.	Other machinery.
	Haikwan taels.	*Haikwan taels.*	*Haikwan taels.*	*Haikwan taels.*	*Haikwan taels.*
Shanghai	485,426	2,959,233	18,751,225	1,596	8,356,584

The market for industrial machinery in China is developing rapidly and American manufacturers occupy an important, if not a leading, position in that trade,

and the volume of business available there is such as to justify careful sales effort in order that the market may be developed up to its possibilities. While some of the particulars published above indicate that there is a certain amount of European competition, it should also be remembered that, for many classes of equipment, the difference between the European and American designs is such as to place these classes of equipment in quite a different grade. Therefore, the sales problem consists in educating the oriental buyers to the superior qualities of the American product.

UNIQUE METHOD OF SELLING MACHINERY.

Trade Commissioner Perry J. Stevenson, Johannesburg, South Africa.

A unique method of selling machinery in foreign markets has recently been brought to the attention of this office and, as it has evident advantages, it may be of interest to American manufacturers of industrial equipment.

The American firm now using the method sends into the foreign field its export sales manager, who has sample machines shipped to him for use in the principal centers. First an attempt is made to get in touch with a prominent user of this type of equipment, on a trial or demonstration basis, no attempt being made to sell the machine until after it has been running and has demonstrated its utility and economy. In fact, this policy is adhered to so rigidly that the sale of a machine will not be permitted before one has been erected and the demonstration has been carried out. The local-agency problem is handled by placing it with a firm selling supplies to the local industry for which the American machinery is intended.

Advantages of the Method.

The advantages of such a sales method are obvious. There is no "overselling" as to the machine's capacity, the buyers making their purchases on the basis of actual accomplishment under their own working conditions, which, of course, vary in the different markets. The best proof of the value of the method rests in the success of the American manufacturer, who has developed a trade in many parts of the world along these lines without ever having a dissatisfied customer. Only machinery that is right and is suitable to local needs can be sold under such a policy.

Naturally one of the most important features is the confidence which is immediately built up in the minds of prospective buyers when they see that the manufacturer has sufficient confidence in his product to send out machinery without any definite sales being in sight. This confidence is increased by the presence of a trained and qualified expert who can superintend the erection of the equipment, as well as instruct purchasers in its operation. While this method may not be suited to all lines of industrial equipment, it is suggested that it might well be followed by more manufacturers interested in South African and other foreign markets

Catalogues of Machinery Wanted in Cuba.

Consul Charles Forman, Nueva Gerona, Isle of Pines, Cuba, requests that catalogues and price lists be forwarded to that consulate by manufacturers of irrigation equipment and canning machinery used in the growing and canning of pineapples, citrus fruits, and vegetables.

Additional information regarding industrial machinery appears in this issue under the following sections:

Foreign trade opportunities Nos. 6262, 6265, 6266, 6267, 6268, 6269, 6270, 6271, 6272, 6308, 6309, 6310, 6311, 6312, 6313, 6314, 6315, 6316, 6317, 6318, 6319, 6321, 6330.

CONSTRUCTION NEWS

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce, or its district and cooperative offices, by referring to the reference numbers given. Where no reference number is given, further information is not available.]

Italy.—The American consul at Trieste reports the approval on the part of the Royal Minister of Public Works of a project which involves the erection of two hydroelectric plants on the Upper Timavo and the Padoz (about 35 miles to the east of Trieste). The work of construction will shortly be initiated and it is calculated that electric energy of 35,000 horsepower will be developed. Reference No. 91132. (Consul Joseph Emerson Haven, Trieste.)

Arrangements have been made for the financing of projects which involve the construction of the first group of hydroelectric plants in the Sila Mountains in Calabria, with the necessary distributing lines, and for the completion of the program of hydroelectric development in southern Italy and Sicily. Reference No. 89670. (Commercial Attaché H. C. MacLean, Rome.)

Mexico.—According to an Executive decree dated January 24, the Mexican House of Deputies has authorized the Federal Government to expend 6,000,000 pesos in 1923 for the development of irrigation projects upon the Conshos and San Pedro Rivers in the State of Chihuahua. No details of the proposed work are yet available, but if the funds are available the work will probably be undertaken by the direction of the Secretaria de Communicaciones y Obras Publicas. (Consul Claude I. Dawson, Mexico City.)

Spain.—The American consul at Seville, Spain, reports that, authorized by Royal order, the ayuntamiento (city council) of Seville will float a bond issue of 10,000,000 pesetas, the proceeds to be devoted to the improvement of the city water system. (Consul William C. Burdett, Seville.)

Australia.—The date set for the receipt of tenders for the construction of the Sydney harbor bridge at Sydney, New South Wales, has been extended to November 20, 1923. Copies of tender form and the revised specifications (1923), which provide for an arch-type bridge, as well as the cantilever type, as originally specified, have been received in the Bureau and will be made available to interested American firms upon request to the Iron and Steel Division. (American Trade Commissioner J. W. Sanger, Melbourne.)

Japan.—The American consul reports the following hotels and buildings in course of erection: Sanyo Hotel (to be maintained by the Imperial Government Railway Department) at Shimonoseki; Denki Club at Tokyo (Marunouchi); and several municipal apartment houses at Tokyo planned by the mayor of Tokyo. (Consul M. D. Kirjassoff, Yokohama.)

According to a press report the Japanese Government has decided to provide one of the large local electric-power companies with funds, at low interest, amounting to 10,000,000 yen (about $5,000,000) in two years, with which to continue the construction of a generating plant, which was temporarily suspended for lack of funds. Reference No. 8334. (Commercial Attaché James F. Abbott, Tokyo.)

Canada.—Bids are desired by the Montreal harbor commissioners for the erection of steel works for a new grain elevator. Eight thousand tons of steel are required. Reference No. 90924. (Consul General Albert Halstead, Montreal.)

Porto Rico.—The municipalities of San Juan, Ponce, and Mayaguez, Porto Rico, are all proposing to make betterments to the existing water supply systems.

AUTOMOTIVE PRODUCTS

M. H. Hoepli, Acting Chief, Automotive Division

LIGHT CARS COMPETING WITH MOTOR CYCLES IN SPAIN.

Assistant Trade Commissioner O. S. Payne, Madrid, February 6.

American motor cycles, which in the past have supplied 90 per cent of the demand in Spain, are at present encountering serious competition from a low-priced American car and from European cycle cars that are selling for approximately the same price as motor cycles or even less. It is believed, however, that if motor-cycle manufacturers could quote lower prices, sales would be increased considerably by supplying utilitarian demands—past sales have been largely to the sporting elements.

[In so far as competition from cycle cars is concerned, American manufacturers have expressed little fear, since the fad has been known to travel from one country to another, usually enjoying only a short life before the public comes to realize that cycle cars can not stand up. If strengthened to the point where they will be satisfactory, the additional cost puts them into a different class from motor cycles in the matter of price. American motor-cycle manufacturers are anticipating that the Spanish market, which at one time was among their best, will not remain depressed for any length of time.]

Motor cycles are not registered separately in Spain. Estimates of the number in use there vary from 2,500 to 10,000, but authentic sources place the number at 6,000 to 7,000. Most of the European motor cycles are of British make, with a few French, Belgian, and German machines. Two well-known American makes predominate, with two other American machines running second. The British makes are chiefly the Triumph, Royal-Enfield, James, and Douglas.

The increasing popularity of American motor cycles in Spain is shown by the fact that of the 197,591 kilos imported in 1913, valued at 2,568,683 pesetas, 70,389 kilos were British, 50,164 were French, and 7,977 were American, while of the 483,856 kilos imported in 1920, valued at 6,290,128 pesetas, 244,633 kilos were American, 92,215 kilos were British, and 69,362 kilos were French. In 1921 the total kilos imported dropped to 131,544, valued at 1,710,052 pesetas, of which 30,844 kilos were British, 24,857 were French, and 60,769 were American. Imports for the first 8 months of 1922 were valued at 267,250 pesetas (other details are not yet available).

Practically All Machines Side-Car Equipped.

The use of motor cycles is confined almost exclusively to two classes of purchasers, namely, Government departments for Army, telegraph, and police service; and wealthy young men for sport purposes. Their use for business is negligible at the present time, although there has been a recent movement in Madrid to employ them as taxis. One feature militating against the popularity of motor cycles is the large number of accidents caused by speeding on the part of the sporting class. The number of motor cycles is approximately 18 per cent of the number of automobiles, yet statistics for the Madrid region show an equal and at one time a greater number of accidents from the motor cycle. This constitutes an additional reason for the development of motor cycles for business purposes rather than for sport. No transition from the bicycle to the motor-cycle class has been noticed, as bicycle users are generally working people who can not afford a motor cycle.

Hilly Roads Require Heavy Motor Cycles.

There are approximately 77,745 kilometers of roads in Spain, those in best condition being in the north and centering around the large towns. These roads, however, are generally hilly and require high-powered machines. In the south and in Andalusia the roads are poor. The Royal Automobile Club is the prime factor in all good-roads movements, and the new Minister of Public Works is said to be particularly interested in this Club.

American Machines Set Standard.

The usual equipment carried by two well-known American makes is generally accepted as standard, although a feature brought out by British manufacturers, consisting of a spare wheel which is adapted to replace any one of the three regular wheels, has proved very popular. No particular color for motor cycles

is preferred. The most popular type is the heavy, powerful 9-horsepower side-car model, such as furnished by one American manufacturer. The technical features required by law are two lamps and two brakes. Of the lamps, one must be in front and one in the rear; the latter must be red and must project a white light from the side that will illuminate the license number.

Practically the only competition worth mentioning comes from British machines, which are said to be more finely finished than the American, but lighter and of too low a horsepower for the hilly roads of the country. They are considerably higher in price than the American machines, but compare very favorably in durability. The French motor cycles are much lighter and somewhat cheaper than the American. Current prices for British machines are about as follows: Four-horsepower Triumph without side car, 3,950 pesetas; 2-horsepower Triumph without side car, 2,300 pesetas; 4-horsepower Triumph with side car, 4,950 pesetas; 6-horsepower Royal-Enfield with side car, 4,600 pesetas; 8-horsepower B. S. A. without side car, 5,000 pesetas. No motor cycles are manufactured locally.

Light Taxes of Little Concern.

Taxes and fees are so light and disregarded to such a large extent that they are not considered a drawback to sales. There is a registration tax of 25 pesetas, and a yearly tax differing in each municipality; the tax in Madrid has been about 15 pesetas per horsepower. Taxes have tended to remain about the same from year to year, but it is now proposed to fix the tax according to the cubic contents of the cylinders rather than according to horsepower. It is estimated that only one-third of the motor cycles in use pay taxes.

Division of Territory.

Some automotive interests hold that better results can be obtained by American manufacturers if the agency for the entire country is given to one really efficient representative who can appoint subagents and supervise their activities, rather than by dividing the country into small independent territories. This arrangment is disputed by some authorities, however, since it is believed that a house located in Barcelona could not successfully operate in Madrid, and vice versa, due to regional prejudices. The Province of Galicia is pro-American and is an excellent market for American automotive products, hence a separate agent for this territory might have a great advantage over one operating from Madrid or Barcelona.

Good Service Given by American Representatives.

American distributors are much more active in rendering good service and in carrying complete stocks of spare parts than are the distributors for foreign manufacturers. One American representative in particular has organized a Sunday repair service, which he operates by having a mechanic on a motor cycle traverse the main roads around Madrid for the purpose of repairing stalled machines. This service is free, except when a part is replaced. No such service is maintained by any other distributor. Another reason for the success of this representative is the fact that his entire efforts and time are devoted to the line of motor cycles, while other agents sell passenger cars in addition.

Dealers are requiring cash payments at the present time, as it is not believed that time payments would increase sales unless the prices of motor cycles were sufficiently reduced to enable the poorer classes to purchase them.

Advertising and Sales Promotion.

The most active distributers advertise their products through trade papers, newspapers, posters, window displays, free service, motor-cycle races, etc. The following are the most important publications for advertising purposes: España Automovil y Aeronautica (official organ of the Royal Automobile Club of Spain), issued in Madrid, fornightly; España Deportiva, Madrid, issued weekly; Heraldo Deportivo, Madrid, weekly; Madrid Sport, Madrid, weekly; A. B. C., Madrid, daily; La Epoca, Madrid, daily; Jornada Deportiva, Barcelona, weekly; La Esfera, Madrid, weekly.

Trade is promoted to a certain extent by races and contests, which are held four or five times a year by the Royal Motor Club. This club has a large membership of persons interested in motor cycles, accessories, etc. There are no trade associations in Spain for promoting sales.

AUTOMOTIVE DIGEST.

Chosen—Old Stocks Nearly Exhausted.

Firms in Chosen are recovering from the period of depression which followed after the heavy importations made in 1920. In the case of motor vehicles, stocks are almost exhausted, and new orders are being placed. (Vice Consul Foster M. Beck, Seoul, January 15.)

China—Rear-View Mirrors Required in Shanghai.

Effective April 1, 1923, all vehicles in Shanghai, as a license condition, must be fitted with a mirror of such size and so placed that the driver has a clear view of all following traffic, according to a municipal notification recently issued. (Assistant Trade Commissioner A. Viola Smith, Shanghai, March 20.)

Philippines—Alcohol an Unsuccessful Passenger-Car Fuel.

Although experiments have shown that alcohol as fuel for trucks is successful in the Philippines, this is not the case with passenger cars. Besides the fact of the fuel's offensive odor, the carburetors do not supply enough air, and the economy is not sufficient to warrant passenger-car users in changing their carburetors even if suitable ones were available. (Trade Commissioner John A. Fowler, Manila, March 8.)

Cuba—Agents For New Truck Lines Scarce.

Three factory representatives of leading makes of American trucks have failed to find suitable distributers in Habana during the past two months, as practically all the larger and more responsible truck agents at the present time have agreements with the manufacturers whom they represent which do not permit them to take over the agency of another manufacturer. There are approximately 500 unsold trucks in Cuba. The demand from commercial firms is not very heavy, as during the prosperous years preceding the crisis of 1920–1922 many of them bought more trucks than their business required. (Acting Commercial Attaché Paul L. Edwards, Habana, April 12.)

Peru—Improvement in Motor-Vehicle Trade Expected.

Although no suitable firms can be interested in taking the agency for new motor vehicles at the present time, owing to long-continued business depression, prospects are looking up as a result of better prices received for leading Peruvian products, and the motor-vehicle trade may show improvement a few months hence. A new tariff is under consideration, which reduces the import

duty on motor vehicles from 60 centavos per kilo to 15 per cent ad valorem for cars valued at not more than 500 Peruvian pounds ($2,000, at present exchange rates). (Acting Commercial Attaché W. E. Dunn, Lima, February 28.)

New Zealand—Imports of Motor Vehicles in December.

Motor-vehicle imports in December, 1922, totaled 479 passenger cars and trucks, valued at £98,991, and 109 motor bicycles and tricycles valued at £7,037, as against 166 and 22, respectively, in December, 1921. Imports of parts for passenger cars and trucks were valued at £9,473 and of motor bicycles and tricycles at £962, as against £8,602 and £2,403, respectively, in December, 1921. (Consul K. deG. MacVitty, Auckland, February 16.)

United States—1922 Export Figures Available.

Statistics showing 1922 exports of passenger cars, motor trucks, and busses, electric trucks and passenger cars, and parts of motor vehicles, except engines and tires, by classes and by country of destination, have recently been released to American manufacturers on the Exporters' Index. Other interested parties may secure copies upon application to the Automotive Division or to the proper district or cooperative offices of the Bureau of Foreign and Domestic Commerce.

India—Karachi a Market for Medium-Priced Cars.

Although the market for American passenger cars in Karachi is limited by its geographic inaccessibility, on the edge of the Indian desert, the rapidly increasing wealth of the Punjab and the expansion of the good roads has developed a market for medium-priced American cars that is being quickly supplied by various agencies stimulated to activity by distributers in Calcutta. Traveling representatives of American automotive manufacturers are making close surveys of market possibilities. (Consul Avra M. Warren, Karachi.)

Belgium—No Market for American Airplanes.

Belgium at present offers no market for American-made airplanes, as the only buyer now is the Ministry of National Defense which probably will continue to make its purchases in France. One attempt was made to enter the field of commercial aviation through a Government subsidized company, but activities ceased in 1922, although the organization still exists. Belgian interests also attempted to organize a local aircraft industry with the support of the Government, but as yet this company has confined its activities to repair work on existing planes. (Leigh W. Hunt, Secretary, Brussels, March 20.)

Greece—High Taxes Limit Motor Sales.

Importation of motor vehicles from January to October, 1922, totaled 80, as compared with 400 to 500 in previous years. Most of these vehicles were imported before the enforcement of the customs tariff of June 24, 1922 (since further increased), and the high interior taxes. Furthermore, the tax and the high price of gasoline has led many motor-vehicle owners in Greece to sell their cars, thus flooding the market with second-hand vehicles and forcing down the internal price of cars as compared with their real value on the basis of foreign exchange. (Acting Commercial Attaché R. O. Hall, Athens, March 27.)

Sumatra—New Motor-Vehicle Taxes Effective.

The Cultuuraad of the Sumatra East Coast has established a yearly tax on motor vehicles, effective January 1, 1923. The new tax is based primarily on horsepower and on the weight of the vehicle plus load. In actual practice the taxes work out approximately as follows: Lightweight touring car, 50 florins; average 5-passenger 4-cylinder car, 70 florins; average 7-passenger 6-cylinder car, 90 florins; 2½-ton truck with solid tires, 380 florins; 3-ton truck with solid tires, 420 florins. The tax on the above trucks with solid tires is 56 per cent heavier than for those equipped with pneumatic tires. Motor vehicles for hire are taxed double, whether used for persons or for merchandise. (Consul C. O. Spamer, Medan, February 12.)

United Kingdom—Tax Revision Delayed—Greater Production.

Manufacturers, dealers, and owners of motor vehicles in Great Britain are disappointed at the statement made by the Ministry of Transport on March 23, that it would not be possible for the report of the Committee on Taxation of Motor Cars to be recieved in time for consideration in this year's budget. Pressure had been exerted for a change in taxation from the present horsepower basis to one based on fuel consumption, to be effective January 1, 1924. In all probability it will not now be considered in time to become effective before January 1, 1925. Car orders are reported to be increasing, and some manufacturers of light cars are running their factories 24 hours a day. One large Coventry firm, manufacturing motor cycles, recently reported a production of 500 machines during one week. (Assistant Trade Commissioner W. H. Park, London, March 27.)

Czechoslovakia—Domestic Motor Vehicles are High-Priced.

There are three concerns in Czechoslovakia producing motor vehicles, the two more important ones being the Ceskomoravska Kotbenka, producing the "Praga," and the Laurin & Klement Co., producing a car bearing the company name. The combined producing capacity of these two plants does not exceed 600 cars annually. The Laurin & Klement 25 and 50 horsepower cars retail at approximately $2,200 and $3,200, respectively, while the Praga 20, 30, and 50 horsepower cars sell for approximately $2,000, $2,600, and $3,900, respectively. The Praga 3-ton truck costs approximately $3,000. To all these prices, with the exception of the motor truck, a 12 per cent luxury tax must be added. The third factory in the country, J. Walter a spol, at Jinonice near Prague, produces approximately 100 cars per year which sell at lower prices. (Trade Commissioner H. Lawrence Groves, Prague, March 6.)

Exhibits Available.

Interested persons may obtain the following exhibits from the Automotive Division, or through the proper district and cooperative offices of the Bureau of Foreign and Domestic Commerce, by requesting the exhibit number in each case:

87097.—Motor-vehicle manufacturers in Switzerland. Report, accompanied by catalogues, covering the four motor-vehicle factories still in existence after the commercial depression which caused two factories (Piccard, Pictet et Cie., and Arbenz S. A.) to go into bankruptcy. Prices charged by several producers are given. (Vice Consul William H. Mathee, Zurich, March 5.)

87940.—Firms exhibiting at the 1923 International Automobile Exposition at Goteberg. Names of local firms and their products, who will take part in the exposition to be opened on May 9, 1923, with list of products to be exhibited.

72453.—Austrian passenger cars and trucks. Detailed report on features found in chassis, bodies, and equipment. Policies of

individual firms outlined. Accompanied by specifications and prices and a large number of catalogues of various manufacturers. (Trade Commissioner W. F. Upson, Vienna, January 31.)

85634.—Development in French Aviation as shown at the Parisian exhibit. Report covers airplanes, seaplanes, flying boats, helicopters, hydroplanes, motorless planes, as well as improvements and notable events in French aeronautics. (Vice Consul Thomas B. Dawson, Paris, February 1.)

86624.—Motor-Vehicle Rules and Regulations in French West Africa. Covers construction, brakes, license plates, speed, danger signals, etc., for passenger cars, motor trucks, and motor cycles. (Consul W. J. Yerby, Dakar, February 6.)

Miscellaneous 305.—Specifications of Motor-Vehicle License Plates in the Philippines. Blueprints, covering the years 1924 and 1925. Estimates place the required number for 1924 at 31,000 and for 1925 at 34,000. (Trade Commissioner John A. Fowler, Manila, March 2.)

Additional information regarding automotive products appears in this issue under the following sections:

Foreign trade opportunities Nos. 6251, 6252, 6253, 6254, 6274, 6317, 6337.

SPECIALTIES

Henry H. Morse, Chief, Specialties Division

SPECIALTY COMMODITIES IN WORLD MARKETS.

HARDWARE.

The Spanish Market for Enameled Ware.

The present moment seems opportune for American manufacturers to introduce enamel kitchen and toilet utensils into the Spanish market. Enameled ware of these varieties finds wide use in Spain, the principal suppliers at present being Germany, Czechoslovakia, Sweden, and Switzerland. Several Spanish factories also produce enamel ware of cheaper grades, but the quality of their output is by no means equal to that imported.

Up to now Spain has purchased most of its enameled ware from Germany, but deliveries are falling behind and German prices are tending to rise to the level of those of other countries. Whether this condition will be temporary or permanent will depend to a large extent upon the outcome of the present internal situation in Germany. As an indication of the present favorable condition for American trade in enameled ware, it may be mentioned that a manufacturing company in the United States has recently received its first order from Spain, and that an important Spanish importer of Barcelona has recently sent a representative to the United States to make purchases.

Local importers suggest that American manufacturers conform to the established custom of making shipments with drafts attached payable at from 30 to 60 days' sight; that, if possible, business be started by the visit of a representative with a complete set of samples, and arrangements should be made to maintain stocks at such centers as Barcelona and Madrid; and that before undertaking any very extensive selling campaign a complete study of Spanish tastes in this line be made.

Several Barcelona concerns have received enameled ware from the United States, and they have been entirely satisfied with its quality, although the prices were found somewhat high. Apparently either direct representation in this market has been lacking or the lines represented have not been actively pushed.

Barcelona imports of kitchen utensils (polished, galvanized, enameled, and tinned), manufactures of tin plate, and steel spoons and forks (tinned or coated with other metal) from the United States have been as follows: In 1920, 1,439,328 kilos, valued at 3,900,579 pesetas ($1=6.495 pesetas at present exchange); in 1921, 2,046,285 kilos, valued at 5,594,158 pesetas; and in the first eight months of 1922, 514,530 kilos, worth 1,322,342 pesetas. (Consul Frank A. Henry, Barcelona, March 17.)

The Market for Hardware in Latvia.

In the Latvian market the fact that German merchandise is gradually deteriorating should assist the prospects of American hardware manufacturers. So far German hardware products have dominated the Latvian market. The cause is to be found in the low German currency and the proximity of that country to Latvia. The effect of the currency is passing, but, of course, the advantages accruing from proximity are permanent and are further enhanced by initiative and enterprise of the German forwarding agents in effecting prompt delivery.

Purchasers in Latvia are conservative, and reputation goes far toward finding a market. This is evidenced by the popularity of American saws and safety razors of well-known makes. American merchants can not obtain a proportionate representation on the local market if they insist on cash at port of shipment. Their British competitors, who are quite conservative, seem satisfied with a percentage of the cost with the order and a substantial part of the remainder against documents, Riga. Terms less favorable than these will hurt the prospects of the exporter. (Consul John P. Hurley, Riga, March 3.)

American Hardware in Australia.

There are good prospects for considerable trade activity in the Australian hardware market. American hardware enjoys considerable popularity in Australia and, with the revival of prosperous conditions in that country, 1923 should be considerably better than 1922. The demand for cooking utensils is particularly brisk. (Consul General Thomas Sammons, Melbourne, March 1.)

Market for Kitchen Utensils in Amsterdam.

Amsterdam offers a great opportunity for the sale of American kitchen utensils and other small household articles. Many are sold in Amsterdam now, but they are relatively high priced and must compete with cheap German products that are inferior in quality and durability but sufficiently attractive in price to offset the better American article.

The special opportunity here is for a store or a chain of stores like the 5 and 10 cent stores in the United States. There are variety stores in Amsterdam selling low-priced articles, but none of these has a small maxi-

mum price, like 10 cents. Stores with such a price limit and well stocked with useful articles would have a great trade in Amsterdam.

The prices of kitchen and other small household utensils sold in Amsterdam are generally much higher than those for similar articles in the American 5 and 10 cent stores. Pie pans, cake pans, and similar cooking utensils, and all sorts of small articles used about a house, which are sold in such American stores for 5 or 10 cents apiece, usually cost at least a guilder (40 American cents) in Amsterdam. It seems entirely practicable to sell these articles in Amsterdam for one-third of that price, even when the cost of freight from the United States is added to the tariff duty. Therefore, it should be profitable for an American 5 and 10 cent establishment to operate stores in Amsterdam and elsewhere in the Netherlands with prices at 15 and 30 Dutch cents—equivalent to 6 and 12 American cents. These stores would be similar to the American three-penny and sixpenny stores in England, which are very successful.

Instead of paying a guilder for small utensils, or hunting through the so-called "bazaars" for lower-priced ones, the Amsterdam public would be irresistibly drawn to stores where they knew that no price would be higher, for instance, than 30 Dutch cents—a price which at present will buy almost nothing in this country. (Consul Frank W. Mahin, Amsterdam, March 13.)

OFFICE SUPPLIES.

Carbon Paper and Typewriter Ribbons in the Vigo Market.

According to estimates about 100,000 sheets of carbon paper and between 10,000 and 12,000 typewriter ribbons are consumed annually in Vigo, Spain. Carbon paper comes from the United States, England, and Germany, with German carbon paper particularly popular because of the price differential. In general, carbon paper retails for $0.78 to $2.34 per box of 100 sheets, and the demand is for black and violet of about 8 by 12½ inches in size.

Typewriter ribbons of American or English origin have the preference, as the cheapness of German ribbons is more than offset by their poor quality. The colors preferred are blue, blue and violet, blue and red, black, and black and violet. The average retail price per ribbon is about $0.80.

There is no uniformity as to buying methods. Some dealers open direct connections with the foreign exporter, while others buy through agents in Barcelona and Madrid. (Consul Henry T. Wilcox, Vigo, February 24.)

Market for Small Safes in Portuguese East Africa.

Practically every hardware store in Portuguese East Africa stocks an assortment of small steel safes. These are in almost universal use among the business firms, and even the larger of the Indian traders are purchasing them. The annual importation amounts to over 10,000 kilos.

The most popular sizes with their retail prices are as follows: 18 x 18 x 24, £35; 24 x 24 x 30, £36; 20 x 20 x 30, £40; 24 x 24 x 32, £45; 30 x 44 x 65, £25; 50 x 80 x 82, £45; 78 x 75 x 50, £85; 76 x 70 x 55, £75. The Portuguese pound is quoted at approximately $4.

The Portuguese and the British makes are at present the only ones on the market. These safes are not high-grade articles and unless bricked in are not fireproof. They are, however, sufficiently strong to resist the attacks of the safe-breaking weapons of the local burglars and consequently satisfy the requirements. The combination lock is almost unknown and not generally desired, because the key safe is regarded as the more convenient. (Consul C. M. P. Cross, Lourenco Marques.)

Market for Office Supplies in Central Mexico.

Miscellaneous office supplies, such as pens, pencils, typewriters, ledgers, and ink, find a fair market in central Mexico. As there are no industrial establishments nor extensive office business of any nature in that locality, the sale of typewriters, cash registers, adding machines, and office furniture has always been restricted. Other up-to-date office appliances, such as envelope sealers, calculating machines, and dictaphones, are rarely seen.

The greater portion of the office supplies is furnished by the United States and Germany, only the cheaper grades of paper and books being manufactured in Mexico. Steel pens of English manufacture are found on sale in one or two houses and German inks are popular.

Although American typewriters have always been most popular in the district, central Mexico has been invaded recently by a German make, called the "Urania." This machine is selling at about 25 pesos ($12.50) cheaper than the well-known American typewriters, and is reputed to be well built. It is understood, however, that these typewriters, as well as other office supplies, are very hard to secure from Germany now. (Consul Lee R. Blohm, Aguascalientes, March 9.)

Fountain Pens and Ink Pencils in Mexico.

The San Luis Potosi market for fountain pens and ink pencils is supplied almost entirely from American sources. Although a vast proportion of the population is illiterate and lives on a very conservative, not to say primitive, scale, and is not even remotely to be considered as eventual purchasers of pens and pencils, there are perhaps a hundred thousand people of the educated classes, and the use of fountain pens among them is quite as general as in the United States. One house went to the expense of purchasing, for over $100, a machine with which to engrave names on fountain pens to the end of increasing their business therein.

Chihuahua offers a fair market for American fountain pens. Because of the great percentage of illiterate population this district does not offer so good a market for fountain pens as would a district of the same population in the United States. American pens have very little European competition to meet, although an attempt was recently made to market an English-made pen, but, it is believed, with small success. (Consul Walter F. Boyle, San Luis Potosi, April 3, and Consul W. M. Parker Mitchell, Chihuahua, April 6.)

South African Market for Carbon Paper and Typewriter Ribbons.

Considerable quantities of American carbon paper and typewriter ribbons are sold in the South African market. For the year 1922, $3,745 worth of the former and $6,364 worth of the latter were sold. However, British competition in these products is very keen, chiefly due to lower prices that they are able to quote. Among the British makes of carbon paper and typewriter ribbons sold, the "Koloc" line is believed to be one of the most popular. There is also a very limited sale in South Africa for the highest grade of carbon

paper. Medium grade, retailing for approximately $3 for 100 sheets, is most in demand.

In order to enter this market the best procedure for any firm to follow, if it produces suitable goods, is to send a representative to this country, or to place its business in the hands of a local manufacturers' agent who can keep constantly in touch with the importing trade. The use of correspondence in soliciting business and the promiscuous distribution of catalogues and price lists among prospective agents, jobbers, and dealers has never proved itself fruitful of results and is not recommended as the most effective way to sell goods in South Africa. (Consul Charles J. Pisar, Cape Town, March 7.)

NOTES ON OPTICAL GOODS.

Market for Optical Goods in South Africa.

The market in South Africa for American optical goods is not a definable one so far as the retail trade is concerned. That is to say, the individual consumer is not concerned with the origin of the material with which his prescription is filled or other requirements met. The retail dealers, however, are aware of the superiority of the American article and accordingly purchase about 80 per cent of their lenses, frames, and cases either directly from the American manufacturer or from a local wholesale house which buys in quantities.

There is only one exclusively wholesale optical-goods house in this district, namely, Messrs. Katz & Lourie, 143 Market Street, Johannesburg, and only one other in the whole of South Africa—Optic's (Ltd.), at Port Elizabeth, Cape Province. The Johannesburg house imports over 75 per cent of all the optical goods used in South Africa and serves the jobbers throughout the country. Of this firm's goods 80 per cent are imported from the United States, 15 per cent from France, and the remaining 5 per cent from Great Britain and the Continent. The local firm is well equipped for manufacturing (surfacing, grinding, edging, polishing, and drilling) from stock lenses the requirements for the entire Union of South Africa and sufficiently stocked to supply all needs for ready-made material, such as frames and cases.

Any American manufacturer desiring to introduce his goods in the South African market should first attempt to interest these wholesalers before filling small orders for jobbers. (Vice Consul John R. Minter, Johannesburg.)

American Optical Goods Supply Cuban Demand.

The Cuban business in optical goods has increased constantly during the past six or seven years. This was true in unit sales even during the business depression which followed the financial crisis of 1920. During this period, however, the value of goods sold showed practically no increase, and for a time declined. The value of unit sales has increased, but it is expected that the sales of the higher-priced articles will show a more marked improvement from now on. The late spring and summer months are normally good selling months, since many of the sugar planters and mill operators come to Habana as the sugar season closes to make their purchases. A steady and gradual improvement is looked for in the optical-goods business.

The annual purchase of optical goods by Cuba is estimated to be about $200,000, of which American manufacturers supply practically the entire demand. Formerly the American firms sold direct to the retail stores through traveling salesmen. At the present time, however, there is an increasing tendency to sell only through the large wholesale houses in Habana. Shipments to other firms are usually made with a draft drawn at 30 to 90 days attached to the documents. Sales made by Cuban wholesale firms to the retail dealers of high standing are made on a 30-day basis; to others the terms are cash with the order. (Assistant Trade Commissioner Howard H. Tewksbury, Habana, March 10.)

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

Proposed Broadcasting Company in India.

Vice Consul Harold Shantz, Calcutta, March 8.

According to telegraphic dispatches published recently, it was announced at the broadcasting conference held in Delhi on March 7 that the Indian government did not intend to permit broadcasting in India by individual firms, but, under reasonable control (as in the United Kingdom), by a single licensed company for the whole of India. It is planned that this company shall consist both of British and Indian firms and that no non-British subjects will be allowed to take part in it.

The proposal of the government regarding terms of the agreement required of the broadcasting company were embodied in a draft form of license placed before the conference. Opinions upon this form will be obtained from the Provincial governments and chambers of commerce.

The Director of Wireless pointed out that under the proposed license an imported set of apparatus would only be authorized if it was of British manufacture, but that it would be permissible to buy parts from the United States, or other foreign countries, and assemble them in India. The director said that the proposed company would be essentially an Indian one, registered and having headquarters in India.

It is understood that the manufacture of receiving sets is to be undertaken in India as soon as practicable by the new broadcasting company. This will probably at first consist of importation of some parts, the local manufacture of others, and assembling of complete sets.

In this connection it may be observed that at the present time no wireless equipment can be imported into India which is not for government use, except under a special import license from the Director of Wireless and by persons who are licensed to operate.

AUSTRALIAN TELEPHONE IMPROVEMENTS URGENTLY NEEDED.

Consul General Thomas Sammons, Melbourne, March 13.

Under the new Australian Federal Ministry an advisory board is to take charge of reforming the activities of the post office department, including the telephone and telegraph services. In connection with the work to be done by this advisory board the sum of approximately £9,000,000 ($42,750,000 at the exchange rate of £1=$4.75) is to be expended.

The shortage of telephones in Australia at the present time is estimated at 15,000. According to press reports, applications for new telephone installations are being received at the rate of over 2,500 a month, not more than 1,800 of which can be taken care of by the department with its present capacity. Under existing conditions the department has been falling behind on telephone applications at the rate of 750 a month, in addition to which there are old accumulated applications numbering 15,000. The new development will be applied equally to country service as well as cities, although country applications do not present the same difficulties as those in the more congested districts.

Much satisfaction is being expressed by the business interests of Melbourne at this promise of a thorough overhauling of the post office department, which is said to be badly needed to keep pace with the demand and the rate of progress which this city is making.

Automatic Telephones Proposed for Riga.

Vice Consul Carl Birkeland, Riga, March 17.

A new full automatic telephone exchange, to replace the present system in operation in Riga, has been proposed by the General Director of the Latvian Post and Telegraph Bureau of the Ministry of Communication. The cabinet is reported to have approved the project, which will be submitted to the Constituent Assembly during the coming summer. Favorable action is expected.

The new project calls for a machine-switching telephone exchange capable of caring for 10,000 lines, with a maximum capacity of 20,000 lines. It is proposed to install the new system in the office building which was erected for that purpose in 1914. The installation will be extended over a period of about four years. During the first year 2,000 subscribers' lines will be installed, 3,000 will be installed the second year, 3,000 the third year, and 2,000 the fourth year. The estimated cost is stated to be $600,000.

The present telephone system is operating under serious difficulties, due to the absence of modern equipment. The exchange has a capacity of 10,000 lines, of which only 8,500 are in working condition. Of these 8,500, 5,000 are used in local service and 1,500 in long-distance service, leaving 2,000 lines free.

It is estimated that the net earnings of the telephone system for the year 1923 will reach about 4,000,000 rubles, or $15,000.

Development of Quebec's Water Power.

Consul E. Haldeman Dennison, Quebec, Canada, March 22.

Attention has recently been drawn by the Provincial minister of lands and forests to a number of new projects now under way for the purpose of developing and utilizing the enormous water-power possibilities of the many falls and rapids of Quebec. Contracts for two important water-power developments have recently been let, one of these being in connection with the rapids of the Grande Decharge of Lake St. John, while the other is a 15,000-horsepower development located on the Outarde River on the north shore of the coast.

It is expected that within five years a minimum of 230,000 horsepower will be developed at a cost of $12,000,000. There are said to be possibilities for developing 1,000,000 horsepower from the stretch of rapids extending from Lake St. John to the head of navigation of the Saguenay, and, in time, this figure will undoubtedly be reached. This will place the Province of Quebec at the head of all Provinces producing electric power in Canada.

Electrical Trade Notes.

Chinese Electric Light Company Organized.

According to Vice Consul C. D. Meinhardt, of Changsha, China, an electric-light company has been organized in that city with a capital of $10,000.

Increasing Demand for Electrical Goods in India.

Popularity of electric drive in Indian mills and extensions of electric-power facilities are causing an increasing demand for electrical goods in India, according to the Canadian Commercial Intelligence Journal. The United States is the second largest source of supply for electrical apparatus and supplies imported by India.

Hydroelectric Project in Rio Grande do Sul.

Plans have been approved to utilize the Toca Falls of the Santa Cruz River in the State of Rio Grande do Sul to provide light and power for a number of municipalities in Sao Leopoldo and Taquary. A 79-kilometer transmission line is to be built, which will operate at 40,000 volts. The cost of carrying out the project is estimated at 2,000,000 milreis. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, April 3.)

Radio Situation in Ireland.

No definite policy has been announced by the Irish Government up to April 1 regarding its position with respect to wireless broadcasting, or the operation of private receiving sets. At present there is a small market for this class of equipment which, since the regulations of the British post office and the British Broadcasting Co. do not apply in Ireland, is open to foreign manufacturers. (Consul Charles M. Hathaway, jr., Dublin.)

Italian Telephone and Telegraph Lines Extended.

New poles, nearly all in pairs, have been set up for a distance of 500 kilometers (1 kilometer=0.62137 mile) in connection with improving the telephone and telegraph service in Tuscany. This extension has been made in connection with the work of electrification of various railway lines in southern and central Italy and is being done by the Ministry of Posts and Telegraphs. Additional work is under way for the new telephone lines between Florence and Pisa. (Vice Consul Earl Brennan, Florence, March 19.)

Japanese Electrical Developments.

Hydroelectric developments now licensed for construction in Central Japan number 225, with a total capacity of 1,340,000 horsepower. Of this amount, 260,000 horsepower is already completed and in opera-

tion. Power sites classified according to capacity show that 22 per cent will yield from 1,000 to 10,000 horsepower, while 74 per cent will yield more than 10,000 horsepower. A new company—the Watarase Suiden K. K. (Watarase Hydroelectric Co., Ltd.)—was organized last fall to engage in the sale of electrical machinery and to build power plants for the account of other concerns. It has a capital of 1,000,000 yen (1 yen=$0.4985) of which one-fourth has been paid up. (Far Eastern Review, March 1.)

Telephone Service for Tampico.

Installation of a telephone system in the city of Tampico, Mexico, seems probable. Tampico is one of the largest modern cities at present without telephone service. A committee of the American Chamber of Commerce, working in cooperation with Mexican officials, is at present engaged in making a house-to-house canvass of the entire city to ascertain how many telephones will be required, and also to find out how much capital can be raised from local business men toward financing the project. It is estimated that about $400,000 will be required and that half of this amount can be obtained locally. About 3,000 telephones will be necessary to meet the initial demand. (Consul James B. Stewart, Tampico, March 21.)

Condition of German Electrical Industry.

Domestic demand for electrical apparatus and supplies in Germany is still weak. Neither the Government nor private customers are placing large orders for apparatus and a partial fall in prices is causing some customers to hold back in the hope of further reductions. A general falling off is noticeable in orders for high-tension apparatus and supplies, installation materials, and cables. The demand for meters and electrotherapeutic apparatus is no better, owing to the loss of purchasing power on the part of the customers. The outlook for railway safety appliances is poor and the sale of electric lamps at home and abroad shows no improvement. German prices for certain electrical products have reached, and in some cases exceeded, those of any country in the world. (Consul O. N. Nielsen, Berlin.)

State Control of Radio Proposed in Denmark.

State control of radiotelephony in Denmark is provided in a bill recently introduced in the Danish Rigsdag by the Minister of Traffic. It is proposed that the Minister of Public Works shall be authorized to grant concessions for installation of radio receiving sets, and that the provisions of the law of April 19, 1907, concerning wireless telegraphy, shall also apply to wireless telephony. It is said that, on account of the restricted wave band that will be assigned to Denmark under agreement with the Norwegian and Swedish telegraph services, the Danish Government will exercise full control over transmitting stations. (Assistant Trade Commissioner H. Sorensen, Denmark, March 16.)

MINERALS AND METALS

Luther Becker, Chief, Iron and Steel Division

FOREIGN MARKETS FOR U. S. IRON AND STEEL IN FEBRUARY.

The feature of the United States export trade in iron and steel during February was the quickening of business with Japan, that country receiving 18,283 long tons of American iron and steel, as contrasted with only 9,964 tons in January. Shipments to Canada fell off slightly from the January figure (see COMMERCE REPORTS of April 9, p. 89), as did those to Cuba and Mexico. The countries to which more than 500 tons of American iron and steel were exported during February, 1923, are shown in the following table:

United States exports of iron and steel to the principal countries in February.

Countries.	Tons.	Countries.	Tons.
Canada	55,404	Peru	1,971
Japan	18,283	Philippine Islands	1,944
Cuba	7,659	Hongkong	1,402
Mexico	6,067	Chile	1,310
Argentina	5,556	British South Africa	692
United Kingdom	5,009	British West Indies	685
Australia	4,804	Panama	676
British India	4,114	Straits Settlements	614
Brazil	4,201	Dominican Republic	602
China	2,973	Venezuela	527
Honduras	2,587	New Zealand	512
Colombia	2,567		

While there was a small variation in most of the markets between the first two months of 1923, only one loss and three increases of over 1,000 tons were noted. Exports to Chile fell off 1,030 tons and shipments to Argentina, British India, and Brazil increased 3,386 tons, 2,327 tons, and 1,216 tons, respectively.

Commodities Taken by Leading Markets.

Canada's receipts were comprised primarily of the following: Steel bars, 8,211 tons; plates not fabricated, other than boiler plate, 7,519; structural shapes, not fabricated, 7,250; skelp iron or steel, 6,637; black steel sheets, 5,039; pig iron, 2,250; rails weighing 50 pounds per yard or more, 2,015; tin plate, 1,916; galvanized sheets, 1,724; hoops, bands, and scroll, 1,587; wire rods, 1,346; fabricated structural shapes, 1,312; boiler tubes, 998; galvanized wire, 866; strip steel, 826; other structural forms, 691; iron castings, 654; iron bars, 613; and scrap, 599 tons. The bulk of the shipments to Japan were rails weighing 50 pounds per yard and over, of which 10,042 tons were exported, together with 483 tons of rail joints, splice bars, etc., 1 ton of switches and frogs, 78 tons of railroad spikes, and 20 tons of railroad bolts, nuts, etc., although consignments of tin plate (2,116 tons), welded black pipe (1,397 tons), black steel sheets (1,050 tons), and steel bars (1,001 tons) were also heavy. Cuba received from America chiefly 1,170 tons of steel bars, 998 tons of galvanized sheets, 655 tons of structural shapes (not fabricated), 844 tons of other structural iron and steel, and 645 tons of rails weighing 50 pounds per yard and over. The items bought by Mexico in excess of 500 tons were:

Welded black pipe, 995 tons; casing and oil line pipe, 977 tons; cast iron pipe and fittings, 553 tons; and car wheels and axles, 544 tons. Argentina's leading purchases were 997 tons of black steel sheets, 770 tons of barbed wire, 691 tons of galvanized wire, 649 tons of plain wire, and 644 tons of galvanized sheets; those for the United Kingdom were 1,801 tons of steel bars, 737 tons of skelp iron or steel, 628 tons of wire nails, and 609 tons of welded black pipe.

Other outstanding shipments of specific commodities were: Galvanized sheets—3,232 tons to British India, 698 tons to the Philippine Islands, and 518 tons to Colombia; scrap—939 tons to Hongkong and 739 tons to China; barbed wire—940 tons to Brazil and 740 tons to Australia; boiler plate—2,349 tons to Australia; rails weighing less than 50 pounds per yard—1,078 tons to Honduras; casing and oil-line pipe—780 tons to Peru; steel bars—635 tons to China.

Growing Demand for Zinc Dust in South Africa.

Vice Consul John R. Minter, Johannesburg, Transvaal.

The installation of Crowe and Merrill processes on two new mine extensions and the expressed intention of other mines to do likewise when extensions or changes are undertaken promise to create a fair increase in the demand for zinc dust for use in the production of gold in South Africa. The increased efficiency being too little to warrant a complete change by the older plants, it is expected that the process will be installed immediately only in the case of extended areas.

American producers desiring an outlet for zinc dust should at once attempt to establish themselves in this market with a view to the future, being content with small business until the use of this process of precipitation has become more universally adopted. On the two mines which have been using the Merrill process for 12 years it has been found that from 0.007 to 0.100 pound was consumed for each ton milled. An idea of the future possibilities can be gained when it is reckoned that from 2,000,000 to 2,500,000 pounds would be consumed in the processing of the 25,000,000 tons milled annually in the Transvaal and Southern Rhodesia in the production of gold.

Situation in Metallurgical Industry of Southern Soviet Russia.

Abstracted by Eastern European Division from Izvestia of February 2. The Bureau assumes no responsibility for the accuracy of the information.

The following data showing the situation in the metallurgical industry of southern Soviet Russia were presented to the presiding board of the Gosplan (State Planning Commission) in connection with the problem of restoration of this industry.

In pre-war times the 18 mills which were then in operation in southern Russia produced 3,065,000 long tons of metal annually. At present there are but six plants in operation, with an annual production of 161,000 tons, while the workmen employed in these mills number 25,000, against 7,000 to 9,000 normally required for such a production. As a result the industry showed a deficit of 20,000,000 gold rubles. In view of the decrease in demand for steel, it was recommended to retain in State operation only the Youzovka and Ekaterinoslav mills, with 13 blast furnaces, the rest of the plants to be shut down. This recommendation was approved by the Gosplan, with instructions to the Industrial Division to work out the costs of maintenance of the suspended plants.

GERMAN FOREIGN TRADE IN IRON AND STEEL FOR 1922.

In the following table is shown the exports from and the imports into Germany of iron and steel for November, December, and the 12 months ended December, 1922:

Exports and imports of iron and steel from and into Germany during 1922.

Articles.	November, 1922.	December, 1922.	12 months ended December 1922
EXPORTS.	*Tons.*	*Tons.*	*Tons.*
Pig iron, scrap, and ferro-alloys	32,166	38,868	270,792
Ingots, blooms, slabs, billets, and sheet bars	13,678	21,332	102,116
Rails and accessories	30,755	30,617	363,066

Bridge and other structural work	607	456	2,732
Railway axles and wheels, tires and springs	1,027	842	2,908
Carriage and cart axles	26	27	243
Wire, rolled and drawn	4,297	5,373	50,765
Wire rope and cord, barbed wire, wire gauze, and cloth, etc	37	60	464
Wire and cut nails and tacks			119
Screws and rivets	582	747	6,967
Ships' anchors			4
Horseshoes, calks, horseshoe nails, and nails, n. e. s.	15	7	89
Chains	4	8	70
Cask buoys, tanks, containers	31	106	452
Wagon springs	42	23	465
Iron castings, including machine parts	1,013	941	10,828
Malleable castings and forgings, including machine parts	714	852	7,327
Total imports	234,862	309,638	2,488,061

These figures disclose an excess of imports over exports in 1922 of 271,433 metric tons.

Opportunity to Purchase Scrap Iron and Steel and Chrome Ore.

Consul G. K. Donald at Johannesburg, South Africa, reports by cable an opportunity to purchase 10,000 tons of scrap iron and steel, a large portion of which is rails. The seller desires cabled offers f. o. b. Delagoa Bay—(the freight rate is approximately 30

shillings). Offers are also desired on Rhodesian chrome ore, guaranteed 48 per cent, which can be purchased at competitive prices. Interested American firms can obtain the name and cable address of the seller by application to the Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington, D. C.

COKE SITUATION IN EASTERN FRANCE.

Consul Paul H. Cram, Nancy, March 27.

During the past 10 days the situation of the metallurgical industry in eastern France has shown some improvement. Slightly larger quantities of coke have been received. Shipments from Czechoslovakia now arrive regularly. Belgium is beginning to furnish coke at the rate of about 1,000 tons per day. About 500 tons of Dutch coke are received daily. Arrivals from the Ruhr are now estimated at 1,000 tons daily. Although the strikes in the territory of the Saar and in the Moselle continue, yet large numbers of men have resumed work. Local establishments have received during the last few days coal in certain quantities from these sources. The production of coke in northern France is also increasing.

In this connection it may be stated that the metallurgical establishments of this region have recently made an agreement with the manufacturers of coke in northern France to take over the future production of the coke ovens which will be rebuilt. Owing to the damaged condition of the blast furnaces during the years immediately following the war and to the crisis of 1921, the requirements of coke were in a large measure satisfied by the German product; in fact, coke produced in northern France was unable to compete with the German payments in kind. Whereas the French production of coke in 1913 amounted to 2,941,194 tons, in 1920 and 1921 the production was only 782,534 and 744,756 tons, respectively. In 1922 with the revival of business the monthly output increased as follows: January, 1922, 70,894 tons; November, 93,183 tons; December, 113,498 tons; January, 1923, 131,994 tons.

As a result of the foregoing agreement, the reconstruction of coke ovens in northern France will proceed rapidly. Furthermore, the recent rise in value of the French franc has rendered the purchase of foreign coal and coke somewhat easier. In fact, the general impression prevails that the most critical period relative to fuel supply has passed.

MARCH SHOWS GAIN IN BRITISH STEEL EXPORTS.

Cable from Commercial Attaché Walter S. Tower, London, April 14.

British exports of iron and steel products increased during March, the total for that month being 368,072 long tons, as compared with 317,568 tons in February and 353,389 tons in January. Imports of iron and steel into Great Britain declined from 122,664 long tons in February to 110,965 tons in March. The volume of the chief iron and steel products shipped to and from Great Britain during March is shown in the following table, which affords a detailed comparison of the foreign trade for February and March of 1923:

British iron and steel imports and exports for 1923.

Articles.	Imports.		Exports.	
	February.	March.	February.	March.

Mineral and Metal Items.

Opportunity to Purchase Old Brass and Copper.

A Chilean broker offers 100 tons of old brass and copper to American users of this material. His address and information regarding terms, etc., may be had upon request from the Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington, D. C. Refer to file No. 89925.

New Mining Company Organized in Brazil.

A company has been formed in Cuyaba, with 600,000 milreis capital, called the Comp. de Mineracao em Matto Grosso. It plans to extract gold from the bed of the Cuyaba River, a dredge having been acquired for this purpose. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, March 31.)

Japanese Firm Erecting New Iron Furnace.

On March 13, 1923, the corner stone of a new iron furnace was laid in the compound of the Asano Shipyard at Tsurumi, near Yokohama. It is expected that construction will be finished within the year. Iron ore from China will be used and the anticipated annual output will be about 50,000 tons of pig iron. (Commercial Attaché James F. Abbott, Tokyo, March 21.)

Steel Prices Rise in Japan.

Following the trend of prices abroad the Yawata Steel Works has announced advances ranging from 6 to 25 yen per ton for steel. The new schedule is (old prices being given in parentheses for comparison): Rods, square, round, or flat, 140 yen per long ton (124 yen); three-sixteenths-inch bars, 135 yen (124 yen); one-fourth-inch bars and up, 130 yen (124 yen); angles, 135 yen (125 yen); joists and channels, 155 yen (130 yen). (Commercial Attaché James F. Abbott, Tokyo, March 21.)

Additional information regarding minerals and metals appears in this issue under the following sections:

Cable review, Far East: Better prices bring increased activity in Indo-China tin mining.
Tariffs and Trade Regulations: Reduction of import duty on tin plate in Fiji.
Foreign trade opportunities Nos. 6233, 6256, 6257, 6259, 6260, 6261, 6262, 6263, 6264, 6298, 6299, 6301, 6302, 6327, 6328.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF.

Constantinople Rug Market Firm.

Arrivals of oriental rugs from the Caucasus and Persia at the beginning of the new year amounted to 700 bales of Iran runners, Gorevans, Tabriz carpets and rugs, Bokharas, Afghans, and Baluchistans. (Consul G. Bie Ravndal, Constantinople, February 9.)

United States Leads in Barbados Cotton-Goods Market.

The United States leads in the cotton-goods market of the Barbados, British West Indies. During 1921 out of a total of 1,823,497 yards imported 1,051,111 yards came from the United States, while 772,382 yards came from the United Kingdom. (Consul J. C. Watson, Barbados, British West Indies, February 27.)

Brazil a Limited Market for Straw Hats.

The Brazilian customs tariff provides a high protective duty on straw hats ranging from $0.40 to $2.60. The best quality of men's straw hats retail for about $3.50, with many grades much cheaper. Considering the costs attendant upon importing, this makes the market very limited. (Consul E. M. Lawton, Sao Paulo, March 9.)

Market for Felt Hats in Ceylon.

Felt hats in demand in Ceylon are those with a broad brim and, according to the ideas of the Tropics, must be lined with red satin and have a ventilator at the top. Other styles do not find much of a demand. Local department stores are the principal agencies dealing in men's felt hats. (Consul M. M. Vance, Colombo, March 7.)

Lockout in Dundee Jute Trade.

The Dundee jute market has been uncertain for some time, due to the dispute caused by a reduction in the number of operatives on each spinning frame. Recently all but two of the jute works shut down and declared a complete lockout, affecting nearly 30,000 workers. (James L. White, clerk in American consulate, Dundee, Scotland, March 23.)

Restriction on Indian Imports of American Cotton.

It is probable that in the near future imports of American cotton into India will be restricted to the single port of Bombay. Such a restriction has the approval of the Bombay and Madras Chambers of Commerce as a measure for the prevention of the introduction of the American cotton boll weevil. (Assistant Trade Commissioner C. B. Spofford, jr., Calcutta, March 2.)

Bradford Wool Shipments to United States.

Shipments of raw wool and wool manufactures from Bradford to the United States during March were: Raw wool, £332,000; noils and wastes, £202,000; wool tops, £75,000; wool yarn, £112,000; worsteds, £46,000; woolens, £57,000; cloth from the hair of the Angora goat, alpaca, etc., £28,000; dress goods, £39,000; total value of all classifications of wool and manufactures, £919,000. (Cable from Consul Wallace J. Young, Bradford, England, April 25.)

Sericulture Developing in Taiwan.

Sericulture in the interior districts within the jurisdiction of Taihoku Province is showing rapid development in both quantity and quality. This industry is earnestly engaged in by the inhabitants of the interior because of its profit. The authorities are considering providing better means of transportation and improvement in processes of drying cocoons. (Consul H. T. Goodier, Taihoku, Taiwan, Japan, January 4.)

New Textile Mills in Brazil.

A cotton mill is now being constructed at Rio Tinto, in the State of Parahyba, and is expected to be ready for operation by October, 1923. Plans have been perfected to establish another cotton mill at Santa Rita do Sapucahy, in Minas Geraes, and a silk mill is to be established in Barbacena, in the same State. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, March 21.)

Australian Wools Realizing Good Prices.

Prices realized at the sixth wool sale of the season at Adelaide, South Australia, are reported to have been the second best of the sales held thus far this season. Of 30,480 bales, over 24,480 bales were sold. The highest price paid was 31d. a pound for 9 bales of greasy merino. Purchasers represented Yorkshire, Continental, American, Japanese, and Australian mills. (Consul Henry H. Balch, Adelaide, March 3.)

Turkish Mohair Demand Strong.

Practically all the 4,000 bales of mohair which arrived in Constantinople from Anatolia during January were sold to English and American houses. Some 3,000 bales were still available for export at the end of the month. Prices were strong; Castambol, lower grade, 25 to 27 cents a pound; Angora, fair average, 29 to 31½ cents; Eski-Shehir, finer qualities, 32½ to 35 cents. (Consul G. Bie Ravndal, Constantinople, February 9.)

Italian Broom Corn Production and Stocks.

A comprehensive report on "Production of stocks of broom corn in Italy" has been received from Consul General John Ball Osborne, Genoa, Italy, and will be made available to interested persons upon application to the district and cooperative offices of the Bureau of Foreign and Domestic Commerce or to the Textile Division at Washington. Refer to file No. 86546. Particular attention is given the status of the broom-corn industry in Venetia and Tuscany.

German Artificial-Silk Production.

Recently published statistics show that in 1922 Germany produced 6,000,000 kilos of artificial silk. The average monthly production at the beginning of the year was 350,000 kilos, but by the end of the year it had reached 600,000 kilos. The export amounted to 450,000 kilos. The average monthly export at the beginning of 1922 was 100,000 kilos, but it had risen to 200,000 kilos per month by the end of the year. (Consul E. Verne Richardson, Berlin, March 27.)

MARKET FOR HOSIERY IN CHILE.

Rollo S. Smith, secretary to commercial attaché, Santiago, March 8.

Chile in past years has been a large consumer of European hosiery—principally of German manufacture, because of the excellent reputation which the German full-fashioned product had gained. It may be said that the Chilean public is thoroughly appreciative of the distinction between full-fashioned and seamless. With the war and post-war difficulties Germany became unable to supply the market, and Chilean buyers were obliged to turn to the United States for silk and cotton hosiery. The United Kingdom, however, continued to supply the greater part of the woolen hosiery consumed.

In 1920 German manufacturers again began furnishing hosiery to this market, and now it is evident that they have regained a large part of their pre-war trade at the expense of American business. Despite this loss to the Germans, however, it may safely be stated that American hosiery has acquired a good reputation in Chile and that American manufacturers, particularly makers of full-fashioned types, can find a good demand for their output in this field.

Effect of Tariff on Character of Trade.

Full-fashioned hosiery is especially in demand in the better grades of women's mercerized lisle hose (240 to 280 needles). Inferior qualities of hose (160 to 200 needles) made from carded or combed yarn can be sold in seamless or mock-seam styles, but the opportunities are not so good for these because of the existence of several important stocking factories in Chile which make a specialty of them. The native products, furthermore, are well protected by high tariffs. The standard range of colors of the American market is popular in this country.

The Chilean Government has placed an import duty of 4.50 pesos gold (the gold peso is worth $0.365 United States currency) per kilo (kilo=2.2046 pounds) on cotton hosiery, which rate applies to inferior as well as to superior grades. Therefore high-grade merchandise has the better chance, as, being generally lighter in weight and of greater value, it pays a proportionally smaller customs contribution. In the case of women's pure-silk hose the best market is for full fashioned of pure silk throughout the entire length. The tariff on this latter class of goods is 48 pesos gold per kilo for both high and low grades.

Local Products Meet Demand for Men's Cheap Socks.

The market for men's socks is not so favorable for importation as is the case with women's wear. Nevertheless it is good for absorption of limited quantities of seamless, mock-seam, and full-fashioned styles. Considering the high tariff, already referred to, the same principle holds good with men's hosiery as with women's; that is, that the better grades (highly mercerized lisle) can be imported and sold to better advantage than the cheaper grades. There is a fair market for imported combed-yarn socks. Inferior grades of men's hosiery are made extensively in the country and, with adequate tariff protection, supply the local demand to a considerable extent.

Children's and infants' socks are not included in the native production, and therefore the demand for these must be supplied by foreign manufacturers. In this line also the buying public is very particular as to quality. White, light blue, pink, and black are the most popular colors.

Chile's Imports of Hosiery.

Statistics of imports for the years 1920 and 1921 (the latest available) are given below:

Chilean imports of hosiery, 1920 and 1921.

[1] Legal kilo=weight of commodity plus inside packing.
[2] Less than 1 kilo.

Consul George A. Makinson, Valparaiso, March 7.

An Opportune Time for Pushing American Hosiery.

German prices have been steadily rising and for some time have been materially higher than American quotations; nevertheless, local dealers continue to regard the German article as superior to all competitors and are willing to pay the difference in price. Since the occupation of the Ruhr, manufacturers of central Europe have been unable to quote. Although German hosiery still continues to come into Chilean ports, such arrivals represent orders placed four to six months ago.

American firms doing business in Chile have been handicapped because of the unfavorable impression created by very inferior shipments received during the war. Even to-day it is sometimes difficult to convince buyers that good hosiery can be made in the United States. As a rule the German article is said to be better mercerized and better finished than its American rival. Germany has lately been doing its biggest business with a special type known locally as media velo, or semiveil or chiffon. This is a particularly light and transparent hose which so far no American mill has offered in this market.

[A list of the principal hosiery importers and dealers in Chile may be obtained upon application to the district and cooperative offices of the Bureau of Foreign and Domestic Commerce or to the Textile Division at Washington. Refer to file LA-13014—A.

Also of interest to American manufacturers is the special circular, Packing Hosiery for Export to Chile, Tex—135, recently issued by the Bureau, copies of which may be obtained from the Textile Division upon request.]

AMERICAN COTTON ENCOUNTERS COMPETITION IN PORTUGAL.

Vice Consul Hernan C. Vogenitz, Oporto.

During the past year a greatly increased proportion of Brazilian cotton has been taken by Portugal at the expense of American. Of the total Portuguese raw-cotton imports in 1922, 48.83 per cent was American, 47.74 per cent came from Brazil, and the remaining 3.43 per cent was made up of Indian, Egyptian, and others. The quantities in bales were 28,477 American, 27,843 Brazilian, and 1,996 other kinds. American cotton is much preferred to Brazilian and would probably be generally purchased until the difference in price exceeded 15 per cent. During the past year, however, this difference reached as high as 30 per cent, with the result that the importation of Brazilian cotton considerably more than doubled. This season's Brazilian crop is said to be poor and for that reason increased purchases of American cotton are predicted.

Varieties and Grades Taken.

About 80 per cent of the American cotton taken is good middling 28 and 28/29 millimeter and usually sells at a premium, 15 per cent is fully middling to middling, and only 5 per cent is middling.

Brazilian cotton is not graded as the American product and is frequently ordered by samples.

Indian cotton comprises about two-thirds of the amounts secured from other sources and is used mainly in the manufacture of low-grade cotton cloth and for medicated cotton.

Egyptian cotton comprises approximately the remaining third of cotton secured from sources other than the United States and Brazil and is used for high-quality cloth and especially for the manufacture of sewing thread. When this grade is not available in the Portuguese market, American middling fair cotton is employed.

Best Method for Selling in Portugal.

The importation of cotton is effected almost entirely through representatives of cotton firms established in Oporto, and it seems that the most successful method is to furnish the local agent with a considerable supply of cotton on consignment, which enables him to visit the mills and accept orders for immediate delivery. A local representative can usually fix an exchange rate with the banks to enable him to quote prices in Portuguese currency and grant credits from one to three months, as the occasion may require. The question of quick deliveries seems to be an extremely important one to the Portuguese mills.

The customs duties and transaction taxes on cotton purchased outright and shipped direct to the consumer through the cotton agent approximate 6 centavos Portuguese paper currency per kilo and are increased to 8 or 10 centavos in the case of cotton shipped on consignment and necessitating one or more transactions within the country. Strong representations by cotton dealers in the Oporto district are being made to the Portuguese Government in the hope cotton received on consignment will be exempted from this tax.

Cotton Manufacturing Outlook Good.

The general outlook for the cotton mills of the Oporto district is considered very favorable for the year 1923. Due to the depreciation of the Portuguese currency, the importation (and resulting competition) of British cotton goods, formerly received in large quantities, has been rendered practically impossible, and the small stocks still remaining on hand can not be sold except at a loss.

Many of the Portuguese mills have been forced to lower the quality of certain classes of the goods manufactured to meet the greatly decreased purchasing power of the laboring classes, but this has not menaced the prosperity of the mills, and relatively heavy exports of the different grades of cloth have continued to Portuguese colonies and to Spain. It is generally believed that all mills will continue working full time during the current year unless some radical change occurs in the economic conditions of the country.

[Other phases of the Portuguese cotton trade are discussed in Textile Circular No. 124, dated April 5, 1923. Copies may be obtained from the Textile Division, Bureau of Foreign and Domestic Commerce, Washington.]

INDIAN SHIRT AND COLLAR MARKET.

Assistant Trade Commissioner C. B. Spofford, jr., Calcutta.

In India shirts of the better grades sell only among Europeans and well-to-do Indians, who are accustomed to the closed-front garment with a very long tail. Cheap cotton shirts are extensively worn by the poorer classes, but are of such poor quality and sell at such low prices that it is not believed American manufacturers would be interested in bidding for this class of trade. The European community can buy silk or other materials at the bazaars and have shirts of better quality made up by the native tailors at a comparatively low cost. The Indian tailors copy custom-made shirts quite well, but because they do not always get the collar band and shoulders to fit satisfactorily there is a demand for the ready-made garment and imported shirts are on sale in all the leading shops in the large cities. Pleated, semistiff, and soft dress shirts are now commonly worn for dinner, dress, and informal dances and can be purchased in all the leading shops.

Two-Ply Collar Best Suited for India.

Soft and laundered collars are sold in the shops as well as in the bazaars, but the semistiff collar has not yet been introduced into India, although it should find a ready sale because it is so well adapted to the Indian climate. The price for laundered collars of French linen, both 2-ply and 4-ply, in Calcutta is 12½ rupees per dozen (a rupee is equal to 33 cents at present exchange). The 2-ply collar seems to be better suited to India, because the native "dhobi," or laundryman, starches the collars so badly that the 4-ply is too stiff to iron properly and results in its breaking more readily on the edges. The only noticeable peculiarity of the stiff collars in use is the vertical hole in the back.

It must be pointed out that the purchasers of collars in India are not inclined to change the style so often as do Americans and that they are more interested in securing collars of sufficient durability to last for some time.

Introductory Methods.

Dealers in Calcutta usually insist on having their own company's name inserted in the collar band of shirts and collars rather than the brand of the manufacturer. This is a problem which American manufacturers will meet with difficulty unless they are prepared to enter the Indian market for the sole purpose of selling collars without regard to their brands, but it is recommended that they should establish their

names in this market, especially in the bazaars, notwithstanding it would probably mean curtailed sales at first.

American firms which make a complete line of shirts and collars might profitably use the semistiff collar as an entering wedge for their other lines. If the domestic demand is so great as to consume the total output, it might be wise to allocate a sufficient quantity to fill Indian orders even at the expense of domestic orders. It is also suggested that collars which may have gone out of style in the United States might continue to be the style in the Far East and could be sold to good advantage.

MANUFACTURE OF WOOL CLOTH IN CHILE.

Consul George A. Makinson, Valparaiso.

The manufacture of wool cloth constitutes an important industry in Chile, there being at the present time some six factories producing cloth for men's and women's wear. Although Europe continues to supply the bulk of the high-grade woolens demanded by the well-to-do, the importation of cheaper grades has been effectively restricted by means of a high protective tariff, with the result that local mills now produce most of the suitings and dress goods worn by the middle and lower classes.

Raw Materials—Mechanical Equipment.

Native wool exclusively is used in Chilean mills. The finest grades are obtained in Magallanes Territory, in the far south, where pure-bred Merinos predominate. This wool runs as fine as 70s. A little farther north in the Valdivia district sheep masters have gone in for mutton breeds—that is, long coarse wool animals of the Lincoln type. Still farther north in the central Provinces practically all of the flocks are crossbred, the wool averaging between 50s and 60s in grade. The sheep in this region are not particularly well cared for, and the wool is lacking in strength and is not equal in type to "Territory" wools in the United States of similar fineness.

During the latter years of the European war a fair percentage of American dyes was used in the local mills; to-day, however, German dyes enjoy an absolute monopoly of the field.

European machinery, principally of German and British origin, predominates, except in one mill, built in 1918, which purchased all of its equipment in the United States.

Kinds of Cloth Manufactured—Wages.

Output is confined for the most part to medium and low grade cashmeres, few mills spinning yarns finer than three runs (4,800 yards to the pound). The largest mill has 126 looms, and much of its production is cloth suitable for army and navy requirements and for civilian uniforms. One or two plants operating with foreign superintendents and dyers have recently improved their product to an appreciable extent and are now turning out men's-wear cashmeres that compare very favorably with imported goods of similar grade. There is a steady demand for women's plain woven dress goods running about 10 ounces in weight. These are piece dyed with a flannel finish. They sell at the mill at 12 to 13 pesos (at present exchange [January 13] $1.50 to $1.63); the average price for fabrics suitable for men's suitings is 20 pesos per meter ($2.50 per 1.09 yards).

Relatively low wages are paid in the woolen industry. Dyehouse men and card-room help receive from 5.50 to 6.50 pesos for a 9-hour day, spinners receive 6.50 to 7 pesos, and dressers from 6 to 7 pesos. The girls employed in the spooling department and finishing rooms earn from 3 to 4 pesos per day. Male help in the finishing department receives from 5.50 to 6 pesos. A loom fixer caring for 20 looms gets 20 to 25 pesos, and weavers in one mill, which perhaps pays the best wages of any, earn 50 to 60 pesos per week.

FLAX GROWING IN FRANCE.

Vice Consul David B. Levis, Cherbourg, March 9.

While the manufacture of flax products is of some importance in the Cherbourg consular district, most of the raw material for the flax-spinning mills is obtained from outside the district. Flax culture here, as in the rest of France except the northern Departments, has declined sharply. In Calvados flax-raising had entirely disappeared in 1913, but has been resumed during the past two years, and the present area is 350–500 acres. In the Manche, where 1,500 acres were planted in 1892, production has been practically abandoned. Similar conditions are disclosed in the Department of the Orne.

In 1908 the area under flax in all France was 45,000 acres, in 1913, 72,000 acres, and at the outbreak of the war it had grown to about 115,000 acres. At present the amount of land devoted to flax growing shows a shrinkage of 50 per cent from the highest pre-war acreage, while the French linen mills can consume the output of 200,000 acres, their annual requirements being 400,000 metric tons of raw flax. Notwithstanding the difference in price, French flax spinners are said to prefer the home-grown product to that of Russia.

French farmers are being urged to increase the acreage of flax on the grounds that it will give additional employment, and that 125,000 more tons of flax could be produced annually, thus retaining at home the millions of francs paid to foreign countries to keep French linen mills in operation. In addition, the utilization of the seed for oil and oil cake and the straw for paper would prove an important source of revenue.

THE CHINESE FEATHER INDUSTRY.

Vice Consul Maxwell M. Hamilton, Canton.

Feathers of two kinds—those used for filling cushions, pillows, and mattresses and those classed as ornamental or fancy feathers and used for hats and dresses—have been exported from China for many years. In the Canton consular district feathers of the ordinary type are gathered upcountry by peddlers who go from village to village collecting small quantities of duck, fowl, and other kinds of feathers.

What the peddlers gather is passed on to larger dealers, who in turn ship the feathers by junk to Canton and Fatshan. At these two places the feathers are half sorted and sold to the eight or ten large Chinese feather merchants who supply the foreign commission houses.

Grading and Packing.

There are 25 or 30 grades of these feathers, all of which are sold by the picul of 133⅓ pounds. The chief demand in Europe comes from France and the Scandi-

navian countries, where feathers for use in making feather beds are in favor. Feathers sorted for Europe may contain 30 per cent dirt. A better grade is demanded for the American market, the maximum of dirt being fixed at 15 per cent.

When the feathers reach the foreign commission houses at Canton, the dirt and the long feathers are removed by hand. Some firms use an electric blowing machine to test samples before packing. This machine removes the dust so that the feathers may be inspected more closely. When ready for export, the feathers are packed either in loose bales of 1½ piculs or in hydraulic pressed bales of 3 piculs.

Exports from Canton.

There are many kinds of ornamental or fancy feathers exported from this district, the most popular of which are the silver and golden pheasant, numidae, and peacock feathers. Maritime Customs statistics show exports of 4,795 piculs of duck and fowl feathers from Canton from January to September, 1922. In the corresponding period of 1921 there were 729 piculs exported, while in 1920 the amount was only 373 piculs. These figures illustrate the steady growth of the feather trade. In 1919, $1,542 (United States currency) worth of ornamental feathers was exported, $3,171 worth in 1920, and $3,920 worth in 1921. The declared exports of feathers to the United States from Canton were 41,992 pounds in 1921 and 134,828 pounds in 1922, the values being $16,192 and $33,664.

Chosen's 1922 Textile Trade.

Vice Consul Foster M. Beck, Seoul.

A steady market for tussah silk and an increasing demand for raw silk and cocoons were features of Chosen's textile export trade in 1922. Cotton, in spite of a small decline in 1922, is still one of Chosen's leading exports, and further expansion may be expected with improvement in quality. Fabrics in demand by the import trade were twilled shirtings, cotton drills, wool cloths, and Chinese grass cloths. Shirtings and sheetings showed a marked decline from 1921 figures. Chosen's principal textile imports and exports for the past two years are tabulated below:

Chosen's chief textile imports and exports, 1921 and 1922.

Item.	1921	1922
EXPORTS.		
Cocoons	$1,224,987	$1,406,789
Raw silk	1,346,619	1,844,168
Tussah silk	5,156,677	5,038,452
Raw cotton	1,764,287	1,757,558
Cotton cloths	776,332	690,247
IMPORTS.		
Raw cotton	1,162,024	1,809,444
Cotton yarns	1,931,144	1,497,341
Shirtings and sheetings:		
Gray	12,667,531	8,189,478
White	3,166,692	2,612,734
Jeans, twilled shirtings, and cotton drills	2,536,984	3,009,644
Other cotton cloths	1,864,916	1,360,626
Wool cloths	814,586	1,280,613
Chinese grass cloths	2,689,616	4,838,370

Practically all the decrease in imports can be explained by the fact that dealers became overstocked when large quantities were imported in anticipation of the increase in the customs tariff on August 29, 1920. Since the figures are for values and not for quantities, the decreases in reality are probably much less than would seem to be indicated.

Calcutta Market for Pile Fabrics.

William B. Douglass, jr., clerk in American consulate general, Calcutta, February 8.

There is a fairly good demand for velvets and velveteens in the Calcutta district among the wealthier classes of Indians and to a limited extent among Europeans. Both Indians and Europeans use velvet for upholstering, and the former use it to some extent for clothing. Owing to the tropical climate of the country, velvet is used but little by the Europeans as clothing. The demand for such textiles here must not be assumed to be proportionally as great as in large western cities. The vast majority of the people of Calcutta are extremely poor and unable to buy costly materials.

The following is a list of the current prices quoted by one of the large European department stores: Velvets—colored, 18 inches wide, $3.15-$4.95 per yard; black, 18 inches wide, $3.85 per yard. Velveteens—corded, 22 inches wide, $1.95 per yard; 23 inches wide, $1.35 per yard; 27 inches wide, $2.35 per yard. Corduroys—for furnishings, 27 inches wide, $2.35 per yard.

It is difficult to obtain accurate estimates of the retail prices from the Indian merchants, due to the custom of bargaining, but almost invariably the native dealers sell at a considerably lower figure than the European dealers, and consequently they draw much of the European trade in addition to practically all of the Indian trade.

Most of the velvet is at present imported from England, although a limited supply comes from France. So far as is known, there is no velvet or velveteen manufactured in India.

[A list of the principal cloth merchants in Calcutta who should be interested in the importation of velvet and samples and prices furnished by a native dealer may be obtained from the Textile Division, Bureau of Foreign and Domestic Commerce, Washington, by referring to file No. 88654.]

Switzerland's 1922 Trade in Cotton Goods.

Vice Consul William H. Mathee, Zurich.

In 1922 Switzerland's imports of raw cotton amounted to 21,485 metric tons (1921—24,636 metric tons), with a value of 65,540,000 francs (1921—98,427,000 francs). Egyptian cotton was 8,533 tons, valued at 32,263,000 francs; American, 11,927 tons, with a value of 30,686,000 francs.

The imports of cotton yarns (chiefly fine qualities) amounted to 4,027,800 kilos (kilo=2.2046 pounds), with a value of 45,050,000 francs, of which 3,494,300 kilos, valued at 40,461,000 francs, or nearly 90 per cent, came from Great Britain. The exports of cotton yarns totaled 6,144,500 kilos, with a value of 46,321,000 francs, of which 4,136,100 kilos, valued at 29,179,000 francs, or 67 per cent, went to Germany. Other large buyers were: Austria, 409,900 kilos, value 4,452,000 francs; France, 573,900 kilos, value 3,066,000 francs; British India, 177,700 kilos, value 1,278,000 francs.

Swiss imports of cotton fabrics in 1922 were 4,688,900 kilos, with a value of 49,970,000 francs; about 70 per cent of the total imports (34,891,000 francs) came from Great Britain. Exports of cotton fabrics were 6,299,200 kilos, with a value of 112,933,000 francs, the chief markets for which were: Germany, credited with 39,388,000 francs; Austria, 16,552,000 francs; Hungary, 5,450,000 francs; and Czechoslovakia, 2,563,000 francs. Germany and the succession States of Austria-Hungary have thus taken more than half (57

per cent) of the exports from Switzerland. The United States' takings of Swiss piece goods were valued at 16,111,000 francs and of plumetis (feather-stitch embroidery) at 10,290,000 francs.

Special Reports Available.

The following reports will be loaned to those interested upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington:

Transmitting Notices of the Dressmaking and Women's Light Clothing Trade Board (Scotland) regarding the minimum rates of wages for female workers. Consul General Robert P. Skinner, London, England, February 26, 1923. No. 87849.

Transmitting Notices of the Readymade and Wholesale Bespoke Section of the Tailoring Trade Board (Great Britain) regarding the minimum rates of wages for male and female workers. Consul General Robert P. Skinner, London, England, February 26, 1923. No. 87851.

Transmitting Notices of the Jute Trade Board of Great Britain regarding the minimum piece rates for female workers. Consul General Robert P. Skinner, London, England, February 15, 1923. No. 86860.

Transmitting Notices of the Jute Trade Board (Great Britain) regarding the minimum time rates and overtime rates for male and female workers. Consul General Robert P. Skinner, London, England, March 9, 1923. No. 88236.

Transmitting Notices of the Rope, Twine, and Net Trade Board (Great Britain) regarding the minimum rates of wages for female workers. Consul General Robert P. Skinner, London, England, March 9, 1923. No. 88238.

Transmitting Notices of the Hat, Cap, and Millinery Trade Board (Scotland) regarding the minimum rates of wages for female workers. Consul General Robert P. Skinner, London, England, March 9, 1923. No. 88237.

Transmitting Notices of the Rope, Twine, and Net Trade Board (Great Britain) regarding the minimum wages for male and female workers. Consul General Robert P. Skinner, London, England, March 27, 1923. No. 90566.

Wool Trade of Marseille during 1922. Vice Consul Charles Amsden, Marseille, France, February 14, 1923. No. 86356.

Difficulties of the Upper Franconian Embroidering Trade. Vice Consul Albert Halstead, jr., Munich, Germany, February 12, 1923. No. 86358.

Norman Handmade Laces. Vice Consul David B. Levis, Cherbourg, France, February 6, 1923. No. 85148.

Notes on the Clothing Trade in Central Mexico. Consul Lee R. Blohm, Aguascalientes, Mexico, March 16, 1923. No. 88278.

Transmitting Report of the Italian Artificial Silk Industry. Commercial Attaché H. B. MacLean, Rome, Italy, November 8, 1922. No. 5521.

Ceylon's Exports of Coir Yarn, Bristle Fiber, and Mattress Fiber in 1922, in Review of the Ceylon Coconut Industry in 1922. Consul Marshall M. Vance, Colombo, Ceylon, February 7, 1923. No. 88577.

Refining Traffic in Saxony (the finishing of textiles is not favored by the various chambers of commerce in Saxony, and the Chemnitz Chamber has decided that tulle should be taken off the list of foreign materials for the steady refining trade). Consul Louis G. Dreyfus, jr., Dresden, Germany, March 1, 1923. No. 88510.

Prices Current for Curaçao Straw Hats, as published in the Government Gazette at Caraçao, West Indies, for the month of February, 1923. Consul B. S. Rairden, Curaçao, Dutch West Indies, March, 6, 1923. No. 88000.

A New High-Grade Fiber (Pita Fiber) in Ecuador. Consul General Frederic W. Goding, Guayaquil, Ecuador, January 24, 1923. No. 85651.

The Textile Industry of Mexico. Consul Thomas D. Bowman, Mexico City, Mexico, March 10, 1923. No. 87580 or Special Circular Tex.–137.

Woolen Cloth Industry at Vienne. Consul Hugh D. Watson, Lyon, France, February 24, 1923. No. 87232.

Status of Polish Textile Industry on January 1, 1923. Consul General L. J. Keena, Warsaw, Poland, March 20, 1923. No. 90173.

Conditions in the German Textile Market. Vice Consul Christian T. Steger, Dresden, Germany, March 6, 1923. No. 88752.

German Textile Stock Fluctuations in 1923. Vice Consul Christian T. Steger, Dresden, Germany, March 14, 1923. No. 90782.

CHEMICALS

Charles C. Concannon, Acting Chief, Chemical Division

THE CHILEAN SULPHUR INDUSTRY.

Vice Consul Edwin H. Livingstone, Valparaiso, March 19.

Chile possesses important sulphur deposits scattered along the entire Andes Mountain chain in close proximity to the numerous volcanoes that are to be found within that region. The development of these sulphur deposits is not always an easy matter. At times the extreme altitude makes the work of extraction practically impossible because of the deep snows covering the ground during the entire winter and even late spring. In other cases the location of the deposits in active volcanic regions, such as in Chillan, retards their development. Another handicap to the industry is the absence of roads.

Location of Principal Mines.

The most important sulphur deposits in the country and those that have been developed and worked the most are in the northern zone between the Provinces of Tacna and Antofagasta. In Tacna are the Villa Industrial, Aguas Calientes, Tacora, and Chupiquina mines. These, while well inland, nevertheless have good transportation facilities. The quality of the sulphur is excellent and the mines can be operated during the entire year.

In the Province of Antofagasta are numerous deposits of good quality, the principal ones being the Ancauquilcha, Sierra Ancauquilcha, Cerro San Pablo, Carcote, and Gemelos del Azufre mines. Most of these mines are at present either idle or producing only small quantities of sulphur.

Toward the south deposits of considerable size are to be found. Despite the fact that the grade of sulphur is good, these deposits have been worked but intermittently, due to their location a long distance from the coast, within the line of the heavy winter snows, and to their lack of means of transportation. These mines are situated in the neighborhood of the baths of El Toro in Coquimbo and in the Province of Atacama. Finally other deposits that are well known

but have never been developed are those of Nuble (near the Chillan volcano) and Colchagua Provinces.

Growth of Production.

The oldest reliable statistics available date from the year 1887. In that year Chile's production of sulphur amounted to only 0.2 ton. From 1887 to 1902 the total output was 15,000 tons; from 1903 to 1908, 20,833 tons. From 1909 to 1919, inclusive, 115,000 tons were obtained. In the year 1918 production reached its highest point, 19,557 tons. In 1920, 13,340 tons, and in 1921, 9,670 tons were extracted. The statistics for 1922 have not yet been completed.

One of the most important establishments in the country produced during the year 1922 and the first two months of 1923 slightly more than 936 tons of sulphur (all of which was absorbed in Chile), divided as follows: Azufre flor (finely ground or powdered sulphur) for vineyards, 12,754 sacks, shipped to Valparaiso, San Antonio, and Talcahuano; azufre molido (ground sulphur), for the disinfection of stock, 1,219 sacks, shipped to Punta Arenas; azufre molido for industrial uses, 600 sacks, shipped to Valparaiso and San Antonio.

The gradual increase in production up to 1920 was due to the greater demand for sulphur in the manufacture of powder for the nitrate mines, to the progress in the manufacture of chemical products in Chile, and finally to increased exportation abroad. From the following figures the diminishing consumption of sulphur by the nitrate mines can be appreciated: Consumption in 1919—4,000 tons; in 1920—3,800 tons; in 1921—3,000 tons. Production was also influenced by the falling off in the demand for the product abroad; during the three years 1919–1921 exports were: 1919—6,000 tons; 1920—500 tons; 1921—300 tons. Argentina is the principal consumer, with appreciable quantities going to Bolivia, Peru, and Uruguay.

Future of the Industry.

Of the future La Riqueza Minera de Chile says in its January issue:

The probable future development of Chile's chemical industries will play an important part in the future demand for sulphur. New concerns for the manufacture of sulphuric acid are being organized. Manufacturers of explosives for the nitrate plants are increasing their requirements. Exportation of sulphur could be notably intensified if a campaign of propaganda were inaugurated that would give as a result the acceptance of Chilean sulphur in the place of that which is purchased in other countries.

Chile needs not only improved methods of extraction and treatment of the sulphur, accessibility to the deposits by means of good roads to aid the rapid transportation of the mineral, but, above all, the aid of the Government.

Foreign capitalists have already begun to inquire into the potentiality of the mining of sulphur in Chile.

Turkish Attar of Roses Neglected.

Consul General G. Bie Ravndal, Constantinople.

Since the armistice the Turkish rose-oil output has been considerably neglected by American and European buyers. It had found a good market in central European countries during the war. The neglect is said to have been caused by the fact that certain unscrupulous producers began mixing other essences, such as geranium, with the rose oil and selling the adulterated product as "pure rose oil." Foreign buyers now require the exporter to send the merchandise to their respective countries, and only after analysis at the port of destination is the price paid there in accordance with stipulations. If the density and the ingredients of the rose oil are found to differ from the agreed-upon quality, prices are then changed accordingly.

Turkish analytical certificates appear unacceptable to foreign purchasers, and as a result few sales have taken place during the past three years. American purchases from Constantinople amounted to $149,630 in 1919, $41,994 in 1920, $3,971 in 1921, and $185 in 1922. Arrivals at Constantinople from Bordour and Sparta (Asia Minor) and other producing districts, including Kezanlik, Bulgaria, during 1922 approximated 100 kilos, and the present available stocks for export are estimated at 90 kilos. There are many sellers on the market, but buyers are scarce. Selling offers at present (February 16) vary between 100 and 120 piasters per miscal (62 to 75 cents per 4½ grams), but buyers' quotations do not exceed 70 piasters (44 cents) per miscal.

Artificial Fertilizers in Italy.

Consul Joseph Emerson Haven, Trieste.

Italy's superphosphate plants have a present potential capacity of some 1,300,000 to 1,400,000 tons a year. Actual production, however, has not yet reached this figure, the output for 1922 being estimated at 900,000 tons, against 678,000 tons in 1921 and 665,000 tons in 1920.

The crude phosphates required by the industry are imported almost entirely from Algiers and Tunis, this African material permitting the manufacture of low-grade superphosphates (from 14 to 17 units). American rock is used for high-grade superphosphates (from 16 to 20 units), but the American crude phosphate is more difficult to grind, is considerably more expensive, and requires a larger quantity of sulphuric acid for its decomposition than the African.

Present-day consumption of superphosphates in Italy is perhaps 10 to 15 per cent below the pre-war annual total of 1,000,000 tons—apart from 130,000 tons of phosphatic (Thomas) slag imported—upper Italy, Tuscany, and Marches accounting for about 80 per cent of the total. The average price of superphosphates in this country rose from 0.40 lira per unit in 1913–14 to 2.75 lire in 1921 and fell to 1.90 lire in 1922.

Nitrogenous Fertilizers—Ammonium Sulphate.

The nitrogenous fertilizers used here are for the most part imported. However, Italy has recently begun the manufacture of calcium cyanamide, and the output is rapidly increasing, having been 16,000 tons in 1921 and an estimated 25,000 tons in 1922. Calcium cyanamide now costs 98 lire per 100 kilos (kilo=2.2046 pounds).

The manufacture of sulphate of ammonia from synthetic ammonia by the methods of the Italian chemists Casale and Fauser is now being undertaken.

European Camomile Flowers Offered.

A firm in Belgrade, Yugoslavia, has informed Vice Consul Henry R. Brown of its desire to export camomile flowers. Further information may be obtained by addressing the Chemical Division, Bureau of Foreign and Domestic Commerce, Washington, and referring to file No. 91214.

Japanese to Restrict Output of Fertilizers.

Commercial Attaché James F. Abbott, Tokyo.

At a meeting of the Artificial Fertilizer Manufacturers' Association held in Tokyo it was decided by a large majority, states the Chugai Shogyo of February 24, to restrict output of artificial fertilizers for the rest of the year 1923 by 35 per cent of capacity production. The principal firms in the association are the Dai Nihon Jinzo, Kanto Sanso, Nihon Kagaku, Sumitomo, Taki, Nihon Ryuhi, Tozai Hiryo, Kamishima Jinzo, Niigata Ryusan, Osaka Alkali, Rasa Island Phosphate, Hokuriku Jinzo, and Ryusan Soda companies.

Aden Gum Market Active.

Consul Raymond Davis, Aden, Arabia.

Since December, 1922, great activity had been noticed in the Aden gum market, particularly gum frankincense. Gums are brought to Aden from the original sources of supply by men who, upon arrival here, report to their long-established customers concerning the quantity and quality of the supplies which they have brought in. In other words, the gums can not be purchased by persons other than the regular customers. In practically all cases the purchasers are Indians, who are among the richest merchants of Aden and quite able to hold their stocks any length of time to secure a better price.

The market was in this condition last December, when suddenly a brisk demand was felt from the outside world, and automatically prices began to rise, with very few sales at first. When prices reached a satisfactory point the Indian merchants started selling their goods in small lots. At the present time (February 5) gum frankincense is 40 per cent higher than it has ever been before in the history of Aden.

Syrian Apricot Gum.

Consul Charles E. Allen, Damascus, February 15.

Apricot gum, a by-product of the apricot-growing industry in Syria, can be used as a substitute for gum arabic in all the cruder processes in which the latter substance is employed. The annual harvest of this gum is estimated at 15 tons, but it is said that probably 100 tons additional go to waste for want of a market. The present wholesale price is 35 to 50 Syrian piasters per rotol (8 to 11 cents a pound), the price varying as franc exchange fluctuates.

Additional information regarding chemicals appears in this issue under the following sections:

Cable review, Far East: Indian linseed prices.
Tariffs and Trade Regulations: Abolition of Italian match monopoly.
Foreign trade opportunities Nos. 6257, 6258, 6259, 6274, 6275, 6280, 6320, 6337.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

GROWTH OF FINNISH VENEER INDUSTRY.

Consul Leslie A. Davis, Helsingfors, March 17.

The veneer and plywood industry in Finland was founded during the war and has developed rapidly. There are now seven factories, with a total yearly production of about 30,000 tons of veneer. The 50 lathes in operation are being increased to 58.

The best qualities of veneer are used for furniture and ceilings, etc., the poorer qualities being used for the manufacture of packing boxes of various kinds, especially tea chests. About 30 to 40 per cent of the exports of veneer consist of tea chests.

The exports during 1922 amounted to about 20,000 tons, being about 100 per cent more than the corresponding figures for the preceding year. The exports have gone almost exclusively to England, small quantities only having been shipped to Belgium and the Netherlands. The prospects for the veneer industry are favorable. It is reported that the Finnish factories have sold their total production for about six months ahead.

One of the largest veneer factories in this country has been greatly enlarged of late and has taken up the manufacture of a new veneer called "Tarso," said to be patented in 15 countries. The manufacture of "Tarso" veneer consists of imitating inlaid work and wood mosaic on veneer by means of photography in such a way as to show all original colors, these being burned into the wood. The price of "Tarso" veneer is only about three times that of common veneer and an unlimited number of copies may be made from a plate. The manufacturer feels that "Tarso" will have a good market, especially in the cabinetmaking industry.

AN EXAMPLE WORTHY OF EMULATION.

The 30-mile boulevard leading from the Imperial summer palace at Nikko, Japan, to a near-by village, with stately Japanese cedar trees planted on both sides, towering 200 feet or more in the air, makes a deep impression on the visitor. The legend connected with these trees has more than a passing interest. Several hundred years ago, it is said, the Emperor of Japan summoned all the noblemen of the country to his summer palace, each one being requested to bring a gift. An impoverished nobleman, realizing that he could not make an adequate offering in gold or silver, carried with him a sack of tree seeds and, planting the seeds on both sides of the highway, made the remark that his gift would be the greatest blessing of them all and that his name would be remembered long after the gold and silver offerings of his colleagues had vanished.

To-day, many hundred years after these seeds were planted, thousands of persons are being benefited by these shade trees, and the seeds from these cedar trees have caused new trees to grow up in the neighborhood, which in turn have provided many generations with material for the construction of homes.

Will not some public-spirited lumbermen, who have made their fortunes from our forests, follow the example of the Japanese nobleman, thereby bestowing a blessing on posterity?

THE GERMAN LUMBER SITUATION.

Consul E. Verne Richardson, Berlin, March 26.

In common with almost all of Germany's industrial undertakings, the lumber business has undergone many changes of late and has suffered in no small degree from adverse conditions of supply, monetary uncertainties, decreased building activity, and high import prices. With the conclusion of the war, foreign countries were offering high prices for lumber and German dealers were prompt to take advantage of this. They soon created an export trade of such considerable volume that the government, recognizing the danger to German industry of heavy depletion of native lumber supplies, stepped in and by control measures put a stop to indiscriminate exporting. It is found that in 1920 and 1922 the entire timber import was 8 and 46 per cent, respectively, of 1913, and the entire timber export was 92 and 33 per cent, respectively, of 1913.

In 1913 Germany's chief single source of lumber supply was Russia. By 1922 Czechoslovakia had resumed the premier place, followed in order of importance by East and West Poland, Austria, and Finland, all of these countries together making up 80 per cent of that year's total.

Consul General F. T. F. Dumont, Frankfort-on-Main, March 20.

Southwestern Germany.

It is reported that American yellow pine is once more entering the German market and, were it not for the scarcity of money, foreign lumber in large quantities would already have been imported into Germany.

The steady demand for coniferous logs fell off very noticeably during March. Business with Czechoslovakia was slack in spite of the fact that high domestic prices and the fall in the value of the Czech crown made the moment very propitious for import.

All branches of the sawn lumber trade held back pending further reductions in prices. The turning point is now said to have been reached with regard to prices for coniferous lumber at the forests, and sawmill owners, who have been holding back their material, have had to sell at a loss. It is estimated that more and more firms will be forced by falling prices to sell their stocks at a loss. Business in planed lumber came to a standstill. Prices were lower but there was no demand.

Commercial Attaché C. E. Herring, Berlin.

Prices of German Building Lumber.

A conception of the increases in the prices of German construction lumber can be gained from the following table, which recently appeared in the Holz Welt. These prices were quoted in German marks per cubic meter delivered to the German-Polish frontier and have been converted to dollars per M feet at New York exchange value for the mark. The improvement in the value of the mark of over 100 per cent during the month of February, however, did not respond in a similar reduction of lumber prices, owing to the increased freight rates, labor costs, and other overhead.

Date.	Beams.	Waney small timber.	Thick planks.	Waney box boards.	Flooring.
	Per M feet.	*Per M feet.*	*Per M feet.*	*Per M feet.*	*Per M feet.*
March, 1922.....	$15.22	$11.00	$15.22–$16.92	$8.46–$8.88	$19.45–$21.14
Mar. 15, 1923.....	33.96	18.12	33.96	18.12	43.02

TEAK INDUSTRY OF SIAM.

Consul Maurice P. Dunlap, Bangkok, February 9.

There are about 30 sawmills of importance which cut the teak that makes up one of Siam's three large export items. These sawmills are practically all located in or near Bangkok whither the teak is finally floated, having been cut in the northern forests, launched on the smaller streams that intersect the country, and then collected in rafts on the larger rivers which form the broad Menam that empties into the Gulf of Siam just south of Bangkok. Five of these mills are operated by European interests, the others being run by Chinese and principally engaged in trade with China.

Skilled labor costs from 50 to 150 ticals per month ($20 to $60), according to experience. Unskilled labor costs from eight-tenths to one tical ($0.30 to $0.40) per day. Sawmills usually work from 6.30 a. m. to 5.30 p. m. The average annual production is from fifty to sixty million feet of sawn timber, about 60 per cent of which is exported to other Asiatic countries and Europe. A teak expert estimates that an average of 41,000 tons per year of sawn lumber have been consumed in Siam during the past five years. These are tons of 50 cubic feet, each ton being equal to 600 feet board measure.

During the past year Siam teak has had difficulty in competing on the world market with Burma teak mainly because of the relative high value of the Siamese currency, but now that the tical has dropped 15 per cent in value and may go even further, the outlook is better. However, the European demand has increased as has the demand from Japan and India while on the other hand the supply has been restricted this year by a comparative lack of rain, so that less teak has been floated to Bangkok. It is stated, therefore, that teak prices are not expected to fall.

LUMBER IMPORTS AT HAVRE, FRANCE.

Vice Consul Harold D. Finley, Havre, March 27.

The port of Havre, France, increased in importance in the lumber trade in 1922, handling more lumber of practically every kind than had been imported there previously. The United States was the principal source of building timbers while the North European countries were more important sources of lumber.

Not so much interest was manifest in hardwoods at Havre. Central Europe is furnishing the bulk of the supply but little of it arrives through this port. Imports of oak from the United States increased about three times last year.

Local lumbermen report increasing use of African woods as substitutes for the usual hardwoods. American hardwoods suffer most from this competition on account of the exchange. While the United States was the largest individual supplier of walnut, the French Congo and other French West African colonies together are reported to have sent in last year logs classed as walnut amounting in quantity to one-third more than the quantity coming from the United States. Logs classed as mahogany came in quantities from French West Africa, the French Congo, and the United States, followed by other American countries. Importations of African mahogany and okoume have been particularly important during the first two months of 1923. Certain varieties of woods are being received from the United States, irrespective of price, for special purposes.

JAPANESE IMPORTS OF LUMBER DURING 1922.

Trade Commissioner Halleck A. Butts, Tokyo.

The total importation of pine, Douglas fir, and cedar lumber into Japan for 1922, as given in advance reports of the Department of Agriculture and Commerce, was as follows:

Japanese imports of pine, cedar, and Douglas fir during 1922.

Countries of origin.	Pine, cedar, and Douglas fir.			
	2.56 inches or less in thickness.		Over 2.56 inches in thickness.	
	Board feet.	Value.	Board feet.	Value.
China	7,945,336	$314,062	13,857,592	$374,276
Kwantung Province	2,635,160	126,404	6,046,664	208,024
Asiatic Russia	339,624	14,709	219,651,080	5,720,157
United States	25,809,728	1,441,584	660,644,152	25,838,678
Canada	3,452,208	184,205	34,011,584	1,387,849
Other countries	256,096	9,444	64,448	7,839
Total	40,438,152	2,090,408	934,275,520	33,536,823

Countries of origin.	Total pine, cedar, and Douglas fir.		Percentage of total imports.	Average value per M feet.
	Board feet.	Value.		
China	21,802,928	$688,338	2.2	$31.57
Kwantung Province	8,681,824	334,428	.9	38.52
Asiatic Russia	219,990,704	5,734,866	22.6	26.07
United States	[1] 686,874,488	[1] 27,365,729	70.4	39.84
Canada	37,463,792	1,572,054	3.9	41.96
Other countries	320,544	17,283	.....	53.92
Total	975,134,280	35,712,698	100.0	36.62

[1] Includes 420,608 board feet of cedar for pencils, valued at $85,467.

NOTE.—Values computed at average New York exchange for the year 1922, 1 yen equals $0.478037.

The average value per unit of lumber imported from Siberia and the United States was $26.07 and $39.84 per M feet, respectively. This clearly indicates that American lumber is sold in competition with Siberian lumber on a basis of quality and suitability and not of price. The cutting of Siberian timber has been severely restricted this year, hence American lumber will suffer no great competition from that direction.

EXPLOITATION OF RHINE FORESTS.

Translation from La Journee Industrielle, March 28, prepared in Western European Division.

The exploitation by the high commission of domanial forests of the left bank of the Rhine, which commenced hardly a month ago, has already given the most satisfactory results. Four contracts for wood coming from these forests have already been given. The first two, contracted to Belgian and Dutch dealers, were effected through the Belgian authorities at Aix-la-Chapelle February 24 and March 10 and dealt with lumber coming from the forests of Roetgen and Cleves. The product of these two sales was 3,352,800 Belgian francs.

On March 19 the French authorities sold at Coblenz, for 2,352,200 francs, timber coming from the forests situated between Kreauznach and Simmern. This timber was contracted to French buyers, but a number of Germans took part in the sale. On March 25 the Belgians made another contract (adjudication) at Aix-la-Chapelle, reported to have amounted to 548,700 Belgian francs. Future contracts will be made at Coblenz, Spire, Treves, and Weisbaden, up to April 19.

AUSTRALIAN IMPORTS FROM NEW ZEALAND AND JAPAN.

Trade Commissioner J. W. Sanger, Melbourne.

Effect of Reciprocity on Imports from New Zealand.

When the Australian-New Zealand tariff reciprocity act went into force September 1, 1922, it was generally believed that the preference given to New Zealand lumber under this bill would result in considerably increased imports, even though it was generally recognized that these New Zealand woods find a market in Australia almost entirely on a basis of their cheapness, being used where no strength is required, and not coming into any competition whatever with Douglas fir. It is significant, however, that the imports of New Zealand pine into Australia for the six months ended December 31, 1922, show no increase over the preceding period, despite the fact that during this six months, four of the months covered the period since the ratification of the special tariff. This situation, while significant, is not conclusive, however, as lumber importers generally are of the opinion that very substantial stocks of New Zealand pine were on hand before the tariff went into effect.

Australia Buying Japanese Oak.

The Japan Advertiser announces that export contracts of Japan oak lumber, dressed and undressed, for New Zealand, Sydney, and Melbourne have been concluded for the first time in Japan. It has been agreed that 300,000 feet will be shipped to Australia by the regular lines of the Nippon Yusen Kaisha and the Osaka Shosen Kaisha, and consignments are now being prepared. Consignments to New Zealand will be transhipped at Sydney or Melbourne. It is expected that millions of feet will be carried to Australia during the rest of the year.

The two steamship companies have come to an agreement regarding the freight, which has been fixed at 45 shillings per ton. By these shipments the companies realize profits on their Australian services, which have been exceptionally slack since the beginning of this year. They had been operating the service with heavy losses, but they could not abolish them, as they were maintained under Government subsidy.

Imports, July–December, 1922.

Preliminary figures on the timber imported into Australia during the last six months of 1922 show £1,850,927 ($9,007,536 at par) from all countries, and £733,186 ($3,568,050 at par), or 40 per cent from the United States.

CHOSEN'S LUMBER TRADE.

Vice Consul Foster M. Beck, Seoul, March 14.

It is estimated that approximately 6,000,000 board feet of lumber will be imported into Chosen during 1923. This will consist chiefly of Douglas fir in rough square logs 12 to 24 inches square by 24 feet up to 40 feet long. Of this amount it is estimated that 4,000,000 feet will be imported directly from the United States, while the other 2,000,000 feet will most likely come from Japan in small lots.

Besides the above a small quantity of yellow and red cedar will probably be imported for building purposes. As the importation of this kind of lumber is still in the experimental stage, the quantity imported will naturally be small, and it is very doubtful whether such importation will be direct from the United States.

During 1922 a small quantity of this kind of lumber was imported into Chosen in the shape of sawn lumber instead of square logs or blocks.

The present price for Douglas fir squares is between 1 yen and 1.25 yen per cubic foot ex yard (between $0.0415 and $0.0519 per board foot at par rate of exchange—1 yen equals $0.498), and at these prices there should be fairly good business in the future. However, if the price should go over 1.30 yen ($0.054) per board foot, importation would be impossible. New York exchange for the yen is slightly below par for this date (March 14, 1923), quotations being $0.484 per yen.

During 1922 about 750,000 board feet of red and white Siberian pine, in logs, was imported through the ports of Gensan and Chemulpo. Business, however, was unsuccessful owing to its poor quality and to the high price asked as compared with the native Yalu Chiang pine.

Exports of Pine to Japan and China.

Chosen Yalu Chiang pine (so-called red and white pine) is exported to Japan in the shape of sawn lumber and scantlings. The quantity exported during 1922 is estimated at 2,000,000 board feet. No Yalu Chiang timber in the shape of rough logs is exported. Trial orders of larch logs for electric poles have also been filled.

During 1922 about 600,000 board feet of Toman Chiang pine was exported to north China, while about 500,000 board feet went to Japan. All of this was red pine in rough square logs.

1922 Imports into Uruguay.

Preliminary figures recently received show that 1922 imports into Uruguay of the different kinds of pine lumber from three-fourths to 1 inch thick were 28,842,000 board feet. For comparison the 1921 imports were 19,184,000 board feet and the 1918 imports were 27,176,000 board feet.

The 1922 imports of hardwood lumber from three-fourths to 1 inch thick were 2,461,000 board feet. The imports of hardwood lumber show an increase since 1918, when 1,122,000 feet were brought in. It is understood that a large part of the pine lumber was Parana pine from southern Brazil, while much of the hardwood lumber doubtless came from Brazil and included not only what are commonly called Brazilian hardwoods but also Brazilian cedar, which is a hard wood.

The 1922 imports of box shooks were 2,877,000 feet. The 1921 box imports were less than 150,000 feet, but in 1918 amounted to over 9,500,000 feet. The box shooks were probably all Parana pine.

Swiss Interested in Pacific Coast Woods.

A Swiss lumber importer is planning to visit the Pacific coast with a view to placing initial orders for Pacific coast lumber. The lumber import trade of Switzerland has heretofore usually been carried on through other European importers, and it is gratifying to notice that an interest is shown in direct relations between Swiss merchants and American exporters.

CUT-OFFS.

Swedish Sales of Lumber.

Sales of Swedish lumber from January 1 to March 15, totaled 594,000,000 feet. (Consul W. A. Leonard, Stockholm.)

The Polish Timber Industry.

There are at present in Poland approximately 394 timber industrial establishments employing 30,000 workmen. These figures include 182 sawmills with 7,000 workmen. (Clerk to Trade Commissioner L. J. Cochrane, Warsaw, March 20.)

Lumber Conditions in Philippines.

The movement of Douglas fir has slackened and stocks are improved. In native lumber, the volume and prices of exports have increased and the prices for domestic consumption are firmer. (Cable from Trade Commissioner Fowler, Manila, April 13.)

Market Good in Brussels.

The lumber market is quiet but prices are increasing. The consumption of American lumber is normal with hardwood renewals due because of activity in the furniture industry. Polish oak being received is much inferior to American but is selling at one-third the price of American oak. (Cablegram from Commercial Attaché Cross, Brussels, April 20.)

Parana Pine Grades.

Parana pine lumber, as it comes from the better class mills under present methods, will grade about 40 per cent No. 1, 15 per cent No. 2, and 45 per cent No. 3. In the larger operations most of the No. 3 lumber is used in the manufacture of box shooks for which there is a good market. (J. A. Kircher, Assistant District Forester, United States Forest Service.)

Mexican Hura Found in Abundance.

Hura wood, known locally as "Habilla," is reported to be found in fair abundance along the coast, both to the north and south of Acapulco. It is preferred in boat construction and also used for light construction work and in the making of boxes. In appearance it resembles white pine, although in grain texture it is more like mahogany. There are no authentic data available as to what quantities of this wood are commercially procurable. Generally speaking, the lack of roads or other transportation facilities render lumbering impracticable and the forests of this State are, therefore, for the most part untouched. A highway is being constructed from Acapulco to Mexico City, the completion of which is set for September, 1924. This will make possible the reaching of much valuable timber. Furthermore, a canal of about 70 miles in length is being constructed through the lagoons to the northwest of Acapulco, along the coast. This should be completed next November and will bring within the possibility of exportation many products, including those of the forest. (Consul Geo. A. Bucklin, Acapulco, Mexico, March 24.)

Additional information regarding lumber appears in this issue under the following section:

Foreign trade opportunities Nos. 6291, 6292, 6293, 6294.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

DECREASE IN UNITED STATES IMPORTS OF LEATHER GLOVES.

During January, 1923, the United States imported 389,245 pairs of leather gloves, most of which were women's and children's. The average number of pairs of leather gloves received monthly by the United States during 1922 was 642,943. The importations of January, 1922 (677,136 pairs), exceeded the monthly average by more than 30,000 pairs, while the January, 1923, importations were approximately 250,000 pairs less than this average.

The following table shows the number of pairs of leather gloves imported by the United States during January, 1922 and 1923, and the average monthly receipts during 1922:

United States imports of leather gloves.

Imports of gloves.	January.		Monthly average, 1922.
	1922	1923	
	Pairs.	*Pairs.*	*Pairs.*

Boot and Shoe Import Trade in January.

The imports of leather boots and shoes into the United States during January, 1923, were classed as follows: Boots and shoes (free), 91,677 pairs, valued at $103,165; slippers (free), 462 pairs, valued at $512; boots, shoes, and slippers (dutiable), 57,139 pairs, valued at $13,813. The countries participating in this trade are shown in the following table:

United States imports of leather boots, shoes, and slippers during January, 1923.

Countries of origin.	Pairs.	Value.	Countries of origin.	Pairs.	Value.

CONDITIONS IN THE FRENCH SHOE MARKET.

Trade Commissioner J. F. Butler, Paris, April 7.

The arrival of good weather has resulted in an improvement in the retail shoe trade in France. The increased sales, however, are confined for the most part to the cheaper and average-priced shoes. The increase in the cost of raw materials is likely to result in an increase of approximately 10 per cent in the prices of shoes. Certain manufacturers have already increased their prices by 5 or 6 per cent. Customers, however, are opposing this increase and it seems that it will have to be borne by the retailers. The latter are unwilling to pay more than 70 francs a pair for shoes in order to be able to sell them below 100 francs and thus avoid the 10 per cent tax charged on shoes retailing at more than 100 francs per pair.

Items of Interest to the Trade.

German Shoe Export Trade.

The figures of Germany's external trade for the year 1922 show that the exports of boots and shoes totaled 5,121 tons in 1922 as against 2,912 tons in 1913, while of slippers 540 tons were exported last year against 28 tons in 1913. The bulk of these exports went to the Netherlands, the Saar, and Denmark. (Shoe and Leather Record, London, March 9.)

Canada's Export of Leather Gloves.

Canada during the 11-month period ended February, 1923, exported leather gloves valued at $12,849, which represents an increase of about $3,800 over similar shipments during the corresponding period of 1922. The principal consignments were those to the United Kingdom, valued at $8,776, and to Newfoundland, valued at $1,995. The United States received only $239 worth.

Decrease in Canadian Exports of Boots and Shoes.

During the 11 months ended February, 1923, Canada exported leather boots and shoes to the value of $121,827, as compared with $266,060 in the corresponding period of 1922. During the 1923 period the following countries participated in this trade: United Kingdom, $13,781; United States, $64,055; Belgium, $87; France, $21; Newfoundland, $5,642; Russia, $7,082; St. Pierre and Miquelon, $11,790; and other countries, $19,369.

Konigsberg Fair a Failure.

The Konigsberg Fair held at the end of February was a failure, and most of the exhibitors left before it closed. The sales to foreign buyers amounted to only one-third of the total. Some of the prices quoted to eastern importers were dumping prices. It is reported that men's brown boots of best quality were sold for $2.50 to $3 per pair to Latvian importers. On the whole, the purchases of eastern importers at the fair were far below what had been expected, while Soviet Russia bought practically nothing, although much hope had been entertained of large purchases from this source. (Shoe and Leather Record, London, March 9.)

Market for Shoe Polish in Portugal.

Before the Portuguese currency suffered a serious depreciation both American and European manufacturers of shoe polish found a considerable market for their products in Portugal. This trade, however, has diminished during the past five or six years, almost in relation to the depreciation in the value of the currency, and at present practically all importations of shoe polishes, both liquid and paste, have ceased. The manufacture of shoe polish locally has been undertaken to a considerable extent and many brands, generally of very poor quality, are offered on the market. Preference would be given to accredited brands of American shoe polishes if they could be locally purchased at a price within the reach of the buying public or not appreciably higher than the prices paid for the home-made article. (Vice Consul Hernan C. Vogenitz, Oporto, February 21.)

Additional information regarding shoes and leather manufactures appears in this issue under the following section:

Foreign trade opportunities Nos. 6247, 6297, 6305, 6306, 6322.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

INCREASED ACTIVITY IN THE ABYSSINIAN HIDE MARKET.

Consul Raymond Davis, Aden, Arabia, March 20.

The Abyssinian market, which has exported practically no hides to the United States since March, 1920, is showing renewed activity along this line. During the first three weeks of March of this year the quantity of Abyssinian hides shipped to the United States was more than three times the combined total of similar shipments for the years 1920, 1921, and 1922. Increases have also been noticed in shipments to European ports, and the demand is steadily increasing. The American demand may be explained by the increase in price of other hides, so that the Abyssinian product, never very popular in the United States, can now be utilized for cheap sole leather.

It is, of course, too early to determine whether or not the present stimulated condition of the market will continue. Prices advanced 15 per cent during the past week and further increases will have a tendency to check the demand, but the present activity is not only helping financial conditions in Abyssinia, but is giving an unexpected boost to the 1923 business of Aden. Aden, however, is of relatively small importance in this trade as the majority of the shipments are made direct from Jibuti on account of the lower freight rates.

Limited Demand for American Leather in India.

Consul T. M. Wilson, Bombay, March 12.

The port of Bombay last year imported only 9 tons of tanned and dressed hides and 11 tons of tanned and dressed skins. Although these receipts were undoubtedly below normal, there does not appear to be any great improvement in the trade so far this year. Indian tanned leather is being used to an increasing extent; it is of cheaper quality than the imported leather, but its price is attractive to the ordinary Indian consumer. As the trade in imported leather is not large, the number of dealers is limited.

The consumers of high-class upper leather are chiefly the very small bazaar makers of shoes and leather products, who do most of their work by hand, and a very few European houses who make shoes to order. Of these two classes, the bazaar trade furnishes the larger market. Most of the leather bought by the bazaar makers of shoes is furnished by the few importers or through the Bombay offices of European and American concerns. A few also import a little leather on their own account.

[Firms who are interested in the Indian market for leather can obtain a selected list of importers and bazaar dealers in Bombay from the Hide and Leather Division or from the district and cooperative offices of the bureau by referring to file No. C. I. 64.]

German Slaughter Statistics for 1922.

Le Cuir, Paris, March 22.

The number of animals slaughtered in Germany during 1922 and a comparison with corresponding figures for 1913 and 1921, according to figures furnished by the German bureau of statistics, are shown in the following table:

Animals.	1913	1921	1922
	Number.	*Number.*	*Number.*
Oxen	492,148	359,483	316,357
Bulls	466,091	364,635	323,534
Cows	1,463,656	1,283,536	1,442,478
Young cattle over 3 months old	791,452	866,466	965,767
Calves under 3 months old	3,702,536	3,108,376	3,207,789
Sheep	(1)	2,092,359	1,769,406
Goats	(1)	315,387	239,551
Dogs	7,344	5,482	13,595
Horses	153,039	148,679	240,014

[1] Figures not stated.

The figures given in the table for 1913 are only for the territory comprised in the German Republic.

Hide and Leather Trade Notes.

Hide and Skin Prices Decline in Poland.

Early in April prices of hides and skins in the Polish market dropped 10 to 15 per cent, but tanners continued to purchase only for their immediate needs, anticipating a further decline. Prices for leather naturally show a weak tendency, and the volume of orders passing is reduced. (Le Cuir, Paris, April 13.)

Hide Prices in French Market Show Upward Trend.

Prices of hides and skins in France remain high and the trend is upward. By reason of this increase in price of raw materials, it is predicted there will be an increase of approximately 10 per cent in the price of shoes. There is a noticeable lack of stocks of shoe leather in the tanneries and in the hands of shoe manufacturers. (Assistant Commercial Attaché J. F. Butler, Paris, April 7.)

Austrian Hide and Leather Market.

Austrian prices for hides and skins are firmly maintained, and purchases are being freely made for both heavy hides and calfskins. The latter show a tendency to advance. The domestic leather market is dull, owing to the shortage of silver. For this same reason some fair volume of export business is being handled. Up to the present prices have been maintained, but a slight weakening is anticipated. (Le Cuir, Paris, April 13.)

Italian Leather in Bulgaria.

Bulgaria must import about 30 per cent of the leather necessary for its growing demands. Imported leathers are for the most part restricted to superior qualities of sole and upper leather. Hungary occupies first place as a source of supply and Italy ranks second. For a considerable period the imports of leather into Bulgaria from these two countries included mainly average assortments tanned for the most part from Argentine hides. During the latter part of 1922, however, Bulgaria began to import the better class of Italian leathers, amounting in the aggregate to 44,092 pounds for this short period. (Tribuna Coloniale, Rome, March 17.)

Readjustment Continues in Spanish Leather Industry.

The situation of the Spanish tanning and footwear industries shows no improvement. A process of readjustment is taking place, and time will be needed to reestablish the balance of the industry. The influence on the industry of the absolute or conditional prohibition of exports must also be taken into account. It was thought that this measure would be sufficient to lower the price of footwear, the fact that the industry was largely kept alive by purchases of hides and skins abroad being entirely disregarded. This trade is now below that of 1920, but good quality of footwear has not fallen in price. The Spanish hide and leather market is still inactive. In some regions stocks have greatly diminished, but in others the warehouses are overstocked, and workers are being dismissed. (Shoe and Leather News, London, March 8.)

Additional information regarding hides and leather appears in this issue under the following sections:

Cable review, Far East: Good demand for hides and skins in Madras.

Tariffs and trade regulations: Reduced export duty on hides and skins in India.

Foreign trade opportunities Nos. 6239, 6240, 6259, 6307, 6333.

RUBBER PRODUCTS

P. L. Palmerton, Chief, Rubber Division

TIRE MARKET IN ESTHONIA.

Consul Harold B. Quarton, Reval.

The demand for tires in Esthonia is necessarily small during the winter season, and the depleted stocks are not replenished until spring, when the demand improves.

Few American tires were sold in Esthonia during the past year, because the prices quoted were high and the goods could not be obtained when needed. However, their high quality is known, and demand therefore is improving. Orders placed in Germany or England were received much quicker, and therefore sales of these brands predominated. If American manufacturers had a general distributing plant in Denmark it would increase their tire sales in Esthonia.

The Continental tire is the leading make in Reval, selling 500 to 600 tires annually, or 50 per cent of the total sales. Besides the products of four American companies there are on the market the English and German Dunlop, the German Metzler, Excelsion, Harburg-Wien, and Peters-Union. The number of automobiles is increasing steadily.

FRENCH IMPORTS OF RUBBER PRODUCTS IN 1922.

Of the total net imports of rubber manufactures into France during 1922, valued at 58,406,000 francs, the United Kingdom supplied 28,698,000, the United States 11,958,000, Belgium 7,766,000, Italy 4,083,000, Canada 2,717,000, Germany, 2,080,000, and other countries 1,104,000 francs. Imports of separate products by countries are not available. The values of the principal products imported were: Belting, hose, washers, etc., 20,308,000 francs; casings, tubes, and solid tires, 18,852,000; vulcanized rubber thread, 9,641,000; elastic webbing goods, 2,144,00; rubber footwear, 2,143,000; water-proof clothing, 1,487,000; and other rubber products, 3,831,000 francs. Imports of rubber thread, rubber footwear, and elastic webbing goods and water-proofed clothing were heavier during 1922 than in 1921; for other classes the value of imports decreased in 1922.

Rubber Output of British Estates Decreased in February.

An analysis of rubber-production figures for British-owned estates during three months prior to restriction and the first two months under restriction showed that

actual production was not being limited to the exportable allowances during November and December, 1922 (COMMERCE REPORTS, April 2, 1923, p. 25). Legislation to deal with this question is under consideration in the Federated Malay States, and notice to this effect was given in January.

According to Rickinson's Rubber Companies Position of March, 1923, 58 British-owned estates in British Malaya produced 3,272,014 pounds in November, 3,829,384 pounds in December, 3,545,626 pounds in January, and 3,107,459 pounds in February, the first quarter allowance being 7,842,075, while 18 British estates in the Dutch East Indies produced 1,698,058 pounds in November, 1,720,341 pounds in December, 1,671,137 pounds in January, and 1,482,040 pounds in February, the first quarter allowance being 3,292,946 pounds.

Rubber Trade Notes.

Rubber Footwear Manufactured in Brazil.

Rubber footwear, particularly tennis and sport shoes, are manufactured to a considerable extent in this city. Rubber overshoes are very little worn and are not manufactured here. (Consul E. M. Lawton, Sao Paulo, March 21.)

Tire Price Changes Imminent in England.

There has been no change in tire prices in England since last October. It appears, however, that new price lists will be issued in May by leading manufacturers, and the general opinion is that prices will be increased. (Consul W. F. Doty, Stoke-on-Trent, April 9.)

Toy Balloons in Peru.

Toy balloons are not as common in Peru as in the United States, and, outside of carnival and other fiestas celebrations, there is very little demand for such novelties. There are several firms handling this class of goods, including one local manufacturer. (Acting Commercial Attaché W. E. Dunn, Lima, March 1.)

February Exports of Rubber from Brazil.

During February, 1923, rubber exports from Para and Manaos totaled 3,083,457 pounds, of which 2,411,265 pounds were shipped to the United States. The exports show a decrease of 2,418,521 pounds as compared with February, 1922. (Consul George H. Pickerell, Para, March 13.)

American Tires Popular in Barbados.

Practically all automobile tires and automotive equipment used in Barbados are of American make. There are about 1,000 passenger cars, 50 trucks, and 50 motor cycles, and each motor vehicle requires four tires per year on the average. Three repair shops do vulcanizing and retreading, using American equipment therefor. (Consul John J. C. Watson, Barbados, February 13.)

Italian Tire Exports to England.

Italian tire exports to England during the first nine months of 1922 amounted to 1,966 metric tons. The French transshipments to England during the same period amounted to 1,882 metric tons, while those for the entire year amounted to 2,352 metric tons. It is said that Michelin is shipping to England from the Italian factory; Pirelli gets only a small share of the Italian export tire trade.

Consumer Discounts On Tires in the United Kingdom.

Tire retailers customarily grant discounts to owners of commercial vehicles and taxis, the discount on tires for commercial use being 5 per cent (to owners of up to 3 motor trucks), and 10 per cent (to owners of more than 3 trucks) for cash. The discounts on tires for taxis is 10 per cent and 15 per cent, on the same basis as to number of taxis. (Consul A. B. Cooke, Swansea, Wales.)

Types of Rubbers Worn in Persia.

The Persian market for rubbers was formerly supplied chiefly from Russia by the Treugolnik and Prowodnik. Samples of men's rubbers resemble those customarily worn in the United States. The heel is about three-eighths of an inch thick, and there is a slight projection in the back to assist in removal. Rubbers for Persian women are unusually flat, with very little allowance for the instep and with no built-up heel; in other words, they are adapted for wear with flat-soled slippers. (Commercial Attaché Chester Lloyd Jones, Paris, April 6.)

Finland's Rubber Factory Enlarged.

Suomen Gummitehdas O/Y (Finska Gummifabriks A/B) has recently completed a new factory for the manufacture of rubber overshoes. The production capacity is 4,000 pairs per day, while the old factory produced 2,000 pairs daily. The company expects to be able to satisfy the demands of the entire country by fall. The former limited production has prevented exportation, and considerable quantities have even been imported, chiefly from Germany and Sweden. The imported shoes have sold at a lower price than the Finnish product, but the latter has enjoyed a good market on account of durability and good quality. (Consul Leslie A. Davis, Helsingfors, March 29.)

Tire Market in Mauritius.

Over 2,000 motor vehicles were registered in Mauritius in 1922, according to unofficial reports. In December, 1920, there were 85 motor trucks in use on the island's sugar estates. Of the 741 passenger cars imported during 1919, 1920, and 1921, 638 came from the United States. Imports of automobile accessories, including tires, were valued at 409,073 rupees in 1921, the countries of origin being United States, 258,664; United Kingdom, 112,023; France, 79,564; Union of South Africa, 16,683; and Italy, 2,129.

All of the leading tire dealers are located in Port Louis, a town of about 43,000 inhabitants, which is the commercial capital of Mauritius, located on the northwest coast of the island. This town is the workshop and storehouse of the Colony, as well as the seat of government.

Additional information regarding rubber products appears in this issue under the following sections:

Cable review, Latin America: Exceptional tire sales in Chile.
Cable review, Far East: Rubber exports from Straits Settlements.

COAL

BRITISH INDUSTRIAL REVIVAL HAMPERED BY LACK OF COAL.

(Prepared in Western European Division.)

The occupation of the Ruhr and the practical elimination of Ruhr coal from European markets is causing an added demand for more than 2,000,000 tons of British coal per month for continental consumption. British coal exports are increasing and the price of coal is rising. The domestic consumption is considerably in excess of last year. Production in the iron and steel industry is now 50 per cent in excess of the 1922 figures and only slightly below the pre-war average. In the face of these facts the loss of production during the Easter holidays, amounting to nearly 3,000,000 tons, is important.

In 1922 British coal production amounted to 252,000,000 tons, of which 82,000,000 were either exported or used for foreign bunkering, leaving 170,000,000 for home consumption, an average of 3,150,000 tons per week. During February an average of 5,537,000 tons was produced weekly, of which 1,925,000 went abroad, leaving 3,612,000 for home consumption. In March an average of 5,510,000 tons was produced weekly, of which 1,930,000 tons went abroad, leaving 3,580,000 tons for home consumption. March exports of coal amounted to 7,180,000 tons. For these two months the margin of coal for domestic consumption is only 14 per cent above the monthly average for 1922, while demand for coal has increased to a much greater extent.

One method of calculating the increased demand is a comparison of steel production. The monthly average production of steel ingots and castings during 1922 was 486,000 tons. In January the production was 624,300 tons, an increase of 30 per cent over the 1922 average; in February 707,100 tons, an increase of 48 per cent; and in March 802,500 tons, an increase of 65 per cent. With the steel industry producing at a rate more than 50 per cent above last year's average and coal production but 15 per cent increased, it is no wonder that coal prices have risen until the best grades of South Wales coal are quoted at over £2 a ton for export.

Increases in Continental Demand.

The increased continental demand for British coal during February was partially accounted for as follows: France imported 1,375,000 tons, 375,000 above the average before the Ruhr occupation; Italy imported 675,000 tons, or 175,000 above previous imports; Germany imported over 1,000,000 tons, or 250,000 more than the average during 1922; Belgium imported 425,000 tons, while previously almost no British coal was consumed in that country. Additional shipments for German account are probably contained in the figures for the Netherlands and Denmark, while these countries used increased quantities of British coal on their own account in place of supplies previously obtained from the Ruhr. In March, France and Germany each imported 1,800,000 tons of British coal, or a combined excess of 1,750,000 tons above their 1922 monthly average.

While the situation in the Saar Basin is partially improved by the return of some of the strikers to work, production is still below normal. This causes additional demand upon French coal reserve. Altogether it is apparent that so long as the Ruhr deadlock continues western Europe is facing a probable net shortage of coal, which provides an opportunity for shipments from the United States. Under these circumstances the loss of production in Great Britain, due to the Easter holidays, is significant.

Production Figures.

For the week ending March 31, British coal production was 4,874,000 tons and for the week ending April 7 it was 3,941,000 tons, a net loss of almost 3,000,000 tons from the average figure of 5,700,000 tons per week previously maintained. However, the latest returns show that during the week ending April 14, 5,776,000 tons were mined, the largest weekly output in the last four years.

CONDITIONS IN THE BRITISH COAL-MINING INDUSTRY.

Trade Commissioner Alexander V. Dye, London, March 29.

There is apparently no immediate danger of a crisis in the coal-mining industry of the United Kingdom due to wage disputes, although such a crisis may possibly arise later in the summer. There has been considerable agitation among the miners in an endeavor to raise the minimum wage which was set by the agreement terminating the strike in 1921. The dissatisfaction is principally due to the fact that prices for coal have risen materially within the last two months, whereas wages have not risen accordingly.

The increase in the price is largely the result of the demand for export coal caused by the Ruhr occupation and the general increase in industrial activity on the Continent, where conditions were not affected by the Ruhr question. Generally speaking, the price of coal is about 10s. per ton in advance of last year, the price of best Admiralty Welsh being 37s. 6d. to 38s.; best steams, Newcastle, 35s. 6d. to 36s.; and best anthracite at Swansea 42s. 6d. per ton.

This rise in the price of coal has not been reflected in wage increases for two principal reasons: One is that it has been a traders' rather than a mine owners' profit, as many traders were willing to take a speculative gamble when the Ruhr situation arose and bought the output of the mines for some months in advance. The other factor is the result of the wage agreement, whereby the profits shown in the industry in any one month do not affect wages until the second month following.

Resolution Adopted by Miners' Federation Conference.

The principal opponents to the present wage agreement are the miners' federations in South Wales, Lancashire, and Scotland, who instructed their delegates to the Miners' Federation Conference held in London the latter part of March to vote in favor of giving the usual three months' notice for the termination of the present contract. Three lines of policy were proposed at the conference:

1. To give immediate notice of a termination of the present agreement.
2. To take up negotiations with the mine owners relative to securing an amendment of the existing agreement which would give the workmen a minimum wage equal to the cost of living.
3. To appeal to the Government for an amendment to the Coal Mines Act so as to provide all the workers in the mines wages based on the cost of living.

The resolution which was adopted in the conference rejected the policy of giving three months' notice to terminate the agreement and called upon the executive committee to negotiate with the coal-mine owners and at the same time request the Parliamentary Labor Party to introduce an amendment to the coal mines act in April. The delegates are asked to report to their respective local unions and meet at a conference which is to be called later to further consider the question, particularly with reference to giving notice of the termination of the present agreement.

Number of Mine Workers Increasing.

Wages have remained practically stationary since the first of the year, but there has been a continued increase in the number of men employed. In fact, there are more workers in the coal-mining industry of the United Kingdom at the present time than in 1913, the year of greatest production, the number employed on March 10 being 1,143,600, as compared with 1,127,000 in 1913. The average number of days worked has remained more or less stationary for the last three months at 5½ per week. In the meantime coal production is steadily rising.

Exports to America Continue.

Some coal continues to be exported to America, but chiefly on old orders, and it is interesting to note that the ships which are taking British coal to America are being rechartered to bring American coal back to Europe, one concern recently having sold 160,000 tons of American coal to Germany for delivery over the next three months.

Development of Coal Industry in Lorraine.

Consul William J. Pike, Strasbourg, March 6.

The approximate extent of the coal fields of Lorraine has been a matter of investigation for many years, and according to the present opinion of the most skilled engineers the veins extend through the whole territory of Lorraine. The possibilities of the future can be judged when a comparison of coal districts under operation (53,620 acres) is made with the total area of the fields (127,900 acres). The operations are at present divided into three districts—Saar and Moselle, with 37,065 acres, in which 8 shafts are being worked and 2 have been abandoned; Petite Roselle, with 12,355 acres, in which 12 shafts are being worked; and La Houve, with 4,200 acres, in which 3 shafts are being worked and 1 is under construction.

The production of coal has developed rapidly during the last 30 years, rising from 1,137,000 tons in 1900 to 1,824,000 tons in 1905, 2,686,000 tons in 1910, and 3,660,000 tons in 1918; the 1922 output maintained this latter figure. As the quality of the coal in the Lorraine district is very poor it is not feasible to introduce machinery, but it is predicted that richer veins will be developed and the output increased.

Notes on Foreign Coal Trade.

Importation of Fuel for Navigation Company in Brazil.

The Secretary of the Treasury of Brazil has authorized the Cia. Nacional de Navegação Costeira to import 120,000 metric tons of foreign coal for its own use, free of duty. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, March 21.)

French Coal Production.

The production of coal in France during January amounted to 3,147,000 tons and of coke 132,000 tons, as compared with 2,821,000 tons and 113,000 tons, respectively, during the preceding month. (Consul Paul H. Cram, Nancy, March 13.)

Fuel Consumed by Rio Grande Do Sul Railway System.

During 1922 the State railways of Rio Grande do Sul, Brazil, consumed 102,219 metric tons of domestic and 10,033 metric tons of foreign coal. The wood consumed total 513,921 cubic meters, and the total expenditure for fuel was 11,447,425 milreis. There is now in force a standing contract for the delivery of 8,000 metric tons of domestic coal per month. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, March 21.)

Brazilian Government Assistance to National Coal Industry.

The Brazilian Federal Government has authorized the Cia. Estrada de Ferro e Minos São Jeronymo to repay the loan of 2,000,000 milreis made to it in accordance with a decree of March 30, 1918, by making deliveries of domestic coal for the use of the Government. The decree referred to permitted Federal loans to mining companies up to one-half of the capital invested in installations and purchases of mineral lands. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, March 21.)

Welsh Anthracite Exporters in Canadian Market.

Welsh anthracite coal owners and exporters are making careful and considerable preparations to offer anthracite in the Canadian market in qualities and at prices which will compete strongly with American coal. The plan of the Welsh exporters is apparently to deliver large tonnage of run-of-mine anthracite at Montreal during the summer months when the St. Lawrence is open; to establish there coal wharves and coal breakers; to treat and grade the coal there; and so to supply the Provinces of Ontario and Quebec regularly and promptly, according to the demand of these markets. According to a report made by the British trade commissioner at Toronto, the imports of British coal into Canada during 1922 totaled 874,175 tons, as compared with only 1,481 tons in the preceding year. (Consul A. B. Cooke, Swansea, March 15.)

Resumption of Coal Shipments from Spitzbergen.

Norwegian coal companies operating in Spitzbergen have continued production during the winter, and from information just received will be able to ship 260,000 tons of coal during the coming season. Favorable Arctic ice conditions promise the possibility of an early resumption of coal shipments from Spitzbergen, and the recent sharp advance in prices is directing attention to the possibilities of this coal. The operations at the Kings Bay mines have been under Government control with the purpose of extracting fuel oil at a plant under construction at Kirkenes which was expected to be ready for operation with the beginning of the season's shipments. Political disturbances in Germany have, however, delayed the delivery of the technical equipment, and it is not certain that the oil plant will be able to operate this season. (Consul George Nicolas Ifft, Bergen, March 10.)

Additional information regarding coal appears in this issue under the following sections:

Cable review, Latin America: Partial cessation of activity in coal industry in Chile.
Minerals and metals: Coke situation in eastern France.

PETROLEUM

Henry C. Morris, Chief, Petroleum Division

MADAGASCAR PETROLEUM IMPORT TRADE.

Consul Alfred T. Burri, Tananarive, March 6.

Total imports of petroleum products into Madagascar during 1922 showed an increase of 82 per cent as compared with the preceding year. Illuminating oil accounted for most of the increase, imports of this item totaling approximately 492,900 gallons, or nearly three times those for 1921, and over four times the 1920 receipts. The importation of gasoline and naphthas has declined from about 361,400 gallons in 1920 to 117,900 gallons in 1922, while lubricating oils show some gain over the two preceding years.

Paraffin wax and vaseline are imported in very limited quantities, almost entirely from France. Candle making of local tallow is a home industry, and very little paraffin is used for this purpose. Other petroleum products continued to come chiefly from the United States during 1922, appreciable quantities being shipped via France and the neighboring African colonies.

The following table shows imports during 1922 as compared with 1920 and 1921:

Imports of petroleum products into Madagascar.

Products.	1920	1921	1922
	Kilos.	*Kilos.*	*Kilos.*
Illuminating oil	341,155	596,601	1,478,818
Gasoline and naphthas	1,004,344	523,358	327,426
Lubricating and other heavy oils	320,847	121,177	466,319
Paraffin wax	1,343	4,537	1,427
Petrolatum	8,783	3,059	1,431
Total	1,676,472	1,248,732	2,275,421

Regulations Governing Gasoline Shipments in Batavia Harbor.

Consul Charles L. Hoover, Batavia, February 12.

What is said to have been the first shipment of American gasoline to Batavia in several years arrived in January on an American steamer. There were 10,000 cases in the consignment, and its arrival has been welcomed as a relief from the monopoly which the native production has had heretofore, although it does not appear that any change in the prices is under contemplation for the near future.

There are some harbor regulations in force here, however, which are apparently unknown in the United States and which add considerably to the cost of transporting American gasoline. Vessels discharging gasoline are obliged to anchor in the outer harbor; they may keep up steam in only one boiler; they must have their anchor shackle so prepared that it can be slipped immediately in case of necessity; and they must keep two tugs lying alongside so that they can be towed out of the harbor in case of fire.

THE PETROLEUM TRADE OF LATVIA.

Based on reports from Consul John P. Hurley and Robert R. Bogenberger, clerk to trade commissioner, Riga.

Kerosene is the principal refined petroleum product imported into Latvia, and during 1922 approximately 2,066,000 gallons were received, according to official Latvian statistics. Kerosene imports were fairly light during the spring and summer months, increasing during the latter part of the year to a total of 1,333,678 kilos (about 440,000 gallons) in December. Gasoline receipts during 1922 amounted to about 244,500 gallons, distributed fairly evenly throughout the year.

Definite indication of the sources of petroleum products imported into Latvia is not available, but it is estimated that approximately 60 per cent of the kerosene received during the first half of the year came from the United States, 25 per cent from Poland, and 15 per cent from Russia, while during the latter part of the year it was reported that increasing quantities were arriving from Russia. The larger part of the gasoline and lubricating oil also originates in the United States. Some kerosene is shipped via England, while Galician oil in general comes via Danzig, whence it is shipped in tank cars to Riga. American oil is usually received via Hamburg and Copenhagen. The following table shows the imports of the principal petroleum products during 1922:

Latvian imports of petroleum products in 1922.

Products.	January-June, 1922.	July-December, 1922.	Total, 1922.
	Kilos.	*Kilos.*	*Kilos.*
Crude petroleum and other mineral oils not specified	3,731,196	5,674,044	9,405,240
Kerosene	1,534,228	4,726,264	6,260,492
Gasoline and benzine	421,984	257,308	679,292
Mineral lubricating oils and greases	1,038,788	459,597	1,498,385
Paraffin	(1)	(1)	109,813

[1] Separate figures not available.

Distribution Facilities.

Libau, Windau, and Riga are the principal importing and distributing points for petroleum products in Latvia. Shipments arrive at the first two only by sea, while at Riga overland consignments are also received. Products imported by sea come in general via Hamburg and Danzig in small tankers of 600 to 1,000 tons capacity, one ship of 700 tons capacity being owned by the Latvian Government. From the distributing points mentioned oils are shipped in tank cars, drums, and barrels to Walk, Dvinsk, Reshitza, and Mitau, and distributed to the surrounding villages by more or less primitive methods. There are no pipe lines for the distribution of oil and only 8 or 10 tank cars in the country.

Storage tanks are located principally at Riga, where there are about 35 tanks, with a total capacity of approximately 35,400 tons. At Libau there are 10 tanks, with a capacity of about 8,000 tons, and at Dvinsk, Reshitza, and Mitau the storage capacity is limited to less than 200 tons at each place. Smaller towns usually have one tank, holding from 30 to 50 tons.

Wholesale distribution is effected exclusively through local agencies. As a rule petroleum products are purchased by wholesale merchants on a basis of 25 per cent payment with the order, 50 per cent when the merchandise is sold or otherwise disposed of, and 25 per cent in from three to six months. In selling to retailers wholesale dealers usually sell on a cash basis only.

Operations of Latvian Refinery.

One refinery is reported to be operating in Latvia at present. This plant is located at Riga (Muehlgraben) and is owned by Oelrich & Co. The pre-war production was about 50,000 barrels of machine oil and 120,000 to 150,000 barrels of kerosene per year, these products being obtained from Russian crude oil imported from Black Sea ports and by rail through Russia.

The machine oil produced was sold in Germany, France, England, and Belgium, and the kerosene in Russia and in the territory which at that time constituted the Baltic Provinces. At present this refinery is understood to be operating largely on American crude oil.

Reported Soviet Oil Concession.

It is reported that an agreement with the soviet authorities has been negotiated by a representative of the Gouria Petroleum Corporation (Ltd.), whereby the title to the original holdings of the Gouria Syndicate (Ltd.) and the Gouria Petroleum Corporation (Ltd.) is revived and additional oil lands included. It is understood that the agreement has not as yet been ratified by the ultimate authority in Moscow.

The Gouria Petroleum Corporation had three wells drilling prior to the war on a leased area near Gouria, between the ports of Batum and Poti; but operations ceased at the outbreak of the war. The new agreement with the soviet authorities is understood to supersede the original lease contracts obtained from private owners and to constitute the Soviet Government the principal grantor of the concession, with a certain percentage of royalty to the original private owners. The concession includes not only the 70 square miles of the original lease but an additional contiguous area of the same size, and will be valid for 40 years.

Increasing Fuel-Oil Trade in the Canary Islands.

Vice Consul Julian C. Greenup, Las Palmas, March 12.

The bunker fuel-oil trade at Las Palmas has rapidly increased in importance since its beginning in the summer of 1919 by the Asiatic Petroleum Co. (Ltd.), and it is reliably reported that other companies expect to enter this trade in the near future. The growth in the sales of fuel oil to steamers is shown by the fact that in 1919 approximately 1,000 tons of oil were sold at Las Palmas, in 1920 about 17,000 tons, in 1921, 60,000 tons, and in 1922 sales rose to 100,000 tons.

The present station of the Sociedad Petrolifera Espanola, the operating company of the Asiatic Petroleum Co., was completed and placed in service in the summer of 1921, replacing the service previously given by oil tankers. In addition to this station, the first shipments of material have been received for the construction of oil tanks on land owned by Cory Bros. & Co. (Ltd.), to whom a concession was recently granted by the Spanish Government. The Anglo-Persian Oil Co. (Ltd.) is also said to have purchased land preliminary to the erection of a plant for supplying fuel oil, although it is not expected that the installation will be commenced in the near future. It is further reported that several applications to build pipe lines on the breakwater bounding Puerto de la Luz on the east are pending.

Petroleum Notes.

Petroleum Activity in Nuevo Leon, Mexico.

It is reported that the Mexican Department of Commerce and Industry has issued a number of permits for drilling in the State of Nuevo Leon. This is a new field in Mexican petroleum activity, and the petroleum possibilities are still to be proved, although favorable indications are reported. (Assistant Trade Commissioner H. Bently MacKenzie, Mexico City, April 7.)

New Kerosene Refinery at Balikpapan, Borneo.

The Bataafsche Petroleum Maatschappij, the Netherlands Indian branch of the Royal Dutch, is enlarging its kerosene refinery at Balikpapan, Borneo. The cost of the new plant is about $1,600,000. This company also has announced its intention to remove its candle plant from Balikpapan to a Chinese port. The reason for the change is given as excessive taxation in Netherlands India. (Consul Parker W. Buhrman, Soerabaya, Java, March 7.)

Oil Storage Facilities in Buenos Aires.

Oil storage facilities in the port of Buenos Aires include 26 tanks with a total capacity of 210,000 metric tons (approximately 1,430,000 barrels). Of this number, the Argentine Government has three tanks of 6,000 tons capacity each for the storage of oil from the Government workings at Comodoro Rivadavia, and the Southern and Western Railways have three tanks of 8,000 tons each. (Assistant Trade Commissioner Clarence C. Brooks, Buenos Aires, March 8.)

Production of State Wells in Czechoslovakia.

The total output of the State petroleum workings at Gbely, Czechoslovakia, during 1922 amounted to 17,740 metric tons (about 125,000 barrels). The largest monthly production during the year was reached in July with 2,400 tons, and the smallest output was 900 tons in December. Last year's production exceeded that of 1921, placed at 13,000 metric tons, and it is expected by the administration of the State wells to further increase the output in 1923. (Consul C. S. Winans, Prague, February 26.)

Sale of Petroleum by Argentine Government at Rosario.

Since the completion of the 60,000-barrel tank in Rosario at the end of January the Argentine Petroleum Department has been successfully retailing the oil from the Government fields at Comodoro Rivadavia. The crude oil being sold for fuel in Rosario has a fixed price of 40 pesos per metric ton in bulk or 45 pesos when sold in the drums belonging to the petroleum department (peso equals $0.375 and metric ton equals 6.8 barrels). (Trade Commissioner George S. Brady, Buenos Aires, March 20.)

Trinidad Oil Development Retarded.

The Governor of Trinidad, in opening the legislative council of the colony on February 16, made the following statement regarding oil in Trinidad:

> I referred in my message of last year to the fact that the oil industry, like all other industries, was feeling severely the effect of the general trade depression throughout the world. The difficulties then confronting the oil companies have, I regret to say, continued throughout the year with the result that some of the largest producing companies have had to curtail their production owing to the difficulty of marketing the oil. The general financial stringency has also affected prospecting work in the proving of new areas.

British Petroleum Company in Argentina Doubles Production.

The annual report of the Compania Ferrocarrilera de Petroleo, a British petroleum company operating in Argentina, for the year ending December 31, 1922, gives the production for the year as 26,567 cubic meters (a cubic meter equals 6.8 barrels) as compared with 12,992 cubic meters during 1921. During the year the company drilled 10 wells on its reservation at Comodoro Rivadavia, and it has 6 more in process of drilling. It also constructed pipe lines for the transporting of petroleum and gas. The Compania Ferrocarrilera de Petroleo is a combination of the three British-owned railways, Sud, Oeste, and Pacifico. (Trade Commissioner George S. Brady, Buenos Aires, March 20.)

Proposed Petroleum Port at Talmont (Gironde), France.

Action is again being taken toward the construction of a petroleum port at Talmont (Gironde). The authorization for the construction of wharves as well as tanks for petroleum products was given by the French Government to the Société Francaise d'Action Economique, and the Ste. Civile des Entrepôts Mèritimes de Talmont-sur-Gironde is now engaged in carrying out the work, which it is expected will be of considerable importance to the French petroleum trade. Near Talmont there is a large plain said to be suitable for the construction of oil tanks. This plain is connected by rail with the central part of France, and communication with the southwest is said to be easy and economical by the Gironde, the Garonne, the Dordogne and the Canal du Midi. (Vice Consul John F. Feeney, Paris, March 29.)

Increasing Interest in Chilean Explorations.

The search for oil in Chile has been considerably stimulated by petroleum developments in the neighboring countries of Peru, Argentina, and Bolivia. Several native companies have been organized for the exploiting of possible petroleum lands situated in the Andean foothills near Lonquimay, Los Angeles, Laja, and other points at which surface indications of oil are found. In the northern Provinces of Tacna, Tarapaca, and Antofogasta considerable activity is reported on the part of small companies, and two larger companies, the Cia Petrolifera Rafaelitas and the Cia Petrolifera Cachenta, are understood to be engaged in active drilling along the Chilean-Argentine frontier between 37° and 40° south latitude. Several Santiago companies also own or control extensive tracts of possible oil lands in Bolivia, and the latest Chilean entrant into this field is the Anglo-Bolivian Oil Co. (Ltd.), incorporated in Chile February 16. It is said that this company will acquire a concession covering 85,000 hectares in the Department of Cochabamba, Bolivia. (Consul George A. Makinson, Valparaiso, March 1.)

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

GERMAN "COMMODITY" BOND ISSUES.

Consul Orsen N. Nielsen, Berlin.

In an effort to find a relatively stable basis for investment, a number of public and private German institutions have experimentally floated issues based upon some primary commodity rather than on the paper mark. Rye, wheat, coal, and coke have thus been used.

Although investment in a bond based upon a commodity is not absolute protection for the investor, nevertheless the purchase of such bonds is a guaranty that the depreciation of the sum invested will be limited by the fluctuations in the price of the specific commodities invested in. Further, a relative rise in the price of the commodity between the time of investment and the date of the maturity of the bond gives to the investor an opportunity to make a clear profit above whatever interest may accrue on his investment.

Pioneer Work of State of Oldenburg.

The pioneer work in issues based on commodities was done by the Staatliche Kreditanstalt Oldenburg (State Credit Office of Oldenburg), which put on the market the Oldenburgische roggenanweisungen in a total amount of 6,000,000 kilos of rye in blocks of 125 kilos each, for which nontransferable certificates of ownership were issued. Each certificate is to be redeemed by a sum equivalent to the price of 150 kilos of rye, and in arriving at this price the average price of rye upon the Berlin Produce Exchange during the three months immediately preceding the date of redemption will be taken.

While the certificates of ownership bear no interest, in the ordinary sense of the word, the gain to the purchaser arises from the fact that he receives for his investment a premium of 25 kilos of rye. The assets of the Oldenburg credit office have been placed as security for the issue, and the certificates are sold on the Bremen and Berlin Stock Exchanges. On the Berlin Stock Exchange they sell for about the current price of 125 kilos of rye plus freight from Berlin to Oldenburg.

Other Public and Private Bonds.

The example of the State of Oldenburg has been followed by the Hanoveranian State Credit Institute, by the Free State of Mecklenburg-Schwerin, by the Free State of Saxony, and by a number of private enterprises, among which are the Roggenrentenbank A. G. of Berlin, the Deutsche Aktiengesellschaft für Landeskultur of Berlin, the Badische Landes-Elektrizitätsversorgungs A. G. of Baden, the Ferngaswerk Franken-Thüringen G. m. b. H. of Neustadt-Coburg, and the Badische Landwirtschaftsbank G. m. b. H. of Karlsruhe.

Under German law these issues are suitable for the investment of trust funds, and fundamentally all resemble the one above described, though there are slight variations in some cases.

Special Gold-Conversion Issue.

The issue of the Deutsche Aktiengesellschaft für Landeskultur has the advantage of being convertible to a gold basis under certain conditions. Its bond issue is for both rye and coal, and certificates of ownership of various amounts of both commodities, ordinarily redeemable as above outlined, have been issued. However, should the value of 100 kilos of rye, according to the average daily quotation on the Berlin exchange for rye from the Mark of Brandenburg, be for the three months preceding the date of redemption below the value of 4.68 grams of fine gold as a commodity, the owner of a bond based upon rye may claim payment on a gold basis. The value of fine gold as a commodity will be calculated on the basis of the London quotation for gold converted into German currency at the official bid quotation on the Berlin market for London exchange.

Chinese Branch Bank for Habana.

Assistant Trade Commissioner C. A. Livengood, Habana, Cuba, March 8.

Within a period of a few months, representatives of two separate Chinese banking institutions have visited Habana to determine the needs for a local branch catering to Chinese interests. These banking institutions are the Industrial and Commercial Bank (Ltd.), of Hongkong, and the Chinese Merchants' Bank of the same city.

The representative of the latter bank reports that a branch of the Chinese Merchants' Bank will be established in Habana within two or three months. Plans are under way for the carrying out of the necessary legal formalities. This bank, whose capital is stated to be $5,000,000 in currency and $2,500,000 in gold, has an agency in New York. The owners of the bank are reported to be heavily interested in rice, and it is expected that the Habana branch will devote itself to financing shipments to Cuba of Chinese rice, silks, embroidery, chinaware, and other oriental products.

At the present time the financing of importation of Chinese goods to Cuba is carried on through the leading Habana banks, none of which is Chinese. A few local Chinese merchants receive money deposits from the members of the Chinese colony, but no institution carrying on a general banking business caters to this trade.

British Investment Trusts.

A Trade Information Bulletin on British investment trusts, prepared by Leland Rex Robinson, United States financial trade commissioner to London, has just been published by the Finance and Investment Division of the Bureau of Foreign and Domestic Commerce. This bulletin is a comprehensive study of the purposes, form of organization, methods of operation, etc., of British investment trusts. Mr. Robinson in-

dicates the way in which the investment trust is a factor in the stabilization of the British bond market and also draws certain conclusions as to the practicability of organizing investment trusts in the United States. The Finance and Investment Division will send free of charge copies of this Trade Information Bulletin to anyone interested.

Swedish Bond Market.

Assistant Trade Commissioner H. Sorensen, Copenhagen, Denmark, March 8.

It is thought most unlikely that Sweden will go to the United States for any capital in the near future, since the Swedish bond market was able during 1922 to absorb not only the fairly large domestic bond issues but also considerable quantities of Swedish bonds held abroad. The Goteborg Bank states that the value of foreign-held Swedish bonds repurchased from 1914 to the close of the last year amounted to not less than 641,000,000 crowns. Of this total, bonds of the value of 48,500,000 crowns were repurchased in 1922.

CREDIT AND COLLECTION FACTORS IN THE NETHERLANDS.

Consul General George E. Anderson, Rotterdam.

[NOTE.—This report of Mr. Anderson on credit and collection factors in the Netherlands is based on an investigation into the rôle played by certain factors determining the need of credit and the extent of credit accommodations.]

It is not possible to state accurately what percentage freights, duties, and handling charges add, on the average, to the cost of goods before a dealer is in receipt thereof, since freight and handling charges vary so considerably and depend so much upon the description and bulk of the goods and, in the case of freight rates, upon the origin of the goods and the distance they have to be shipped. Most imports into Holland are subject to an ad valorem duty of 5 per cent. However, there are certain kinds of merchandise, especially machinery and tools, which for special purposes are exempt from import duties. On the whole, imports into Holland are subject to comparatively small charges, except for actual handling in the ports of the country.

When importing piece goods, foodstuffs, hardware, tools, etc., in shipments, say, of $5,000, a merchant must lay out probably 10 per cent, or $500, before the merchandise comes into his possession, but this depends in a large measure upon the credit standing of the consignee and the condition of the exchange market. Merchandise shipped from the United States usually reaches Holland in about two months. There are no particular delays or difficulties in clearing goods through the customhouses, and in fact merchandise is generally delivered to consignees within one week after the arrival of the vessel in port. Storage charges made by the Government in appointed warehouses are fair.

Ratio of Stock to Capital—Turnover and Profits.

Accurate information with regard to the usual ratio of stock carried to the actual cash capital invested by merchants (retail and wholesale) in piece goods, foodstuffs, hardware, tools, etc., is exceedingly difficult to obtain. Undoubtedly each merchant carries a different ratio of stock, and the foresight displayed in the nature and size of his stock with respect to the trend of prices and market conditions is the chief factor in his profits for the year.

The average ratio of capital to annual turnover or sales of a firm with a cash capital of, say, $50,000 engaged in the textile business is four or possibly five times the amount of the capital; of a firm engaged in selling foodstuffs, probably four times; and in hardware, three to four times the capital. In most lines an annual turnover of four times is expected and considered good business.

Profits vary according to the volume of business transacted and conditions affecting the trade. In general, however, from 10 to 15 per cent, averaging perhaps between 13 and 14 per cent, is the usual net profit expected in a retail business, with 5 to 10 per cent, perhaps 8 per cent on an average, as a fair return on a wholesale business.

The Money Market—Bank Charges.

Money is, as a rule, more plentiful in Holland during the summer months, the market commencing to tighten in September. It is tightest in November and along into the early spring months when the farmers usually have most of their obligations to meet. In Holland there are probably no special methods of financing crops as understood in the United States, because conditions are very different. The Dutch farmer usually receives payment for his crops from the delivery of his produce, a large part of which is of a perishable nature, particularly in the line of fruits and vegetables. These are usually sold through cooperating societies, which divide the proceeds of the total sales pro rata among the members. Another important crop is the sugar-beet crop, which is paid for by the sugar mills on delivery of the beets in the fall and early winter. The grain

crops in Holland are comparatively limited, but in any such crops there is no delay in marketing.

Banks in Holland usually charge one-half of 1 per cent for opening letters of credit. One per cent is usually charged for collecting drafts. For protest in the case of nonpayment the usual charge of notaries is made. Stamps depend upon the amount involved and vary according to the published schedule.

Arbitration Facilities—Registration of Firms.

All firms doing business in Holland must be registered with their local chamber of commerce, which is established by law for the purpose, the entire country being divided into 32 districts, in each of which is a chamber of commerce thus officially established. These chambers of commerce have various functions, including machinery for the arbitration of claims and disputes, all of which are regulated by established and published rules. There are also associations of dealers in nearly all lines of trade with their own machinery for the arbitration of disputes. There are also various agencies for making surveys for claims of damage or other purposes. Each association or chamber of commerce has its particular rules governing competency of surveyors, and generally they are men recognized in the trade and in some cases recognized as specialists in their respective lines.

All firms must be registered with the district registration bureau. There seems to be no reason why a claim against a firm not properly registered should not be valid, but on the other hand a firm not registered would probably have difficulty in commencing suit without completing its registration. The law seems to be that a firm is subject to a fine for not registering, but otherwise maintains its standing.

There is little or no trouble on account of taxes or other governmental action against merchandise. Holland is practically a free-trade country. The nation's prosperity depends almost entirely on free international commerce, and, in general, the terms under which foreigners can do business in this country are very fair and satisfactory.

Protest of Drafts—Collection Charges.

Ordinary claims involving merchandise are valid for 30 years and ordinary claims involving interest are valid for 5 years. It is advisable to protest drafts if not paid, as it is possible to take legal steps more quickly if the draft has been protested.

In the collection of accounts lawyers charge 10 per cent for amounts up to 200 florins; 5 per cent for amounts from 200 to 1,000 florins, minimum 20 florins; 3 per cent for amounts from 1,000 florins upward, minimum 50 florins, special cases excepted. Legal action should be avoided if possible, as proceedings in the courts of the Netherlands are usually very slow, sometimes extending over more than a year.

Credit Terms—Goods on Consignment.

The terms or time which importers or jobbers grant to their customers here vary from cash in hand to three months' credit. General terms are 30 days. The terms offered by firms in England, France, Germany, Italy, and Spain, on different kinds of merchandise, such as textiles, hardware, etc., are practically all alike. British firms are granting 30 days from date of invoice for textiles, to the end of the month following delivery in the case of hardware, and cash against documents in the case of foodstuffs. In general these terms apply to all countries.

Regarding the practice of shipping goods on consignment, in general goods shipped on consignment to firms of recognized standing and established honesty in Holland are safe. There are a considerable number of new firms in the country which at times may have been guilty of rather sharp practice, but the older established firms are particularly careful to protect the consignor's interests.

Acquisition of Real Estate in Poland by Foreigners.

Consul General L. J. Keena, Warsaw, March 13.

A law placing limitations on the right of foreigners to acquire real estate in Poland was enacted by the Polish Government on March 24, 1920. At that time it was not of particular interest to American interests, as the war with the Bolsheviks served to discourage investments in real estate for some time. Now, however, Americans and American interests are showing more favorable inclination to make investments in this country and the law has therefore assumed greater importance to these interests.

The law provides that real estate may be purchased by foreigners, either corporations or individuals, only after a permit has been obtained from the council of ministers on the recommendation of the minister of finance. As regards real estate of special kinds—i. e. commercial, industrial, agricultural, and the like—the decision of the council of ministers is made in conjunction with the minister who deals with matters of that special nature.

The permit is valid for four months and nonrenewable if the purchase has not been completed within this period. It must contain the name of the purchaser, the purpose of the sale, the minimum selling price, the conditions of the transaction, and special conditions fixed on the basis of article 2 of this law. Article 2 grants to the council of ministers the right in individual cases to fix special conditions for both parties to the transaction on the recommendation of the minister of finance.

The law empowers the council of ministers to use its discretion as to whether or not a permit shall be issued. No reason need be given for a decision, nor will appeals from decisions be allowed. Specific exemption from these provisions is granted to transfers of property rights to heirs.

[The complete text of this law is on file in the Division of Commercial Laws, Bureau of Foreign and Domestic Commerce, Washington, and will be loaned upon request. Refer to file No. 89728.]

Arbitration of Trade Disputes in Aden.

Consul Raymond Davis, Aden, Arabia, March 27.

Indian merchants of Aden, practically all with their head offices in India, follow very attentively all changes in the mercantile organization of their mother country and adopt at once any course of action which their head offices have adopted.

Recently a meeting was held by the Indian merchants of Aden in order to discuss the matter of forming a court of arbitration for trade disputes occurring among themselves. The proposal to form such a court, consisting of eight, was unanimously agreed upon, and the members of the court selected.

Since that time several trade disputes and business misunderstandings have been presented, and the court of arbitration has settled each to the complete satisfaction of all concerned. All the merchants seem to be pleased with the new method; they now have no fees to pay and cases are settled with great expedition, whereas under the previous arrangement a considerable sum of money was necessary to file a case in the courts and a long delay was always experienced before a hearing could be had.

CONSIGNMENT LAWS OF FRANCE.

Consul General A. M. Thackara, Paris.

Consignments of merchandise and legislation incident thereto are dealt with partly by articles 95 and 575 of the French Code of Commerce, but the various functions of the consignee are covered by provisions in the French codes relating to commission contracts, storage of consigned goods, and bankruptcy.

"Consignment of merchandise" as usually interpreted by the French business world is merchandise that has been shipped by a foreign owner to a merchant in France for the storage and ultimate disposition of the goods under instructions from the owner.

Retention of Owner's Title to Goods.

In France a commission merchant receiving consigned goods can be likened to a salaried employee and as such is liable to legal proceedings before tribunals of commerce, but on the other hand the commission merchant acts under his own name and not under that of the owners of the consigned merchandise. Although holding goods in storage for the account of the owner, the commission merchant is nevertheless responsible only for rendering an account of the money received from sales. According to French practice, consignment of goods is not a conditional sale.

An American shipper always retains his title to the consigned merchandise until it is sold, as, under the French law, should the owner's title thereto lapse the consignee's connection as agent of the owner automatically ceases. According to article 1938 of the Civil Code, "the consignee can not demand that the shipper produce proof that he is himself the owner of the goods," which in ordinary language signifies that the consignee is not entitled legally to ascertain who are the actual owners of the merchandise, as the consignee is only responsible to the shippers.

Ownership in Case of Bankruptcy of Consignee.

Article 575 of the Code of Commerce provides that merchandise can be claimed from the estate of a consignee who may become bankrupt if the merchandise still remains in possession of the consignee, and if sold the value thereof can be claimed from the purchaser if the money has not already been paid to the consignee or credited against another account.

In other words, if the merchandise has not been sold, it can be claimed from the bankrupt consignee's estate. If sold but still in the warehouse of the bankrupt consignee, the goods can not be claimed, as the consignee had authority to dispose of the goods, and this authority has transformed the owner's claim against the goods into a claim against the sale price thereof. If the goods have been sold and delivered but not yet paid for by the purchaser, legal action for payment against the purchaser lies with the owner and not with the bankruptcy officials.

However, if the merchandise has been sold, delivered, and paid for, the shipper can only claim against the consignee for settlement of the shipper's account with the consignee, and as no privilege is accorded to this class of claim the value of the merchandise is merged into the consignee's bankrupt estate. The remedy against this danger would be for American firms to take steps to cause all payments for goods on consignment to be made to a bank which should be intrusted with the repayment to the consignee of his expenses and commission.

Exercising a Lien—Undisclosed Principal.

No person holding a claim against the consignee can exercise a lien on the goods held by the consignee for the account of the owner, as it has been clearly laid down that the goods do not belong to the consignee. On the other hand, creditors of the owner can exercise a lien on such goods. The consignee himself, if creditor of the owner, can exercise a lien on goods in his (the consignee's) charge.

The agent of an undisclosed principal acts in his own name and is solely responsible as far as third parties are concerned, unless his acting for such undisclosed principal would cover up a fraud of some nature, in which case the third parties have legal recourse against the undisclosed principal.

Nonremittance of Proceeds by Consignee.

In case of goods shipped on consignment and a portion sold without payment being made therefor by the agent to the owner, French legislation makes the following provisions:

1. If the consignee has been paid for the goods sold and has not transmitted the amount to his principal, the latter can take legal action for settlement of the account based on article 1993 of the Civil Code, which requires representatives to "render a statement of their management and to account to the principal for everything received by them in virtue of the powers conferred upon them" by the agreement between themselves and the shipper.

Unjustified retaining of any part of the sums received for merchandise belonging to the shipper, over and above expenses to which the consignee may have been put, including commission, and of which he must furnish proof, renders the consignee liable to legal action in the penal courts for misappropriation of funds. (Penal Code, art. 408.)

2. If the consignee has not been paid for the merchandise the shipper can take action against the purchasers.

3. Even if the consignee, by special agreement with the shipper, or because of local custom, has accepted responsibility for the solvency of the customers, French legislation does not recognize the consignee as owner, and the claim of the original shipper lies against the third party purchasing the goods.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

RAILWAYS.

SALES INFORMATION ON LATIN AMERICAN RAILWAYS.

The following article is the fifth in a series on individual railways in Latin America. All available printed sources of information have been used, and additional data have been obtained from Special Trade Commissioner P. L. Bell. A handbook containing this information in more detail for all railways in Latin America will be published later.

LA GUAIRA & CARACAS RAILWAY CO. (LTD.).

Charles O. Frey, Transportation Division.

Although it is one of the shortest lines in Venezuela, the La Guaira & Caracas Railroad, in operation since 1883, is considered the most important and best in the Republic. Nearly one-fourth of the freight handled by all the lines of Venezuela is transported over this line. It operates in the Federal District, connecting the capital of the country with the principal seaport, about 2½ hours distant. In crossing the Coast Range to reach Caracas the road climbs from sea level at La Guaira to a pass about 3,000 feet in altitude. Because of its route along the mountainside the line appears dangerous; but it is so well constructed and so closely inspected that accidents are rare, none involving loss of life having occurred in the history of the line.

The La Guaira & Caracas Railway Co. (Ltd.), which was registered February 15, 1882, obtained a concession from the Government of Venezuela to construct a railroad from La Guaira to Caracas. The Government agreed not to grant concessions for additional railroads in that territory for 99 years from the completion of the line in question, thus guaranteeing freedom from competition during that period. The concession does not provide for the purchase of the road by the Government, but on the expiration of the concession ownership will pass from the company to the Government.

There is no guaranty of subvention in the concession, the only financial assistance granted by the Government consisting of freedom from taxation and the admission free of duty of all materials required for the construction of the line.

Length and Gauge of the Railroad.

The railroad operates 36.65 kilometers (22 miles) of track having a gauge of 3 feet. The track of the La Guaira Harbor Association, which connects the La Guaira-Caracas Railroad with ship side, also has a 3-foot gauge; but the Gran Ferrocarril de Venezuela and the Central de Venezuela, which center in Caracas, the southern terminus, have a gauge of 3½ feet.

Grades, Curves, and Altitudes.

The maximum grade of the road is 3¾ per cent, and the minimum radius of curves 43 meters. Halfway up the mountain, at Zig-Zag, there is a switchback to reduce the grade of the way.

The line reaches its greatest altitude at Caracas, which is 3,000 feet above sea level. Altitudes of other points on the line are as follows: Rincon, 4.16 kilometers from La Guaira, 228 feet; Curcuti, 7.06 kilometers from Rincon, 1,072 feet; Zig-Zag, 4.44 kilometers from Curcuti, 1,550 feet; Peña de Mora, 6.6 kilometers from Zig-Zag, 2,311 feet; and Cantinas, 6.3 kilometers from Peña de Mora, 2,905 feet.

Bridges, Tunnels, and Trackage—Rolling Stock.

The line has 15 steel bridges with a combined length of 281.55 meters and 8 tunnels with a total length of 379.5 meters.

The rails used weigh 65 pounds to the yard. The sleepers are native hardwood throughout.

During the latter part of 1922 the following rolling stock was in use on the La Guaira-Caracas Railroad:

	Number.
Locomotives	15
Passenger coaches	28
Flat cars (15-ton capacity)	20
Box cars (15-ton capacity)	63
Cattle cars (12-head capacity)	34
Total	160

Stations, Warehouses, and Shops.

Stations are located at the following points, distant from La Guaira as indicated: Rincon, 4 kilometers; Curcuti, 11 kilometers; Zig-Zag, 16 kilometers; Peña de Mora, 22 kilometers; and Cantinas, 28 kilometers. The company shops are at Caracas, and are equipped with lathes, drills, planers, slotters, shapers, screw-cutting machines, and other equipment adequate for making the necessary repairs of the line and for doing some construction work. The warehousing facilities at Caracas have been augmented recently by the construction of new buildings with modern equipment, which are adequate to handle the freight brought into Caracas for distribution or shipment.

Finances.

The cost of constructing the La Guaira-Caracas Railroad, including stations and equipment, was $95,736 per kilometer, or approximately $154,068 per mile. When the company was registered in 1882 its capital was authorized and issued to the amount of £350,000 in shares of £10 each, 16,000 shares of which was subscribed by the Government and various cities of Venezuela. In 1887, 5 per cent debenture stock in the amount of £370,000 was issued to replace a previous issue of 7 per cent debenture stock. Stock is redeemable at par in 1982 unless the company declares it perpetual prior to January 1, 1926.

The La Guaira-Caracas Railroad is one of the most prosperous in Venezuela. In late years a dividend of 6 per cent has been paid regularly on capital shares. Dividend rates on ordinary shares for 1910 to 1920, inclusive, were 5½, 7, 8, 8, 8, 6, 6, 6, 6, 7, and 8 per cent, including a bonus of 1 per cent.

Traffic Statistics.

Notwithstanding the competition offered by the Caracas-La Guaira highway with its mule carts, pack animals, and automobiles, the La Guaira-Caracas Railroad carries approximately one-fourth of the railroad freight of the country. The freight consists principally of imports received at the port of La Guaira and of agricultural and manufactured products from the Caracas commercial district.

Traffic statistics for the year ended December 31, 1920, are as follows:

Freight carried	metric tons	91,971
Passengers carried	number	92,401
Gross revenue	bolivars	3,549,058
Freight revenue	do	2,860,100
Passenger revenue	do	688,958
Operating expenses	do	1,895,386
Net gain	do	1,653,672

Operating Staff and Officials.

The names of members of the operating staff and of officials of the La Guaira-Caracas Railway Co. may be obtained from the Transportation Division on request.

Austrian Locomotive Industry Thrives.

Consul Robert W. Heingartner, Vienna, March 26.

Recent orders for locomotives from Yugoslavia, Rumania, and Hungary, in addition to those of the Austrian State Railways, are sufficient to keep the Austrian locomotive factories busy for some time, according to the Neues Wiener Journal.

The Austrian Government has ordered 17 electric locomotives for the Arlberg and Salzkammergut Railways. The Italian State Railways have placed an order in Austria for 200 locomotives to be delivered within 3 years. The Neue Freie Presse reports this to be the first order of Italian State Railways placed outside of Italy.

Heavy Cars for German Railways.

Consul E. Verne Richardson, Berlin, February 28.

Fifty-ton cars are being considered for use, where possible, on the German State Railways. These cars, if adopted, are expected to increase efficiency and decrease costs of operation. Experiments are being made with coupling devices and bearings. The screw couplers now in use on the 10–15 ton cars are said to be unsatisfactory.

Additional information regarding railways appears in this issue under the following sections:

Cable review, Far East:
Increased shipping in Indo-China.
Shipping activities in the Philippines.
Freight and shipping rates from Chile.
Indo-China railway receipts.

SHIPPING.

GREEK MERCHANT SHIPPING.

Manuel Cambouri, Commercial Intelligence Division.

The restoration of the merchant fleet of Greece almost to its pre-war proportions by the unaided efforts of Greek subjects is an illustration of the fact that national aptitudes which result from geographical conditions are likely to succeed, even in the face of a continued ring of adverse political circumstances.

The Greeks are the oldest maritime race of Europe. The physical configuration of the country, composed of peninsulas, islands, and a mainland indented by the sea, requires domestic communication by water; and an interior traversed by mountain ranges compels a considerable part of the prolific race to seek a livelihood on the sea or by migration across the sea. The Greek immigration to the United States is the expression of a racial impulse which began with the settlement of Greek colonies along the shores and islands of the Mediterranean before the Christian era. Greek sailors and Greek merchants, even during four centuries of Turkish domination, had a large share in the navigation and trade of the Mediterranean, Black, Aegean, and Adriatic Seas. But the decline of their political liberties stunted maritime growth, and when Greece again became independent in the nineteenth century steamers were beginning to supersede sailing vessels, of which the Greek merchant fleet was then composed.

Remarkable Pre-War Growth of Merchant Fleet.

The shipowners' attempt to adjust their shipping to these new conditions were largely unsuccessful, owing to lack of capital, until the Boer War; then the demand for cargo space forced up freight rates and led to considerable Greek shipping purchases. The real stimulus, however, was given in 1910 through the passage by the Boulé of a mortgage law which greatly enhanced the credit of the shipowners and enabled them to borrow capital on favorable terms. Shortly afterwards a Greek passenger line to New York was established, mainly to accommodate the large Greek emigration movement. In the four years following the passage of this law—that is, by July, 1914—Greece had added 500,000 gross tons to its steam fleet, which then numbered 401 vessels of 820,000 gross tons, according to Lloyds returns in 1914. Thus, in the eight years preceding, the Greek merchant fleet had doubled its tonnage, a result surpassed only by the growth of Netherlands shipping.

War Losses and Subsequent Recovery.

During the past 10 years Greece has been in a disturbed condition due to war and other causes. In the World War 48 per cent (388,000 gross tons) of the Greek merchant shipping was destroyed—a larger percentage of loss than was suffered by any other nation. In addition, 114 steamers, aggregating 260,000 gross tons, were sold to foreigners. Since the armistice Greece has twice radically changed its government and has undergone a great military and political disaster. Yet by January, 1922, official returns show the Greek merchant shipping possessing 440 steamers of 685,000 gross tons, and by January, 1923, 419 steamers of 736,700 gross tons.

This steamer fleet is made up of foreign-built ships, some of them constructed to Greek order at British yards, but the greater number of them bought from foreign owners and having already seen service.

The amount expended in purchasing the 550,000 gross tonnage added to the Greek fleet during the war and up to the end of 1921 was about $48,000,000, according to R. O. Hall, commercial attaché at Athens. But this represents only a small portion of the $200,000,000 collected by shipowners during the same period from insurance on lost ships, war prices for ships sold to foreigners, and high freight receipts.

Coastwise Trade Reserved to Greek Vessels.

The greater part of the Greek fleet has always been engaged in the Mediterranean trade, chiefly between Greece and ports of the Mediterranean, Aegean, and Black Seas where Greek merchants and Greek subjects have long been settled. During the war, however, the shipping was chartered to carry coal from England to the Mediterranean; also, during the post-war coal strikes Greek ships carried coal from the United States. But a large part of the fleet is also active in the many forms of coasting trade of Greece.

The coasting trade is reserved to Greek ships and to ships of nations that admit Greek ships to their coasting trade; but during the war the rule was suspended, as it was again in the autumn of 1922, when virtually all Greek ships were employed in the transport of the Army and the refugees from Asia Minor. Austrian

ships before the war were admitted reciprocally to the Greek coasting trade, and the continuation of the privilege has been granted to these ships now under the Italian flag. The fisheries afford employment for many Greeks; and by a reciprocity treaty with Italy both Greeks and Italians enjoy the privilege of the sponge fisheries in the territorial waters under the jurisdiction of each country and its colonies.

Mail Subsidies.

The Greek foreign mails are carried almost wholly by foreign ships at International Postal Union rates, but a few small subsidies aggregating about $50,000 annually are paid.

SUEZ CANAL TRAFFIC, 1922.

Consul Coert du Bois, Port Said, February 20.

Suez Canal traffic in 1922 surpassed the record of 1912, the highest previous year, by 468,000 net tons, and reached a total of 20,743,000 net tons. This total tonnage was reached with a passage of 1,028 less ships than in 1912, the average net tonnage per vessel rising from 3,773 in 1912 to 4,774 in 1922.

Nationality of Vessels Engaged in Traffic.

The 4,345 vessels which passed through the Suez Canal in 1922 were divided among the maritime nations as follows:

Net tonnage passing through the Suez Canal, 1922; by nationality of vessel.

[In thousands of tons.]

Nationality.	1913	1919	1920	1921	1922
British	10,052	11,355	10,839	11,397	13,383
Dutch	1,287	755	1,426	2,032	2,161
Franch	928	475	775	968	997
Japanese	344	1,450	1,601	1,042	928
Italian	291	317	606	934	858
German	3,352	.....	15	171	735
American	7	168	724	672	668
Norwegian	93	257	172	259	309
Danish	172	315	230	232	280
Swedish	123	156	230	206	242

With the year 1913 representing a pre-war normal, British shipping has increased 11 per cent, Japanese 170 per cent, Italian 195 per cent, Dutch 68 per cent, Norwegian 232 per cent, and French 7 per cent. The table also illustrates the recrudescence of German shipping. It will be noted that American shipping reached a peak in 1920, and since then has declined steadily. Suez Canal traffic, however, does not include so large a proportion of the total shipping of the United States as it does of certain other countries. Dutch Suez shipping, for example, which has held a high place during the entire post-war period, includes a greater proportion of the total mercantile marine of the Netherlands, as the transit of the Suez Canal is made twice by every ship voyaging between the Netherlands and Dutch East Indies ports.

Character of Traffic.

An increase is shown in the tonnage of loaded cargo vessels, as compared with mail and passenger vessels, naval vessels, and ships in ballast.

Character of tonnage passing through the Suez Canal, 1922.

[In thousands of tons.]

Character of vessel.	1913	1921	1922
Loaded cargo vessels	13,985	12,910	15,095
Mail and passenger vessels	4,879	3,198	3,858
Naval vessels	301	486	447
Vessels in ballast	868	1,525	1,343
Total	20,033	18,119	20,743

Cargo Movement Through the Canal.

The total cargo movement through the Suez Canal in 1922 exceeds that of 1921 by 18 per cent, although it is considerably below that of 1913. The following table shows the movement in both directions and the total:

Dead-weight tonnage of cargoes passing through the Suez Canal, 1922.

[In thousands of tons.]

Year.	Eastbound.	Westbound.	Total.
1913	11,320	14,456	25,776
1920	6,318	10,729	17,047
1921	6,576	10,933	17,509
1922	8,192	13,168	21,360

American Shipowners Improve Loading and Discharging Methods.

J. F. Keeley, Transportation Division.

American shipowners are using every effort to handle our exports carefully and efficiently, and many of the American flag lines have recently made considerable progress in the matter of loading and discharging cargo by the adoption of a platform sling.

The sling consists of a square platform, strapped underneath on either side with two steel straps in which there is an eye for the insertion of the hook in the lifting line. The principal feature of the sling is the covering top, which is a square frame the same size as the platform itself, but of considerably lighter construction. As a result of the upward strain of the four ropes attached to the sling and leading to the line from the winch, the top is securely clamped over the cargo in the sling, thereby preventing the goods from shifting or falling out, except in very rare instances, regardless of the angle at which the sling might be canted in coming out of the hold of the ship and being landed on the wharf.

This type of sling is used extensively for discharging and loading case goods, boxed shooks, barrel staves, and other small package freight which requires particular care in handling. The sling is usually loaded with 50 to 60 cases of goods of an average size, although it has been used to good effect in some instances with a load considerably larger.

It is hoped that the use of this type of sling will be generally adopted, as it will result in a marked lessening of the damage done to packages at the time of loading and discharging, and will be helpful in delivering American exports abroad in first-class condition.

Publication of Revised Light Lists.

The Bureau of Lighthouses announces the publication of the following light lists:

For the Great Lakes, United States, and Canada, corrected to March 15, 1923. This list includes all aids to navigation maintained by or under the authority of the United States Lighthouse Service and all lighted aids maintained by the Dominion of Canada, on the Great Lakes and on the St. Lawrence River above the St. Regis River. The list includes lighthouses, lighted beacons, light vessels, lighted buoys, and fog signals, and unlighted beacons or buoys, except those in Canadian waters.

For the sixth lighthouse district, embracing the waters from Cape Lookout to Hillsboro Inlet, corrected to March 10, 1923. This list includes all aids to navigation maintained by or under the authority of the United States Lighthouse Service in the waters of North Carolina, South Carolina, Georgia, and Florida, from New River Inlet to Hillsboro Inlet Light Station, and includes lighthouses, lighted beacons, light vessels, lighted buoys, fog signals, and unlighted beacons and buoys of all descriptions.

Copies of these lists may be obtained for 30 cents each from the Superintendent of Documents, Washington, D. C., and from various sales agents at principal ports, including collectors of customs, lighthouse district superintendents, district offices of the Bureau of Foreign and Domestic Commerce, United States shipping commissioners and radio inspectors of the Bureau of Navigation, and field stations of the Coast and Geodetic Survey.

Additional information regarding shipping appears in this issue under the following section:

Cable review, Latin America: Construction continues on Peruvian railroads.

COMMUNICATIONS.

POSTAL NEWS OF COMMERCIAL INTEREST.

(Postal Bulletin.)

Letters for Anatolia.

All communications for Anatolia (Asia Minor) must be written in either Turkish, French, Italian, English, Arabic, Greek, or Armenian, and are subject to examination by the Turkish censorship. Communications should be as short as possible. There is no responsibility for articles seized by censor. (P. B., April 12.)

Special Delivery Mail for Canada.

The charge on special delivery mail for Canada is 20 cents, in addition to the regular postage. When the sender puts only 10 cents additional postage on a letter, the postal service of Canada makes an additional charge of 20 cents on delivery, for short-paid postage. (P. B., March 26.)

Dyes in the Mails to British India.

Effective at once, samples of dyes and coloring matter will be accepted in the regular mails to British India. (P. B., April 24.)

Bees to Canada.

Bees acceptable for transmission in the domestic mails will be dispatched to Canada in single packages that do not exceed 11 pounds in weight. On receipt at the border exchange post office, these will be transferred into Canada outside of the mail sacks.

Parcel-Post Service to Russia.

The postal administration of Great Britain, which acts as intermediary for parcels post mailed in the United States for delivery in Russia, announces that such packages will now be accepted for all places in Russia in Europe and Russia in Asia, including Turkestan. (P. B., April 7.)

Parcel Post to Caroline, Marian, and Marshall Islands.

Effective at once, unregistered parcel-post packages addressed for delivery in the Caroline Islands, Marian Islands (except Guam) and Marshall Islands (except Nauru Island), will be accepted up to a weight limit of 11 pounds under the same conditions as parcels addressed to Japan, except that such parcels can not be registered. (P. B., March 31.)

GERMAN AIR-TRAVEL VERSUS RAILWAY-TRAVEL TIME.

Consul E. Verne Richardson, Berlin, March 8.

A Berlin newspaper has published the following table showing the time required for a journey by rail and by air from Berlin to certain of the principal cities of Europe, with the time saved by the latter:

To—	By railway express.	By aircraft.	Time saved.
	Hours.	*Hours.*	*Hours.*
Augsburg	12	6¾	5¼
Bremen	8	3	5
Constance	16	6	10
Copenhagen	11	6	5
Danzig	11	5	6
Dresden	3	1½	1½
Geneva	27	9	18
Hamburg	5	2	3
Koenigsberg	12	7	5
Kovno	24	8	16
Leipzig	3½	1½	2
Memel	20	[1] 15	5
Moscow	125	[1] 23	102
Munich	13	6	7
Norderney	11	4½	6½
Nuremberg	10	4	6
Prague	8	3	5
Riga	30	[1] 17	13
Stettin	3	1½	1½
Stuttgart	15	6	9
Wangeroog	11	4½	6½
Westerland	12	4	8
Zurich	21	7	14

[1] Including train Berlin-Danzig.

Air Traffic News.

Copenhagen-Hamburg Service Proposed.

A Government subsidy, not to exceed 110,000 crowns, for aiding the establishment of an air mail route between Copenhagen and Hamburg, has been proposed by Denmark's Minister of Traffic and indorsed by the finance committee of the Folkething. The Government is to receive all income derived from the carrying of mails. (Assistant Trade Commissioner H. Sorensen, Copenhagen, February 16.)

Commercial Airplane Traffic for Saxony.

The Saxon Government will appropriate this year 10,000,000 marks for the promotion of a commercial air service throughout Saxony. The principal cities and towns are making arrangements for landing places. In Leipzig, 6,000,000 marks have been raised to reconstruct and enlarge the old airport at Leipzig-Mockau for international traffic. At Dresden, the necessary

ground has been secured, and a new port will be constructed on the Heller, instead of Kaditz, the old landing place of Kaditz not being favorably situated. Other airports are contemplated at Chemnitz, Plauen, and Zittau. (Consul Louis G. Dreyfus, jr., Dresden, March 14.)

Aerial Route Malmo-Hamburg to Open in April.

The aerial postal route between Malmo and Hamburg was scheduled to open in April. Another company has been formed under the name "Aero Lloyd," which planned to inaugurate an aerial route on April 1 between Hamburg and London. This will be in close connection with the Swedish line, so that mail arriving from Sweden, Norway, and Finland at Malmo at 8 a. m. will be delivered the same day in London at 2 p. m.

In the route Malmo-Hamburg, three hydroplanes will be used, one at each station and one in flight. Each machine will be able to carry 650 kilos of freight. The postage will be 20 øre extra for letters to Germany, 40 øre to Holland and France, and 60 øre extra to England. (Assistant Trade Commissioner H. Sorensen, Copenhagen, Denmark, March 17.)

Additional information regarding communications appears in this issue under the following sections:

Electrical equipment:
Australian telephone improvements urgently needed.
Automatic telephones proposed for Riga.
Proposed broadcasting company in India.
Tariff and trade regulations: Mexican surtax for lack of viséed parcel-post commercial invoice.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS.

GERMANY—GREECE.

C. E. Dickerson, jr., clerk to trade commissioner, Athens, March 31.

Proposed Commercial Treaty.

The conclusion of a commercial treaty between Germany and Greece is under consideration, according to the Economist, of Athens, for March 10, 1923. Greece will request that, in exchange for the facilities which Greece will grant Germany, the importation of Greek tobacco and dried fruits into Germany be given preference.

ITALY—POLAND.

Consul General L. J. Keena, Warsaw, March 27.

Ratification of Commercial Convention.

The commercial convention between Italy and Poland granting most-favored-nation treatment, which was signed on May 12, 1922 (see COMMERCE REPORTS for August 14, 1922), was ratified by both Governments on March 19, and became effective April 1, 1923.

IMPORT AND EXPORT RESTRICTIONS.

EGYPT.

Sugar Monopoly to be Abolished.

The Egyptian sugar monopoly will terminate on May 10 and all restrictions on the importation of sugar and substitutes, including glucose, will be removed, according to a cablegram from Consul Lester Maynard at Alexandria, under date of April 24, 1923, received at the Department of Commerce.

FEDERATED MALAY STATES.

Federated Malay States Government Gazette, Kuala Lumpur, February 27.

Import Prohibition on Unhusked Rice.

The importation of "padi" (unhusked rice) into the Federated Malay States has been prohibited, effective March 1, 1923, by an order of the chief secretary to the government.

ITALY.

Gazzetta Ufficiale, Rome, March 27.

Abolition of Match Monopoly.

The Italian match monopoly is to be abolished on June 1, 1923, and a manufacturing tax substituted therefor, according to a royal decree of March 11, 1923.

The decree further provides that a surtax be levied on all quantities of imported matches equal to the manufacturing tax imposed on domestic matches.

POLAND.

L. J. Cochrane, clerk to trade commissioner, Warsaw, March 22.

Modification of Export Restrictions on Eggs.

It is reported that during the remainder of the year 1923 the Polish Government will allow the exportation from Poland of from 1,500 to 2,400 carloads of eggs, each car containing 110 cases. The first allocation of export licenses will take place early in April and will cover from 600 to 650 cars, distributed over a period from April 10 to June 10.

An export tax will be assessed, payable in foreign currency and amounting to 60 per cent of the difference between the price of eggs in the importing country and that in Poland. The foreign currency proceeds of the exportation will be turned over to the Polish State Loan Bank, which will pay the exporter the equivalent in Polish marks.

[See COMMERCE REPORTS for September 25, 1922, for prohibition on exportation of eggs.]

Assistant Trade Commissioner Elbert Baldwin, Warsaw, March 24.

Proposed Restrictions on Exportation of Timber.

Restriction of timber exports to prevent alleged excessive exploitation of forest reserves is being agitated, and legislation will probably be passed in the near future. The economic cabinet commission recommended the following resolutions on March 19, 1923:

1. A charge of 4 per cent for export license for crude lumber.

2. A charge of 40 per cent of gross profit (difference between domestic and export levels) to be levied on exports of softwood. This tax is estimated as equivalent to 1 shilling per cubic meter.

44486°—23——8

3. Foreign currency derived from timber export sales is to be turned over to the Government in exchange for Polish marks at the market rate.

[See COMMERCE REPORTS for April 2, 1923, for suspension of further exports of lumber and timber pending the formulation by the Diet of a new policy of exploitation and export.]

SPAIN.

Consul Keith Merrill, Madrid, March 21.

Exemptions from Export Restrictions on Works of Art.

The requirement established by the royal orders of August 29 and November 8, 1922, that a certificate must be procured from the official appraising commissions for the exportation from Spain of works of art to the effect that the said objects do not belong to the artistic treasures of the country, does not apply to works of living artists and belonging to them or to objects of contemporaneous industrial art, such as chairs, tables, etc. The exportation of the articles mentioned above is subject to no formalities or restrictions.

UNITED KINGDOM.

Consul General J. G. Foster, Ottawa, April 12.

Removal of Restriction on Canadian Store Cattle.

By the Importation of Animals Act (December 15, 1922), the long-standing British prohibition on the importation of Canadian store cattle was removed, effective from April 1, 1923. Canadian store cattle may now be landed in the United Kingdom without being dealt with and slaughtered in accordance with the diseases of animals act, 1894. They may be sent either to farms for further feeding, or direct to slaughter.

GENERAL TARIFF CHANGES.

POLAND.

Consul General L. J. Keena, Warsaw, April 3.

Doubling of General and Luxury Duty Coefficients.

The general duty coefficient has been raised from 2,000 to 4,000, and the luxury duty coefficient has been raised from 3,000 to 6,000, by a joint order of the ministers of finance and commerce, dated March 23, 1923, and published in the Journal of Laws, No. 31, of March 28, 1923.

PORTUGAL.

Diario do Governo, Lisbon, March 27.

New Customs Tariff.

A new Portuguese customs tariff became effective April 20, 1923, according to a decree of March 27. Authorization had been granted by a law of August 25 last to revise the rates of the maximum and minimum tariff which had been in effect since November 24, 1921, and to establish certain regulations for the application of this tariff. Below is a synopsis of the principal features of the new tariff:

(1) The rates of the minimum tariff are to be applied in whole or in part to merchandise from countries entitled by treaty to this preference. The minimum rates may also be applied to goods from countries which accord their minimum rates to Portuguese products.

(2) The origin of the merchandise when directly imported may be established, for customs purposes, by the documents which regularly accompany them. A certificate of origin, however, is necessary for merchandise indirectly imported, except when such merchandise is imported under a direct bill of lading which affords proof of origin.

(3) The Government is authorized to increase duties fivefold on articles from countries which do not concede their minimum tariff to Portugal when such countries impose especially severe duties on Portuguese products or apply certain other measures considered detrimental to Portuguese trade.

(4) The new import duties, except those on tobacco, are payable in gold at the rate of 1 escudo to $1.08. Hitherto duties only on articles regarded as of a luxury class have been paid totally in gold, those on commodities regarded as necessities being paid one-half in gold and one-half in paper.

(5) The import and export surtaxes are abolished, the only surtaxes now assessable being those applied to certain articles listed in 25 tariff items which enjoy the present conventional rates.

(6) The import tariff classification has been changed for a number of articles and the tariff items increased from 592 to 861. The following table gives a comparison of the old and new rates on a number of articles of particular interest to American trade. The duties, both old and new, indicated in the table are in gold, except when otherwise indicated for a certain number of duties previously in effect.

No. in tariff of 1923.		Former.		New.	
		Maximum.	Minimum.	Maximum.	Minimum.
		Per cent ad valorem.	*Per cent ad valorem.*	*Per cent ad valorem.*	*Per cent ad valorem.*

603	Passenger automobiles with bodies, duty on chassis according to weight, increased by 20 per cent.				
	The former classification and duties for complete passenger automobiles were as follows:				
	Up to 18 horsepower (plus a surtax of 500 escudos each)	*Each.* 240.00	*Each.* 120.00	.....	.....
	More than 18 horsepower (plus a surtax of 1,000 escudos each)	240.00	120.00	.....	.....

[1] Duties payable one-half in gold and one-half in paper.

(7) The export tariff classification has also been changed and the tariff items increased from 18 to 87. The ad valorem export duty of 1.5 per cent on goods not specified has been increased to 3 per cent.

It is provided that goods imported under contracts in existence at the date of this decree (March 27) for direct supply to the State or to administrative corporations at prices based on the duties in force when the contracts were signed shall continue to pay the relevant duties and surtaxes until the expiration of the period of the contract.

Of special interest to American exporters is the provision that during the period of six months following the date of the publication of the tariff (March 27) any complaints may be presented to the council of experts for the customs service. After investigating such complaints the council shall report its findings within two months to the Government, which is empowered to make such modifications in the present tariff as are deemed advisable.

[The duties of the minimum column apply to imports from the United States.
Information regarding import and export duties on specific articles will be furnished upon request.]

TARIFF CHANGES IN SPECIFIC ARTICLES.

AUSTRALIA.

Commonwealth Gazette, Melbourne, March 15.

Further Postponement of Deferred Duty on Writing and Typewriting Paper.

The Australian minister for trade and customs has announced that the increased duty on writing and typewriting paper, item 334 (F) (1), which was deferred until July 1, 1923, has been further postponed until January 1, 1924. The present and deferred duties are as follows:

334. (F) Writing and typewriting paper (plain), not including duplicating, (1) in sheets not less than 16 by 13 inches, ad valorem, present, 15 per cent; deferred, 30 per cent.

The above duties are the general rates of duty. The present British preferential rate is 5 per cent and the deferred rate 20 per cent ad valorem.

Commonwealth Gazette, Melbourne, March 15.

Imposition of Dumping Duties on Certain Imported Goods.

The Australian Government has imposed antidumping duties on the following goods:

Under section 2 (dumping exchange duty): Pocketknives wholly of metal, with nickel-plated handles, and glassware (domestic), when originating in or exported from Germany; artificial fruit mounts, when originating in or exported from Czechoslovakia; carbide of calcium, when originating in or exported from Norway.

Under section 9 (dumping preference duty, for protection of United Kingdom industries): Vacuum flasks and gramaphone records, when originating in or exported from Germany.

[The provisions of the antidumping law of Australia were published in COMMERCE REPORTS for November 27, 1922.]

BRITISH INDIA.

Consul J. P. Moffitt, Rangoon, March 7.

Proposed Budget Changes.

The budget statement of the government of India, which was presented in the Indian Legislative Assembly by the finance member on March 1, 1923, contains the following changes in customs duties, effective March 1, 1923:

An increase in the import (and excise) duty on salt from rupees 1-4-0 to rupees 2-8-0 per maund.

A reduction in the export duty on hides and skins from 15 to 5 per cent. (See COMMERCE REPORTS for April 2, 1923.) The system of rebates is being abolished.

A specific import duty of 20 rupees per pound is imposed on saccharine (except in tablets), and a duty of 25 per cent ad valorem or 20 rupees per pound of saccharine contents, whichever is higher, is imposed on saccharine tablets, in place of the former duty of 25 per cent ad valorem on all saccharine products.

The removal of the concessional rate of 2½ per cent ad valorem on tea chests and lead sheets therefor, which will be dutiable at 15 per cent ad valorem, the rate applicable to the materials of which they are composed.

The adoption of a new definition of "Machinery and its component parts" and consequential changes in the entries relating to railway and building materials, ships, etc.

[1 rupee equals 16 annas or $0.3136 (current exchange); 1 maund equals 87⅐ pounds.]

The Gazette of India, Delhi, March 1.

Import Duty Established on Salted Fish.

Salted fish, dry or wet, are dutiable at the rate of 15 annas per maund of 82⅐ pounds avoirdupois, when imported into any customs port from any place beyond the limits of British India, according to a notification issued by the governor general in council, effective March 1, 1923.

FIJI.

Vice Consul Quincy F. Roberts, Apia, Samoa, January 31.

Changes in Import Duties on Films, Tin Plate, Butter, and Empty Barrels.

The following changes in the Fiji import tariff are made by ordinance No. 32 of 1922, passed on December 21, 1922:

Films for cinematographs, kinetoscopes, and bioscopes, will be admitted free of duty until such date as the governor in council shall by proclamation direct and appoint. Under the tariff of 1921 films of foreign origin were dutiable at 12½ per cent ad valorem, and films of British origin were free of duty.

The import duty on tin plate of foreign origin is reduced from 27½ per cent to 12½ per cent ad valorem, and tin plate of British origin, formerly dutiable at 15 per cent ad valorem, is now admitted free of duty.

The import duty on butter of foreign origin is increased from 2d. per pound to 8d. per pound, and on butter of British origin from 1d. per pound to 4d. per pound, effective for six months from the date of the ordinance.

For a period of one year from the date of the ordinance no duty is payable on empty wooden barrels and casks and on fashioned ends, staves, bungs, and hoops for the construction of barrels and casks.

Vice Consul Quincy F. Roberts, Apia, Samoa, March 21.

Further Reduction of Export Tax on Copra.

The tax on copra exported from Fiji, as imposed by the export ordinance of 1920, and amended on June 16, 1922, was reduced for the year 1923 to 5s. per ton or

fraction thereof, by ordinance No. 1 of 1923, effective January 1.

[An ordinance purporting to reduce the export duty on copra from 15s. to 10s. for the current year was announced in COMMERCE REPORTS for April 16, 1923, on page 192; the more recent ordinance mentioned above has effected the further reduction referred to.]

FRANCE.

Journal Officiel, Paris, March 13.

Reduced Duties on Certain Goods of Austrian Origin.

Duties on a number of goods imported into France from Austria are reduced, according to a decree of March 10, 1923. Goods now subject to the minimum tariff are: Sawdust, cellulose paper pulp, and colored billiard chalk. Percentage reductions on the difference between the general and minimum tariffs are granted as follows: Fifty per cent reduction, woods, common; magnesia bricks; incandescent electric lights; knit goods, wool; certain newsprint paper; Morocco leather wares; lamps; certain hat shapes; and hats of hair felt or of mixed wool and hair felt. Seventy-five per cent reduction, leather trunks and valises. Thirty per cent reduction, machine tools weighing over 5,000 kilos. Twenty-five per cent reduction, hats of wool felt.

[These goods were formerly subject to the general rates of the French tariff.]

GREECE.

Acting Commercial Attaché R. O. Hall, Athens, March 16.

Changes in Export Duties on Tobacco.

The following export duties, payable in bank notes at the time of exportation, are assessed on tobacco by a Greek decree issued on March 8, 1923, effective from the date of publication in the Official Gazette.

Origin and quality of tobacco.	Former duty.	New duty.
	Drachmas per kilo.	*Drachmas per kilo.*
A. On tobacco produced in the east of the River Strymon:		
(a) First quality (basmades)	5.00	6.00
(b) Second quality (bassimbaghlia, separastalia)	5.00	3.00
(c) Third quality (tsikintia, kyrintia)	5.00	1.00
B. On that produced between the Rivers Strymon and Aliakmon, and on that of the district of Agrinion:		
(a) First quality (basmades, bassimbaghlia)	3.00	3.00
(b) Second quality (skarta, refouzia, separastalia)	3.00	2.00
(c) Third quality (kyrintia, tsikintia)	3.00	1.00
C. On that produced in the other Greek Provinces:		
(a) First quality (basmades, bassimbaghlia)	1.00	2.00
(b) Second quality (skarta, refouzia) and on every kind of tobacco leaves produced in the Province of Argolis and Corinthia and in the Aegean Islands	1.00	1.00

The method of verifying the quality and origin of the tobacco will be fixed by a legal decree.

Certain Leathers Exempt from Export Duty.

By the same decree the minister of finance is permitted to exempt from the export duty of 5 drachmas per kilo assessed on leather all the lamb leather of any weight, as well as goat leather weighing up to 60 kilos per 100 pieces, which was in the possession of exporting merchants prior to December 31, 1922, and not exported before the end of April, 1923.

Cable from Consul General W. L. Lowrie, Athens, April 26.

Removal of Export Prohibition on Olive oil.

The exportation of 12,600,000 pounds of olive oil has been authorized by the Greek authorities. An export duty of 12 per cent ad valorem has been imposed.

The exportation of all olive oil from Greece was prohibited on December 28, 1922. See COMMERCE REPORTS for March 5 and April 30, 1923.

PERU.

El Peruano, Lima, March 3.

Export Surtax Established on Cotton in the Province of Tacna.

An export surtax of 0.40 sol is established on each quintal (101.4) pounds) of unginned cotton, and 1 sol on each quintal of ginned cotton exported from the Province of Tacna, by Law No. 615, recently approved. This tax is imposed for the purpose of securing funds for building local schools and jails.

[There is a general export tax on cotton in Peru which varies according to the variety of cotton, and, when prices rise above a certain limit, it is computed according to the quotations on the New York market.]

POLAND.

Consul General L. J. Keena, Warsaw, April 6.

Certain Fish, Milk, and Amber Exempt from Import Duty.

The following articles may be imported free of duty, according to a Joint Order of the Polish Ministers of Finance and Commerce, dated March 27, 1923, and published in the "Journal of Laws" No. 35, of April 4, 1923.

(Item 37–1–c) Herring and other sea fish, not otherwise specified, fresh (living or not) and frozen; (item ex39–1) fresh milk; (item 68–1) amber, melted or not, unmanufactured.

[The above articles had previously been exempted from duty, until February 28, 1923, by a Decree effective November 11, 1922. See COMMERCE REPORTS for June 5, 1922, and January 22.]

Consul General L. J. Keena, Warsaw, March 23.

Increased Export Duty on Petroleum.

The export duty on crude mineral oil has been increased from 50 to 150 Polish marks per net kilo, by a Joint Order of the Polish Ministers of Finance and Commerce, dated March 12, 1923, published in the "Journal of Laws" No. 28, of March 20, 1923.

YUGOSLAVIA.

Vice Consul Harry R. Brown, Belgrade, March 30.

Reduction of Export Duty on Wheat.

The export duty on wheat has been reduced from 150 dinars to 60 dinars per 100 kilos, by an order issued on March 23, 1923, by the Economic Financial Committee of Ministers of Yugoslavia, and effective on the same date.

CUSTOMS REGULATIONS.

FRANCE.

Journal Officiel, Paris, March 10.

Preferential Treatment of Tunisian Products Limited to Imports in French Ships.

The decree of October 5, 1922, temporarily permitting Tunisian products to enjoy in France and Algeria the preferential treatment accorded them because of their origin, even when such merchandise was imported in foreign ships, is revoked. Henceforth Tunisian products to enjoy such treatment must be imported in French ships.

MEXICO.

Diario Oficial, Mexico City, April 7.

Surtax for Lack of Viséed Parcel Post Commercial Invoice.

When parcel-post packages are delivered at Mexican post offices and the proper viséed commercial invoice covering the shipment is not presented by the consignee the visé fee is calculated according to the regulations previously established (as published in COMMERCE REPORTS for April 2, 1923, p. 70), and a surtax is imposed in addition as follows:

When the commercial value of the merchandise is over $5 but less than $50—25 centavos (12½ cents); when valued at $50 or more 50 centavos (25 cents).

This surtax for failure to present the proper viséed copy of the commercial invoice is effective from April 22, 1923.

UNION OF SOUTH AFRICA.

Consul Charles J. Pisar, Cape Town, March 5.

Proposed Export Bounties on Cattle and Beef.

A bill has been introduced in the Parliament of the Union of South Africa providing for the payment of bounties on the export of slaughter cattle or beef for the year ending March 31, 1924, and for any subsequent year in respect of which the necessary appropriation is voted.

Bounties are to be at the rate of a farthing (one-half cent) per pound in the case of slaughter cattle, and a halfpenny (1 cent) in the case of beef, upon compliance with the regulations imposed by the Department of Agriculture, provided claim is made within three months after shipment.

EASTERN EUROPE AND LEVANT

E. Dana Durand, Chief, Eastern European and Levantine Division

URBAN CENSUS OF SOVIET REPUBLICS.

Abstracted from Economic Life (Moscow) of April 6 and 7, 1923.

On March 15, 1923, a nation-wide census was carried out, covering the population of all cities, towns, and factory settlements of urban type (the entire nonagricultural population) of Soviet Russia and the Ukraine. The census for Turkestan, Transcaucasian Republics, and Daghestan was scheduled to commence April 15, and for the Russian Far East, May 1. The census of March 15 embraced 2,123 urban centers, whose population was 21,158,518, according to the census of August 28, 1920. The returns were not complete on April 6, especially for the remote regions of Siberia and the Urals, but the chief of the demographic section of the Central Statistical Bureau estimated that the total present population, inclusive of military garrisons, amounts to 24,000,000.

Results for Moscow and Petrograd—Housing Shortage.

The results for Moscow and Petrograd have been fully tabulated and show that Moscow has a total population of 1,542,874, and Petrograd 1,067,328. This represents an increase of 56.5 per cent for Moscow and 44.5 per cent for Petrograd, for the two and one-half years elapsed since the previous census. As compared with prerevolutionary times, the present population of Moscow approximates that of 1910. In 1916 the population of Moscow was 2,030,000. The proportion of the male population of the capital increased substantially as compared with 1920, when the ratio of female population to the male was 1.235; at present it is 1.006. Thus, the male population has been mounting half as fast again as the female population.

A great increase—almost sixfold—was also registered in the number of private employers of labor, namely, 4,644 as against 673 in 1920; this is a result of restoring private initiative, chiefly in trading. Establishments employing only members of the proprietor's family, cooperative shops, and one-man shops numbered 45,520, against 29,100 in 1920. However, employees of private trading establishments numbered as yet only 3,190, or about 32.1 per cent of the total number registered, the remaining 67.9 per cent being employed in the Soviet trading institutions.

In connection with the increase in population, there is recorded great congestion and a growing scarcity of dwellings. While the population increased by 56.5 per cent, the number of dwellings available rose only by 2.7 per cent.

Changes in Provincial Urban Centers.

The population of 58 provincial capitals increased from 4,515,479 in 1920 to 4,589,042 (exclusive of military)—an average increase of but 1.6 per cent. At the same time, the movement up or down of the population of cities showed great disparity. Thus, the population of Kiev, capital of the Ukraine, rose from 366,396 to 403,730 (10.2 per cent), while the population of Odessa fell from 427,831 to 315,600 (26.2 per cent); Kiev thus took third place in the census, with Odessa fourth, reversing their order in the census of 1920. Similar decreases of population affected all of the southern ports: Nikolaiev, by 27 per cent; Taganrog, by 14 per cent; Novorossiisk, by 3 per cent. To some extent, the decline in population of the ports may be accounted for by the fact that the census of 1920 was carried out in midsummer, while the one of 1923 was taken prior to the opening of navigation.

The capitals of Provinces affected by the famine of 1921 showed a very considerable decline. The population of Samara fell from 175,606 to 150,132 (14.5 per cent); Penza, from 91,812 to 79,540 (13.4 per cent); Simbirsk, from 77,248 to 68,290 (11.6 per cent); Ufa, from 93,056 to 84,096 (9.6 per cent); Stavropol, 15.7 per cent; Simferopol, Crimea, 10.4 per cent.

Consuming Provinces Increase Faster Than Agricultural.

In general, the consuming (nonagricultural) Provinces showed a considerable increase in population, from 10 to 20 per cent and over. The average increase for all the consuming Provinces was 4 to 8 per cent, whereas under normal conditions it was estimated at 3 per cent. In the agricultural or food-producing regions the average increase was much lower.

Indebtedness of Russian Industries to the State.

Economic Life, Moscow, March 28.

Loans issued by the Commissariat of Finance of the Soviet Government to the major industrial enterprises during the year 1922 amounted to 54,999,244 gold rubles, on which there accrued interest of 421,620 rubles, making a total of 55,420,864 rubles. The payments on these loans amounted to 567,089 rubles, leaving a total indebtedness on January 1, 1923, of 54,853,775 gold rubles.

The amounts loaned in 1922 and still outstanding for various industries on January 1 are itemized, as follows:

	Indebtedness, in gold rubles.
Fuel industry	19,076,302
Metallurgical	17,196,709
Textile	3,419,185
Foodstuffs	3,240,685
Mining	2,835,519
Electrical	1,772,830
Chemical	1,147,541
Silicate	543,823
Leather	307,500
All others	5,011,695
[Add to	54,880,638]

Esthonian Budget for 1923.

Consul Harold B. Quarton, Reval, Esthonia, March 15.

The budget for 1923 was authorized by the Riigikogu (Esthonian Parliament) on February 20, 1923. It provides for a total expenditure of 6,753,707,460 Esthonian marks (roughly $19,863,845 at the exchange rate for December, 1922, of 340 Esthonian marks to 1 dollar). In order to cover expenses, however, the revenue side of the budget includes the item "Credit from operations, current loans," which constitutes a deficit amounting to 707,248,660 marks. The principal items of expenditure are: War ministry, 1,614,678,950 marks; Communications, 1,599,811,400; and Finance, 933,876,700. Income estimates include as the principal items: Indirect taxes, 2,354,120,000; income from Government undertakings, 2,074,302,000; reimbursements of operation funds, 320,000,000; and credit from operations, current loans, 707,248,660.

In general, Esthonian public finance shows continued improvement. Five years ago the deficit was 90 per cent. The 1923 deficit is 10.5 per cent against 10.2 per cent for 1922. The deficit in 1922 was covered by loans and not by issue of paper money, a policy which will probably be pursued in 1923.

Proposed Latvian Budget.

American Minister F. W. B. Coleman, Riga.

The Latvian budget for the fiscal year ending March 31, 1924, was presented to Parliament by the Cabinet on March 9, 1923. The total income, principally anticipated from the flax and spirit monopolies and the customs, is estimated at 174,383,390 lats (roughly $33,664,747, at the exchange rate of 1 lat to 1 gold franc). The principal items on the expenditure side of the budget include communications, 38,500,000 lats; state credits, 30,400,000; defense, 29,700,000; finance, 16,200,000; and education, 11,600,000. Among the expenses, 8,000,000 lats represent unsettled accounts taken over from the budget of last year and amortization of debts for 5,000,000 lats. The remainder is provided for the issue of loans for the revival of agriculture and industry.

Unification of Currency in Transcaucasia.

Abstracted from Economic Life (Moscow) of February 18.

The Federal Council of the Union of Transcaucasian Republics decreed on January 10, 1923, to abolish the issuance of national currency by the individual Republics of the Union, replacing it by standard currency for all Transcaucasia. The new currency will be issued on the basis of par (ruble per ruble) for Georgian "bonds" (notes), 1 ruble for each 100 rubles of the notes of the Azerbaijan Republic, and 1 ruble for each 150 rubles of the notes of the Armenian Republic. The old local currencies were to remain legal tender up to March 1, 1923, by which time they were to be exchanged for the new currency of Transcaucasia.

This financial consolidation of the Transcaucasian Republics was rendered imperative by the chaotic situation resulting from arbitrary and unstable rates of exchange of the different currencies. Return of goods shipped from one of the Transcaucasian Republics into another and remaining unsold, as a result of abrupt exchange variations, had been a common occurrence heretofore; it is hoped that the new measure will stabilize values and facilitate exchange.

Exports from Vladivostok in 1922.

Abstracted from Economic Life (Moscow).

The total exports during 1922 through the port of Vladivostok amounted to 516,641 tons. Of this amount 353,085 tons (over 70 per cent) consisted of beans; 129,084 tons of bean cake, and 10,379 tons of bean oil; other items included 5,204 tons of flax and 4,673 tons of wheat.

BALKANS AND LEVANT.

DECLARED EXPORTS FROM GREECE TO UNITED STATES.

Consul General W. L. Lowrie, Athens; Consul L. B. Morris, Saloniki; Consul G. K. Stiles, Patras; Consular Agent Sotirios Karapateas, Kalamata.

The value of exports declared from Greece to the United States during 1922 through the American consulates at Athens, Saloniki, and Patras (including the consular agency at Kalamata), amounted to a total of $19,291,239, compared with $17,459,944 during 1921. This gain resulted entirely from the unusual shipments of tobacco from Saloniki and Athens—except for which the value of 1922 declared exports from all Greece would have been less than in 1921.

The articles entering most largely into this export trade in 1922, in order of importance, were: Tobacco, valued at $13,766,024 (mostly from Saloniki and Athens); currants, valued at $2,340,868 (all from Patras and Kalamata); figs, valued at $683,056 (chiefly from Kalamata); olives, valued at $529,434 (chiefly from Athens); hides and skins, valued at $429,591 (largely from Athens and Saloniki); olive oil, valued

at $323,838 (mainly from Athens and Patras); furs, valued at $196,576 (nearly all from Saloniki); cheese, valued at $152,276 (chiefly from Patras); raisins, valued at $94,175 (all from Athens and Patras); citrons in brine, valued at $93,447 (all from Patras).

Exports Declared from Athens.

Declared exports from the Athens district showed a considerable gain over 1921, particularly in the case of tobacco. There was a falling off in exports of cheese, emery stone, figs, magnesite ore, olives, olive oil, dried skins, and valonia. American goods returned for lack of market amounted in 1921 to $176,903, and in 1922 to $116,592.

Declared exports from Athens to United States during the calendar years 1921 and 1922.

Exports Declared from Saloniki.

The exports declared to the United States in 1922 from the Saloniki district totaled nearly $1,000,000 more than in any previous year since the establishment of the consular office; the year nearest approaching in value was 1914, when declared exports amounted to $7,447,312.

This increase, however, was not accounted for by a larger volume of normal trade but, as in 1914, by disturbed political conditions. In 1922 it was occasioned by shipments, as a measure of precaution, of accumulated stocks of unmanipulated tobacco from the Xanthi and Cavalla districts. Other articles showing marked increases in export values were opium, cheese, and fox and stone-marten skins. The promising trade in saffron noted in 1920 is practically wiped out, the cultivation of the plant having been almost abandoned.

Returned American goods in 1921 amounted to $10,991, and in 1922 to $7,452. In 1921 these goods consisted principally of cotton hosiery, inner soling, and shoe polish; in 1922, of hardware and ladies' shoes—the latter proving unsuited to the market.

Declared exports from Saloniki to the United States.

Exports Declared from Patras, Including Kalamata.

Declared exports in 1922 from the Patras district, including the Kalamata agency, show a considerable falling off as compared with 1921, most of it occurring in the case of currants, figs, skins, olives, olive oil, and raisins. A considerable gain is noted in the case of cheese, citron in brine, licorice root, tobacco, and valonia (the latter article was not exported during 1921). Returned American goods in 1921 amounted to $34,030; in 1922, to only $233.

Declared exports from the Kalamata agency in 1922 were valued at $1,498,023, as against $2,397,680 in 1921, the greatest decrease occurring in the same articles as for Patras. The only gains of moment occurred in sheepskins and goatskins and in raw furs. American goods returned during 1921 were valued at $33,320; none were returned during 1922.

Declared exports to United States from Patras and its agencies.

[1] Including in 1921, butter, honey, nuts, onions, peppers, and clipped wool; in 1922, butter, currant sirup, eggplants, peppers, and origan.

[2] Comprising books, green beans, cheese, capers, eggplants (preserved), honey, nuts, oil of sulphur, olives in oil, origan, green peppers, resin, sage, silk piece goods, soap, tobacco (unstemmed), and vine leaves.

EXPORTS DECLARED FROM PALESTINE TO UNITED STATES.

Vice Consul George C. Cobb, Jerusalem, Palestine.

Exports to the United States declared through the American consulate at Palestine during the calendar year 1922 show a considerable gain as compared with 1921; this gain is particularly noticeable in the case of Bibles, brass manufactures, almonds, and wine. It will be noted that 15,500 feet of cinema films were exported during 1922, whereas this article was not listed in 1921. While no American goods were returned during 1921, in 1922 this class of exports was valued at $3,533 and comprised auto parts, lubricating oil, shoes, books, spectacles, and household effects.

Exports declared from Palestine to United States during 1922.

[1] Does not include inquiries handled by foreign service of the bureau (27 posts, 80 representatives) by the cooperative officers maintained by the bureau in 25 chambers of commerce and boards of trade in the United States.

[2] This classification of inquiries under "Regional," "Commodity," "Technical," and "Miscellaneous" headings cover only the period from Oct. 2, 1921, to July 1, 1922. The figures for trade opportunity addresses and trade lists are for the entire year.

[3] Information reserved from "Foreign trade opportunity" announcements, printed in each issue of the COMMERCE REPORTS. (Name and address of foreign inquirer interested in the purchase of American goods, including references, cable address, and other details.)

LATIN AMERICA

J. R. McKey, Acting Chief, Latin American Division

FOREIGN TRADE OF MEXICO.

Preliminary statistics for the foreign commerce of Mexico, with the exception of petroleum exports, for the first six months of 1922 and for January, 1923, have just been issued by the Government of that country. Petroleum exports were reported as valued at more than 150,000,000 pesos during the first half of 1922, or approximately 60 per cent of total exports for that period. That proportion is corroborated by an estimate of 59.2 per cent, based on the valuation of Mexican exports to the United States, as declared at the American consulates in Mexico during that time. Mexican 1922 statistics do not show the origin of shipments and, as the customs classifications do not correspond with those of the United States, American export figures can not be used for comparison.

Importations into Mexico for January, 1923, specify the following percentages from the various countries: United States, 59.5; Germany, 22.9; Great Britain, 5.9; France, 3.4; Spain, 2.9; Switzerland, 0.8; Canada, 0.7; British India and Belgium, 0.6 each; Italy, 0.5; Cuba, 0.4; Japan, 0.3; and 34 other countries, 1.5 per cent.

Statistics covering the second half of 1922 have not yet been issued and the January, 1923, figures are the

only ones available later than those for June, 1922. The following table affords an idea of American trade with Mexico. Figures in the body of the table are from Mexican statistics. Those in the last line, "United States exports to Mexico," are American statistics, with values converted into Mexican pesos for the purpose of comparison.

Mexican imports and exports for first half of 1922 and January, 1923.

[Values expressed in 1,000 Mexican pesos.]

[2] Mexican export figures. These do not include petroleum.

BOLIVIAN BUDGET FOR 1923 PUBLISHED.

The national and departmental budget for 1923 has just been decreed by the President after Congress had adjourned without passing a general appropriation act. The decree provides that the budget of 1922, with modifications which the Government considers necessary, shall continue in effect during the year beginning March 1. From the announced budget it appears that there will be a deficit of 12,499,621.12 bolivianos. (On April 23 1 boliviano was equal to $0.314.) The service of the loan by American bankers has been included in the allotment to the Ministry of Finance.

The following table summarizes the complete 1923 budget:

	Bolivianos
National revenues:	
Public domain	5,458,684
Public services	3,145,350
Direct taxes	4,176,500
Indirect taxes	8,820,000
Export taxes	3,459,500
Total revenues	25,060,034
National expenditures:	
Legislative branch	495,300
Foreign affairs	1,080,190
Worship	93,740
Executive branch	5,030,869
Finance	16,531,791
Industry	117,780
Fomento	639,487
Justice	1,974,186
Instruction	3,333,806
Agriculture	26,160
War	7,739,985
Colonization	496,361
Total expenditures	37,559,655
Deficit	12,499,621

Mexican Economic Notes.

Chihuahua Crop Early.

In the west central part of the State of Chihuahua, the several thousand American Mormons located on the mountain plateaus have been assured of a plentiful supply of mountain water for their crops of the coming season by the abundant rains and snows of the late winter. Energies of the colonists are devoted largely to agriculture and the principal crops are alfalfa, beans, corn, and fruit. The first crop of alfalfa will be ready about the middle of May, instead of the usual 30 days later, on account of the favorable conditions. (Consul John W. Dye, Ciudad Juarez, March 28.)

Saltillo Crops Unusually Good.

Unusually good crops, including an excellent yield of winter wheat, are expected in the Saltillo consular district. A careful canvass of this section of the State of Coahuila shows that damage by the recent frost, which affected many districts of Mexico, was almost negligible here, and all signs point to a successful season for local farming interests. (Consul Fred R. Robinson, Saltillo, March 27.)

Depression in San Luis Potosi Business.

Business in the San Luis Potosi consular district during March continued in the depressed condition which has existed for some time. Credits are still restricted and importations are practically on a basis of cash against documents. A strike directed against the local electric light and power company received the support of all labor unions in the city of San Luis Potosi and the workmen gained every point in dispute. (Consul Walter F. Boyle, San Luis Potosi, April 1.)

Vera Cruz Expects Large Sugar and Coffee Crops.

Many planters of the State of Vera Cruz during the past two years experienced difficulties in financing crops of sugar and coffee. Two sugar properties were placed in the hands of receivers this season and others were forced to accept low prices for immediate sales.

The 1922–23 crops of these two commodities have moved in sufficient quantities to bring forth local estimates of national production. The sugar crop is now put at about 45 per cent over 1921–22 and coffee at 20 per cent below the total for that season. The State of Vera Cruz is expected to raise approximately 70,000 tons of sugar, a gain of 15,000 tons, and the remaining sections 90,000 tons—an increase of 35,000 tons over the previous crop. Allowing 110,000 tons for domestic consumption, this would leave 50,000 tons for export. The output of coffee was reduced somewhat by December rains, but the quality of the berry is excellent and

the price satisfactory. Judged by the present flowering of the trees, 1923–24 should record a bumper coffee harvest. (Consul John Q. Wood, Vera Cruz, March 23.)

Conditions in Aguascalientes.

Economic conditions in the Aguascalientes consular district, embracing the central Mexican States of Aguascalientes and Zacatecas, have shown but little if any improvement since the first of the year.

Limited credits make merchants reluctant to purchase any amount of imported goods until assured of a quicker turnover than at present, and many are finding cash sales obligatory. Retail trade in staples is more or less constant, as hardware, automotive products, canned goods, shoes, hats, and agricultural and mining machinery always are in a certain demand. United States exporters control the large portion of trade, but are finding competition from German hardware, toys, and china, French drugs and condiments, and French and English cloth.

Mining in this district has been benefited by the upward trend of the lead market and apparently firm silver prices. Shipments of bullion for the first quarter of 1923 were about 13 per cent greater in value than for the same period of the preceding year. The copper and lead bullion of this district assays high in silver and gold. Little additional development in mining is anticipated on account of a feeling of uncertainty as to the future of the silver market.

Of more vital interest locally than mining is the prospective corn crop. Unexpected rains during March brought possibilities for the best yield of corn, wheat, and beans for several years, and a bountiful harvest of corn would add more to the purchasing power of the people than an increase in prices of lead or silver. (Consul Lee R. Blohm, Aguascalientes, March 31.)

American Chamber of Commerce Established in Haiti.

On March 16 the American Chamber of Commerce of Haiti was organized, with headquarters at Port au Prince. The membership of this organization has been tentatively divided into three classes: Active, associate, and honorary. Membership at present is to be limited to American citizens and firms.

This organization, which has as its principal purpose the support of the convention between the United States and Haiti and the fostering of closer trade relations between the two countries, has received the indorsement of the President of Haiti and the American High Commissioner to that Republic.

Colonization Project in Brazil.

The Sociedad Industrial Agricola Colonizadora de Matto Grosso has been organized in Sao Paulo with a capital of 1,800,000 milreis (1 milreis=$0.1077 at the present rate). The principal object of the new company is to take over a grant of 500,000 hectares (1 hectare=2.47 acres) of land, which was made to the Marquez de L. Beccaria Incisa by the State of Matto Grosso. The land is on the Paraguay River and its affluents, and can be reached by steamers of 300 to 400 tons displacement.

Additional information regarding Latin America appears in this issue under the following sections:

Foodstuffs: American fresh fruits in Latin America.
Chemicals: The Chilean sulphur industry.
Transportation—railways: Sales information on Latin-American railways.

FAR EAST

F. R. Eldridge, Chief, Far Eastern Division

THE INDUSTRIAL POSITION OF JAPAN.

Industrial development in Japan during the last 40 years, particularly during the last decade, has been remarkable. No parallel in the history of industry can be found. The point has been reached, however, where further development is certain to be much more complicated. In reaching the status of a world industrial power, Japan must pay the price involved in the introduction of world factors into its industrial problem.

World War Extended Japanese Markets.

Until 1914 Japan's industrial products were marketed almost entirely in the Far East, but with the advent of the World War this field was extended, and by 1919 manufactured articles of Japanese origin were found in all the world markets. As Japan's industries are organized chiefly for export a study of the following table gives a very good idea of Japan's industrial progress during the last 10 years:

Japan's exports—1922 compared with 1913.

Group.	1913		1922		Per cent of increase in 1922.
	Value.	Per cent of total exports.	Value.	Per cent of total exports.	
Food, drink, and tobacco:					
Unmanufactured	$12,290,000	3.9	$21,867,000	2.7	78.6
Prepared	18,688,000	5.9	30,333,000	3.7	62.0
Raw materials	25,593,000	8.1	42,368,000	5.2	65.0
Partly manufactured	165,549,000	52.9	421,215,000	51.2	157.5
Wholly manufactured	92,180,000	29.2	290,975,000	35.6	216.0
Miscellaneous	2,980,000	1.0	11,966,000	1.6	300.0
Total trade	315,271,000	100.0	818,724,000	100.0	160.0

During 1922 over 35 per cent of the total value of Japan's exports consisted of wholly manufactured articles, as compared with 29 per cent during 1913. The absolute increase also shows the extent to which industries have been developed. The value of wholly manufactured articles exported during 1922 was 216 per

cent over 1913, while the increase in total exports during the same period amounted to only 160 per cent.

A decrease in the value of exports of raw materials is also indicative of this progress. Exports of goods in this classification during 1922 amounted to only 5.2 per cent of the total exports, as compared with 8.1 per cent during 1913, which shows that there is a tendency for the factories to consume more and more of the supply of domestic raw materials each year.

Many Factors Have Aided Growth.

Several factors have made this rapid industrial growth possible, chief of which has been the comparatively low cost of production in Japan. Other favorable factors have been its geographical position in relation to the far eastern markets, the willingness of its manufacturers to adopt the methods of the leading industrial nations of the world, and, during the last decade, the effects of the World War.

Some of the advantages which aided in the industrial growth are, however, gradually losing their importance. Due to the comparatively higher efficiency of occidental labor and machinery, the rising cost of living and higher wages, the cost of production in Japan at the present time, except in a few lines, is on a level with production costs of other industrial nations. The geographical position is no longer the great factor that it has been in the past, and, finally, the far eastern markets that have been temporarily abandoned to Japan since 1914 are once more attracting the attention of the industrial nations of the world. Foreign competition is not only being felt by Japan in its near-by foreign markets but in the domestic market as well.

Indian Customs Revenue.

Assistant Trade Commissioner C. B. Spofford, jr., Calcutta.

The total of Indian sea and land customs' revenue (excluding the salt revenue) collected during January, 1923, amounted to 40,100,000 rupees against 35,400,000 rupees for the same month a year ago and 34,500,000 rupees in December, 1922. This brings the total revenue during the first 10 months of the fiscal year to 351,700,000 rupees, compared with 289,900,000 rupees during the corresponding period of last year.

Import duties accounted for 276,500,000 rupees, with notable increases of revenue from iron and steel, cotton piece goods, railway plant, mineral oils, matches, liquor, tobacco, rubber tires and tubes, motor cars, cutlery, hardware, and silk piece goods. Decreases appeared in the import revenue on machinery and sugar.

Revenue from export duties totaled 43,400,000 rupees, with increases registered in jute and rice and decreases in raw hides and skins.

The excise duty on cotton manufacture yielded 15,200,000 rupees, which was a decrease over the previous year. The revenue from kerosene was 7,400,000 rupees; from gasoline, 6,100,000 rupees; and from land customs and miscellaneous items, 3,100,000 rupees.

[Rupees may be converted into American money at the rate of 3 rupees to the dollar. For the English official statement for the conversion of revenue values in India, see COMMERCE REPORTS, March 19, 1923, page 771.]

Far Eastern Trade and Economic Notes.

Japanese Banks in Manchuria Consolidate.

Four Japanese banks in Manchuria (subsidiaries of the Bank of Chosen) are to be consolidated with a combined capitalization of 30,000,000 yen, according to a statement of the Japanese finance department. The banks affected are the Dairen Bank, capitalized at 3,000,000 yen; the Manchuria Commercial Bank, capitalized at 2,700,000 yen; the Mukden Bank, capitalized at 5,000,000 yen; and the Liaotung Bank, capitalized at 2,500,000 yen (1 yen =$0.4985). (Japan Advertiser, March 27.)

Industrial Growth in Tasmania.

Industrial progress in Tasmania is shown in returns for the past year and the outlook appears to be most encouraging. Several new industries have been established, among which are a chocolate and confectionery manufactory at Claremont, near Hobart, and woolen and spinning mills at Launceston. Besides these a chemical plant formerly located at Sydney has removed to Hobart because of the cheaper electric power available in Tasmania. Other important industrial concerns are increasing their holdings. (The Manchester Guardian Commercial, February 22.)

Australian Finances.

Vice Consul William A. Dunlap, Melbourne, February 12.

The federal revenue of Australia for the six months ended December 31, 1922, was £28,382,496, while federal expenditures were £24,213,001. On January 1 of the present year the revenue on hand amounted to £10,478,909—an increase of £4,070,485 in the six months beginning July 1, 1922. Figures made up to January 29, 1923, on the note issue and gold reserve of Australia, gave a total of the former at £52,449,662: Banks, £29,817,075; public, £22,632,547. The total amount of gold held in reserve was £24,475,414—46.66 per cent of the total note issue.

Tokyo Retail Prices Higher During March.

Retail prices in Tokyo during March show considerable increases over prices during the previous month, according to a preliminary estimate made from statistics compiled by the Bank of Japan. The increase was general in almost all lines. The index number for March stood at 218, as compared with 215 for February, representing an increase of 1.4 per cent. Foodstuffs show greater increases than any other group, the advance amounting to 2.3 per cent. In the foodstuff group only two articles (onions and foreign oriental rice) show decreases, while domestic rice, red and white beans, cabbage, salted salmon, soy, and sugar have risen.

State Bank for Travancore, India.

The Travancore State government of India has approved plans for the establishment of a State bank. For several years past the members of the popular assembly of Travancore, India, have been urging the need for a State bank to develop trade and promote industries by affording facilities to the mercantile and trading classes. An investigation, therefore, was made of the Baroda and Mysore State banks, with the result that the recommendation of the Economic Development Board for the opening of a similar bank in Travancore has been sanctioned by the government. The present capital of the new bank has been fixed at 30,000,000 rupees ($10,000,000). The working expenses are to be shared by the State, which has also granted substantial concession in the shape of deposits, both with a nominal interest and with no interest. (Commerce, Calcutta, March 10.)

WESTERN EUROPE

Charles E. Lyon, Acting Chief, Western European Division

IMPORT TRADE OF SANTANDER, SPAIN.

Consul L. G. Dawson, Santander, March 22.

Santander, on the Bay of Biscay in northern Spain, is the natural port of entry for merchandise from northern European countries, as it is the nearest of all Spanish ports to central Spain and Madrid, with which it has rail connections, and also because of the large well-protected bay which forms its harbor. In 1922 Santander ranked third among Spanish seaports in the amount of duties collected, being surpassed only by Barcelona and Bilbao.

Most of the imports received at Santander are for transshipment to Madrid and other parts of central Spain, but there are several classes of goods used locally. Crude petroleum and kerosene are imported for use in the two Santander refineries. Phosphate from the United States, Thomas slag from Belgium, nitrates from Chile, and potash from Germany are imported by the fertilizing manufacturing companies at Santander. The large imports of coal from England are for the Norte Railroad and the Nueva Montana iron furnaces. Leaf tobacco is imported for the tobacco monopoly, principally for use in the cigar and cigarette factories at Santander. Tobacco imports in 1922 amounted to 7,354 metric tons, of which 3,201 tons came from the Philippine Islands, 2,942 tons from Brazil, 806 tons from the United States, and 355 tons from Cuba. Cigars and cigarettes are also imported, but none were brought in from the United States in 1922. Other commodities imported at Santander are sugar, coffee, cacao, and cereals.

Leading Countries Participating in Trade.

The leading countries sharing in the import trade of Santander in 1922 were as follows:

	Metric tons.		Metric tons.
Great Britain	80,130	Argentina	5,535
United States	26,833	British Indies	3,842
Belgium	13,345	Philippine Islands	3,800
Germany	12,626	Brazil	2,954
Chile	7,079		

More than half of the total imports from Great Britain consisted of coal, while nearly two-thirds of the imports from the United States were petroleum products. A wide variety of commodities was imported from Germany, the leading items being natural phosphates, machinery, and manufactures of iron and steel. From Belgium the most important items were iron and steel manufactures, especially railway materials, and chemical products, principally basic slag.

In addition to petroleum products, which have already been mentioned, the principal commodities imported from the United States were phosphate, ores, wood and manufactures of wood, machinery, electrical material, scientific instruments and apparatus, sugar, and unmanufactured tobacco. The only important import from Porto Rico was coffee, while tobacco and tobacco manufactures made up nearly the whole of the trade with the Philippine Islands.

FEATURES OF SWISS INDUSTRIAL CONDITIONS.

Consul L. W. Haskell, Geneva, March 26.

The effects of the Ruhr situation are among the most important features of conditions in Switzerland. In some respects Swiss producers have derived considerable advantage from the retardation of German industry, which has given them a better chance in the home market. On the other hand, the failure of deliveries of semimanufactured materials and fuel from the Ruhr, owing to lack of transportation facilities and the unwillingness of German shippers to obtain export licenses from the French authorities, has had an unfavorable effect. A recent agreement between the French and Swiss Governments, enabling Swiss importers to obtain the licenses on their own account, may relieve the situation to some extent.

Unemployment and Industrial Conditions—Cost of Living.

Labor conditions are improving to some extent. The number of persons affected by unemployment declined from 76,143 on January 31 to 74,525 on February 28, while the number of totally unemployed decreased from 56,275 to 52,734; the number of partially unemployed rose from 19,868 to 21,791. The policy of the Government is to encourage the emigration of labor to other countries, but it is attempting to give intelligent direction to this movement through the labor office, which is informed regarding employment conditions abroad.

Industry in general is still dull, but slight improvement has occurred in the linen textile, shoe, pharmaceutical, and watch industries. The future of most industries is uncertain, and prospects are in no case brilliant.

The index number of the cost of living in February, 1923, was 157 compared with June, 1914; 90 compared with February, 1922; and 99 compared with January, 1923, according to the Federal labor office. Retail prices have remained remarkably stable for several months.

Sample Fair at San Sebastian, Spain.

Ambassador C. E. Wood, Madrid, March 26.

It is announced that a sample fair will be held at San Sebastian, Spain, from July 15 to 31, 1923. Applications for space will be received until May 31, 1923, and should be addressed to Sr. Director Feria de Muestras, San Sebastian, Spain. During 1922 a sample fair was held at San Sebastian for 35 days and an average of about 5,000 persons attended daily.

Additional information regarding western Europe appears in this issue under the following sections:

Automotive products: Light cars competing with motor cycles in Spain.
Transportation—railways: Heavy cars for German railways.
Tariffs and trade regulations:
Proposed commercial treaty between Germany and Greece.
New customs tariff in Portugal.
Ratification of commercial convention by Italy and Poland.

AFRICA

SOUTH AFRICAN FOREIGN TRADE IN 1922.

Consul Charles J. Pisar, Cape Town.

The foreign trade of South Africa, according to preliminary figures, showed an excess of exports during 1922. The total value of imports into the Union of South Africa during 1922, including imports for government use and imports of specie, were valued at £51,557,371, as compared with £58,201,337 in 1921. General increases over the previous year were recorded during 1922 in the imports of cotton, leather, and silk goods, haberdashery, and motor cars. Machinery, implements, and hardware indicate a very marked increase. The following statement gives the value of the principal items imported in 1922 with comparative figures for 1921.

Imports into South Africa.

Articles.	1921	1922
Cotton manufactures:		
Piece goods	£3,135,413	£4,423,579
Blankets, rugs, and sheeting	536,630	697,335
Shawls	79,991	96,425
Hosiery and underwear	1,039,810	1,294,043
All other cotton manufactures	929,040	1,029,716
Drugs and chemicals	1,063,648	1,034,441
Electrical material and machinery	1,876,230	978,866
Food and drink	5,394,324	5,596,248
Haberdashery and millinery	929,065	1,132,970
Hardware and cutlery	2,134,335	1,962,387
Hats and caps	474,390	521,310
Implements and tools	1,373,960	589,731
Iron and steel manufactures (except machinery)	2,079,380	1,876,610
Leather and leather goods	939,614	1,354,795
Machinery (except locomotives)	4,420,733	2,144,364
Oils	2,777,465	1,966,188
Paper and paper manufactures	1,119,318	672,877
Silk manufactures:		
Piece goods	604,229	664,003
Hosiery and underwear	133,200	240,709
Made up articles	56,429	86,041
Stationery and books	1,267,203	1,098,713
Motor cars	626,701	926,512
Wood and timber	1,454,948	1,599,558
Woolen manufactures:		
Cloth and piece goods	662,350	657,343
Blankets and rugs	413,125	263,270
Shawls	62,524	57,815
Hosiery and underwear	142,443	176,094
All other woolen manufactures	105,679	175,591
All other articles	22,369,155	18,234,837
Total	58,201,337	51,557,371

Export Value Shows Slight Decline.

The value of exports of South African produce during the year 1922 was £57,025,785, as compared with £57,960,154 in 1921. While these totals show but a slight variation, marked increases and decreases have been registered in many items. Diamonds, Angora hair, hides and skins, whale oil, and wattle bark show appreciable increases, both in volume and value, and while the value of wool exported in 1922 shows an increase of £2,500,000 the volume decreased by 20,000,000 pounds. The value of the exports of raw gold decreased by £5,000,000, corn by £900,000, and coal by £900,000.

The quantity and value of the leading articles exported from South Africa, not including reexports, during 1921 and 1922 are shown in the following table:

Exports of South African produce.

Articles.	1921		1922	
	Quantity.	Value.	Quantity.	Value.
Bark, wattle.....pounds..	159,884,477	£457,318	271,716,264	£799,942
Coal.....short tons..	1,795,093	1,949,014	1,477,654	1,061,350
Corn.....pounds..	777,246,032	2,295,769	544,179,987	1,426,376
Diamonds.....carats..	316,702	1,355,487	1,330,664	4,386,554
Feathers, ostrich....pounds..	296,711	461,533	303,692	393,919
Gold.....ounces..	8,862,748	34,453,586	7,540,393	29,313,278
Hair, Angora.....pounds..	17,128,915	583,643	25,792,749	1,152,470

All other articles		6,959,034		5,498,870
Total		57,960,154		57,025,785

Share of Leading Countries in Trade.

Imports into South Africa came chiefly from Great Britain, which supplied £26,544,740, or 53.5 per cent of the total in 1922, as compared with £28,711,925, or 54.2 per cent, in 1921. The imports from the United States were valued at £5,876,606 in 1922 as compared with £8,244,699 in 1921; these values represent 11.8 and 15.6 per cent, respectively, of the total imports into South Africa in these years. Imports from Germany increased from £1,275,142 in 1921 to £3,017,831 in 1922, and represent 2.4 per cent and 6.1 per cent, respectively, of the total imports.

Great Britain also takes the greater part of the exports from South Africa, shipments to that country in 1922 being valued at £49,801,568, or 78.2 per cent of the total, as compared with £51,196,516, or 78.9 per cent, in 1921. The United States takes only a small share of the South African exports—£2,526,998, or 3.9 per cent in 1922, as compared with £2,253,524, or 3.5 per cent in 1921. Exports to Germany in 1922 were valued at £2,971,856, or 4.7 per cent of the total, and show a slight increase over 1921 when Germany took South African goods to the value of £2,434,533, or 3.8 per cent of the total.

SOUTH AFRICAN BUDGET FOR 1923–24.

Consul Charles J. Pisar, Capetown.

The total expenditures, excluding railway and harbor estimates, of the Union of South Africa during the fiscal year beginning April 1, 1923, and ending March 31, 1924, are budgeted at £28,561,318, a decrease of £483,039 as compared with 1922–23. The estimates for salaries, wages, and allowances of £8,861,327 and for general services of £19,699,991 show a slight decrease compared with last year. A reduction of £200,000 was achieved in the estimate for unemployment expediture, which reflects the improved position of labor in the Union due to increased activities of the mining industries.

The appropriations for the ministry of agriculture were reduced by some £60,000, the largest cut made in any single department with the exception of the ministry of mines and industry. Appropriations for

the ministry of finance were greatly increased, the total provisions for the public debt being £8,620,000, an increase of £181,000; for pensions, £1,805,000, an increase of £76,000; and for provincial administration, £4,320,000, an increase of £130,000. Funds allotted to the ministry of native affairs were reduced by £51,000. The ministry of justice was granted £2,570,000 for police work, that sum being but slightly in excess of last year. The sum of £2,827,796 was provided for posts, telegraphs, and telephones, an increase of £10,000. However, this is a productive item and generally shows an excess of receipts over expenditures at the close of the fiscal year.

TANGANYIKA LABOR AND INDUSTRIES.

In Tanganyika Territory (formerly German East Africa) labor is plentiful, but owing to communistic tribal rules, according to which each man is allotted a portion of the tribal goods sufficient for the maintenance of himself and immediate family, the natives have been educated to work only for the acquisition of luxuries. This condition retards the economic progress and development of the country, notwithstanding the overabundance of labor at hand. Primitive stages of technical education among the natives was begun under the German administration and is now continued under the British authorities. The vast wealth of Tanganyika Territory in forestal, agricultural, and mineral products is practically untouched. Native industries are at the present time greatly undeveloped, consisting mainly of fishing, forest exploitation, agriculture, stock raising, hunting, and ropemaking. The possibilities of the country in raising rubber trees, its future as regards the sisal and hemp industry, as well as its possibilities in the production of gold, mica, graphite, iron and copper ores, cobalt, and nickel, are as yet only slightly known.

[A survey of the economic resources and commercial possibilities of Tanganyika was recently published by the Bureau in Trade Information Bulletin No. 86, copies of which can be obtained from the Western European Division or the district and cooperative offices of the bureau.]

Algerian Foreign Trade During 1922.

Eugent A. Masuret, clerk to trade commissioner, Paris, France.

The special commerce of Algeria in 1922 amounted in value to 3,386,580,000 francs (provisional figures), of which 2,007,089,000 francs were for imports and 1,379,491,000 francs for exports, according to official statistics. The final figures for the foreign trade of the colony during 1921 were 3,156,237,000 francs, of which 1,790,630,000 francs were for imports and 1,365,607,000 francs for exports. The trade for 1922, therefore, shows an increase of 230,343,000 francs over 1921, imports being larger by 216,459,000 francs and exports by 13,884,000 francs. The nicrease in exports would have been much greater had it not been for a deficient cereal crop, which resulted in decreased exports of flour, semolina, and alimentary pastes.

Trade Lists Available.

The Commercial Intelligence Division has recently compiled the following trade lists of importers and dealers. Most of these lists indicate the relative size and importance of the firms listed, their character of business, nationality, as well as side lines handled. The suffixes "A" or "B" added to the file numbers indicate that the lists are revisions of former lists, the new compilations being more complete and reliable than the original. All of these lists have been mimeographed, and copies can now be obtained from the bureau or its district and cooperative offices by referring to the titles and file numbers:

Automotive products, importers and dealers, British South Africa	BE-6004-B.
Business firms, Bahamas, British West Indies	LA-34026.
Business firms, Barbados, British West Indies	LA-34027.
Business firms, Bermuda	LA-34017-A.
Business firms, French West Indies	LA-35005.
Clothing, importers and dealers, New Zealand	FE-24027.
Coal, importers and dealers, Malta	NE-16007.
Drugs, chemicals, and toilet articles, importers and dealers, Panama	LA-28012-B.
Dry goods, importers and dealers, Malta	NE-16005.
Dry goods and clothing, importers and dealers, Salvador	LA-29003-A.
Electrical supplies, importers and dealers, Syria	NE-9011.
Foodstuffs, importers and dealers, China	FE-13038-B.
Foodstuffs, importers and dealers, Malta	NE-16006.
Foodstuffs, importers and dealers, Portugal	EUR-10031.
General Merchandise, importers and dealers Costa Rica	LA-23008-A.
General Merchandise, importers and dealers, Salvador	LA-29007-A.
Groceries and provisions, importers and dealers, Salvador	LA-29006-A.
Hardware, importers and dealers, Malta	NE-16008.
Hardware, importers and dealers, Salvador	LA-29005-B.
Hardware, importers and dealers, Syria	NE-9005-A.
Hospitals, Chile	LA-13039.
Hospitals, Colombia	LA-14023.
Lumber, agents, importers and dealers, Brazil	LA-12072-B.
Lumber, importers and dealers, Chile	LA-13010-A.
Lumber and timber, importers and agents, Netherlands	EUR-8011.
Machinery, importers and dealers, Ecuador	LA-15015.
Machinery, importers and dealers, Poland	RD-65071.
Office supplies, importers and dealers, New Zealand	FE-24030.
Sporting goods, importers and dealers, Canada	BE-1033.
Sporting goods, importers and dealers, New Zealand	FE-24029.

American Consular Officers on Leave.

The following American consular offices are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Huddle, J. Klahr	Hamburg, Germany	May 25	Shawhan Hotel, Tiffin, Ohio.
McDonough, Dayle C.	La Paz, Bolivia	June 16	Department of State, Washington, D. C.
McMillin, Stewart E.	Antofagasta, Chile	June 12	1419 Las Palmas Street, Hollywood, Calif.
Memminger, Lucien	Leghorn, Italy	June 29	Department of State, Washington, D. C.
Savage, John M.	Southampton, England.	May 16	Care of Manhattan Club, Madison Avenue and Twenty-sixth Street, New York City.
Strother, Shelby F.	Guadeloupe, West Indies.	May 12	First and Burnett Streets, Louisville, Ky.
Thackara, Alexander M.	Paris, France	June 12	Department of State, Washington, D. C.

FOREIGN TRADE OPPORTUNITIES.

Reserved information may be obtained from the **Bureau and its district and cooperative offices** by duly registered firms and individuals upon written request by **opportunity number.** The **Bureau** does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Correspondence may be in English unless otherwise stated. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

Typewriters and supplies ---------- 6227, 6229, 6237, 6259, 6295

6227.†—Rebuilt typewriters—Johannesburg, SOUTH AFRICA. Purchase and agency.

6228.‡—Watches, razors (not safety), and sewing machines—Naples, ITALY. Purchase and agency.

6229.*—Office supplies of all kinds, such as typewriters, numbering machines, pencil sharpeners, and typewriter ribbons—Geneva, SWITZERLAND. Purchase and agency.

6230.‡—Novelties and notions—London, ENGLAND. Sole agency.

6231.*—Hardware, hardware specialties, and accessories—CUBA. Agency.

6232.*—Household hardware and novelties—Johannesburg, SOUTH AFRICA. Agency.

6233.*—Hardware, metals, and household articles—Paris, FRANCE. Agency.

6234.*—Household hardware for department store—Geneva, SWITZERLAND. Purchase.

6235.*—Household hardware, white enamelware, tools, medium grade jewelry, alarm clocks, high-grade watches, women's medium grade silk and cotton hosiery, men's shirts, and cotton underwear—Johannesburg, SOUTH AFRICA. Exclusive agencies.

6236.†—Hardware and building supplies—Mexico City, MEXICO. Agency.

6237.*—Office supplies of all kinds, including carbon paper and typewriter ribbons—Vienna, AUSTRIA. Agency.

6238.*—Kitchen utensils—Bristol, ENGLAND. Agency and purchase.

6239.*—Motor-car upholstery hides, dyes, furniture hides, and sheepskins for furniture—Antwerp, BELGIUM. Purchase and manufacturers' agency.

6240.*—Sole leather, glazed kid in blacks, colors, and suedes, and patent leather—Stafford, ENGLAND. Agency.

6241.†—Artificial leather for the upholstery, motor car, and furniture trades—Johannesburg, SOUTH AFRICA. Manufacturers' agency.

6242.*—Full line of women's ready-to-wear clothing of the latest models—St. Stephens, CANADA. Purchase.

6243.*—Children's half and three quarters cotton hose, plain and fancy; women's cotton, artificial silk, and silk hose, French (wide) tops; and men's cotton, artificial silk, and silk hose, and cotton fleece underwear—Cape Town, SOUTH AFRICA. Manufacturers' agency.

6244.*—Hosiery, knit goods, and underwear—Bordeaux, FRANCE. Agency.

6245.‡—Ply and filling yarns in gray, bleached, and colored—ENGLAND. American representative desires to place orders.

6246.*—Sporting articles of all kinds, and sport hosiery—Geneva, SWITZERLAND. Purchase.

6247.*—Footwear, silk, cotton, and woolen piece goods, bathing costumes, hosiery, etc.—Johannesburg, SOUTH AFRICA. Exclusive agencies.

6248.*—Spraying machines and materials for agricultural and horticultural use, and equipment for use in the fruit-growing industry—Christchurch, NEW ZEALAND. Purchase and agency.

6249.*—Horticultural tools and machinery—Christchurch, NEW ZEALAND. Purchase and agency.

6250.*—Seed-cleaning machinery and general agricultural machinery—Waimate, NEW ZEALAND. Purchase and agency.

6251.†—Automobile accessories and supplies—Rio de Janeiro, BRAZIL. Agency.

6252.*—Low-priced automobiles—Vigo, SPAIN. Purchase and agency.

6253.*—Mechanical tire-inflation equipment for garages—Lyon, FRANCE. Purchase or agency.

6254.‡—Motor cycles, strong and seaworthy motor boats, gasoline, petroleum, lubricating and linseed oils, sugar, electrical goods, and pneumatic and solid rubber tires—Larache, MOROCCO. Agency.

6255.*—Fuel oil, gas oil, and technical fats—Rotterdam, NETHERLANDS. Purchase.

6256.‡—Transformer oil, circuit breaker oil, insulating tapes, mica insulation substitutes, and similar products—Lyon, FRANCE. Agency.

6257.*—Carbonate of potash of different grades, in quantity of 20 to 40 tons at a time—Antwerp, BELGIUM. Purchase.

6258.‡—Chemicals, and sugical supplies—EGYPT. Manufacturers' agency.

6259.†—Rosin, caustic soda, iron and steel products, tin plate, galvanized and barbed wire, iron hoops, black and corrugated sheets, hosiery, typewriters, Portland cement, paper, flour, and leather—Rio de Janeiro, BRAZIL. Agency.

6260.*—Heavy steel, and wire products—Calcutta, INDIA. Purchase.

6261.*—Platinum for jewelry-making purposes—Kalgan, CHINA. Purchase.

6262.*—Machinery and wire for manufacturing bed springs, filling and covering for mattresses, and machinery or apparatus for nickel plating—Santiago, CUBA. Agency.

6263.*—Iron and steel products, such as wire, tin plate, and cement—Porto Alegre, BRAZIL. Agency.

6264.*—Zinc dust for Crowe and Merrill metallurgical process—Johannesburg, SOUTH AFRICA. Agency.

6265.*—Continuous-bucket type of coal chutes, concrete construction, of various sizes, for use on the Government railways—Adelaide, SOUTH AUSTRALIA. Purchase.

6266.*—Gold-dredging machinery, apparatus for use in placer-mining stamp mills for quartz mining, and similar equipment—PANAMA. Purchase.

6267.*—Equipment for the manufacture of carbon dioxide and cylinders for storing and marketing the gas—Guaymas, MEXICO. Purchase.

6268.*—Modern flour-milling machinery—Moravia, CZECHO-SLOVAKIA. Purchase.

6269.‡—Coal-mining machinery and supplies—Madrid, SPAIN. Agency.

6270.*—Apparatus and machinery for production of alcohol from molasses—Montreal, CANADA. Purchase.

6271.*—Jute-weaving machinery and portable timber-cutting machines—Saigon, INDO-CHINA. Purchase.

6272.*—Embroidery machines, 6, and tracing and perforating machinery, power operated; paper designs for embroidery; and embroidery cottons and silks—Sydney, AUSTRALIA.

6273.‡—Rubber bathing caps and novelties—Montreal, CANADA. Agency.

6274.*—Rubber belts, rubber tires, low-priced hosiery, paints, hardware, automobiles, etc.—Rangoon, INDIA. Purchase.

6275.*—Rubber goods, including hot-water bottles, and rubber gloves—Christiania, NORWAY. Agency.

6276.‡—Sugar—Paris, FRANCE. Exclusive agency.

6277.*—Sugar bags, flour, rice, and nonperishable provisions in general—Habana, CUBA. Agency.

6278.*—Lard, bacon, and paraffin—Antwerp, BELGIUM. Purchase and agency.

6279.‡—Sugar and molasses in large quantities—Bombay, INDIA. Purchase.

6280.*—Oil cakes, meat scraps, meat cakes, sulphate of ammonia, tankage, etc.—Antwerp, BELGIUM. Purchase.

6281.†—Salt codfish and rice—Piraeus, GREECE. Purchase.

6282.*—Corn and wheat flour of all descriptions—Hamburg, GERMANY. Agency.

6283.†—All kinds of licorice goods—Copenhagen, DENMARK. Purchase.

6284.*—Granulated sugar and powdered sugar—Neuchatel, SWITZERLAND. Agency.

6285.*—Canned fruits and vegetables, meat, fish, etc.—Berne, SWITZERLAND. Agency.

6286.*—Sugar—Christiania, NORWAY. Agency.

6287.*—Sugar, sirup, rice, dried apples, apricots, canned fruits, packing-house products, cottonseed oil, and oleo oil—Christiania, NORWAY. Agency.

6288.*—All kinds of foodstuffs of the best quality, except condensed milk—Bordeaux, FRANCE. Agency.

6289.*—Pork and bacon—Christiania, NORWAY. Agency.

6290.*—Provisions and groceries—Habana, CUBA. Agency.

6291.*—Beer cases to hold 4 dozen bottles—Pernambuco, BRAZIL. Purchase.

6292.*—Wooden boxes—Trinidad, BRITISH WEST INDIES. Purchase.

6293.*—Fruit and butter box shooks—Auckland, NEW ZEALAND. Purchase.

6294.*—Shooks for orange and other fruit boxes—Cape Town, SOUTH AFRICA. Agency.

6295.*—General stationery lines, carbon paper, ribbons, and other typewriter supplies—Melbourne, AUSTRALIA. Purchase and agency.

6296.*—Paper and paper specialties, including writing, ledger, and offset papers, S. C. litho, coated litho, book papers, glassines, butter parchments, box boards, bristols, calendars, and advertising novelties—Winnipeg, CANADA. Purchase.

6297.†—Sundry goods, novelties, stationery, motor-car tires, shirts, socks, shirtings, rolled-gold jewelry, and boots and shoes—Colombo, CEYLON. Purchase.

6298.*—Iron and steel girders, bar iron, pig iron, and sheet iron, all of the best quality, in all sizes, large shipments—Stuttgart, GERMANY. Purchase.

6299.*—Iron ore for smelting, bar iron, iron and steel girders, tees, U's, rectangular forms, and sheet iron, in continual shipments of unlimited quantities—Mannheim, GERMANY. Purchase.

6300.*—Electric vacuum oven, medium size, voltage 220—Matanzas, CUBA. Purchase.

6301.*—Nails, 50 tons, and 100 tons of cast iron—Sofia, BULGARIA. Purchase.

6302.*—Cast iron in bars of 2 or 3 feet, 100 tons—Constantza, RUMANIA. Purchase.

6303.‡—Agricultural seeds and machinery, including spinning and ginning machines, and wheat and rice husk cleaners—Sierra Leone, AFRICA. Purchase.

6304.*—Agricultural machinery and implements, and all articles required in agricultural pursuits—Vukovar, YUGOSLAVIA. Purchase and agency.

6305.*—Leather novelties of first-class quality—Wellington, NEW ZEALAND. Purchase.

6306.*—Wooden pegs of the best quality for shoe manufacturing—Goteberg, SWEDEN. Purchase.

6307.*—Buffalo hides for upholstering work, glazed kid leather, and patent leather—Christiania, NORWAY. Purchase and agency.

6308.‡—Pipe-bending machinery—London, ENGLAND. Agency.

6309.*—All machinery necessary for the establishment of a modern bakery with a maximum capacity of 40 barrels of flour per day—Chihuahua, MEXICO. Purchase. Prices and illustrated catalogues are desired of gasoline or electrically heated ovens, kneeders, pans, etc.

6310.‡—Gas and oil engines and power pumps—London, ENGLAND. Agency.

6311.*—Machinery and equipment for brass foundry—Christchurch, NEW ZEALAND. Purchase and agency.

6312.*—Machinery and equipment for rubber-heel factory—Dublin, IRELAND. Purchase.

6313.*—Electric conveyor for iron ore, with a capacity of 1,000 tons per hour, over a distance of approximately 250 meters—Bilbao, SPAIN. Purchase.

6314.*—Cement gun for making water-tight the front trenches of founds of masonry dams to store water—Hyderabad, INDIA. Purchase.

6315.*—Machinery and accessories for making player-piano rolls, of approximate capacity of from 25 to 30 rolls per day—Chihuahua, MEXICO. Purchase.

6316.*—Tanning machinery, substantial and modern—Provadia, BULGARIA. Purchase.

6317.*—Internal-combustion engines, agricultural machinery and implements, tractors, flour mills, automobiles, and motor trucks—Cairo, EGYPT. Purchase and agency.

6318.*—Machine tools, lathes, and metal-drilling machines—Seville, SPAIN. Purchase.

6319.*—Home knitting machines—Wellington, NEW ZEALAND. Purchase and agency.

6320.*—Cork stoppers, casein, and mineral colors—Prague, CZECHOSLOVAKIA. Purchase.

6321.‡—Machinery for the extraction of turpentine and by-products, and implements and supplies for the extraction of the gum from the tree—Guadalajara, MEXICO. Purchase.

6322.*—Sporting goods of every kind, including shoes and articles for travelers—Geneva, SWITZERLAND. Purchase and agency.

6323.‡—Kentucky dark-leaf tobacco—Buenos Aires, ARGENTINA. Purchase.

6324.‡—Groceries, chocolates, hosiery, silk goods, women's clothing, etc.—Johannesburg, SOUTH AFRICA. Agency.

6325.*—United States Government surplus war webbing—London, ENGLAND. Purchase.

6326.‡—Plain and lisle cotton, artificial silk, and pure silk hosiery, and also cotton, silk and mixture underwear—Hobart, TASMANIA. Manufacturers' agency.

6327.*—Plain galvanized iron sheets, zinc sheets, corrugated galvanized-iron sheets, and plain iron wire—Christiania, NORWAY. Purchase and agency.

6328.‡—Supplies of all kinds for shipbuilding and ship chandlers, except boilers, machinery, and hull parts, such as plates and girders—Toulon, FRANCE. Agencies.

6329.†—Evaporated milk, macaroni, California fruits, and salmon—The Hague, NETHERLANDS. Agency or purchase.

6330.*—Glass jars for the packing of honey, the preserving of fruit, and equipment for the preserving of fruit—Port of Spain, BRITISH WEST INDIES. Catalogues, price lists, advertising matter, and samples are desired.

6331.†—Specialties of all kinds—AUSTRALIA. Representation.

6332.*—Agency desired of an export commission house in New York.

6333.†—Textiles and notions, upper and fancy leather, hardware, paper, and stationary supplies—Rio de Janeiro, BRAZIL. Agency.

6334.*—Very cheap cotton blankets, cotton shawls, beads, enameled and tin mugs, lunch cans, cotton handkerchiefs, woolen yarns, and similar goods, all of the cheap grades—Johannesburg, SOUTH AFRICA. Agency.

6335.*—Rubber boots, principally for fishermen, miners' heavy boots, fishermen's oilskins, rubber hats and gloves, and rubber coats and slickers, in large quantities—Prince Rupert, CANADA. Agency.

6336.*—Optical goods, photographic apparatus, etc.—Paris, FRANCE. Agency.

6337.*—Hardware, cotton piece goods, fancy goods, toilet requisites, automobile accessories, coffee, flour, advertised cereal foods, groceries, canned fruits, etc.—Johannesburg, SOUTH AFRICA. Exclusive agencies.

6338.*—Hardware, tools, scissors, and novelties—Bristol, ENGLAND. Agency.

SALES INFORMATION SERVICE.

The Commercial Intelligence Division of the bureau maintains a classified World Trade Directory Index of foreign merchants for the purpose of assisting American firms seeking contracts with foreign buyers and agents.

From the information already collected through the foreign representatives of the Departments of Commerce and State, lists of firms engaged in practically every line of business in any part of the world can be furnished. A large number of these lists indicate the relative size and importance of each firm in its community, nationality of owners or managers, character of business, and the various commodities handled. These lists are great aids to traveling salesmen and firms undertaking advertising campaigns.

Further data, such as the countries from which firms make most of their purchases, date of establishment, bank and trade references, number of employees, and other confidential data that can only be obtained by representatives on the ground are also available and can be secured by requesting sales information reports on specific firms.

Knowing what agencies are handled by the different foreign firms, the Commercial Intelligence Division is well equipped to select and recommend the names of agents or firms who could properly represent American exporters.

This confidential sales information service is available to all American firms who have their names recorded on the bureau's Exporters Index.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

Herbert Hoover, Secretary of Commerce — Julius Klein, Director Bureau of Foreign and Domestic Commerce

Arbitration Educational Week.

Following the practice which in recent years has been found helpful in centering the mind of entire communities upon a generally beneficial idea, an Arbitration Educational Week is being held May 14 to May 20 in New York City.

Commercial arbitration is a strictly constructive movement. It is at once profoundly idealistic and intensely practical.

It stands for the ideal of peace, fairness, and honor, yet it offers material gains that may be translated into terms of money and good business.

Commercial arbitration provides a prompt, fair, and intelligent adjustment of differences between merchants in any country or countries through the impartial and equitable judgment of men trusted by both parties and chosen for expert knowledge of the business in dispute. The submission is voluntary. The award leaves no sting behind.

Commercial arbitration would remove, by voluntary agreement of the contracting parties, a mass of commercial litigation from the operation of courts, leaving the latter free to deal more promptly with matters that can not be solved without judiciary intervention.

Commercial arbitration has obtained a strong hold upon the mind of the progressive element in the mercantile communities everywhere. American and foreign trade bodies are rapidly multiplying arbitration facilities so that in the near future arbitration will be freely accessible to merchants in all classes of business and in all communities. The Department of Commerce has gladly cooperated with various phases of the movement.

The problem of commercial arbitration is one that must appeal to the producer, to the merchant, and to the consumer, for it is essentially a movement for the elimination of waste and the prevention of loss. The aim of the Arbitration Educational Week is expressed in its slogan: "Learn to arbitrate."

Egypt as a Market for American Goods.

To the majority of people in the United States Egypt means the Sphinx, the Pyramids, and that latest of archaeological discoveries, the tomb of Tutankhamen. It is a country with a past, a land of an ancient and glorious civilization, and an excellent place for tourists in winter. But it is far more than all this—it is a country with an economic present and an economic future. As such, it is worthy of serious attention on the part of American manufacturers and exporters. While it is true that the country is somewhat handicapped because it is almost entirely dependent on one resource—cotton—the experience of the last few years bids fair to have a salutary effect and to drive home to Egyptians the danger of "putting all their eggs in one basket." If this lesson has been learned, the next few years should show a widening diversity in agriculture and other industries.

A country with sound money, a balanced budget, and a fairly long-established trade is worth consideration as a desirable market for American goods. Egypt fulfills these three requisits. Its money is to-day very near par—the Egyptian pound, with a parity of $4.9431, being now worth over $4.75 in terms of United States currency. The constant ratio between the pound sterling and the Egyptian pound (97½:100) insures the rise and fall of the Egyptian pound with sterling. The basing of bank-note issue on Egyptian Government securities and British Treasury securities held in London has permitted the financing of the cotton crop without the necessity of actually moving funds from London. Government expenditures are, as a rule, kept well within actual receipts, and the latter are generally in excess of budgetary estimates. The balance of trade has been favorable to Egypt for many years, with the exception of 1920 and 1921, when the cotton crisis interfered with normal trade tendencies for the time being.

Manifestly a country that can show an increase of total trade from about $296,000,000 in 1913 to $416,000,000 in 1922, or about 41 per cent, is worth serious cultivation. Moreover, trade of the United States and Egypt, as shown by Egyptian statistics, grew from about $12,000,000 in 1913 to about $47,500,000 in 1922—imports from the United States for the two years being, respectively, about $2,500,000 and $7,000,000. That Egypt can absorb much more merchandise from the United States is evident, however, from the purchase in 1921 of American goods valued at about $33,000,000, this heavy purchase being due in part, of course, to the inability of certain countries and the ability of the United States to make prompt deliveries. Even though it be admitted that prices were still high in 1921 and that some overstocking may have occurred, these figures are significant. The decline in 1922 in imports from the United States can be accounted for

partly through further price deflation in 1922, the effects of the cotton crisis, and a general retrenchment in purchases, although it must be admitted that imports from the United States fell off in greater proportion than from other countries.

Egypt likes American products and has bought a surprisingly large assortment of goods from this country. Naturally, keen competition from European countries will be encountered, for Europe appreciates the magnitude of this market lying at its very doors. American energy and American goods have already opened a market that can be increased, but permanent results can be obtained only by careful and constant attention to the needs and possibilities of the market.

Vital Importance of Cooperation in Foreign Trade.

The value of cooperation and mutual loyalty among the nationals of any given country engaged in foreign trade was appreciated by the earliest traders of history. The ancient Greeks considered it an offense punishable by death to allow trade secrets to be known by competing nations, and stories have come down to us of Greek ships run on the rocks to prevent pursuing vessels of other nations from determining the location of their markets. Under the guild system of the Middle Ages, when the quality of the products of a city determined its prosperity, the cooperation of everyone concerned in the manufacture and transportation of those products was required under penalty of discontinuing business. This knowledge of the value of cooperation prevails to the present day in the foreign-trade policies of the exporting nations of Europe, and is brought to our attention daily.

Without a knowledge of this feeling of mutual responsibility between foreign manufacturers and carriers, it would be difficult to understand, for example, why German, French, and English goods, packed in containers that American exporters would brand as unfit for export trade, arrive in this country in the best condition, whereas American goods shipped in similar containers would be seriously damaged.

European steamship companies consider the transportation of the products of nationals a patriotic duty. They realize that the growth of the export trade of a nation has a direct bearing on their profits and that the protection and careful handling of export shipments accrues to their benefit as the foreign trade of the country is fostered and advanced. Many of the larger American steamship owners have worked out the same idea in the service they accord to American products intrusted to their care, and have built up a reputation for efficient handling which turns trade to their ships in ever-increasing volume. However, American export trade needs the cooperation of all agencies in finding and holding a place in the highly competitive markets of the world. Further, all parties to an export transaction should realize that prosperity in our foreign trade has a direct bearing on the prosperity of the individual, and should therefore exert every effort in promoting its development.

Sidetracking Export Orders—and Loyal Agents.

Real profits in export business are the result only of sustained and efficient effort. The companies that organize to serve their foreign customers on the same basis as their domestic customers are the ones that are reaping the benefits accruing from the greater diversity of markets afforded by oversea business.

Too many American manufacturers show effective interest in export orders only when domestic business is slack. When their home customers again begin to call for goods such companies may divert to domestic buyers shipments that were originally destined for export, or they may quote longer deliveries on foreign than on domestic orders, or they may even increase their foreign price schedules to a point that almost prevents their local agents abroad from taking any business at all.

Such tactics will, of course, release some additional goods for domestic buyers—but what about the firms or men abroad who represent those manufacturers? Faith in the home firm breeds that spirit of loyalty which sells goods in the face of the keenest competition. And such loyalty exists most strongly in the highest types of representative.

The sidetracking of export orders can not be long concealed from an able agent, and nothing will kill his loyalty more quickly. Such a representative has at stake not only the specific profits involved but also his personal reputation among buyers. A poor representative may continue his allegiance to the firm under such circumstances, but the better type will bitterly resent such unfair practices and will make new connections at the earliest possible moment.

Any manufacturer who has built up a sound foreign business appreciates the value of deep-rooted loyalty among agents, and he also realizes how quickly deliberate injustice will disintegrate such an agency organization. He knows that sidetracking export orders is not only bad ethics but is thoroughly bad business as well.

The Export Manager's Understudy.

The export manager who has had previous experience as a traveling salesman often feels the necessity of securing greater personal contact with his foreign customers with whom connections were built up during his years on the road. Accordingly he makes trips lasting from six to eight months into as many of the firm's foreign markets as he can conveniently cover. Now this is an excellent idea, pro-

vided the export manager can arrange matters in the home office so that business will proceed in a normal way during his absence. But this can not be done by mapping out detailed instructions to some junior clerk, for no export manager can foresee conditions and contingencies over so long a period and provide rule-of-thumb methods for dealing with them.

What such an export manager should do is to provide himself with an "understudy," carefully trained and thoroughly familiar with conditions both in the export field and at home. He should outline to this understudy the fundamental principles and policies which are to govern the business while the export manager is away. But the question of methods should be left to the assistant. He should be empowered to make decisions, change plans, and in all other ways to have a perfectly free hand, provided only that he adheres to the general policies laid down by the export manager. For unless an assistant export manager is trained to a pitch where he can be given authority to settle detailed questions of procedure and be in a position to determine what he should do as new conditions arise in different markets, then the export manager would better remain at home.

MONTHLY CABLE REVIEWS

WESTERN EUROPE.

Charles E. Lyon, Acting Chief, Western European Division.

BRITISH INDUSTRY FEARS END OF PRESENT ACTIVITY.

Based on cable from Commercial Attaché Walter S. Tower, London, May 3.

Continental conditions remain the leading factor affecting British trade prospects, and business circles greatly desire a settlement of the Ruhr and reparation questions. Failing some satisfactory solution, it seems difficult to believe that the present trade revival can long continue. British foreign trade is increasing. Coal production reached a new record. Arrivals and departures of shipping are 25 per cent above the figures of a year ago. Iron and steel production shows a 50 per cent increase over last year. The upward swing of prices continues, although somewhat more slowly.

British Interest in Continental Situation—Price Indexes.

The attention of British business interest has been focused on the latest reparation note from Germany and the Franco-Belgian reply. While the German proposal as announced is not regarded as satisfactory, it is considered as a possible opening toward negotiations for a final settlement.

The Times wholesale price index number on April 30 stood at 164.9, as compared with 163.6 on March 31. The food group rose to 161.5, chiefly because of the increased use of cereals, sugar, and potatoes. The material group stood at 166.8, owing largely to increased prices of textiles and linseed. Articles showing a decline included nonferrous metals, pig iron, and rubber. The Economist index number, which showed a slight decline in March, advanced to 165 on May 1, the highest point for more than a year. The most important increases were shown in silk and sugar.

Rise in Government Bonds.

British budget receipts for the first four weeks of the present fiscal year totaled £76,667,000, while expenditures were £62,989,000. The floating debt on April 28 was £790,380,000. The money market is easy but interest rates are not declining. The gilt-edge securities market continues strong; this is especially true of British Government issues. The value of new issues is increasing. Most flotations are now successful, but investors appear to be more discriminating. New capital issues for the first three months of 1923 were £46,000,000, or less than half of corresponding figure for last year. Of this amount, £14,000,000 was domestic and £32,000,000 for foreign countries and British possessions. The 10-point fall in sterling exchange to $4.62 is attributed to British treasury purchases in the United States against the repayment of the American debt, more especially the repayment of the value of the silver loaned to India during the war under the Pittman Act.

Record Coal Output—Iron and Steel Market Quiet.

The British output of coal for the week ended April 21 reached the record figure of 5,825,000 long tons. A decline of 20 per cent for the first week in May is expected, due to the May 1 holiday. Coal export prices, although slightly weaker, still remain high. The German demand is heavy in Newcastle. The dock congestion continues in South Wales, but is being greatly relieved. Progress is being made in the negotiations for three-shift coal loadings. Coking coal is especially strong for export.

Lumber imports rose during April, but the demand is now weaker. The pig-iron market has been quiet for the last two weeks. Iron producers have full order books but are anxious about the future. The general volume of steel business is slackening, with the expectation of the Ruhr settlement and a release of pent-up supplies of German steel. The offerings of continental semifinished iron and steel products are quoted at prices a shade lower than the recent peak. Steel mills, however, are slowly increasing production to complete orders now on hand. The rumor of the South Wales amalgamation of Baldwin, Guest, Keen, and Nettleford is not yet authentic. The sales of tin plate are decreased, but prices are strong at 25 shillings.

Activity in Charter Market—Foreign Trade Increasing.

British shipping interests are encouraged by the increased activity in charter markets, by cuts in seamen's wages effective April 16, and a decrease in idle tonnage. Total vessels idle in British ports on April 1 numbered 321.

British foreign trade is increasing. During the first quarter of 1923 the volume of the exports increased 10 per cent and of the imports 7 per cent, as compared with the corresponding period of last year.

Wage Disputes Disturb Industrial Outlook.

The labor situation improved somewhat during April on account of the settlement of several textile disputes. The question of wage reduction was compromised in most cases. The whole labor outlook is somewhat clouded. Details of various industrial disputes now going on can be found in an article by Assistant Trade Commissioner H. B. Allin Smith in the western European section of the present issue of COMMERCE REPORTS. The average level of wages in all trades is now estimated at about 175 per cent of the pre-war figure, while the cost of living index stood at 174 per cent. The low wage extreme is represented by wages of farm labor, which stood at 140, while some transport workers are getting as high as 220. Discussions are proceeding for the stabilization of wages in the cotton trade at present levels for the next 12 months. The shipbuilding lockout of boiler makers on account of the refusal to accept an agreement on overtime and night-shift work will have serious consequences on shipbuilding unless an early settlement is reached.

The total number of registered unemployed in Great Britain on April 23 was 1,235,000, a figure which has been fairly constant for the last few weeks. The number on January 1 was 1,485,800.

ITALIAN BUSINESS ACTIVITY DECLINES.

Based on cable from Commercial Attaché H. C. MacLean, Rome, May 5.

The reform policy of the Italian Government is being continued, and a statement of concrete results is expected on May 12. A considerable reduction in State railway deficits is promised for next year, but no definite statement of accomplishments has been possible yet. It is expected that a considerable portion of the lines will be turned over to private enterprise. A new issue of 1,000,000,000 lire in nine-year treasury notes was made in April and another is planned shortly. The amount of short-term notes has been reduced. Industries, while not actually stagnant, are not notably active. Pig-iron production, however, has increased greatly, and railway freight traffic has expanded. Foreign trade, both import and export, has increased over a year ago. Ocean imports in March were particularly heavy, showing an increase of 25 per cent over February.

Government Reforms.

The first report on results obtained through the reforms of the new cabinet will be made by the Ministry of Finance on May 12. It will include both financial savings and other reforms, and is awaited with intense interest. The most recent reforms are the abolition of the Ministry of Labor, the reduction of the cost-of-living bonus to Government employees, and making obligatory of the reorganization of municipal and communal administrations within two months.

The railway commissioners have given assurance that in the next fiscal year there will be a reduction in the State railway deficit to 400,000,000 lire, and that the deficit will be entirely eliminated within three years. The actual deficit for the fiscal year 1921–22 amounted to 1,257,946,309 lire. Plans have been made to concede 5,271 kilometers of the Government railways to private operation.

Financial Situation.

The statement of the banks of issue for February 28 shows a reduction in note circulation to 17,153,000,000 lire, compared with 17,446,000,000 lire on January 31. Discounts also were somewhat reduced, amounting to 5,813,000,000 lire, compared with 5,983,000,000 lire on the earlier date. Reserves were unchanged at 1,241,800,000 lire.

The principal private banks of Italy on January 31 showed increases both in deposits and in loans and discounts compared with December 31, the former standing at 2,182,000,000 lire as against 2,150,000,000 lire, and the latter at 8,124,000,000 lire as against 7,937,000,000 lire. Savings deposits on December 31, 1922, amounted to 17,506,000,000 lire, an increase of 1,444,000,000 lire during the year.

The upward movement of security prices continues. The consolidated 5 per cents are now selling above 89, compared with 88.50 a month ago.

Lira exchange is fairly steady, but has tended to decline slightly since the beginning of April, when it was quoted at 5.02 cents (noon cable buying rates, New York). The quotation on May 3 was 4.92 cents.

Various elements in the financial situation of the Government are of an encouraging nature. An issue of 1,000,000,000 lire in nine-year 5 per cent treasury notes (the first of its kind), which was made early in April, was quickly subscribed, and a second issue of the same amount has been authorized. The amount of short-term notes outstanding has been reduced. On March 31 they amounted to 23,939,000,000 lire, compared with 24,107,000,000 lire on June 30, 1922. The treasury statement for March 31 shows a reduction in the debit balance of 239,000,000 lire compared with February 28.

Industries Inactive.

Industry is, on the whole, rather dull. A revival from industrial depression began to take pronounced form last July and continued unabated to the close of the year. Since the beginning of 1923, however, unfavorable features have again become manifest. While no actual depression has set in, limited domestic demand and the failure of export trade to expand satisfactorily have checked industrial production in many lines. The engineering trade is depressed, but automotives and the manufacture of railway materials are fairly active. The demand for engineering supplies is not sufficient for the capacity of the plants; hence, there is keen competition for the limited business available.

Cotton-spinners stocks are fairly light, but the domestic demand is reduced, while exports are only fair. The cotton association has recommended a four-day week for spinners and weavers for a period of two months because of the slackness of demand. The high

price of American staple has increased the use of Indian cotton. Woolen mills are also quiet because of the refusal of consumers to pay prices corresponding to the cost of raw materials.

Large Coal Stocks—Increased Pig-Iron Production.

Stocks of coal are large, with local prices declining and purchases reduced. Imports in March, however, were especially heavy. American gas coal has a slight advantage as to price, and the available amount of British gas coal is rather limited.

The production of pig iron in Italy has increased greatly since the occupation of the Ruhr. The four blast furnaces now in operation are producing at the rate of 18,000 tons monthly compared with a total production of 91,000 tons for the year 1922. Steel production is now approximately at pre-war levels. The consul at Palermo reports that the Sicilian production of sulphur has increased since the agreement with American producers.

Expansion in Railway Freight Traffic—Agricultural Situation.

Railway freight traffic has shown considerable advance in the past year. From July to December, 1922, there was an increase of 14 per cent. In January and February, 1923, traffic was 19 per cent greater than in the same period of 1922.

Crop conditions are normal for this period of the year. The acreage planted in sugar beets is somewhat greater than last year. Stocks of domestic sugar on hand March 31 amounted to 573,000 tons, approximately three months' supply.

Foreign Trade Increasing.

Total imports in January were valued at 1,056,000,000 lire and in February at 1,571,000,000 lire, while exports reached 788,000,000 and 751,000,000 lire in the same months. The two months, compared with 1922, show an increase of 256,000,000 lire in imports and 200,000,000 lire in exports.

Statistics of ocean imports in March give receipts of coal at 1,037,000 tons, including 797,000 tons from Great Britain, 234,000 tons from Germany, and 6,000 tons from the United States. Receipts of grain totaled 371,000 tons, including 128,000 tons from North America, 118,000 tons from South America, and 78,000 tons from Australia. Imports of metals amounted to 18,000 tons, cotton 12,000 tons, prosphates 55,000 tons, mineral oil 44,000 tons. Total imports amounted to 1,752,000 tons, compared with 1,384,000 tons in February.

The consul at Milan reports that exports of silk to the United States in the period January to April, 1923, reached a value of $8,700,000, compared with $4,500,000 in the corresponding period of 1922.

Emigrants to United States.

The number of emigrants from Italy in 1922 was 244,000, compared with 255,000 in 1921. Emigrants to the United States numbered 45,000, compared with 138,000; while emigrants to France increased to 86,000 from 36,000 in the earlier year.

LATIN AMERICA.

J. R. McKey, Acting Chief, Latin American Division.

ECUADOREAN TRADE SITUATION.

Based on cable from Consul General F. W. Goding, Guayaquil, May 2.

April witnessed heavy exports of cacao, coffee, Panama hats, and hides. Principal imports consist of textiles, machinery, and building supplies. Trade is active, construction is increasing, and exchange is steady.

Market Prices and Exports of Ecuadorean Products.

There have been no changes of special consequence in the situation in Ecuador during the past month. The more important developments during the period, however, affected exports, imports, and finance.

Exports of cacao between April 1 and 24 amounted to 6,000,000 pounds, leaving a similar quantity on hand. The prices currently quoted on this commodity are 28 to 29 sucres per Spanish quintal of 46 kilos, or 101.4 pounds. This price is equivalent to from $0.087 to $0.09 per pound at the current rate of exchange. Receipts are good and there is an active market.

The coffee market is active, with a prevailing price of 45 sucres per Spanish quintal, or $0.14 per pound. This is 5 sucres, or $1.56, less per quintal than the price a month ago. There were 75,000 kilos of coffee exported during the first 24 days of April.

Panama hats to the amount of 8,000 kilos were shipped during the period April 1 to 24, and prices remaining stationary. The local price of hides remains at 20 sucres per quintal, or $0.062 per pound. There were 23,000 kilos of hides exported during the period mentioned.

Imports of Machinery, Textiles, and Building Supplies.

The principal imports at the present time consist of machinery and textiles. Building is increasing and the proportion of concrete houses is noteworthy. The United States appears to be securing a fair proportion of the trade. Buying at present is active and orders are being placed for all kinds of goods, probably in excess of actual requirements.

Rate of Exchange Remains Steady.

The rate of exchange remains at 3.20 sucres per dollar, or $0.312 per sucre. Importers are at present buying beyond their requirements and thus helping to create a scarcity of drafts. American exporters would therefore do well to fill orders with cash at hand. Discount rates have been fixed as follows: For 90-day paper, 12 per cent; for 60-day paper, 10 per cent; for 30-day paper, 8 per cent.

A 5-sucre mortgage cedula, which has been circulating as money during the past few months, has been declared illegal and ordered withdrawn.

FAR EAST.

F. R. Eldridge, Chief Far Eastern Division.

IMPROVEMENT IN BRITISH MALAYAN FINANCIAL AND TRADE CONDITIONS.

Cable from Consul General Ernest L. Harris, Singapore, May 1.

Financial conditions in British Malaya have improved and the slight betterment recently noted in the general trend of trade is continuing. Increased use of tractors. Loans authorized for the development of roads.

Credits Improving—Market Conditions.

Commercial credits are becoming slightly more liberal throughout British Malaya as a result of the increased prices for rubber and tin. Operators in these industries are making purchases for the first time in 15 months. At the annual meeting of the Singapore Chamber of Commerce, however, the chairman cautioned against undue optimism regarding the continuance of high prices.

Some evidence of the better trend in business is found in the automobile trade, which was seriously affected by the depression which followed the decline in the rubber industry. A dealer in touch with conditions states that governments of the Malay States intend to standardize on one make of British motor truck. The automotive business in these countries is not large but it indicates the tendency toward general business improvement. An increase in the use of tractors for breaking soil for rubber plantations is reported.

The rubber market is rather dull for spot delivery, with a decrease in forward business and in local speculation.

Government Loans Authorized.

The federal council of the Federated Malay States has authorized the chief secretary to request Crown agents to borrow money by issue in London of Federated Malay States government treasury bills in multiples of £1,000, payable at par from general funds when the chief secretary determines. The issuance of treasury bills in the Federated Malay States is also authorized.

The legislative council of the Straits Settlements has approved a loan of 1,000,000 Straits dollars ($567,800 at par) to the State of Trengganu, principally for the development of roads. It is proposed that 400,000 dollars of the loan shall be floated during the current year and 300,000 dollars in each of the next two years.

Construction of Waterworks—Shipping.

It is announced that the Singapore council has appointed consulting engineers for the construction of waterworks in Johore.

Shipping space is sufficient for cargo offered, but there is no great surplus of stock. Bunker coal and oil stocks are normal.

SEASONAL DECLINE IN JAVA TRADE.

Cable from Consul Charles L. Hoover, Batavia, May 1.

A seasonal falling off in trade is noticeable in the Batavia consular district during recent months. Old crops are practically all moved and new crops have not arrived. Prices for many staple exports are rising and deflations in prices of import commodities are occurring.

There is considerable activity in the construction of low-price dwellings, which has created a demand for builders' hardware.

American ships report freight offering to Atlantic coast ports small, the total outward tonnage from Batavia for the first quarter of the current year having amounted to 33,000 tons. Freight rates are steadily increasing.

It is reported that Australian capitalists are considering investment in a large tea estate in Java, although no definite developments have taken place.

SOUTH AFRICA.

Based on cable from Trade Commissioner Perry J. Stevenson, Johannesburg, May 5, with cooperation of Consul M. B. Davis, Port Elizabeth.

ECONOMIC POSITION CONTINUES STEADY.

The general business and financial position in South Africa is showing improvement. Gold production recorded an increase, and the sale of diamonds was satisfactory. Agricultural prospects are good, pointing to an increasing purchasing capacity on the part of the country districts. Building activity continues brisk, and unemployment is decreasing. Iron and steel prices were slightly higher. Wool prices increased; mohair and skins were firm, and ostrich feathers weak. Imports and exports for March recorded a decline. Antidumping legislation has been introduced into the South African Parliament by the Minister of Finance.

General Business Situation Favorable.

The tendency of gradual improvement which has been manifested in the Union of South Africa since the new year continues. Less anxiety is noted in the financial market, merchants being more inclined to embark on new enterprises. New capital issues of £500,000 and £350,000 6 per cent debentures for the New States and West Springs Rand Gold Mines have been underwritten, respectively, by the Johannesburg Consolidated Investment Co. (Ltd.) and the Anglo-American Corporation of South Africa (Ltd.).

Gold Production Higher—Diamond Output.

The total output of gold by the Transvaal mines during March was declared at 761,586 fine ounces, valued at £3,236,740, on the basis of 85 shillings per ounce, the same price which prevailed during February. March production of gold registered 56,616 fine ounces higher than February, with an increase in value of £240,618. The number of natives employed in the gold mines at the end of March was 181,473, as compared with 182,983 at the end of February.

Diamond production during February totaled 90,801 carats, valued at £310,800.

Mines Buying Conservatively—Building Activity Continues.

The gold and coal mines are buying conservatively, meeting their needs as far as possible by the purchase

of secondhand material and machinery. In view of the decline in value of the gold premium, close economy is being practiced. Stocks of supplies in the mines and in business houses are reported low, and they are obliged to come into the market at short intervals.

The activity in building operations which has prevailed for more than six months continues unabated. Public buildings and a considerable number of residences are in course of erection. Trade in lumber is fair and building material prices are unchanged.

Commodity Market Conditions.

The Johannesburg iron and steel market is quiet but expectant. Prices have advanced slightly, owing to the cessation of competition from the Ruhr. Supplies are restricted, but improvement is looked for at an early date. Importers have been awaiting a settlement of continental conditions, a feeling prevailing that Germany would dump supplies at keenly competitive prices. This situation is changed now that the Government has committed itself to a protective tariff policy. Legislation has been introduced in the South African Parliament to prevent dumping by granting low freight rates to home production, the measure being particularly aimed against goods of continental origin.

Cotton goods of English and continental manufacture are underselling American-made goods. Desirable combing wool stocks at Port Elizabeth are practically exhausted. Prices have advanced from 5 to 10 per cent in the face of general competition, with growers holding back supplies. Summer mohair and skin prices are firm. Ostrich feathers are weak, with the demand principally from America and France; no offers are coming from German buyers.

Engineering Trades Inactive.

The engineering trades are marked by quietness. Railway construction is limited principally to the repairing of damage done by the recent heavy rains. A number of new cars are being constructed in the Johannesburg municipal shops. The city council is confronted with the problem of deciding whether it will make tramway extensions or permit motor-bus service to its rapidly growing suburbs.

Imports and Exports Decline During March—Trade Regulations.

Total imports into the Union during April amounted to £4,342,300, as against £4,679,000 during March. Total exports were valued at £5,062,790 during April, as compared with £6,008,000 during March. Motor car shipments continued at high figures.

The tariff rate on petrol in packages has been increased from 2d. to 3d. The Minister of Finance informed the House of Assembly that the provisions of the imports regulation act, 1922, would cease to be effective after June 30, " and it was not the intention to ask Parliament to renew them." The use of the imperial gallon does not become effective until September 1, 1923.

CHEMICALS

Charles C. Concannon, Acting Chief, Chemical Division

WORLD TRADE IN THE ESSENTIAL OILS OF CITRUS FRUITS.

A. H. Swift, Chemical Division.

Italy takes first place in world production of essential oils of citrus fruits. Essential oil production is an important industry of Mediterranean countries and British West Indies. United States imports of citrus oils show an increase since the war.

The importance of the essential oils of the citrus fruits rests not on the aggregate value of the world production and consumption, as figured in dollars, but on the dependency placed upon them by some of the other industries. All of the oils of this group—lemon, bergamot, orange, neroli, mandarin, and lime—constitute indispensable ingredients in the perfumery, cosmetic, soap, medicinal, pharmaceutical, and flavoring industries. These essential oils, moreover, are by-products, being procured from the culls and peels of fruit which otherwise might be wasted. Just as the industry is small in monetary value, so also is it small in the extent of territory included and the number of producing countries, but in the countries producing citrus fruit it is one of the leading industries.

An unfortunate feature encountered in the study of citrus oils is the lack of statistics, especially in regard to production. Even a study of the trade in these oils will not furnish a complete picture of the consumption, as the figures given will not include amounts of oils which may be shown under some other group, such as perfumery, flavoring extracts, or essences. Considerable shipments of peel and fruit also are made to countries which later manufacture the oil.

Italian Citrus-Oil Production and Exports.

Italy, where citrus fruit supplies one of the leading industries of the country, probably takes first place in the world production of essential oils of citrus fruit, and is practically the only country for which fairly accurate and complete figures are available. The total production of 889,500 kilos of the essential oils of citrus fruits for the year 1920 (the latest year for which production statistics are available) shows a decrease from the years 1918 and 1919, when totals of 1,020,000 and 1,128,300 kilos, respectively, were reached.

Of the amounts manufactured in 1920, lemon oil was the most important, 635,690 kilos having been produced. Over one-half of this was made in Messina, which city is looked upon as the center of lemon-oil production and distribution. Catania also furnished an important amount—108,247 kilos. From point of view of quantity produced, bergamot is second in importance, 111,170 kilos having been manufactured in Reggio-Calabria, which meets nearly all of the world's demand. In addition, during the year 1920, 130,449 kilos of oil of sweet orange, 8,578 kilos of oil of bitter orange, and 3,585 kilos of mandarin oil were produced. Italy's imports of oils are of minor importance. The follow-

ing table shows the Italian exports of these oils, by countries, for the latest years for which statistics are available:

Italian exports of citrus fruit oils in 1919 and 1920.

Oil and country of destination.	1919	1920	Oil and country of destination.	1919	1920
	Kilos.	*Kilos.*		*Kilos.*	*Kilos.*
Lemon oil	757,739	603,722	Orange oil	103,913	70,743
France	103,098	78,177	France	36,270	20,376
United States	313,077	317,763	United States	34,593	34,040
United Kingdom	220,385	149,325	United Kingdom	15,664	8,718
Switzerland	36,129	3,549	Switzerland	5,156	338
Australia	23,852	10,978	Netherlands	2,705	.....
Spain	9,085	199,870	Argentina	2,205	.....
Germany	7,690	.....	Mandarin oil	4,041	3,161
Argentina	6,168	5,525	United States	1,709	(1)
Bergamot oil	194,520	142,244	United Kingdom	1,083	(1)
France	93,761	71,768	France	943	(1)
United Kingdom	39,785	32,858	All other citrus oils	2,374	939
United States	37,833	19,179	United States	866	(1)
Switzerland	5,435	1,408	United Kingdom	406	(1)
Netherlands	2,987	.....			

[1] Not yet available by countries.

Beginning with July 1, 1921, Italy extended its classification of statistics, and, therefore, at the present time, statistics covering the exports by countries for the entire year of 1921 are not available. During the first six months of 1921, 324,350 kilos of lemon oil were shipped to foreign countries, of which amount 148,922 kilos were sent to the United States and 115,710 kilos to the United Kingdom. The sales of bergamot oil during this period registered a big drop, as compared with the corresponding period of 1920, equaling but 40,052 kilos, of which amount France received 15,385 kilos and the United States 11,796 kilos. On the contrary, the demand for orange oil increased, 47,869 kilos having been exported, over one-half of which was taken by the United States and one-seventh by the United Kingdom. Exports of mandarin and all other essential oils of citrus fruit also diminished. Only 853 kilos of mandarin and 81 kilos of the other oils were shipped.

During the last six months of 1921 Italy exported 313,356 kilos of lemon, 64,438 kilos of bergamot, 38,771 kilos of orange, 409 kilos of mandarin, and 184 kilos of all other oils of citrus fruit. The shipments made during the first nine months of 1922 amounted to 532,695 kilos of lemon oil, 129,096 kilos of bergamot, 84,253 kilos of orange, 2,212 kilos of mandarin, and 972 kilos of other oils of citrus fruits. It will be observed from these figures that sales during 1922 were approaching the former volumes of 1918 and 1919, and in all probability will be found to have exceeded those for 1920 and 1921.

Spanish Exports of Citrus Oils.

Although the citrus-fruit industry is one of the most important in some of the districts of Spain, especially in the Valencia and Malaga districts, statistics covering the production and trade of all the oils are not available. A special report recently received in the Bureau records the exports of orange oil to the United States for the past four years, as follows: In 1919, 6,611 pounds, valued at $14,991; 1920, 1,430 pounds, worth $6,112; 1921, 4,486 pounds, worth $9,483; and 1922, 8,497 pounds, valued at $18,046.

The bulk of the exports were sent from Valencia (the producing center) which exported 5,782 pounds in 1919, 1,430 pounds in 1920, 2,635 pounds in 1921, and 4,913 pounds in 1922. Malaga, the other port of shipment, sent 1,851 pounds in 1921 and 3,419 pounds in 1922.

Small quantities of other citrus oils may have been shipped from other ports of Spain and included under the general class of "all other essential oils."

Citrus-Oil Shipments from France and Algeria.

France is another important country in the production, consumption, and exportation of citrus oils, but no statistics are available. Valauris (15 miles from Grasse) is the center of the cultivation of the orange flowers and makes this section of the country the world market for neroli oil, considerable quantities of which are consumed by the perfumers in Grasse. Although quantities of the oil are also exported, the amounts are probably included under "volatile oils, other than rose, geranium rose, and ylang-ylang," which were exported to the amount of 990,600 kilos, valued at 356,625,000 francs, in 1920; 535,527 kilos, worth 192,790,000 francs, in 1921; and 632,553 kilos, valued at 227,719,000 francs, in 1922. In addition to these figures, terpeneless volatile oils to the amount of 9,700 kilos, valued at 10,530,000 francs, were exported in 1920; 23,320 kilos, worth 22,387,000 francs, in 1921; and 7,180 kilos, valued at 6,893,000 francs, in 1922.

Algeria has a small neroli-oil industry and during the year 1920 sent to France 90 kilos of this oil, valued at 405,000 francs, as compared with 72 kilos in 1919. It also exported 23 kilos (69,000 francs) of essential oils other than rose and geranium rose.

Citrus Oil in British West Indies and British Guiana.

The West Indies enters into the citrus-oil industry to a considerable extent. The island of Dominica, of the Leeward Islands, is one of the most important lime-producing districts. The total value of lime products exported during 1919 was £196,401, and in 1920, £185,410. The foreign shipments of essential oil of limes for the years 1917 to 1920, amounted to 45,141 pounds in 1917, 25,096 pounds in 1918, 67,787 pounds in 1919, and 58,151 pounds in 1920; while exports of otto of limes totaled 10,004 pounds in 1917, 13,676 pounds in 1918, 16,964 pounds in 1919, and 20,234 pounds in 1920. Other islands of the Leeward Island group are also producers and exporters of lime products, but no record of exports of the oil of limes is made. There has been a decrease in the production of lime products in the islands of Trinidad and Tobago, due to the general prevalence of the wither tip, or blossom blight disease.

Another island of considerable importance to the citrus-fruit industry is Jamaica. This island produces orange oil. According to the British Annual Colonial Reports, in 1921 "orange oil sold fairly well and brought in about £40,000. The small export trade in citrus fruits remained steady at the same standard as in 1920. The industry is proving of great value and is a means of getting revenue from the oranges which formerly went to waste." The previous report stated: "In 1920 orange oil sold at very high prices and a revenue of £90,000 was received by owners of the wild oranges for this product."

British Guiana has a very promising lime industry with factories producing not only concentrated lime juice and citrate of limes but also the essential oil of limes. During 1921 there were exported, among the other lime products, 544 gallons of essential oil, as compared with 326 gallons in 1919. The total exportation in 1921 was sent to the United Kingdom. In 1920 the United Kingdom received 484 gallons, and in 1919, 294 gallons. The quantities of the essential oils exported are smaller in proportion than those of the concentrated lime juice.

Beginning of Citrus-Oil Industry in Southern India.

According to a report received rather recently from Mysore State, in southern India, preliminary steps have been taken in regard to the distillation of citrus oils, such as petit grain, neroli, lime, and orange oils. These oils have not yet been placed on the market. Other tropical countries produce small amounts of citrus oils, although their trade is chiefly confined to the fruits and juices.

Imports of Citrus Oils into Great Britain.

While the United Kingdom's requirements of essential oils of the citrus fruits are rather extensive, no statistics are available. The total importations of essential oils (natural) for the years 1920 and 1921 were 3,182,447 and 2,014,325 pounds, respectively. The chief countries of origin and amounts are as follows:

British imports of essential citrus oils (natural) in 1920 and 1921.

Country of origin.	1920	1921
	Pounds.	*Pounds.*
France	316,097	173,959
Spain	251,861	125,489
Italy	639,932	436,957
United States	288,208	151,929
British West Indies	102,183	99,256

Consumption of Citrus Oils in the United States.

That the consumption of essential oils of citrus fruit in the United States is increasing is evidenced by the gain in imports. Previous to the war the imports of lemon oil did not equal 450,000 pounds, whereas in 1919 the imports were over 500,000 pounds, and in 1922 they totaled nearly 700,000 pounds. Imports of oil of limes grew from 13,000 pounds prior to the war to over 46,000 pounds in 1919. Orange oil likewise registered marked gains from approximately 80,000 pounds in 1913 to over 227,000 pounds in 1919. The United States imports of the citrus oils for consumption during the past four years were as follows:

Imports of citrus oils into the United States.

Oils and years.	Pounds.	Value.	Oils and years.	Pounds.	Value.
Lemon oil:			Orange oil:		
1919	503,758	$494,223	1919	227,453	$491,822
1920	662,565	900,914	1920	192,675	914,862
1921	642,851	578,471	1921	201,815	485,667
1922	689,520	466,034	1922	220,937	600,472
Oil of limes:			Bergamot oil:

AUTOMOTIVE PRODUCTS

M. H. Hoepli, Acting Chief, Automotive Division

SOUTHERN SPAIN TAKING TO AUTOMOTIVE TRANSPORTATION.

Consul William C. Burdett, Seville.

The use of motor vehicles in the Provinces of southern Spain is practically a postwar development, brought on by local prosperity and continuing in spite of bad roads, poor garage service, expensive fuel, and high taxation. Although the inhabitants of these Provinces are conservative and but slowly susceptible to foreign influences, and although the market at present is limited to the wealthy classes, prospects are bright for increasing sales of passenger cars and accessories. Service-station equipment is very much needed.

The outlook for 1923 has not been overgood, as the general uncertainty and weak buying market have precluded any great expansion. However, a fair business is being done; inquiries for future deliveries are encouraging, and two new agencies have been established in Seville. This is largely a hand-to-mouth market, and general business conditions are immediately reflected in automobile sales.

In spite of the many factors militating against their use, popularity of motor vehicles has grown steadily until in 1922 Seville ranked third among Spanish cities, with a registration of 2,841 motor vehicles. Among these, new passenger cars registered in 1922 alone totaled 457, and comprised 388 American, 28 German, 18 Spanish, 14 French, 12 Italian, and 2 British. One low-priced American car, assembled at Cadiz and driven the 100 miles from Cadiz to Seville, constitutes 65 per cent of the total sales; it is now selling on a partial-payment plan and has almost eliminated competition from any car approximating its price class. A few Citroens are being sold, chiefly because of French affiliations of the purchaser or other inducements not relating to merit, but no other foreign make offers serious competition.

Sales Confined to the Wealthy—Used Cars.

Operating expenses in southern Spain are said to be higher, with a few exceptions, than in any other part of the world. This is the effect of high cost of gasoline, which sells at 54 cents per American gallon (February 1, 1923), the necessary employment of a chauffeur, the lack of mechanics and garage service, and the high customs duty.

These conditions limit the sale of cars to the wealthy, chiefly for town use and for pleasure exclusively. The idea of using cars for transportation rather than pleasure grows but slowly, in spite of the recent sales campaigns of an American company assembling cars at Cadiz.

The used-car problem is not serious in Seville, owing to the fact that the cars are mostly in the hands of the original purchasers; most of them were bought during the past three years and have been driven comparatively short distances.

Poor Roads Confine Use to Cities.

In contrast to northern Spain, there are no extensive motor highways in the Seville region, and touring is usually a vexatious hardship. Many of the roads are metaled, but neither these nor the dirt roads are properly maintained and abound in rock and uneven surfaces that all but prevent motoring. Some exceptions to this rule exist—for instance, the road from Seville to Cadiz.

Interurban passenger transportation is limited by road conditions, and rurally owned motors have a usual driving range of only a few miles. In consequence, motor traffic is confined largely to the cities and environs. In Seville, the largest and a typical city, a majority of the streets are narrow and very crooked, and only half of the remainder are wide enough for two cars to pass. With the exception of 1,200 yards of asphalt, the streets are paved with cobblestones, that are mostly uneven and cause excessive wear on tires.

There is no rule on the road in Seville, except in some of the wider streets. There, traffic is required to go to the right, but on other streets traffic moves to the right or left indiscriminately. In still other parts of Spain, traffic keeps to the left.

Local Preferences in Construction.

American cars are most popular when equipped with Spanish bodies, and freak designs do not even excite curiosity. Five and seven passenger touring models predominate, but cabriolets, sedans, and coupés are growing in use. Weight is not a disadvantage, since mileage cost is secondary to the lessened vibration and jolting incident to the rough roads. Road and traffic conditions do not permit travel in excess of 20 miles an hour; therefore, high speed of a car is not a sales point.

Black paint is most desired, and nearly all American and foreign cars are of that color with a few of the latter painted gray or yellow. Right-hand drive is preferred. Wire wheels are much liked and add greatly to a car's selling value; disk wheels have not been introduced. Speedometers are in kilometers, and gasoline gauges are adjusted to read in liters.

Short wheel base is essential because of the narrow streets and very sharp corners; in no case should it exceed 130 inches, and wherever possible not over 116 inches. Dim lights are required for city driving, but bright lights are advisable outside the city limits. Loud horns are necessary on account of traffic noise, and are not subjected to regulations. Antiskid chains are not used.

Extra Equipment Aids Car Sales.

Devices for rapid adjustment of the top have no local appeal, since tops are rarely lowered. The material should be able to withstand a continued summer temperature of 120° to 130°. Front and rear bumpers should be included in stock equipment, because of heavy traffic and congested streets. Many nickeled parts are an advantage, and such attachments as spot lights, mirrors, clocks, etc., increase the appeal of the car out of proportion to the added cost.

Any extras which add to the comfort of the passenger are popular, but labor-saving devices, such as engine-powered tire pumps or patent oiling systems are unimportant to the owner, since he never personally cares for his car and is not concerned about the chauffeur's convenience. The intial cost is the owners' primary consideration, and as prospective purchasers do not yet have any technical knowledge of cars, operating costs are seldom considered.

Service Stations and Garage Equiment Needed.

Repair facilities are crude and almost nonexistent. There are no first-class repair shops and no expert motor mechanics in Seville. Repairs are made by the chauffeurs, who as a rule have no mechanical knowledge or experience; this results in an abnormal market for new parts and a further expense to the owner. An excellent opening exists for a modern garage and well-equipped repair shop. Garage equipment, such as self-measuring gasoline stations (gasoline is now dispensed in 5-liter tins) and air compressors for tire inflation, would find a market.

Factory Representative Should Appoint Agent—Direct Shipment.

Seville agents for the most part are inactive and do not push sales. The successful introduction of the more popular cars may be attributed to the live sales work in the exceptional cases where the agents go out after trade. To place an American car in this market successfully, it is essential that a factory representative make a survey of local conditions, appoint the most active agent available, and equip him with complete stocks of parts. Appointing agencies in the past by correspondence has been unsuccessful, not to say unfortunate, selections having been made which caused untold annoyance to the export department. The volume of sales depends on the activities of the agent rather than on the merits and reputation of the car itself.

Shipments of cars should be made from New York to Seville direct by monthly steamers, because of high freight-handling charges and delays at transshipment ports. Freight is charged by cubic meters or cubic feet at a varying rate, which at present is $95 on a boxed touring car measuring 320 cubic feet.

Local Activities—Market Outlook.

The Real Sociedad Automovilista Sevillana, an automobile club with 1,300 members, is an energetic and influential orangization that has done more to popularize motoring than any other factor. Its activities include road posting, the publication of excellent maps, dissemination of general automobile information, and representation of motoring interests before the legislative and other official bodies.

The good-roads program now being discussed is too indefinite to affect present sales. But after the present temporary lull is over the motor vehicle trade in Spain can be brought to a new high level by the establishment of modern service facilities, a closer adherence to local preferences in specifications, and more aggressive salesmanship.

British Automotive Foreign Trade Decreased in February.

Assistant Trade Commissioner W. M. Park, London, April 3.

British imports of motor cars and chassis in February showed a decided decrease in comparison with the January imports. The figures may be considered as somewhat disappointing to American and continental manufacturers of motor cars, in view of the fact that February usually shows a substantial increase over the first month of the year in anticipation of the heavy British buying season which begins around Easter.

British imports of motor cars during February, 1923.

Country of origin.	Complete cars.				Chassis.			
	Passenger.		Commercial.		Passenger.		Commercial.	
	Number.	Value.	Number.	Value.	Number.	Value.	Number.	Value.
Canada	1,328	£236,791	4	£1,081	291	£36,422	80	£7,593
United States	262	46,813	1	404	35	6,903	87	13,604
France	192	25,789	14	2,449	343	42,489	45	6,309
Italy	11	2,177	15	2,111	165	24,010	53	11,405
Others	16	3,519	5	1,000	16	3,349	12	2,218
Total	1,809	315,089	39	7,045	850	113,173	277	41,129

January imports totaled 2,025 passenger cars, valued at £325,690; 140 trucks, valued at £22,745; and 1,499 passenger car and truck chassis, valued at £205,564.

Export Trade Decreases.

Exports of automotive products from Great Britain during February totaled £278,459, a decrease of approximately 4 per cent from January shipments, valued at £288,588. February exports were made up of 144 passenger cars, valued at £64,678; 91 trucks, valued at £72,814; 153 chassis, valued at £74,220; and parts worth £66,757. These figures represent a decrease in exports of passenger cars and parts and an increase in shipments of trucks and chassis, as compared with January.

The leading markets were the same as in previous months—Australia, New Zealand, British India, and the Channel Islands. Twelve trucks valued at £19,056 were sent to Spain, and ten valued at £1,358 were sent to Greece.

Geneva Exhibition Indicates Automotive Trend.

Consul Lewis W. Haskell, Geneva, March 21.

Closed cars exhibited at the automobile show held in Geneva, March 16–25, attracted wide attention, as the utility and all-weather value of this type of car has been recognized during the past two years. Open four and five passenger cars, however, are still most popular, and a considerable number of low-priced models of 10 and 12 horsepower were sold during the exhibition. Two and three seaters, six-horsepower makes, also attracted much attention among people of moderate means. Few of the powerful, high-priced cars were sold.

Approximately 100 models of 47 different makes were exhibited, and attracted considerable attention throughout Switzerland. Of these makes, 26 were French, 9 American, 5 Italian, 3 Belgian, 2 British, 1 Spanish, and 1 German; their prices ranged from $600 to $12,500. While the highly polished chassis of a number of continental makes aroused considerable interest, the sectioned engine of a well-known American make, showing the complete oiling system, was the center of attraction.

The number of cars shown by the 21 representatives in the Geneva motor trade was limited by the inadequate premises, although the show was visited by 38,000 people. The authorities intend, during the coming year, to erect a much larger exhibition building with an area of 6,000 square meters, in order that many representatives of accessories, trucks, motor boats, cycles, etc., who were ruled out for lack of space, may be able to exhibit in the future.

Accessory Display Very Popular.

Well known manufacturers of magnetos, starting and lighting systems, carburetors, spark plugs, bumpers, wind-shield cleaners, etc., had exhibits that attracted considerable attention. Effective means of display were also employed by manufacturers of tires, imitation leather, and clothing for motorists.

AUTOMOTIVE DIGEST.

India—State Motor Vehicle Tax Proposed.

A bill has been introduced in the Legislative Council of the United Provinces which would impose a State tax on motor vehicles. It is claimed that the increase of motor traffic has caused great damage to all the roads of the Province, and it is proposed that the proceeds of this tax should be placed at the disposal of the board of communications for the maintenance of local roads. (Assistant Trade Commissioner C. B. Spofford, Calcutta, March 7.)

United Kingdom—Automotive Industry at High Production.

Most of the British motor-vehicle factories are continuing to produce at capacity since Easter, and prospects are good for a brisk season until Whitsuntide. Keen competition is anticipated in the future; but at present most of the large firms are securing plenty of orders, with the exception of heavy motorcycle manufacturers. Lightweight motor cycles are finding an expanding market. High-priced car manufacturers are finding a better demand for their products. The Austin Co. is supplying visitors to England with cars at the current price in the visitor's country, the car to be shipped to the main port of the purchaser's country after use in England for three months or less. (Assistant Trade Commissioner William M. Park, London, April 10.)

Denmark—Accessories Find Good Demand.

Denmark furnishes an attractive market for automotive accessories that is quite disproportionate to its estimated registration of 17,500 passenger cars and 5,000 trucks. This results from the desire of the average Danish purchaser to have all the latest devices. Most cars are provided with extra wheels and secondary wind shield, both made locally. Extra horn equipment of the bulb type is invariably used as legal regulations make the use of loud-sounding electric horns unlawful. Dashboard equipment, bumpers, wind-shield cleaners, and other chassis equipment are sold in large quantities. Tire chains, strangely enough, are used only to a limited extent, in spite of the rather moist climate. (Assistant Trade Commissioner H. Sorensen, Copenhagen, March 28.)

Austria—Automotive Industry in Precarious Position.

The boom in the automotive industry as result of inflation has ceased, and it is not likely that any improvement will take place for some time. Owing to the tightness of money, very few cars are being sold at present to first purchasers and business is confined in large part to trading used cars for new ones. The industry is forced to look to foreign markets, therefore, in order to exist; but this is difficult, because high wages, expensive raw materials, and excessive taxation hamper competing powers abroad, not to mention the import restrictions in neighboring countries. Most car and truck factories are working at reduced capacity. (Consul Carol H. Foster, Vienna, April 13.)

Brazil—Registration in Northern States.

Recent compilations by automotive interests illustrate the expansion of interior sales in the northern States of Brazil. The registration in the city of Bahia totals 365 cars, as compared with 612 in 1919, the decrease being explained partly by sales to the interior of the State and partly by abandonments. Of the number in use at present, 307 are American, 25 French, 18 German, 14 Italian, and 2 Belgian. In the State of Pernambuco 851 cars are registered in Recife and 100 in the interior. In Algoas 61 cars are in use in the capital, Macio, and 16 in the interior. In Parahybo, 71 cars are in use in the city of Parahyba, and 30 in the interior. It is reported that sales to the interior are increasing, as a result of the good roads built in connection with the irrigation projects. In Rio Grande de Norte, approximately 100 cars are in Natal, and 30 in the interior. An omnibus service will be established in Bello Horizonte, capital of the State of Minas Geraes. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, April 3.)

Canada—March Exports Reach New Peak.

Canadian automotive exports in March again touched a new high level, with a value of $3,894,638. This represents a 14 per cent advance over February shipments, valued at $3,393,100, and a 7 per cent increase over the December peak shipments, valued at $3,650,863. Passenger-car shipments during March numbered 6,426, valued at $3,228,915, as against 5,668 in the preceding February and 2,983 in March, 1922. Exports of motor trucks totaled 883, valued at $301,745, as compared with 438 in February. Parts exports were valued at $363,978, as against $196,168 in February. Australia, the leading market during March, took 2,801 passenger cars, the largest number ever shipped from Canada to any country in a single month; the United Kingdom followed, with 1,337; British South Africa, with 633; New Zealand, with 466; and British India, with 291. The leading truck markets were Australia, with 656; British South Africa, with 106; and British India, with 45. Parts valued at $103,035 went to Australia, at $79,602 to the United Kingdom, and at $49,273 to the United States.

Additional information regarding automotive products appears in this issue under the following sections:

Cable review, Far East: Improved automotive business in the Malay States.

Far East: Japanese imports of automobiles increasing.

Tariffs and trade regulations:
Mexican import duties on automobiles changed to ad valorem basis.
Changed conditions under Irish Free State automobile duties.

COAL

OVERSEAS COAL EXPORT SITUATION.

F. R. Wadleigh.

In an article on the overseas coal-export situation which appeared in COMMERCE REPORTS of March 26, 1923, the effect of the Ruhr situation on our export coal trade was discussed at some length.

Following that date, foreign inquiries and offers for our coal decreased somewhat, with perhaps a greater demand for coke than for coal. The decrease is attributed partly to the expectations of an early settlement of the Ruhr situation and partly to the increase in prices of our coal at tidewater, together with the rise in ocean freight rates. Unwillingness on the part of our exporters to give the credit asked by foreign buyers has undoubtedly prevented a number of sales.

However, additional charters are being reported every day as closed, and the prevalent feeling seems to be that with a decline in ocean freight rates as shown in the last week of April and a decrease in prices of coal from the high level of March our coal exporters will be able to secure considerable foreign business, at least for the next few months. In fact, some of the contracts already closed cover deliveries from four to six months and even longer.

United States Exports.

In the figures for overseas exports of coal and coke for the past three months, which are given below, it will be noted that the March figures show the first effects of the Ruhr occupation:

U. S. oversea exports of coal and coke, January to March, 1923.

Countries of destination.	January.		February.		March.

September, 1922	1,263,695	35,472
October, 1922	2,134,424	38,613
November, 1922	2,058,645	38,397
December, 1922	1,850,675	123,442
Total, 1922	13,448,599	456,733
January, 1923	1,448,100	77,759
February, 1923	1,136,324	70,989
March, 1923	1,619,533	97,521

From February 20 to March 12, 52 steamships were closed for the trans-Atlantic coal and coke trade. From the latter date to April 30 the total number of charters announced as closed has been as follows, all for oversea trade: Coal, 101; coke, 70. There are always some charters not made public, so that the number given is slightly less than the total number chartered.

During the last week of April there were comparatively few charters closed for coal and coke and, as a result, freight rates are declining, especially to South American ports. Rates to Rio de Janeiro and to River Plate are about $3.75; French Atlantic, $3.15 (approximately); Rotterdam and Hamburg, $3 to $3.10; west Italy, $3.80 to $3.90.

Inquiries for coke are not so numerous or urgent and there is a considerable accumulation waiting to be loaded into ships at tidewater. Embargoes on coke for export are in effect at both Baltimore and Philadelphia and the permit system is being used by the railroads in moving the coke.

Prices at ovens have become slightly easier and spot furnace coke can be bought at $6.50 per ton.

British Production and Exports.

There has been little change in the rate of production, which for the last seven weeks has been as follows:

Week ended:	Long tons.
Mar. 31	4,873,900
Mar. 24	5,703,000
Mar. 3	5,565,600
Mar. 10	5,713,000
Mar. 17	5,721,000
Apr. 7	3,941,000
Apr. 14	5,776,000
Apr. 21	5,824,900
Average, weekly, 1913	5,520,000

Owing to Easter holidays and short strikes of miners in the South Wales field, April production will show a decrease as compared with March. Production for the week ended April 21 is the largest weekly output since pre-war times. With present working conditions, British production has reached its maximum; this statement will apply to British exports also.

Ship-loading capacity is the limiting factor in coal exports and the British docks are at present worked to their capacity. This is true at the South Wales docks largely because of the refusal of the dock laborers to work three shifts; the northeast coast docks are working three shifts, but are being taxed beyond their capacity, with consequent delays to ships.

British exports (long tons) in January and February, to overseas countries, where our coals are at present competitive, were as follows:

British coal and coke exports.

Items.	1923	
	January.	February.
	Tons.	*Tons.*
Coal	5,611,070	5,992,630
France	1,385,291	1,372,062
Italy	542,118	675,298
Germany	521,354	1,000,097
Netherlands	427,206	416,934
Belgium	426,929	424,492
Argentina	207,786	196,041
Brazil	95,321	88,690
Chile	2,589	608
Uruguay	54,759	29,431
Coke	275,306	262,895
Briquets	110,818	71,226

British exports of coal to all countries in January, 1913, amounted to 6,070,318 tons, and in February, 1913, to 5,569,917 tons.

Ruhr Production Shortage Increases Coke Demand.

While it is impossible to obtain any actual figures of the Ruhr production for the past four months, indications point to a shortage of about 20,000,000 tons during that period as compared with the last four months of 1922.

This shortage has, of course, affected all of the western European countries, but especially those where coals for making coke are imported—viz, France, Belgium, Italy, Netherlands—thus increasing the demand for British coking and gas coals, and causing a rise in f. o. b. prices of the latter from 25s. to 37s. 6d. for the best Durham gas and coking coals.

The shortage in shipments of German coke to France, which totaled 4,303,324 metric tons in 1922, has also increased the general demand for coke.

In January, 1923, France imported 407,663 tons of coke; in February this had fallen to 164,577 tons, of which only 84,605 came from Germany.

Coke production in the Ruhr field is reported as about 40 per cent of normal and coal production about 30 per cent.

French Production and Imports in 1922.

According to the corrected figures that appear in the yearly report of the Comité des Houilleres, the 1922 national coal output was 31,940,000 metric tons—that is, nearly 3,000,000 better than the year before. Five-sixths of the improvement is due to reconstruction in the devastated regions, where production of the damaged mines has risen from 5,500,000 to 7,800,000 tons. National production, however, is still 22 per cent below the pre-war figure, or 30.5 per cent if Lorraine is included. Consumption in 1921 was 65 per cent that of the pre-war period and amounted to 48,700,000 tons. A sign of the industrial revival is seen in the figure 58,087,000 for 1922. The normal consumption of France (Alsace-Lorraine included) is estimated at 78,000,000, so that last year's consumption was 55 per cent of normal. The French coke output in 1922 was 744,756 tons; in January, 131,494 tons, or about 54 per

cent of pre-war production. German supplies amounted in 1922 to 4,303,000 tons, compared with a previous 3,082,000; Belgian to 487,650, as compared with 72,990 tons previously.

Total coke imports were 5,140,000 tons (3,250,000 tons in 1921); coal imports, 22,334,000 tons (17,661,000 in 1921); and patent fuel 1,422,000 tons (1,152,000 in 1921). Of these, 12,098,000 tons of coal and 138,000 tons of patent fuel were imported from Great Britain.

CABLED REPORTS FROM VARIOUS COUNTRIES.

Conditions in the various countries to which we are now shipping coal are given below in summarized form, as cabled by the commercial attaché in each country.

[Office of commercial attaché, Rio de Janeiro, April 27.]

Brazil.—Buyers holding off in anticipation of lower price. Stocks very low, probably not over 40,000 metric tons and not much in transit. Price c. i. f. for English coal is higher than for American. Cardiff First Admiralty, two-thirds large and one-third small, 51 shillings c. i. f.; Pocahontas, run of mine, $11 c. i. f. Freight rate from England, 15 shillings, little less from America; freight rate from England decline is expected, due to large River Plate demand for space and advance rates there.

[Office of commercial attaché, Buenos Aires, April 28.]

Argentina.—Coal imports 1922 were 2,221,000 tons, of which 2,134,000 were from Great Britain. Imports 4 months 1923, 830,000 tons of which 823,000 were from Great Britain. Largest coal purchases are from Great Britain; includes railways and public utility. No heavy stock carried. Most contracts specify Cardiff as standard. Higher percentage lump preferred. Prices Buenos Aires about $9 per ton. Freight rate from Cardiff 13s. 6d. Dealers stated that with lower freight rate from United State they could sell American coal. There would be return cargo of linseed for more American ships.

[Office of commercial attaché, The Hague, April 30.]

Netherlands.—Netherlands coal export trade greatly increased thus far in 1923 and outlook encouraging. Production increasing; prices high; stocks low; labor conditions very satisfactory. Total production first quarter 1923, 1,279,000 metric tons compared with 1,087,000 for similar period 1922. April output expected to equal March, which was highest for year, amounting to 44,000 metric tons. Average monthly output during 1922 was 381,000. Exports of coal and coke first quarter totaled 570,000 metric tons compared with 276,500 in 1922. Exports going principally now to France, Belgium, Switzerland, and Germany. Industries state while some increase is due to effect of Ruhr occupation, major portion are reporting permanent growth of exports. Netherlands price fluctuates with those of competitors. Quotations are usually delivery prices at main foreign consuming centers and vary considerably. Prices at mines for coal range from 18 to 23 florins per ton compared with 14 to 20 first part of year. Foundry coke is 30 compared with 25. Practically no stocks on hand. Exports are mainly by rail. Railway freight rates are high, running from 5 to 8 florins per ton to various points. Labor conditions usually satisfactory. Wages reduced 8 per cent in August, 1922; new agreement concluded during April on August basis runs to end of year. Industry calculates foreign demand on the basis of one-third total production.

[Office of commercial attaché, London, May 3.]

United Kingdom.—United Kingdom coal production week ended April 14 was 7,776,000 tons. Largest week for four years; approximately same rate of output maintained since. Export demand continues heavy. Most collieries sold out through May and very little new business being done. Congestion South Wales docks continues. Steamers reported waiting before Easter to load. March exports 7,180,000 tons; bunkers, 1,444,280 tons additional; largest export month since war. Cardiff prices slightly weaker. Best Admiralties 40s. to 42s. 6d.; best steam small, 30s. to 32s. 6d. Newcastle export prices firmer. Best Tyne steams 35; Tyne prime smalls 25. Before July only coal offered consists odd lots. Norway inquiring for 20,000 tons best Tyne steam smalls, July–September shipment. Coke prices firm; blast furnace coke 67s. 6d. to 70s., Tyne side. No strikes or other labor difficulties. At meeting of National Coal Board April 26, miners asked for raise of minimum wage and owners asked for return of eight-hour day; both refused and adjourned. Cardiff outward freight rate slightly firmer; Cherbourg, 6s. 9d.; Lisbon, 10s.; West Italy, 11s.; River Plate, 13s. 6d.; Valencia, 15s. Newcastle rates weaker; Cuxhaven, 6s.; Elbe, 5s. 6d. Glasgow to Hamburg, 5s. 9d. Homeward rates River Plate advancing steadily; 36s. to United Kingdom for middle May. Sales made in London 160,000 American coal for shipment to Germany, April or May.

[May 6.]

Coal production United Kingdom will be probably 20 per cent less this week due holiday May 1. Congestion at docks South Wales continues but being gradually relieved. Prices for export unchanged but less firm at Cardiff and firmer at Newcastle where some orders were placed for second half of year. Coking coals Newcastle especially strong, firmness Newcastle due to reports that while French are succeeding in moving increased quantities from Ruhr, coke ovens in Ruhr are reducing output to amount needful for Rhur only and miners refuse to replenish stocks; coal now being moved out. Best information available is about 70,000 tons coke moved from Germany to France in April. Total shipments now moving from Ruhr reported about 10,000 tons daily of coke, 12,000 of coal. Owing to new coke ovens starting in France, production there expected to reach 130,000 tons monthly. Normal monthly coke consumption in France 400,000 tons.

[May 7.]

Coal production and export United Kingdom normal. Prices slightly weaker Cardiff for prompt delivery and weaker generally for deliveries after June. Shipping rates firmer; ton show but little actual change. Coal and coke shipments from Ruhr continues. No authoritative figures but reported about 8,000 tons per day each. German note on reparations show no effect yet on coal market.

[Office of commercial attaché, Paris, May 3.]

France.—French mines unable to fill coal orders. No coal arriving from nonoccupied Germany, and Ruhr deliveries very small. However, situation in industrial coal has improved on account of prospects of greater deliveries from Lorraine where strike has ended. Seasonal calmness in domestic coal sizes. Practically no new supplies from Saar since first week of February because of strike. Strikers reported weakening and partial resumption of work probable in near future. Newspaper information reports total Ruhr coke stocks known 518,000 tons and coal 1,550,000. Allies said to have shipped about 30,000 tons of coal since occupation. Stocks seized by Allies in Ruhr estimated 400,000 tons of metallurgical coke and 250,000 tons of coal. In addition, approximately 140,000 tons of coke and 377,000 tons of coal seized Berne-Rhine canal. Shipments to Allies were consolidated and division made for France and Belgium. Newspaper information reports coke sent from Ruhr to France and Belgium up to April 23 was 100,000 tons. Minister Public Works declares shipments of 10,000 tons of coke daily will be established shortly. Tonnage of coke announced now coming forward at over one-third rate of delivery under reparations account. Principal difficulty is lack of loading and transportation facilities. Metallurgic and foundry coke base price Société des Cokes de Hauts Fournaux for April 198 francs and supplementary supplies 310 francs. Because of shortage in Société deliveries, only 20 per cent of members' requirements are furnished at base price.

[Office of commercial attaché, Berlin.]

Germany.—German imports during March amounted to 3,400,000 metric tons of coal, against 1,400,000 tons in February, and a monthly average of 1,050,000 tons during 1922.

Subsidies for Production and Transportation of Spanish Coal.

Consul Frank Anderson Henry, Barcelona, March 26.

By a royal decree of March 17, 1923, the Spanish Government has set forth in detail a new schedule of subsidies which will be paid for the production and shipment of coal. There will be, as a maximum, a general bounty on production of 2.50 pesetas per ton and allowances for transportation varying from 2 to 7 pesetas per ton. The total monthly payments on these accounts can not exceed 1,250,000 pesetas, and if production in any month is in excess of the quantities

calling for such expenditures at the maximum rates a proportional reduction will be made on all payments for the period in question.

In the exposition setting forth the purposes of the decree it was mentioned that various succeeding governments have recognized the necessity for State support of the national coal-mining industry, on account of the critical phases through which it has passed since the war. The present decree which substitutes new rates for those paid under the terms of the royal decrees of November 22, 1922, and January 5, 1923, represents an endeavor to make the protection accorded by the State more general in its terms and to meet the aspirations of coal producers in the different Spanish coal fields.

[A translation of the text of this decree, transmitted by Consul Henry, may be examined at the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by referring to file No. 91341.]

American gas coal has slight advantage in Italian market.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

BRITISH BROADCASTING SITUATION.

Recent developments indicate that a strong effort will be made to relieve the amateur radio operator in Great Britain from having to pay the proposed increased license fee, as well as from having to buy this apparatus exclusively from the British Broadcasting Co. It seems likely that some radical steps may even be taken to break the present monopoly, although this will not necessarily mean the removal of the bar against foreign-made parts.

Press reports from Great Britain show the attitude of the new Postmaster General to be less sympathetic than that of his predecessor toward the present monopolistic arrangement. As in the United States, there are a great many people who want to make up their own sets, utilizing a certain number of manufactured parts. At the present time these users can only be issued experimenter's licenses, but after receiving such a permit they can utilize any kind of part or set they see fit. Such a license thus takes them out of the control of the British Broadcasting Co., the assumption being that they are engaged in experimental work rather than listening in on broadcasted concerts.

The Radio Manufacturers' Association suggests, as a remedy for the present state of affairs, the scrapping of the method now provided for obtaining revenue by licenses and royalties and collecting the whole amount necessary to supply the broadcasting company an adequate revenue from the license fee, with tightened restrictions against the so-called "pirate."

According to statements made in Parliament, 35,385 experimental licenses have been issued and almost that many new applications are waiting action. In addition, it is conservatively estimated that there are 200,000 persons using sets without licenses because they can not get the license they want.

It is probable that the attitude of the post office department will continue to be that radiotelephone apparatus must be manufactured in the United Kingdom. It is evident, however, that a simplification of the whole radio situation in England is necessary in order to provide a fair chance for development.

45712°—23——3

Market for Electrical Equipment at Bergen.

Consul George N. Ifft, Bergen, Norway, April 14.

Power-plant equipment and supplies are in good demand in the district around Bergen, Norway. In the districts of More, Sogn og Fjordene, and Hordaland, there are 664 power stations with a total generating capacity of 279,885 kilowatts. During the year 1922, 52 new stations were installed.

Supplies for these stations are imported from Germany, Sweden, England, and the United States. They are also made locally at the Norwegian plants of two German companies and one American concern. For some time past German houses have obtained most of this business, the keen competition offered by them being hard to meet. Recently this situation has changed, and there now appears to be an excellent opportunity for American manufacturers to secure a good share of the available business.

The important plants in the Bergen district are municipal, or to a considerable extent municipally controlled, and make their purchases through local commission agents or upon bids received from Norwegian representatives of foreign firms.

[A list of Bergen commission agents interested in electrical equipment and supplies has been furnished the bureau by Consul Ifft and may be obtained from the Electrical Equipment Division directly or through any of the bureau's district or cooperative offices by referring to file No. 91960.]

Lighting Fixtures in Demand in Mexico.

Warren Ullrich, clerk to trade commissioner, Mexico City.

With electricity in general use for illumination throughout Mexico the market for electric-lighting fixtures is extremely good, especially in Mexico City and other centers of population in the Republic

The demand for American-made lighting fixtures is gradually increasing as a result of improvement in the public taste for articles of this kind. The tendency to use gaudy fixtures still holds among certain classes of the population, but the high-class American product is coming into greater demand among the wealthier people, who are more interested in the quality of a product that in its price.

Cheap electric-lighting fixtures are imported from Germany and are also manufactured locally to some extent by German houses. They are inferior to

American fixtures both in quality of material and in workmanship. The German houses offer terms of payment more advantageous than do the importers of American material, but the latter have a distinct advantage in that they can make quicker deliveries on the American product than can be made by their foreign competitors.

Central Stations in Great Britain.

A total of 536 public-service generating stations in Great Britain is shown by the report of the Electricity Commission for the year ended March 31, 1922 (published March, 1923). Of these, 366 utilized steam as a source of power, 55 producer gas, 47 oil engines, and the remainder other means, including water power. Only seven stations depend exclusively upon water power, the largest of which produced 18,763,000 of the total of 29,107,000 kilowatt-hours generated from this source.

The total electric power generated during the year amounted to 4,884,666,038 kilowatt hours, of which steam supplied power for approximately 97 per cent.

[The complete report is available for loan to firms interested, upon request to the Electrical Equipment Division of the Bureau of Foreign and Domestic Commerce, Washington, D. C., or through any of the bureau's district or cooperative offices, by referring to the miscellaneous exhibit No. 306.]

Electrical Trade Notes.

Mining Companies Secure Water-Power Rights.

Two mining companies have applied for the right to use the falls of Song Nam, French Indo-China, for the purpose of generating 14,000 horsepower to be used in mining, according to cable advice from the American consul at Saigon.

Australia to Manufacture Cable.

Erection is well advanced at Port Kembla, New South Wales, of a factory for the production of telephone cable, and it is expected that the new plant will be placed in operation by June of this year. It is claimed that the product will equal anything which has been imported, and it is hoped that this local source of supply of telephone cable will relieve the serious delay now existing in meeting requirements for telephone extension. (Melbourne Herald, Melbourne, Australia, March 15.)

Penang Electric Plant and other Improvements Reported.

Tenders are being called for, through the Crown agents, on an electric-light plant for the city of Penang and the new Prai docks, according to the American consul at Penang, Straits Settlements. It is reported also that Crown agents are calling for bids covering new telephone equipment for Penang.

Proposal for Greek Telephone System.

Proposals have been made by a Belgian telephone-manufacturing concern, called "New Antwerp," for the reconstruction of the Greek telephone system, according to Consul John G. Erhardt, of Athens. The cost of the work is given at 65,000,000 drachmas ($722,222 at 90 drachmas to $1). It is provided that the work is to be completed within two years after contracts have been signed. The proposals provide for the conversion of the present overhead lines into an underground cable system, with modern exchanges and the linking of Athens, Piræus, and Saloniki, together with points in the interior, into a unified system.

Italian Telephone and Telegraph Developments.

Accomplishments of the Italian Ministry of Posts and Telegraphs during 1922, according to the report of the Director General of Electric Services, include expansion of the internal and foreign telegraph and telephone services, development of new radio communications, and the application of new telephone and telegraph methods and systems. Poles were set along 500 kilometers of railway lines, and 7,000 kilometers of bronze wire were strung; telephone and telegraph wire amounting to 3,720 kilometers was replaced; and simultaneous telegraph communication over 10 telephone circuits was put into service. On many important telegraph lines the operating equipment was changed, resulting in economy both as to personnel and operation. (Consul H. Earle Russell, Rome, Italy, March 27.)

Additional information regarding electrical equipment appears in this issue under the following sections.

Foreign trade opportunities Nos. 6362, 6413, 6430.

RUBBER

P. L. Palmerton, Chief, Rubber Division

RUBBER PRODUCTS.

MARCH FIGURES HIGHEST SINCE END OF 1920 BOOM PERIOD.

E. G. Holt, Assistant Chief, Rubber Division.

During March, exports of rubber products from the United States reached the highest point since the close of the 1920 boom period, the total value recorded by customs officials being $4,316,176. Seasonal activity in the tire trade in the Northern Hemisphere is largely responsible for this showing. The exports for the corresponding month in 1922 were valued at $3,524,785, which was the record month during that calendar year. Price increases in the domestic market, resulting from higher raw material costs, have been applied to export sales only in a few minor classes. Closer attention to export business has had considerable influence on our constantly increasing volume of exports. Gradually improving economic conditions in many of our foreign markets is reflected in increasing motor car registrations and increased business activity, all of which means that export markets for each class of rubber goods are constantly expanding. In the nine months ended March, 1923, United States exports of rubber products were valued at $27,274,663 as compared with $21,785,696 in the corresponding period of 1922.

A comparison of units and values of automobile casings exported shows that the average value of tires has

steadily declined since the beginning of 1922, and the unit value in March, 1923, represents the record low level in export tire prices. The value per casing during the first quarter of 1922 was $19.94; second quarter, $13.99; third quarter, $11.84; fourth quarter, $11.65; first quarter of 1923, $10.99; and March, 1923, $10.59. The following table shows the corresponding average values for other classes of products:

Average prices of certain rubber products exported.

Articles.	1922				1923	
	First quarter.	Second quarter.	Third quarter.	Fourth quarter.	First quarter.	March.
Rubber boots.....pair..	$2.78	$2.82	$2.52	$2.37	$2.67	$2.97
Rubber shoes.....do....	.92	.85	.80	.90	.83	.82
Canvas rubber-soled shoes.do....	.84	.77	.81	.77	.75	.75
Druggists' rubber sundries .....pounds..	1.13	1.11	1.12	1.00	.95	.88
Battery jars and accessories .....pounds..	.25	.38	.41	.24	.41	.35
Automobile tubes.....each..	2.21	1.96	1.73	1.77	1.65	1.65
Solid tires for autos.....do....	31.15	26.64	29.31	25.66	23.79	24.32
Rubber belting.....pounds..	.52	.49	.48	.48	.51	.50
Rubber hose.....do....	.41	.36	.38	.43	.37	.38
Rubber packing.....do....	.49	.45	.47	.48	.48	.51
Rubber soles and heels....do....	.50	.41	.37	.38	.36	.35
Rubber thread.....do....	1.22	1.16	1.10	1.02	1.05	1.03

There was a general downward tendency of prices during 1922, reaching the lowest level in the last quarter, except in the case of rubber shoes, hose, and packing. During the first quarter of 1923 rubber boots, battery jars and accessories, belting, and rubber thread evidenced strengthening prices, while noteworthy price declines were registered for all classes of tires, canvas rubber-soled shoes, druggists' rubber sundries, hose, and soles and heels. The following table shows the steadily increasing volume of quarterly exports during 1922 and the first quarter of 1923, the increases being especially marked in those classes showing price decreases. The export demand for American rubber products seems to be, roughly speaking, inversely proportional to the market price.

Volume of United States exports of rubber products.

Rubber thread.....do....	244,702	262,964	264,717	301,184	203,221	79,788

The leading markets for industrial rubber goods during March were British South Africa, Mexico, England, Chile, Cuba, and Canada. Markets of secondary importance were Japan, China, Argentina, Brazil, Panama, France, Philippine Islands, Australia, Peru, British India, Norway, and Holland. Details of exports, by countries, for any class of rubber products will be furnished upon request.

Michelin Price Reduction in Holland.

Acting Commercial Attaché Samuel H. Cross, Brussels, April 6.

It is noted that most of the price reductions made by Michelin have been in high-exchange countries. Holland should be added to this list of countries, a 15 per cent cut having been made since January 1. Notwithstanding this cut, Michelin is getting 100 francs more on a medium-sized tire sold in florins in Holland than for the same article in Belgium. Dunlop and Peters Union have both met Michelin prices in Holland. No change has been made in Belgium since the December increase, and it is believed that as long as the present spread between the French and Belgian franc, to the detriment of the latter, amounts to as much as 16 in 100, no reduction is likely, and if this spread increases an advance is more probable.

Rubber Trade Notes.

Tire Market Well Stocked in Panama.

No metric-sized tires are used in Panama. American makes of tires are without competition. Most dealers have considerable stocks of tires on hand. (Consul George Orr, Panama, April 9.)

Tire Price Reduction in Austria.

On April 25 a tire price reduction of 10 per cent on tubes and 20 per cent on casings was instituted by Michelin in Vienna. (Cable from Trade Commissioner William F. Upson, Vienna, May 3.)

Tire Prices Unchanged in France.

No changes in tire prices have occurred in France since December 23, 1922. The fall in the exchange value of the franc in January has been injurious to American exporters represented here. (Consul Hugh H. Watson, Lyon, March 31.)

Tire Situation in Florence, Italy.

Michelin gets about 65 per cent of the tire trade of Florence, Italy, Pirelli 20 per cent, and Dunlop and two American firms divide the remaining 15 per cent. The usual trade discount to dealers is 20 per cent; small discounts of 5 to 7 per cent are allowed consumers. American tires are highly regarded by automobilists, although they are somewhat more expensive owing to adverse exchange rates, transportation charges, etc. (Consul W. Roderick Dorsey, Florence, March 31.)

Rubber Heels for South Africa.

Most of the rubber heels sold in South Africa are of British manufacture, although large quantities are made locally and sold at slightly lower prices. The market is promising, but advertising is neglected. The natives, who in general are poor, are among the best buyers, since it costs less to put the cheapest grade of rubber heels on a pair of boots than it does to use leather. The best sellers are medium-priced round heels, which bring about 6s. per dozen wholesale. (Rubber Age, London, January, 1923.)

CRUDE RUBBER.

RUBBER PRODUCTION IN CEYLON.

Consul Marshall M. Vance, Colombo, March 20.

A maximum of 36,020 long tons of Ceylon-produced rubber may be exported from the island during the year ending October 31, 1923 according to an announcement by the Rubber Controller for Ceylon. The amount is well below shipments for the past four calendar years. Exports for 1922 were 46,694 long tons; 1921, 39,341 tons; 1920, 39,532 tons; and 1919, 46,081 tons.

The above statistics are misleading, however, and the actual decrease in exports for the year ending October 31, 1923, will not be as great as it would at first appear.

Shipments in 1922 were well above normal. Exports of Ceylon-produced rubber for the first eight months of 1922 totaled 27,640 tons and had this rate continued throughout the year the export figures for 1922 would have been 41,450 tons. When restriction was first broached, tapping and manufacturing operations were begun at a feverish rate, and exports from September 1, 1922, until restriction went into effect on November 1, 1922, were record breaking in quantity, thus bringing the year's total well above what it would have been had restriction not gone into effect.

The rubber restriction scheme is primarily for the purpose of lowering production and exports. That the exports of Ceylon-produced rubber have not been reduced may be readily seen from the following table which shows shipments by months:

Exports of Ceylon-produced rubber from Colombo.

Period.	Long tons.	Period.	Long tons.
November, 1921	3,049	November, 1922	4,083
December, 1921	4,377	December, 1922	4,095
January, 1922	3,812	January, 1923	4,635
February, 1922	3,162	February, 1923	3,417
Total	14,400	Total	16,230

This shows an increase of shipments under the restriction period of 1,830 tons.

There were about 11,000 tons of unrestricted rubber stored in Colombo on October 31, 1922. It is impossible to compute from statistics on hand how largely this stored amount entered into the increase of exports during the past four months.

About one-half the rubber production of South India is sold on auction in Colombo, and 2,282 tons of an estimated production of 5,000 tons were so sold in 1922. Production in South India is unrestricted. It is estimated by various experts that between 10,000 and 15,000 tons will be produced in South India during 1923.

It is believed that, under restriction, exports from Ceylon for the year ending October 31, 1923, will probably exceed those for the calendar year 1922. This belief is based on the following statistics:

	Tons.
Exports of Ceylon-produced rubber, 1922	46,694
Exports permitted under restriction scheme for year ending October 31, 1923	36,020
Possible exports of unrestricted stocks on hand October 31, 1922	11,000
Total	47,020
South India rubber exported through Ceylon, calendar year 1922	2,282
Estimated for year ending October 31, 1923	7,000

This conclusion is also supported by the fact, previously noted, that 1,830 tons more rubber was exported from November 1, 1922, to February 28, 1923, than in the same period of the preceding 12 months.

PLANTATION RUBBER IN BRITISH MALAYA.

The 14th annual report of the Council of the Rubber Growers' Association (Inc.), of London, shows the following statistics covering 515 companies and 6 trust companies operating under the association in the Far East:

Companies operating in—	Authorized capital.	Issued capital.	Acreage owned.	Rubber acreage planted or interplanted.
Malaya (288)	£46,701,364	£38,256,594	968,042	664,871
Ceylon (98)	19,091,079	15,834,772	388,730	145,096
Sumatra (42)	17,566,900	11,540,579	535,145	192,133
Java (38)	8,019,500	6,717,398	373,309	102,514
Dutch miscellaneous (2)	265,300	229,543	33,294	4,930
India (15)	2,244,000	2,103,027	73,548	36,898
Burma (8)	840,150	636,328	18,259	13,486
Borneo (21)	3,366,940	2,668,373	158,971	38,018
Other countries (3)	156,850	139,136	12,544	4,072

STANDARD PRODUCTION FOR BRITISH MALAYA.

Consul Renwick S. McNiece, Penang, Straits Settlements, March 10.

The standard production of rubber in the Federated Malay States has been assessed at approximately 150,000 tons, according to the Controller of Rubber Exports of British Malaya. Beginning February 1, 1923, a further concession was granted the small holder, raising his standard production from 320 to 426 pounds per acre annually. The latter figure, however, applies to the first 5 acres of holding under 25 acres in extent. This concession increases the standard production of the Federated Malay States approximately 10,000 tons, making the total about 160,000 tons.

While complete figures are not available for the Malay States not in the Federation it is estimated that the standard production, based on figures for the first quarter, will be 72,000 tons. The concession to small holders will increase this figure to about 78,000 tons.

For the Straits Settlements the estimated standard production is 29,000 tons. The islands of Singapore and Penang are excluded from the operation of the restriction scheme. The cities of Singapore and Penang have been built upon a tradition of free trade. The islands' production is not large, and instead of an export tax, an assessment has been levied on every tappable rubber tree on the islands.

For the whole of British Malaya the statistics show a standard production of 267,000 tons. At present this is subject to 40 per cent restriction which leaves 160,200 tons for export. This total is, of course, subject to revision upward dependent on the price of rubber. While the revision is not dependent on any fixed price, it is understood that when the average price for a quarter is maintained at 1s. 3d., there will be a release of an additional 5 per cent, making the restriction figure 65

instead of 60 per cent. Similarly when the price has been maintained at 1s. 6d., an additional 5 per cent will be released. For the quarter February 1 to May 1 the percentage was 60, but up to the middle of that quarter the price of rubber was well above 1s. 3d. and should it continue a release of an additional 5 per cent for the period May 1 to August 1 is expected. One well-known group of estates in Malaya is estimating its crop on the basis of 70 per cent of standard production for the later months of the year. Assuming an increase of 5 per cent in the exportable allowance for the months of May, June, and July, and a further 5 per cent for the remainder of the year, the amount of rubber available for export from British Malaya during 1923 would be approximately 175,000 tons.

During 1921, 169,429 tons of rubber were exported from British Malaya, according to official returns, as compared with 248,131 tons during 1922.

Additional information regarding rubber appears in this issue under the following sections:
Cable review, Far East: Malay rubber market dull.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

MARKET FOR AMERICAN MACHETES IN MEXICO.

Assistant Trade Commissioner John P. Bushnell.

With any resuscitation of the sugar industry in Mexico, as proposed by the Mexican Government, the market for long knives and machetes will materially increase. The sugar industry and other branches of agriculture which use these articles declined so much during the years of the revolution and up to 1921 that the market for these implements was practically nonexistent.

American machetes have been popular in Mexico and have held their market in the face of some European competition. The American tool is said to be better balanced than the European products, and of a superior quality of steel. Machetes are usually sold without the scabbard, as that part of the tool is seldom used by the worker in the field. The blade should be tipped in blue or red paint, not only to preserve the edge and point, but to make it more attractive to the purchaser. This seems to be characteristic of the most popular makes. The machetes come with the handle attached, which is usually of plain wood with a knobbed end to give more of a grip in yielding.

The trade is generally confined to the hardware houses, which act as jobbers and make distribution direct or through their travelers who cover the agricultural districts and the large haciendas. The machete is used in Mexico not only in the harvesting of sugar cane but in the cultivation of the maguey plant, hennequen, and other fibers, and in the chicle and forest industries.

Manufacture of Agricultural Machinery in Russia.

This article is taken from the Moscow Biednota. The Bureau assumes no responsibility for the accuracy of the statements contained therein.

In order to promote the manufacture of agricultural machinery the Soviet Government in 1921 assigned 35 factories with 13,060 workmen to the production of implements. The pre-war output of these factories, among which are included the Lubertsy Works near Moscow, Helferich and Sade in Kharkoff, and the Zaporozhskaya group in the Ukraine, was estimated at 32,000,000 gold rubles. In 1921–22 it was planned to produce 1,855,972 poods (1 pood=36.11 pounds) of agricultural machinery and implements, valued at 8,865,900 gold rubles. The actual production, however, reached only 973,805 poods, amounting to 5,569,281 gold rubles. Shortage of funds and of fuel and the reduction of the working force to 70 per cent of what had been planned were the causes of the failure to attain the production that had been contemplated. Some articles, however, were manufactured in larger quantities than planned. The output of repair parts was 9 per cent above the original amount called for; that of sickles, 33 per cent; threshers, 2½ per cent; and hay presses, 3½ per cent.

The program of the Chief Administration for Manufacture of Agricultural Machinery for 1923 calls for a total production of 3,305,089 poods, which would be 61 per cent of the pre-war output, and valued at 19,650,000 gold rubles. This would also be 245 per cent greater than the 1922 production. The program calls for the following: Plows, 212,000 poods; harrows, 25,400 poods; drills, 17,200 poods; scythes, 1,335,000 poods; sickles, 530,000 poods; and repair parts, 305,700 poods.

Plans for Manufacture of Russian Tractor.

The latest model of the Gnom tractor (a Russian tractor invented by T. Mamin) is equipped with a 16-horsepower oil engine and is of very simple construction. These tractors can be sold at cheap prices when made in large quantities, and therefore the People's Commissariat of Agriculture has allowed 130,000 gold rubles for the purchase abroad of the necessary machinery. The Balakov factory in Samara Province has been selected for production of these tractors, and it is expected to turn out the first tractors within six months after the installation of the machinery. The output for the first year is expected to be 150 tractors and ultimately from 240 to 300 a year will be manufactured.

Implement and Tractor Notes.

Implement Industry in Hanover.

In Hanover, Germany, during the last quarter of 1922, there existed a domestic demand for agricultural implements, which resulted in all of the factories being actively engaged until up to the last four weeks of the year, after which period the output had to be placed in stock. This was the result of the high prices then being quoted. There was no export demand, as prices were above those of the world's markets. The prices obtained on the domestic market were barely sufficient to cover the increased cost of production and not enough to permit of the purchase of equivalent amounts of raw materials. Since most of the farmers

have already supplied themselves with sufficient quantities of machinery and implements, it is questionable if the plants will be able to continue operating at capacity. (Consul F. R. Stewart, Bremen, March 6.)

Market for Implements in Mexico.

The first favorable crop since 1914 has recently been reported from the Saltillo consular district. This is expected to create a renewed demand for implements. Little machinery has been purchased in the past 10 years, and most of that which was available for the 1914 crop has been stolen or destroyed. The balance has been allowed to deteriorate to such an extent that it is practically worthless. Some of the implements that will be needed in this district are binders of the right-hand, 6-foot cut type and threshers of the small or medium-sized types. These types are preferred on account of the unfavorable road conditions, which make it more economical to haul this type from place to place. In many cases after threshing the straw is baled and used for forage, and the farmers require the removal of some of the shakers from the separator in order to reduce the breakage of the straw in the process of the separation of the wheat. (Consul Fred R. Robinson, Saltillo, April 11.)

Pumps Operated by Water Wheels in South Africa.

Although pumps are used rather extensively in South Africa, there are few places where they can be economically operated with water wheels. Most of the larger rivers have too flat a slope to allow of a sufficient head or fall to be obtained, except at a considerable cost. There are minor instances where a water wheel might be used, but in such cases the source of water power would also be the source of supply to the pumps, and there would be the further drawback that only a portion of the whole flow could be pumped. In the Province of Natal, where the land slopes fairly abruptly to the sea, there are a number of minor falls where a few water wheels are used for operating farm machinery, grinding mills, and pumping water to storage reservoirs. All of these wheels have been manufactured by the Marianhill mission station at Marianhill, Natal. (Consul Charles J. Pisar, Cape Town, March 7, 1923.)

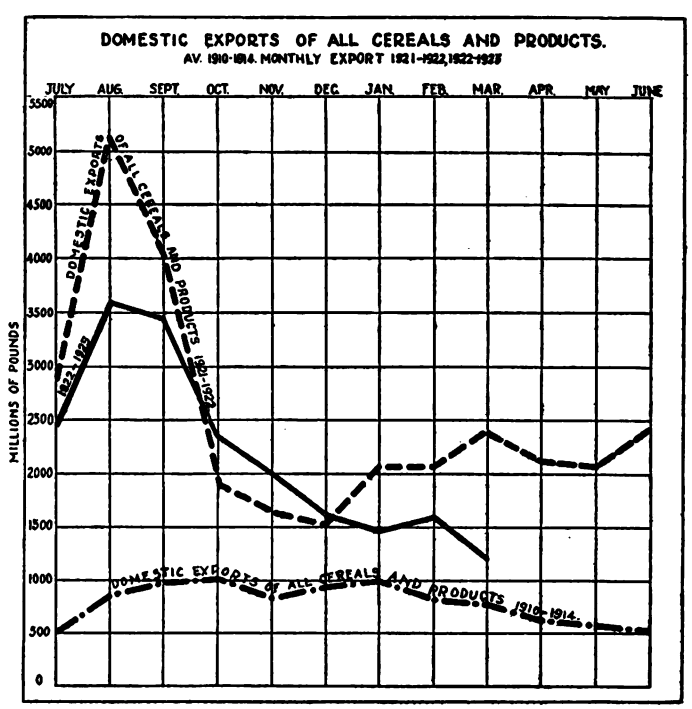
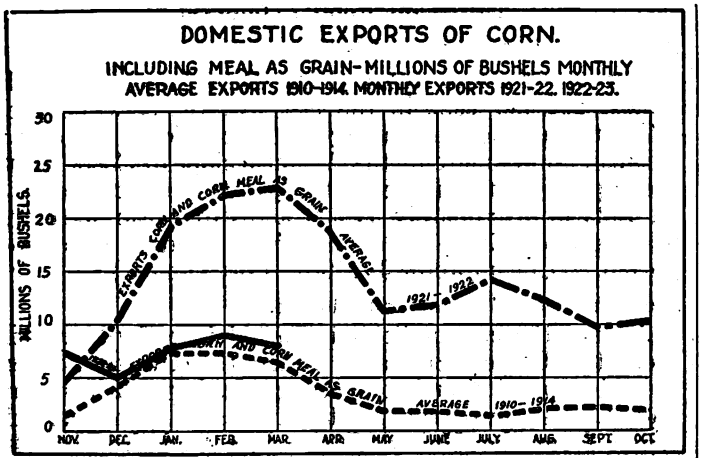
FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

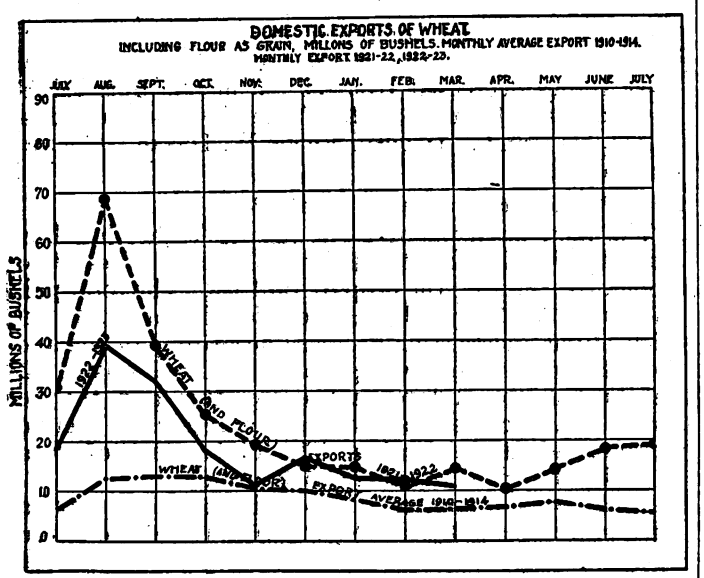


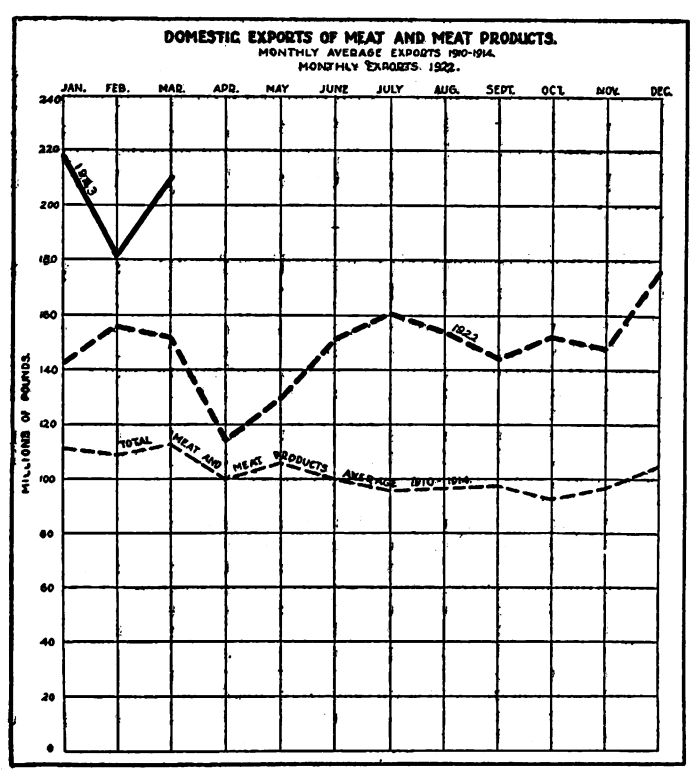
TREND OF UNITED STATES EXPORTS OF FOODSTUFFS.

The accompanying table and charts show in condensed form the principal trends in the foodstuffs export trade for the month of March and the nine months ended in March.



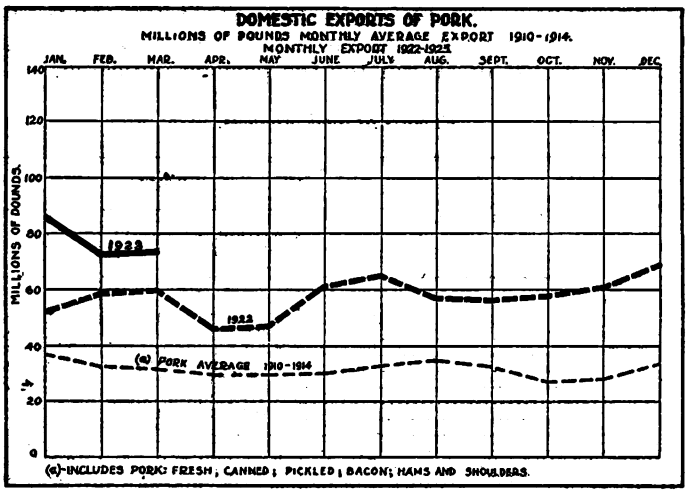
The domestic exports of all cereals during this period may be briefly summarized by pointing out that

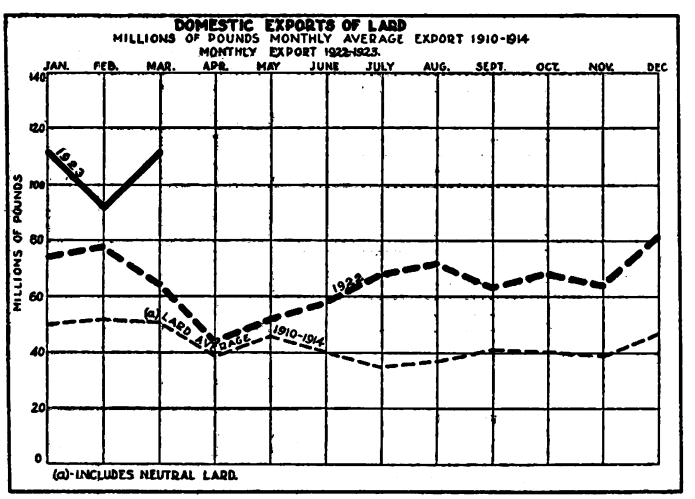


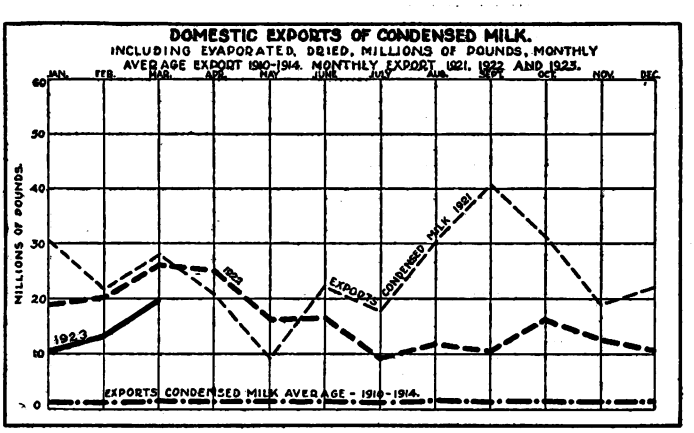


for the third quarter of 1922 (July, August, and September) exports were considerably below those of the preceding year; for the fourth quarter, however, they were somewhat higher, but for the first quarter of 1923 they are again much lower than for the previous year. The decrease is largely accounted for by the

decreased exports of corn. During the first three months of 1922 these exports averaged 21,371,306 bushels per month, while for the first quarter of 1923







exports have been about 7,787,249 bushels per month. Wheat exports for the first quarter of 1923 have remained about the same as for the year before, while exports of rye and oats have somewhat increased.

Exports of meat and meat products show a marked increase over the previous year, averaging for the first

quarter of this year about 203 million pounds per month, as compared with 150 million pounds per month for the first quarter of 1922. The increase is largely made up of exports of lard and cured pork products.

The exports of all products are still above the pre-war average for the same period.

In terms of value, the exports of the principal agricultural products have been somewhat higher than the year before. For the past six months, however, there has been a downward trend, which is due in part to the seasonal trend and in part to decreased exports of certain commodities, such as sugar, cotton, and corn.

The following table shows the exportation of foodstuffs of various classes during March and the nine months ended in March for the periods indicated.

Exports of food products.

[1] Includes evaporated and powdered milk.

Notes on Food Products.

Cacao Exports from Costa Rica.

Export of cacao from Costa Rica have increased almost 200 per cent in the last five years, while the estimated acreage in bearing has increased 75 per cent. The soil and climate of the Atlantic slope of Costa Rica are especially favorable to the growing of this crop. In 1922 approximately 17,500 acres of cacao were in bearing and 5,994,240 pounds of the product were exported. (Consul John J. Meily, Port Limon.)

Swiss Imports of Sugar and Glucose.

Among the commodities imported into Switzerland from the United States in which the United States gained ground from competitors during 1922, sugar and glucose were the most important. Imports of sugar from the United States increased from 4,883 metric tons, valued at 6,613,000 francs in 1921 to 35,975 metric tons valued at 20,496,000 francs in 1922. During the same time the combined imports from Czechoslovakia, Belgium, the Netherlands, and the Dutch East Indies decreased from 59,469 metric tons valued at 85,220,000 francs to 34,187 metric tons valued at 17,777,000 francs. (Consul Lewis W. Haskell, Geneva, March 19.)

Final Payment on Australian Wheat Pool.

The final payment of 2.4 cents per bushel has been made by the New South Wales Voluntary Wheat Pool Committee, closing the crop of 1921–22. The total paid amounts to $1.149 per bushel, less freight, or $1.046 net, with slight increase or decrease according to distance from Sydney. The average price realized was $1.223 per bushel, the difference between this and the net figure covering the total expense for receiving, freight, storage, and administration. The total amount of wheat placed in the pool was 22,785,559 bushels.

An agreement similar to the one in force last year has been entered into by the New South Wales Voluntary Wheat Pool (Ltd.), now a domestic corporation, and the Commonwealth Government and Commonwealth Bank for the handling of this season's harvest. The silos recently completed by the New South Wales government have been leased to the pooling company and have begun to receive wheat. The quantity of wheat received by the pool during the current season, up to February 1, 1923, was 11,156,805 bushels, of which 4,545,042 bushels were placed in the silos. (Consul Romeyn Wormuth, Sydney.)

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Latin America: Exports of cacao and coffee.
Cable review, western Europe: Sugar stocks in Italy.
Chemicals: World trade in essential oils of citrus fruits.
Industrial machinery: Mauritius as a market for sugar-mill machinery.
Foreign trade opportunities Nos. 6339, 6340, 6341, 6342, 6343, 6344, 6345, 6346, 6347, 6348, 6349, 6350, 6351, 6352, 6353, 6354, 6355, 6356, 6366, 6376, 6399, 6425, 6435.
Tariffs and trade regulations:
New Argentine export duties on various cereals.
Danish import duties on cigars increased.
Danish import duties on certain foodstuffs increased.
Prohibition of fresh-meat exports from France.
French tobacco monopoly in Alsace-Lorraine.
Tobacco imports under new Irish Free State tariff.
Removal of Italian import duty on sugar.
Decrease of Rumanian export duty on walnuts.
Turkish import duty on rye increased.
Amendment to British Guiana regulations regarding condensed milk.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF.

New Zealand Hemp Production Maintained.

Hemp graded in New Zealand amounted to 60,490 bales in 1922 as compared with 60,443 in 1921. The quantity of tow graded in 1922 amounted to 15,071 bales as against 12,697 bales in 1921. (Consul K. de G. MacVitty, Auckland, February 15.)

Piassava-Fiber Exports from Brazil Grow.

Exports of piassava fiber from Bahia during 1922 amounted to 6,060,800 pounds, against 4,019,700 pounds for the preceding year. The bulk of the crop was shipped to England, only 885,000 pounds going to the United States. (Consul Thomas H. Bevan, Bahia, March 1.)

Decline in South Italian Silk-Cocoon Production.

Southern Italy, including Sicily, is now producing only between 2,000 and 3,000 tons of cocoons annually, while the total production of Italy amounts to about 45,000 tons. The decadence of cocoon raising in southern Italy is attributed to heavy immigration which has brought about a shortage of agricultural labor. (Consul Leon Dominian, Rome, February 7.)

Cotton Development in Pernambuco.

A credit of 400,000 milreis has been opened by the State of Pernambuco to establish a cotton-development service, and the Federal Government has been requested to place an equal amount at the disposal of the State in accordance with the provisions of Federal law 4632 of February 6, 1923. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, Brazil, February 21.)

Market for Felt Hats in Shanghai, China.

The use of felt hats in Shanghai is not limited to the foreign male population but is increasing among the Chinese men who in their occupations come in contact with foreigners. In 1919 the imports of felt hats of all kinds into Shanghai totaled 17,064 dozen, compared with 24,204 dozen in 1920 and 35,853 dozen in 1921. (Consul James P. Davis, Shanghai, March 5.)

Brazilian Cotton Exports Gain.

Although the total amount of cotton shipped from the port of Recife, Brazil, was practically the same in 1922 as in 1921, foreign shipments showed an increase of 1,606 metric tons, having advanced from 3,413 metric tons in 1921 to 5,019 metric tons for 1922. England took 53 per cent of the total and Portugal 30 per cent, small quantities going to France, Netherlands, Italy, and Belgium. (Consul C. R. Cameron, Pernambuco, February 23.)

Italian Cotton-Goods Export Market.

Export markets for Italian cotton goods are growing. An increasing market in France is noted, but Italian mills are suffering from a lack of orders from the Balkan and Near Eastern countries. It is expected that the ratification of the treaty of Santa Margherita will enable Italian cotton manufacturers to increase the volume of their trade with Yugoslavia. (Consul Leon Dominian, Rome, February 7.)

Shantung Silk Crop a Failure.

According to reports received from private sources throughout the silk districts of the Shantung Province, this year's crop of wild-silk cocoons is a failure. The approximate yield is estimated at 20 per cent of normal and practically 50 per cent less than last year's. This year's failure is attributed to adverse climatic conditions and diseased silk worms. (Chinese Government Bureau of Economic Information, Shanghai, March 10.)

Austrian Textile Crisis Continues.

The crisis in the Austrian textile industry has become still more acute as a result of further import restrictions recently decreed by the Hungarian Government. Increased sales of Austrian textiles were registered in January on account of the disturbed political situation rather than through any improvement in general economic conditions. More mills are closing down and a general wage reduction of 5 per cent became effective on February 1. (Consul R. W. Heingartner, Vienna, March 1.)

Hand-Embroidered Garments Produced in Tientsin, China.

Hand-sewn and hand-embroidered garments are produced in Tientsin, China, in small handicraft shops controlled by a cooperative nonprofit organization. This was formed by certain foreign women of Tientsin for the purpose of selling the output of various missions, which employed Chinese women during the recent famine. Their work includes appliqué Chinese designs, cross-stitch, fine embroideries, novelty bead belts, and other similar articles. At present about 50 women are employed. (Consul General Stuart J. Fuller, Tientsin, March 15.)

Japanese Cotton-Yarn Trade Improves.

The temporary improvement in the Japanese cotton-yarn market, which was evidenced late in January, has continued. February's production amounted to 182,988 bales, thus checking the heretofore steady decline. A favorable market turn in raw-cotton prices has caused spinners to increase their output. A number of the large spinners are still drawing upon stocks of American cotton, which were purchased at exceptionally favorable prices, thus permitting them to underquote both American and British competitors. Yarn stocks at Osaka and Kobe are on the increase. (Trade Commissioners Halleck A. Butts, Tokyo, March 29.)

Chilean Wool Poorly Sorted.

One of the greatest obstacles encountered in buying wool in Chile is caused by lack of care in tying the fleeces, so that sorting is done with considerable difficulty. It is not customary to grade the wool. After dealing with buyers who collect wool from the farms, it is possible to form an idea, though not a very definite one, as to the type and quality that may be expected from any particular section. When the wool arrives at the mills, whether in bales or in sacks, it will be found that all types of wool are indiscriminately mixed. (Consul George A. Makinson, Valparaiso.)

45712°—23——4

WOOL, CAMEL'S HAIR, AND CASHMERE INDUSTRY OF CHINA.

Consul General Stuart J. Fuller, Tientsin, March 26.

Wool is the most important article of export to the United States from Tientsin, the principal market for the wool trade of North China. Although practically every Province north and east of the Yangtsze River produces wool, 50 per cent of all the wool exported from Tientsin comes from Kansu and the Tsinghai district of Mongolia, 15 per cent from Shansi and Shensi, and 25 per cent from the rest of Mongolia. In 1922, according to statistics compiled by the Chinese Maritime Customs, exports of wool from Tientsin amounted to 58,148,400 pounds, as compared with 53,819,067 pounds in 1921 and 10,906,790 pounds in 1920. In all, 90 per cent of the export of China wools was from the port of Tientsin.

There are no authentic figures showing the number of sheep in China. One estimate places the figure at 25,000,000, but this is an approximation. Generally speaking, the sheep are of a very poor variety and, except in the grasslands of outer Mongolia, they are found in extremely small herds, receiving but little care and existing on the scantiest of herbage. The most primitive methods are also in use in the regions of the large herds in outer Mongolia. The excessive snowfall of the winters and the severe droughts which occur during the summer months tend appreciably to reduce the yield.

Variations and Grades of China Wool.

There is a very wide variation in staple, quality, color, and scoured yield of China wools. While many are fair working wools, the majority lack elasticity or springiness, with the result that the yarn is lean or flat. They are used almost exclusively in the manufacture of carpets, although during the period from 1917 to 1919, owing to the shortage of supplies from other parts of the world, some of the finest grades were used in the manufacture of clothing.

China wools are divided into three distinct grades, known to the trade as strictly combing, semicombing, and filling wools. Tsinghai or Hsining and Szechwan wools make up the bulk of the strictly combing and semicombing wools, and mongolians, Hatta, Woosie, Ball, Kinchow, Liangchow, Hsihtsui, Shansi, Kalgan, and Manchurian make up the greater portion of the filling wools. Hsining wool is known to the American trade as a wool of medium-length staple, carrying a fine undergrowth as compared with other filling wools and exhibiting considerable kemp.

Collection and Transportation of Wool in China.

The sheeps' wool is collected from the farmers and transported to one of the numerous central markets which are scattered throughout the wool-producing Provinces. Waterways, oxcarts, and camel caravans are the chief means of transportation and the cargo is usually several months in transit before it reaches its final destination at the port of export.

In the Tientsin district wool is purchased from the individual producers by agents of Chinese wool dealers and representatives of the compradores associated with foreign wool firms of Tientsin. Sining is one of the most important of the interior wool marts and Kalgan is another. At these more remote markets the services of brokers and middlemen are necessary. Certain innkeepers combine that business with the purchase of wool as brokers or intermediaries and conduct private wool exchanges in their respective inns.

Upon the arrival of the wool in Tientsin brokers representing the dealers and the compradores sample the various parcels to the different foreign firms and the stock is eventually sold to the firm which makes the most advantageous offer. A compradore is associated in business with a foreign firm, from which he obtains the advance of funds under certain guaranties and also the transit passes, under which the cargo is brought out with exemption from interior taxation on its movement on the ground that it is intended for export. In consideration of this he is under obligation to offer wool brought in by him to his own firm first. Should that firm refuse it, on account of either price or quality, he is at liberty to offer the cargo to other firms. When a sale is concluded the seller pays a commission to the compradore through whose agency the transaction was consummated. As stated above, wool is also brought in by dealers and sold to the foreign firms through brokers in Tientsin. The wool season at Tientsin is from October to February. Receipts are heaviest in November, December, and January.

After the wool has been purchased by the foreign exporter, it is selected and graded, after which the combing and semicombing wools are shaken by hand and the filling wools are machine cleaned for the purpose of removing the foreign matter, which frequently amounts to 40 or 50 per cent by weight. This is done to reduce the cost of transportation overseas. The cargo is shipped in press-packed bales averaging 500 pounds per bale.

Source and Use of Camel's Hair.

Camel's hair is obtained from the Mongolian and Turkestan camel. The product obtained from the camels from northeastern Mongolia is much darker and much coarser than that from other localities because the camels there are worked harder than they are in the western districts. The poorest quality of all is obtained from the animals engaged in transporting coal. This grade is practically valueless.

The trade is of very old standing, the best hair formerly going to Russia, where it was used for padding clothes, but during the last century trade sprang up with the United States and England.

Camel's hair is shed and not clipped, as is popularly supposed. The best quality goes into the manufacture of high-grade underwear, the second quality into a cheaper grade, and the rest is used in the manufacture of press cloths. There is also a limited amount of this wool used locally in the manufacture of rugs. In the past the United States has taken from 25 per cent to 30 per cent of this commodity, while 60 to 65 per cent has gone to England. Statistics for this industry, compiled by the Chinese Maritime Customs, show that the exports of camel hair from the port of Tientsin in 1922 were 8,460,127 pounds, as compared with 3,791,867 pounds in 1921 and 4,715,300 pounds in 1920.

Exports of Cashmere from Tientsin.

Cashmere exports from Tientsin were 2,693,867 pounds in 1921 and 1,178,667 pounds in 1920. No figures are available for 1922. Nearly all of this commodity, obtained from the cashmere goat, is exported from Tientsin, although there is a small supply from some of the lower Yangtze ports and from Ningpo. From 65 to 80 per cent of the cashmere goes to Great Britain, the United States taking only 12 to 20 per cent.

The United States participated largely in this export trade from Tientsin. Exports of camel's hair alone showed a considerable increase, 2,377,160 pounds having left Tientsin for the United States in 1922, compared with 1,273,768 in 1921 and 2,392,397 in 1920. Exports of wool, given for 1920, were 8,474,474 pounds. In 1922, exports of wool in the grease, medium carding, were 1,223,258 pounds, and exports of coarse carding wool were 2,922 pounds. The same year Tientsin sent to the United States 180,903 pounds of medium washed or pulled wool, and 23,473 pounds of medium scoured wool. Exports of carpet, combing, and carding wool from the same port to the same destination were 58,058,376 pounds in 1922, as compared with 53,097,600 pounds in 1921. About two-fifths of this amount was so-called combing and three-fifths carding wool. Of Tientsin exports of cashmere, the United States received 324,933 pounds in 1921 and 90,800 pounds in 1920.

IMPORTATION OF FRENCH SILKWORMS INTO ITALY.

Vice Consul Harry L. Troutman, Milan, March 7.

Recent discussions in the Italian Senate regarding the commercial treaty with France have a special interest for the industry of silk raising. Complaint has been made on several sides against the introduction of French silkworms, which practice is held to be damaging to the Italian silk and silkworm industry.

A recent article in the Gazzetta di Torino claims that the Italian Government in 1920 conceded to France the right to introduce into Italy the so-called "industrial silkworms"; that is, silkworms which are not selected by the microscopic method. Not only have French silkworm producers taken great advantage of this concession granted by the Convention of Nice, but a number of Italian producers also have transferred their laboratories to France in order to produce industrial worms and bring them into this country.

The movement of importing these French silkworms into Italy has increased so steadily that during 1920–21 Italy imported French silkworms to the extent of about one-third of its needs. During the first six months of 1922 more than 30,000 ounces were imported, notwithstanding protests from different authorities, and especially from the Silk and Silkworm Association of Piedmont.

Damage Done by Industrial Silkworms.

The damages imputed to the use of these nonselected worms are multiple. First of all, because of the cheaper price at which the French industrial worms can be sold, a very damaging competition to the cellular selected worms is brought about, the former substituting the latter on a large scale, particularly in the Piedmont section. The quantity and quality of the silkworm production are seriously affected, it being demonstrated by experience that industrial silkworms not only offer less assurance of successful growth, but also produce cocoons less rich in silk and of a poorer quality.

During the last 10 years the production of cocoons has diminished considerably in Italy, falling from a crop of some 50,000,000 kilos to 30,000,000 or 35,000,000 kilos. It is now felt that every possible effort should be made to give an impetus to worm culture, which industry, because of the prevailing high prices of cocoons, should be highly remunerative. The amount of worms put in incubation must of course be commensurate with the crop of leaves. During recent years many mulberry trees have been destroyed to such an extent that a law against this reckless destruction has been passed.

Silk producers are protesting against the introduction of the French industrial worms, if for no other reason than to insure the highest degree of productivity and the best quality.

CONSTRUCTION NEWS

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by referring to the reference numbers given. Where no reference number is given further information is not available.]

Brazil.—The municipal authorities of Recife have now definitely resolved to enter into a contract for the erection of a hotel in Pernambuco, to be entirely modern, of reinforced concrete construction, and to have at least 200 rooms. Reference No. 92154. (Consul C. R. Cameron, Pernambuco.)

Canada.—It is reported that the Great Lakes Pulp and Paper Co. will build a pulp and paper mill either at Port Arthur or Fort William, Ontario, and expect to have it in operation by February 1, 1925. The plant will comprise a paper mill with a daily capacity of 100 tons of newsprint, and a pulp mill which will have a capacity of 100 tons of wood pulp in addition to the requirements of the paper mill. A contract was signed with the Ontario Hydroelectric Power Commission for the delivery of 10,000 horsepower of electric current from their Nipigon plant at Cameron Falls, Ontario. (Consul Dudley G. Dwyre, Fort William and Port Arthur, Ontario.)

Italy.—The Italian State Railway Administration at Rome is reported to be considering the construction of a tunnel 18 kilometers (11¼ miles) long on the direct line between Florence and Bologna, on which considerable work has already been done by the Government. This tunnel is to penetrate the Appenines on a line connecting the towns of Pianoro, on the Bologna side, and Prato, on the Tuscan side, work having been begun on both ends. The estimated cost of this new undertaking is placed at 600,000,000 to 1,000,000,000 lire (1 lira=$0.193 at normal and $0.049 at present exchange). There is considerable agitation against the carrying out of the project, because of the expense involved and because the present Government has advocated the turning over of the railroads to private hands, the

realization of which plan would relieve the National Treasury of the financial burden involved. (Vice Consul Earl Brennan, Florence.)

Canada.—Announcement has been made that the Province of Ontario will build a standard-gauge branch railroad this summer to extend into the Kirkland Lake gold area, about 25 miles east from Swastika, on the Temiskaming & Northern Ontario Railway. It is also reported that another extension of the Nipissing Central Railway is planned to extend for about 45 miles northeast from New Liskeard and connecting with the new branch line now authorized. Should circumstances warrant, the possibility of projecting a line into the new gold field in Rouyn Township, Quebec, is intimated. It is said, in connection with the branch line to be constructed from Swastika, the Railroad Commission may offer an opportunity to experiment with the use of gasoline and oil burning cars in this climate. Reference No. 91817. (Vice Consul Harold S. Tewell, North Bay, Ontario.)

PAPER

John Matthews, jr., Chief, Paper Division

UNITED STATES PAPER EXPORTS IN FEBRUARY.

Exports from the United States of the chief paper items during February, 1923, as compared with the previous month and with February of last year, are shown in the following table:

United States paper exports during February, 1923.

Items.	February, 1922.		January, 1923.		February, 1923.	
	Pounds.	Value.	Pounds.	Value.	Pounds.	Value.
Newsprint	1,671,034	$75,724	2,127,139	$119,569	2,387,588	$121,405
Book paper	1,353,145	145,784	1,983,231	211,827	2,379,421	261,389
Wrapping paper (including kraft)	2,750,698	171,848	2,540,553	188,002	2,347,032	173,181
Writing paper	379,817	62,049	691,984	96,058	545,229	80,024
Paper board and strawboard	2,746,810	121,347	3,066,568	150,853	3,118,419	164,108
All other items	.....	908,929	.....	1,195,232	.....	1,155,450
Total	.....	1,485,681	.....	1,961,541	.....	1,955,557

As will be noted, newsprint, book paper, and paper board and strawboard show a steady and appreciable increase, both in quantity and value, from February, 1922. The quantity of exports of wrapping paper (including kraft) seem to be retrograding in about the same ratio, while the value of that commodity in February, 1923, though less than that for January, 1923, is larger than for February of last year. Exports of writing paper in February were much greater than they were a year ago, but did not reach the level of the first month of this year. The total value of all paper exports during February, 1923, is but a few thousand dollars less than that for the previous month and nearly one-third again as large as for February, 1922.

THE AUSTRIAN PAPER INDUSTRY AND EXPORT TRADE.

Based on report from Consul Carol H. Foster, Vienna, March 2.

About two-thirds of the paper mills in the old Austria-Hungary remain in the Republic of Austria, so that the losses which occurred on the collapse of the monarchy were far smaller in the paper industry than in other branches. Another advantage which the Austrian paper industry enjoys is an abundance of raw materials, as a large portion of the country is wooded. Production has increased steadily since 1919, as can be seen from the following table, which shows the production of pulp and paper during the last four years in comparison with 1913. During 1922 the output reached about 80 per cent of pre-war production and would probably have been even greater but for the slackening in the latter part of the year, caused by the general economic crisis and the various handicaps under which the manufacturers had to labor.

Production of Austrian pulp and paper.

Products.	1913	1919	1920	1921	1922
	Metric tons.	*Metric tons.*	*Metric tons.*	*Metric tons.*	*Metric tons.*
Paper	188,430	92,480	94,290	127,660	151,080
Cardboard	70,050	30,850	32,810	33,670	41,550
Chemical pulp	121,360	25,240	36,020	71,810	101,870
Mechanical pulp	75,140	58,660	54,570	58,850	72,690
Total	454,980	207,230	217,690	291,990	367,190

Production Difficulties Overcome.

One obstacle in the way of full production during the past year has been the shorter working hours. As manufacturers were forced to introduce the eight-hour working-day they had to raise the number of workmen by about one-third in order to keep production at the same level, and it was found necessary in some instances to shut down machines, as there was no possibility of lodging the necessary number of workmen. The percentage of wages to total cost of production, which is estimated at from 12 to 17 per cent, was not greatly increased, however, by the change from two continuous shifts to three shifts.

Other difficulties with which paper manufacturers had to contend were the daily price changes of raw material, fuel, and semifinished products, as well as fortnightly wage increases, caused by the progressive depreciation of the Austrian crown. Moreover, transportation costs rose considerably, and the general business depression brought about a falling off in the domestic paper consumption. Book publishers and other buyers of paper felt the stagnation keenly. Many paper mills, therefore, were obliged to restrict production during the latter part of 1922. The present crisis, however, is reported to have had a favorable effect on the labor situation, since continuous demands for higher wages have ceased. Just at present the fuel situation is threatening to prove a more serious handicap to pro-

duction than the labor or wage situation. The present supply of coal is still sufficient, but as one-third of the amount required is imported from Upper Silesia, it is doubtful, in view of the political situation in Germany, whether ample supplies will be available in future.

Prices in Vienna Market Becoming Stable.

Vienna is the center of the domestic paper market. Purchases of Austrian paper by the former hostile countries, by the States of the Succession, and by the Balkans are made here. The more expensive grades of paper, such as papeteries, fancy papers, copy paper, and special sorts for staff maps, etc., predominate. Inland paper is invoiced in Austrian crowns, and as manufacturers' agreements as to the fixing of prices do not exist, every mill quotes according to its own scale. During the period of transition positive calculations were impossible, and manufacturers never quoted fixed prices, as unforeseen increases often became necessary. Prices in the Vienna market fluctuated greatly during the past year, but have remained stable since December, and have even dropped 10 per cent during the past few weeks. Stock lots are often sold at present below the normal price, the need of ready cash with which to pay wages and other expenses forcing some manufacturers to sell under the cost of production. Mills now try to avoid the agent's commission, which raises the price of goods offered the consumer, by doing the selling themselves so far as possible.

Austria's total consumption of paper is supplied by domestic mills and the amount of imported paper is, therefore, rather small, consisting of a few special kinds, coming chiefly from Germany. Imports of pulp, paper, and manufactures during 1922 amounted to 21,566 metric tons—a decrease of 38 per cent as compared with 1921. Of this amount, 11,010 metric tons consisted of pulp, 4,138 tons of pasteboard, 3,373 tons of paper, and the remaining 3,045 tons of manufactures. Paper imports into Austria pay duties according to the Austrian tariff revised February 1, 1923.

Paper Export Trade of Austria.

As the Austrian domestic market absorbs only about two-fifths of the present production, paper manufacturers are perhaps more dependent on exports than are any other Austrian producers. A profitable trade was going forward up to a few months ago, but during the last few months of 1922 paper exports suffered greatly as a result of the general political uncertainty and were further hampered by the extremely high Austrian railway freight rates. Another serious obstacle with which the Austrian exporters had to contend was the attitude of various countries toward imports of paper from Austria. The Succession States in particular practically closed their frontiers to imports from Austria.

The outstanding changes in the Austrian paper-export industry since 1913 have been the greatly increased shipments of newsprint and the appreciable decline in exports of cardboard, cigarette, tissue, and fancy papers of various kinds. The enormous increase in the exports of printing paper from this region is more striking when the Czechoslovakian shipments, which amounted to 11,488 tons, are added, thus bringing the total up to 36,878 tons, or about two and one-half times the amount of paper exported from the Austro-Hungarian Empire during 1913. Exports of printing paper from Czechoslovakia to Austria during 1921 amounted to only 244 tons. Exports of writing paper, which always have formed an important part of the Austrian export paper trade, were larger in 1921 than in pre-war years, but shipments of other classes of paper were appreciably less than in 1913. Writing paper now forms the largest item in the Czechoslovakian export paper trade. Exports of paper and paper products from the Austro-Hungarian Empire during 1908 and 1913 and from the Republics of Austria and of Czechoslovakia during 1921 are shown in the following table:

Paper exports from Austro-Hungarian Empire as compared with those from Austria and Czechoslovakia.

Items.	Austria-Hungary.		Austria.	Czecho-slovakia.
	1908	1913	1921	1921
	Short tons.	*Short tons.*	*Short tons.*	*Short tons.*
Printing paper	11,780	14,859	25,390	11,488
Writing paper, including envelopes and papeteries	8,724	12,126	16,111	5,281
Wrapping paper	33,910	28,462	7,072	21,224
Cardboard of all kinds	3,930	39,475	26,990	6,186
Miscellaneous paper, including blotting, parchments, tissue, coated, and fancy paper	12,411	14,742	6,162	4,092
Total exports of paper and cardboard	70,755	109,664	81,725	48,271
Paper and cardboard manufactures	3,562	3,991	8,753	2,221
Total exports of paper and paper manufactures	74,317	113,655	90,478	50,492

Shipments of paper of all kinds from Austria during 1922 amounted to 93,642 short tons, while shipments of cardboard reached 30,698 tons, and of paper and cardboard manufactures, 10,254 tons. In addition to the above, 50,250 tons of pulp were also exported. The principal countries of destination, in order of quantities, were Hungary, Yugoslavia, Italy, Poland, Czechoslovakia, and Germany. Approximately 35 per cent of these exports were made by the factories directly, the remainder going through the hands of dealers in foreign countries.

Competition in International Markets.

During recent months the competition in international markets has been especially keen, the drop in the French and Belgian franc and the depreciation of the German mark, together with the low freight rates and cheaper labor costs in the latter Republic, making it extremely difficult for the Austrian exporters to compete successfully, especially in Italy and the Orient. The situation improved so far as German competition was concerned when German prices were fixed on a gold basis and German freight rates increased. Any permanent improvement in the present condition of the Austrian paper industry can be expected only if the freight rates are adjusted so as to enable manufacturers to compete abroad. As an example of the present excessive rates, transportation costs on paper quoted at 800,000 crowns ($11.11) per 100 kilos, f. o. b. Hamburg, would be approximately 200,000 crowns ($2.79), or, roughly, one-fourth the price. The railway administration has been asked by the paper manufacturers' association to revise the rates on paper and its raw materials, and a reduction of 10 per cent on ground wood and chemical pulp has been granted.

Additional information regarding paper appears in this issue under the following sections:

Construction news: Paper and pulp mill to be constructed in Canada.

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

MAURITIUS AS A MARKET FOR SUGAR MILL MACHINERY.

Modern sugar production involves the use of a great deal of machinery and in any statement showing the important sugar sources throughout the world Mauritius will be found to occupy an important position. The island is isolated, lying well out in the Indian Ocean, about 1,400 miles east from the coast of Africa and even farther from other important countries. It is about half as large as Long Island, but quite mountainous, having peaks as high as 2,700 feet above sea level. In 1921 it had a population of 376,108, or 522 to the square mile. Having abundant rainfall, fertile soil, and a tropical climate, it has been cleared and devoted to intensive agriculture.

Mauritius produces about twice as much sugar per acre as the Philippines, although ranking below Java, Cuba, Hawaii, and some other territories in this respect. During 1921 there were 54 sugar mills in operation on the island, which total increased to 61 for the year 1922. The general size of these mills may be estimated from the fact that Mauritius produced 182,000 long tons of sugar in 1921 and 225,000 in 1922. The demand for machinery in this territory is further indicated by the following returns, as taken by the Board of Mauritian Customs, covering the years 1920–21:

Machinery imports of Mauritius.

Sugar Production and Subsidiary Industries.

The above classification referring to "machinery for local industries" raises a question as to what these may be. An investigation shows that sugar is by far the most important. Plantations of sugar cover about 80 per cent of the total area of the island, and in addition there are certain subsidiary industries connected therewith, as for example, the production of rum and alcohol, the latter having increased from 1,000,000 liters a year in 1915 to 1,900,000 liters in 1920 (1 liter=1.0567 quarts). Tea, tobacco, vanilla, cocoanuts, food crops, and live stock are also produced.

Machinery Now in Use in Mauritius.

Information available shows that the island had about 1,200 kilometers (1 kilometer=0.62137 mile) of narrow-gauge railway, with 170 locomotives and 6,295 cars, at the end of 1920. There were also 16 tractors and 85 trucks on the island. In the 54 sugar factories then in operation there were 223 boilers, 44 economizers, 165 cane mills with 26 crushers, 165 juice heaters, 272 filter presses, 221 vacuum pans, and 999 centrifugals, together with the usual accessory equipment.

The following quotation from the International Sugar Journal for February, 1923, indicates the character of the machinery installed during recent years:

Among other items, the following new machinery was installed in 1920: One mill, 7 economizers, 6 derricks, 8 crushers, 30 Messchaert cylinders, 15 defecators, 10 decanters, 6 quadruple effects, 30 crystallizers, 30 Weston centrifugals, 8 cane carriers, 6 sulphitation apparatus, 6 filter presses, 5 juice heaters, 6 vacuum pans, 1 barometric condenser, and 3 boilers.

During the year 1921 local firms have installed, among other items, the following machinery: Six cane carriers, 2 mills, 3 sulphitation apparatus, 6 defecators, 2 filter presses, 3 air compressors, 4 quadruple effects, 6 vacuum pans, 2 air pumps, 7 juice and magma pumps, 5 pans, 51 crystallizers, 7 boilers, 3 hydraulic attachments for mills, etc.

Canned Food Factories in Portugal.

Consul General W. Stanley Hollis, Lisbon, March 2.

Most of the canning factories in Portugal are packing sardines exclusively. The sardines are generally cooked in steam cookers under high pressure and then packed in tins, which after being hermetically sealed are placed again in the steam kettles.

Tunny fish also is packed in a few factories, but the output is rather small. There are several factories, mostly of large size, which besides packing fish also pack vegetables, fruits, meats, jams, jellies, etc.

[A list of the canning factories in Portugal has been furnished with the above report and may be obtained from the Bureau or through its districts and cooperative offices by referring to file No. CI-62.]

Uruguay to Establish Mint.

It has been officially announced in Uruguay that the Bank of the Republic has decided to establish its own mint, and with this end in view has sent its secretary to Santiago with instructions to study the organization of the Chilean mint.

Additional information regarding industrial machinery appears in this issue under the following sections:

Foreign trade opportunities Nos. 6373, 6375, 6383, 6385, 6386, 6387, 6388, 6389, 6390, 6409, 6418, 6418, 6429, 6435, 6439, 6440.

SPECIALTIES

Henry H. Morse, Chief, Specialties Division

SPECIALTY COMMODITIES IN WORLD MARKETS.

THE CLOCK AND WATCH INDUSTRY OF BADEN.

Consul M. K. Moorehead, Stuttgart, Germany.

There are 25 clock and watch factories located in the Black Forest, which employ 3,700 persons. Nine of these factories are very large, employing from 600 to 2,000 workers; 3 of them employ between 100 to 200 workers each; and each of the remaining 13 have less than 100 employees.

Grandfather clocks are being made by old-established firms at Furtwangen and Lenzkirch. Two large factories at St. Georgen specialize in the manufacture of clockworks for wall, mantle, and kitchen clocks. Wooden cuckoo clocks are still commanding a large market. Watches are being made by two large factories in the Lorrach district of the Black Forest, and another factory of recent date is making precision watches. Tower clocks are built by a firm at Schonach, and 400-day clocks by another firm at Triberg. In the districts of Villingen, Triberg, and Neustadt parts of clocks and watches are being manufactured on a large scale by about 60 factories, employing 4,000 workers. While 7 of these factories, with 700 workers, specialize in screws and wire pins, 27, giving employment to about 2,000 workers, make the more bulky metallic parts of clocks and watches. There are 6 tool factories with 800 workers, 10 fine mechanical factories with 300 workers, and 8 clock-case factories with 250 workers. At Offenburg, and on the Swiss border in the Lorrach district, where a new clock industry is gradually building up, 2 enameling shops are in operation.

The main portion of the watch and clock industry is located in the districts of Villingen, Triberg, and Neustadt and covers 21 communities in these districts. In most of these communities are one or two factories. In the city of Triberg, which had 4,000 inhabitants at the last census, there are 18 clock and watch factories; at Villingen, 15; at St. Georgen, 13; at Furtwangen, 8; at Neustadt, 8; at Schonach, 6; at Hornberg, 5; at Eisenbach, 4; and in Neidereschach, Vohrenbach, and Schonwald, 3 each.

A summary of the declared exports by this industry to the United States during the year 1922 follows:

Exports of the clock industry of Baden to the United States during the year 1922.

Kinds.	Quantity.	Value.
To the United States:		
Complete clocks, number	557,100	$388,670
Movements for clocks, do	61,633	51,760
Time detectors, do	186	2,000
Clock dials, do	200	820
Parts of clocks, pounds	21,320	4,410
Complete watches, number	58,337	20,990
Watch movements, do	1,120	1,980
Parts of watches, pounds	694	1,880
	695,620	470,510
To the Philippine Islands:		
Complete clocks, number	24	210
Complete watches, do	48	110
To Porto Rico:		
Complete clocks, do	246	270
To Hawaii:		
Complete clocks, do	312	700
Total		471,800

JEWELRY INDUSTRY AND MARKETS.

The South African Market for Silverware.

The United States stands second in amount of silverware exported to the South African Union. England, of course, leads the field by a wide margin, not only on account of a tariff advantage but chiefly because British manufacturers have systematically catered to this market. Large English firms maintain wholesale as well as retail establishments in South Africa and take particular pains to cater to the wishes of the market. South Africans in general prefer plain designs in silverware.

In tableware there is little demand for silver with fancy designs or filigree. Plain and fiddle-patterned goods are mostly sold in South Africa, one of the reasons given therefor being that they are more easily kept clean, while the servants can not be relied upon to give the care and attention that is necessary to designed or filigreed silver. (Consul Charles J. Pisar, Cape Town, March 6.)

The Jewelry Industry of Frankfort in 1922.

Hanau, a town of 37,000 inhabitants, 16 miles from Frankfort, Germany, has world-wide fame for its manufactures of jewelry and jewelers' novelties, and is a center for the trade in precious and semiprecious stones. As the raw materials for its industries must be imported, its manufacturers have an advantage only in that skilled workmen can be obtained at a cheap wage.

On account of the necessity of importing raw materials, trade has been affected by the constant decline in the purchasing power of the mark. The domestic demand in jewelry fell off greatly but the large number of foreign visitors, mostly Americans, in Germany during the past year kept factories going. Many manufacturers turned to making cheap novelties designed to appeal to the popular taste. In the silverware branch, export trade was good for the greater part of the year, falling off heavily, however, in the last quarter. Many small manufacturers of jewelry were forced to sell in the early part of the year at low prices in order to obtain funds. This led to the introduction of a price system, based on gold values, by which the fall in the value of the paper mark was accurately determined and prices made in paper marks to suit. Diamonds and pearls had a heavy sale. Diamond-cutting factories were busy on work for export throughout most of the year.

Hanau was a center of the trade in platinum and platinum jewelry before the war, supplies of the metal being obtained without difficulty from Russia. Only very limited supplies can now be obtained and this trade has dropped to very limited proportions. An instance of this can be seen in the platinum exports from this district to the United States, which were valued at $77,000 in 1922, as compared with $1,875,537 in 1921, and $1,998,871 in 1913. (Consul F. T. F. Dumont, Frankfort on the Main.)

ATHLETIC GOODS AND GAMES.

The Nanking Sporting Goods Market.

Golf and tennis are the only two games common to America that are played in the Nanking consular district, and they are played by foreigners only. Nanking, Chinkiang, and Wuhu each has a nine-hole golf course, the one at Nanking being by far the best of the three. Combining the three clubs, however, the active playing membership would not exceed 50 in number. Balls are often obtained from England; but as Shanghai is the importing and distributing center for this part of China, most sporting goods, including golf clubs, are obtained in that city.

Tennis is universally played in China, and every city, town, or settlement where the foreigner has penetrated contains a tennis court or courts, the number being in direct proportion to the size of the community. The Chinese are also fond of this game, and many who have learned the game in mission schools and colleges have continued to play after leaving school. All tennis supplies are obtained from importing firms in Shanghai.

The Yangtze Valley has always afforded excellent hunting. Year by year, however, it has been necessary to cover more ground and work farther from home in order to obtain a satisfactory bag. This has been due to the increasing activity of the native hunter, who knows no closed season, stalks his birds, and is especially destructive during mating season, as well as to large-shooting parties that come to this district from Shanghai, determined to get a "big bag" and "shoot up" the country. Water fowls are still plentiful, and excellent sport can always be had on the river or at flighting when the birds go to the marshes.

All sporting goods are obtained from Shanghai firms. The Chinese are unable to correspond in any language other than their own, are unfamiliar with foreign business methods, and would not attempt direct importation from foreign countries. At the present time Shanghai is able, because of its proximity, to supply this market, and any connections made in that city should be considered, for all practicable purposes, to cover this subsidiary market as well. (Consul John K. Davis, Nanking.)

The Market for Athletic Goods in Argentina.

The only sport in which the natives of Argentina indulge to any considerable extent is soccer football, which ranks as their national game. Other games, such as tennis, golf, baseball, and polo, are of lesser importance and are supported largely by the foreign residents. Hunting is popular and American firearms for this purpose have a fairly large sale.

In general British products control the Argentine athletic-goods market. Soccer footballs are manufactured locally to a certain extent, but golf clubs, tennis rackets, etc., come from abroad. There is no particular prejudice against American athletic supplies, but England was in the market first and established a sound reputation both as to price and quality, which it will be difficult to overcome. (Trade Commissioner George S. Brady, Buenos Aires, March 15.)

Market for Athletic and Sporting Goods in Guatemala.

The market in Guatemala for athletic and sporting goods is extremely limited, owing to the fact that Indians comprise 80 to 90 per cent of the population of Guatemala, who have a relatively small purchasing power and buy nothing of this sort. Of the remaining 10 to 20 per cent of the population, only a very few engage in athletics or sports of any kind. It is understood that there are not over 10 teams in the country playing football (English game), 3 or 4 baseball teams (which very seldom practice or play), 1 golf club, 5 or 6 tennis clubs, and 3 basket-ball teams (meeting irregularly), and these, with a few private tennis courts, constitute the athletics in Guatemala. There are no boxing clubs, athletic buildings, Y. M. C. A. organizations, track meets, or like institutions.

Certain calisthenic and light gymnastic work is included in the school curriculums, but very little equipment is used and athletic apparel is not required. Any special clothing used is chiefly made in the homes.

The Government statistics do not show the amount of athletic and sporting goods imported. Estimates from the principal commercial houses carrying such goods give an average of about $3,000 as the business done yearly in imported goods of this class. (Consul A. C. Frost, Guatemala, March 15.)

Market for Bicycle Accessories in Naples.

There is a fair market in Naples for American bicycle accessories, particularly coaster brakes. The American coaster brake is almost unknown in Italy. The popular type of braking attachment is operated by hand grips attached to the handle bars, which, when pressed, close a pair of rubber-faced jaws directly on the front and rear rims. While this apparatus appears to work fairly well, it is neither so safe nor so effective as a positive-action coaster brake. The complete absence of the American attachment seems to be due to lack of acquaintance with its advantages rather than to approval of the method now in use. It is believed, therefore, that descriptive literature sent to the Naples dealers in bicycle supplies would be productive of considerable interest.

Other articles in common use in America designed to add to the pleasure and convenience of the cyclist might also find a market in Italy. Trouser guards, for instance, might be favorably received. Kerosene head lamps, bells, and tire-repair kits are also in point. In regard to the latter, an effective sale of brass or rubber plugs for punctures might easily produce a market for American tires. At present, owing to the complete absence of anything of this kind, nearly all the tires in use are of the clincher type with an inner tube. (Consul General Homer M. Byington, Naples, Italy, March 7.)

Formation of Polish Organization for Marketing Polish Toys.

The Polish Syndicate of Manufacturers of Toys, Fancy Goods, and Artistic Articles, which comprises approximately 75 per cent of the Polish toy manufacturers, was recently organized for the purpose of promoting the foreign trade of its members. It is claimed that, because of the abundant supply of wood and the comparatively low cost of labor, the Polish wooden-toy industry could be sufficiently developed to compete with other countries from which the United States imports toys.

Various toys ranging from ordinary swords and cart wheels to the more artistic articles such as houses, pianos, and furniture, are now manufactured. A

complete line of samples from each member of the Polish Syndicate of Manufacturers of Toys, Fancy Goods and Artistic Articles is kept on exhibition at the offices of the latter for the convenience of interested buyers.

While the present output for exportation is not large, it could be readily increased if the proper connections could be established with American importers. The name and address of this syndicate (in Polish) can be obtained from the bureau or any of its district or cooperative offices by referring to file No. 91056. (Consul General L. J. Keena, Warsaw, March 23.)

Soda Fountain in London Serves American Drinks.

A large variety of novelties in the line of soda drinks and sundaes is being served in true American style at a soda fountain recently installed in the tea shop of J. Lyons & Co. (Ltd.), according to a recent advertisement in the London Daily Mail. Thus ice-cream sodas of various fruit flavors are dispensed at 5d. each, sundaes for 8d., and frappés at 9d. Fancy concoctions such as Coupe Jacques and Charlie Chaplins retail at 1s. each.

Catalogues Desired by Australian Bureau.

The Australian Bureau of Commerce and Industry desires to obtain catalogues and price lists on apparatus necessary for installing Turkish and Roman baths. The information should be of a type suitable for the installation of baths in a space 80 by 80 feet. (Trade Commissioner J. W. Sanger, Melbourne, March 1.)

Additional information regarding specialties appears in this issue under the following sections:

Tariffs and trade regulations: Cinematograph imports under the new Irish Free State tariff.

MINERALS AND METALS

Luther Becker, Chief, Iron and Steel Division

UNITED STATES IMPORTS OF IRON AND STEEL IN JANUARY.

Imports of iron and steel products into the United States in January, 1923, amounted to 120,080 long tons—a considerable increase over the 96,398 tons imported in December, although a decline from the large volume imported in November, which totaled 141,180 tons. Unusually large deliveries of pig iron, amounting to 83,935 tons, which are comparable with the record-making receipts of 98,767 tons in November, 1922, and the 120,779 tons imported during the period from September 22 to October 31, more than account for the gain in the January total over that of December. A drop of 6,651 tons in the purchase of scrap, however, partially counteracted the gain.

The receipts of foreign iron and steel products by the United States in December, 1922, and January, 1923, are shown in the following table:

United States imports of iron and steel for December, 1922, and January, 1923.

Articles.	December, 1922.	January, 1923.	Articles.	December, 1922.	January, 1923.
	Tons.	*Tons.*		*Tons.*	*Tons.*
Pig iron	54,728	83,935	Tubular products	265	355
Scrap	28,602	21,951	Boiler and other plates	147	350
Ferromanganese, manganese metal and alloys	5,160	4,218	Round iron and steel wire	137	296
Steel ingots, blooms, billets, slabs, steel bars, etc	1,760	2,040	Nails and screws	84	98
Structural shapes	1,447	234	Castings and forgings	81	116
Bar iron	1,171	670	Flat wire and strip steel	66	64
Ferrosilicon	1,053	902	Wire rope and insulated wire, all kinds	49	126
Rails and splice bars	992	1,749	Sheets and saw plates	17	87
Tin plate	347	2,129	Bolts, nuts, rivets, and washers	15	14
Wire rods	277	746	Total	96,398	120,080

Origin of January Imports.

The United Kingdom furnished over half of all the iron and steel products imported into the United States, and France and Canada supplied the bulk of the remaining receipts. With the exception of numerous small shipments from countries whose contributions were under 30 tons each, the sources of the American imports of foreign iron and steel in January were: United Kingdom, 67,376 tons; France, 21,199 tons; Canada, 17,061 tons; Germany, 8,523 tons; Belgium, 3,699 tons; and Sweden, 2,072 tons.

Imports from the United Kingdom included 49,767 tons of pig iron, 10,300 tons of scrap, 4,058 tons of ferromanganese and manganese alloys, and 2,129 tons of tin plate, which represents an unusually large purchase of this commodity. Of the Canadian shipments, 10,913 tons were scrap iron and steel, 5,037 tons were pig iron, and 901 tons were ferrosilicon. The French iron and steel was mainly pig iron (19,974 tons) and scrap (500 tons). Other important shipments were 2,964 tons of pig iron and 556 tons of scrap from Belgium; 6,138 tons of pig iron and 1,334 tons of rails and splice bars from Germany; and 725 tons of steel ingots, blooms, billets, slabs, bars, etc., and 631 tons of bar iron from Sweden.

In addition to the previously mentioned tonnages, there were imported during January 19,394 square feet of card clothing, of which 18,994 square feet came from England and 400 square feet from Germany; 205,532 tons of iron ore, of which amount Cuba furnished 88,000 tons, Sweden 45,560 tons, Chile 38,650 tons, Spain 19,531 tons, Algeria and Tunis 13,300 tons, and Germany 490 tons; and 829 tons of manganese ore and concentrates, 819 tons being from England and the remaining 10 tons from Germany. Although this represents a considerable increase in the importation of iron ore over that for December, 1922, receipts of both manganese ore and concentrates and card clothing were very small in comparison with the previous month. During December foreign shipments of these products into the United States amounted to 167,221 tons of iron ore, 18,305 tons of manganese ore and concentrates, and 80,634 square feet of card clothing.

Mineral Output of France in 1922.

Consul Ernest L. Ives, Paris, March 29.

The provisional figures for the production of minerals, except coal and iron ore, mined in France during the month of December, 1922, and the year 1922, are given in the following table:

Mineral production of France.

Items.	December, 1922.	Year, 1922.	Items.	December, 1922.	Year, 1922.
	Metric tons.	*Metric tons.*		*Metric tons.*	*Metric tons.*
Salt	100,604	1,048,614	Total in pure potash contents	19,653	207,123
Potash:			Mineral oil	5,236	63,377
Crude salts (12 to 16 per cent pure potash)	37,312	320,975	Asphalt	3,234	37,320
Fertilizing salts (20 to 22 per cent pure potash)	21,716	337,318	Bauxite	21,051	139,176
Fertilizing salts (30 to 40 per cent pure potash)	5,075	59,608	Pyrites of iron	14,189	175,066
Potassium chloride (over 50 per cent pure potash)	14,249	126,866	Ores:		
			Antimony	305	3,280
			Arsenic	76	941
			Gold-bearing	3,401	46,175

			Lead	1,124	10,470
			Zinc	526	2,404
			Manganese	282	684

French Iron Ore Output in 1922.

Consul Ernest L. Ives, Paris, March 29.

Detailed statistics of the production of iron ore in France during the month of December, 1922, and the year 1922 are as follows:

Iron-ore production in France.

Regions.	Monthly average, 1913.	December, 1922.	Year, 1922.	Stocks on hand December 31, 1922.
	Metric tons.	*Metric tons.*	*Metric tons.*	*Metric tons.*
Lorraine:				
Metz-Thionville	1,761,250	1,093,346	10,909,560	930,452
Briey-Longwy	1,505,168	957,512	8,520,531	723,774
Nancy	159,743	53,512	552,525	881,391
Haute Marne	5,826			
Normandy	63,896	51,751	585,000	342,221
Anjou, Brittany	32,079	14,328	185,884	109,644
Indre	2,307	1,102	7,836	58,059
South West	2,789	515	9,426	40
Pyrenees	32,821	8,938	55,433	45,270
Tarn, Herault, Aveyron	8,408	50	560	3,500
Gard, Ardeche, Lozere	7,415	237	5,238	14,466
Total	3,581,702	2,181,286	20,831,993	3,108,817

The production of iron ore during December, 1922, shows a slight increase of about 8,000 metric tons over November. The production during the whole year 1922 shows a considerable increase when compared with the production during the year 1921, which amounted to 14,116,706 metric tons, while stocks on hand December 31, 1922, show a decrease of over 1,000,000 metric tons when compared with 4,382,282 metric tons on hand at the end of the previous year. There were 25,853 workmen registered in iron ore mines on December 31, 1922, as compared with 17,508 at the end of 1921.

Production of Gold and Platinum in Soviet Russia.

Abstracted by the Eastern European Division from Economic Life, February 15. The Bureau assumes no responsibility for the accuracy of the data.

There was a general increase in the production of gold in Siberia, both in the State mines and by private prospectors, during October, November, and December, 1922, while the production of both gold and platinum in the Ural district declined almost to a standstill. The following table shows the production by months in funts and zolotniks, the funt being equal to 0.903 pound and the zolotnik to 0.15 ounce:

Production of gold and platinum in Soviet Russia.

Months.	State mines.				Prospectors.			
	Gold.		Platinum.		Gold.		Platinum.	
1922.	*Funts.*	*Zolotniks.*	*Funts.*	*Zolotniks.*	*Funts.*	*Zolotniks.*	*Funts.*	*Zolotniks.*
October	965	89	130	59	15	11	97	46
November	1,063	19	49	40	31	18	73	90
December	1,276	46	1	34	50	42	95	40

Months.	Leased concerns and casuals.			
	Gold.		Platinum.	
1922.	*Funts.*	*Zolotniks.*	*Funts.*	*Zolotniks.*
October	3	74	1	38
November	4	41	4	57
December	1	72	36	40

In three districts of the Ural, platinum-trust operations have been entirely stopped, and only repairs and preparatory work carried on. The decrease in production of platinum in the State-operated mines was caused by suspension of work in the Ural mines.

March Shipments of Pig Iron from Middlesbrough.

Assistant Trade Commissioner H. B. Allin Smith, London, England, April 12.

During the month of March, 1923, 67,638 tons of pig iron were shipped from Middlesbrough—a gain of 24,637 tons over March, 1922. Following is a table showing the distribution of shipments and giving comparative figures for March, 1921, 1922, and 1923, as well as for the first three months of 1923:

March pig-iron shipments from Middlesbrough compared.

Discovery of Kaolin in Eastern Finland.

Consul Leslie A. Davis, Helsingfors, April 7.

Through investigations which the Finnish Timber Co. has been carrying on for two years in eastern Finland a large deposit of kaolin has been discovered, said to contain at least 200,000 tons, and extending deep into the earth. The deposits are situated in Wartsila, in the Prolanvaara Parish, about 20 kilometers from the Wartsila station, and are covered by a layer of mo-

raine 4 to 6½ meters in depth. One of the engineers investigating the deposit states that the fireproof qualities of this kaolin are much higher than those of imported kaolin, which comes chiefly from Denmark and England. It is of a pure quality, either white or brownish in color, and especially well suited to the manufacture of porcelain. The engineer states further that kaolin is important not only in the porcelain and allied industries but also for the paper industry, which has imported annually several thousand tons of this product, valued at several million Finnish marks.

Two other kaolin deposits have to date been discovered in this country, of which those at Puolanka were the richest, but they have not been used to any great extent on account of their distance from the railroad and the difficulties of transportation. The deposits at Wartsila, on the contrary, are easily accessible, and the Finnish Timber Co. intends to begin mining operations this summer.

Mineral and Metal Items.

Stocks of Pig Iron in Japan.

Stocks of pig iron in Yokohama, Tokyo, Nagoya, Osaka, Kobe, Moji, Nagasaki, Dairen, Hakodate, Muroran, Kenniho, and Kanaishi totaled 149,131 tons on February 11—1,837 tons more than on February 1 and 9,346 more than at the beginning of the year. (Commercial Attaché James F. Abbott, Tokyo, March 29.)

French Bauxite Mine for Sale.

Two French bauxite mines, having a tonnage on the spot of about 2,500,000 to 3,000,000 metric tons, have been offered for sale. Interested persons may obtain full particulars upon request to the Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington, D. C.

Sweden Sold Out in Raw Iron.

The large stocks of raw iron (pig iron) which have been stored in the Bergslags district of Sweden since 1920 are now sold. The blast furnaces, which have long been idle, have started work again and their production for the coming six months is already sold out. The greatest difficulty at present is in procuring charcoal, since there has been no production of charcoal during the period in which the blast furnaces were idle. (From Scandinavian newspaper, April 7.)

Options on Greek Magnesite Lands.

Acting Commercial Attaché R. O. Hall, stationed at Athens, has informed the Bureau that a Greek engineer and promoter wishes to interest American capital in certain Greek magnesite-bearing land, upon which he holds options. The name and address of this engineer, together with a map showing the location of the deposits and other data, will be forwarded to interested American firms upon application to the Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington. Mention should be made of file No. 7906.

Spanish Quicksilver Sales.

Official statistics on the sale of quicksilver in Spain for the year 1922 and the first three months of 1923, stated in flasks of 75 pounds each, have been reported as follows: January to December, 1922, 20,619 flasks, valued at 6,398,449 pesetas (1 peseta=$0.1529 at present rate of exchange, the normal rate being $0.193); January, 1923, 12,793 flasks, valued at 3,304,599 pesetas; February, 1923, 3,769 flasks, valued at 1,642,210 pesetas; and March, 1923, 9,085 flasks, valued at 2,264,414 pesetas. The total number of flasks sold was 46,266, with a total value of 13,609,672 pesetas. (Commercial Attaché Charles H. Cunningham, Madrid, April 9.)

PETROLEUM

Henry C. Morris, Chief, Petroleum Division

PETROLEUM PRODUCTS IN CEYLON.

Consul Marshall M. Vance, Colombo, March 1.

Imports of petroleum products into Ceylon are steadily increasing, receipts of kerosene and crude oil in 1922 being larger than in any previous year. Gasoline and lubricating oil imports in 1922 were slightly less than those of 1921, but new high records had been established in that year.

Dutch Borneo is the largest supplier of crude oil to the Ceylon market. The amount of crude imported from Persia is increasing, but apparently Dutch Borneo will continue for some years as the principal source. Total imports of crude into Ceylon rose from 5,187,700 gallons in 1913 to 25,799,002 gallons in 1922, of which Dutch Borneo furnished 4,532,422 gallons in 1913 and 21,479,616 gallons in 1922. The increase in imports in 1922 is due to improved local shipping conditions and the larger number of oil-burning vessels calling at Colombo. Practically all crude oil imports are used for bunkering, only a very small percentage being used in local industries.

Sources of Imports of Refined Products.

Kerosene imports during 1922 totaled 7,064,990 gallons, as compared with 4,307,378 gallons in 1921 and 4,693,366 gallons in 1913. The increase in the kerosene shipments for 1922 was due to increased sales and to the completion of larger storage facilities. Total imports of case kerosene declined from 1,117,569 gallons in 1913 to 321,626 gallons in 1922. Up to and including 1921, all imports of kerosene from the United States were in cases, but in 1922 bulk shipments from the United States comprised about one-third of the total kerosene imports, and indications point to a still further decline in the case trade. Increasing quantities of kerosene are being received from Persia, imports from this source in 1922 amounting to 4,264,660 gallons,

or 63 per cent of the toal, as compared with only 55,417 gallons, or about 1 per cent, in 1913.

Gasoline from Sumatra has monopolized the Ceylon trade for the past two years. Formerly, small quantities were imported from the United States and Dutch Borneo, but these have entirely ceased. Total imports of this product during 1922 amounted to 1,350,363 gallons as against 1,381,671 gallons in the preceding year and 383,422 gallons in 1913.

Lubricating oil comes into Ceylon principally from the United States and shipments from that country have more than kept pace with the rise in total imports. The United States supplied 60 per cent of the 249,195 gallons imported in 1913, and almost 70 per cent of the 1922 imports, which totaled 392,338 gallons. Burma is becoming an important factor in the lubricating oil market in Ceylon, while some oil comes also from Sumatra and the United Kingdom, the latter being largely reexports from America.

Greek Imports of Petroleum Products.

Acting Commercial Attaché R. O. Hall, Athens, March 22.

Imports of petroleum products into Greece during 1922 included approximately 5,660,000 gallons of kerosene and 6,340,000 gallons of gasoline and naphthas. The larger portion of the imports were supplied by Rumania and the United States, with smaller quantities from Persia, Egypt, and other countries. Detailed figures showing countries of origin are given in the following table:

Greek imports of mineral oil in 1922.

Countries of origin.	Illuminating oil.[1]	Crude petroleum.	Benzine.	Naphtha.

[1] Does not include illuminating oil imported for the State monopoly in old Greece, which totaled 6,871,440 gallons in 1922.

Argentine Petroleum Decree.

Trade Commissioner George S. Brady, Buenos Aires, March 19.

The governor of the Province of Jujuy, Argentina, issued a decree on January 9, 1923, which provides for more stringent regulation of the operation of petroleum concessions in that Province. This decree has for its object the prevention of speculation in oil lands, and at the same time limits the area of land which may be held by one individual or company under one original permit or cateo. While a company might still continue to disguise the extent of its holdings by having individuals take out separate claims, this point is covered in the decree by the requirement that every claim be worked continuously with full designated personnel and equipment.

[A copy of the decree referred to may be consulted by interested parties by applying to the Petroleum Division or to any district or cooperative office of the bureau, and referring to file No. 8495.]

Exportation of Petroleum Products from Constantza, Rumania.

Vice Consul Richard B. Hoven, Constantza, March 12.

Constantza is the principal port for the exportation of Rumanian petroleum, and petroleum products comprise the second largest class of exports from Constantza. The quantity of petroleum products exported in bulk from this port during 1922 amounted to 320,511 metric tons, as compared with 165,070 tons in 1921 and 95,566 tons in 1920, an increase of almost 100 per cent each year. Of the bulk shipments in 1922, nearly two-thirds, or 192,622 tons, was illuminating oil, 118,516 tons benzine, and the balance gas oil and residues.

Constantza has direct rail communication with Bucharest and with the principal Rumanian oil fields. Petroleum products are brought to Constantza from the fields by railway tank car or by pipe line. There is a pipe line from Baicoi to Constantza for the exclusive use of kerosene. The pipe line, which is the property of the Rumanian State Railway, is approximately 300 kilometers in length and has a capacity of about 500 tons (approximately 165,000 gallons) in 24 hours.

Facilities for Handling Oil in the Port.

In 1906 the Rumanian Government erected a petroleum pumping and tank station in the harbor. The present Government installation for the handling of petroleum products in Constantza includes facilities for the receiving and unloading of tank cars, for filling of storage tanks from the cars, and for the transfer of the various petroleum products from tanks to ships.

Storage tanks at the port are the property of the Government, which rents them to the various oil companies. Before the war the installation comprised 41 storage tanks, but at present there are 30. Arrangements with the Rumanian Government have been made by the oil companies to rebuild the other 11 tanks and several smaller ones of 1,000 tons capacity each in addition. This work began last spring and it is expected that the tanks will all be ready for use in the course of the summer of this year.

In addition to the Government installation, four of the larger oil companies have their own facilities in the outskirts of Constantza, with a total storage capacity of 140,000 tons. Another company has a station under construction, and it is understood that two more companies have planned installations.

Proposed Shale Oil Plant in Natal.

Consul Lewis V. Boyle, Durban, February 27.

The South African Lubricants and Chemical Works (Ltd.) proposes to set up within six months an experimental plant for the treatment of oil shale from their property in Impendhle District, Natal, according to a recent notice in the South African Mining and Engineering Journal. It is reported that this plant will have a daily capacity of 50 tons of shale, and if results are satisfactory the erection of a plant capable of treating 500 tons per day is proposed.

Additional information regarding petroleum appears in this issue under the following section:

Foreign trade opportunities Nos. 6376, 6394, 6404, 6413.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

UNITED STATES LEATHER FOOTWEAR EXPORT TRADE.

The United States export trade in leather boots, shoes, and slippers during March, 1923, totaled 616,427 pairs (227,970 pairs of men's, 214,655 of women's, and 173,802 of children's), which was an increase of 35.5 per cent over the quantity exported during the corresponding month of 1922. The increase in the number of pairs of men's boots and shoes exported amounted to 52.5 per cent; women's, 3.2 per cent; children's, 78.3 per cent; and slippers, 188.4 per cent. The most noticeable increase in the leather boot and shoe export trade is that shown with Cuba.

The following table shows the number of pairs exported by the United States to leading markets during March, 1922 and 1923, and the nine months ended March 31, 1922 and 1923:

United States exports of leather boots and shoes.

Slippers	7,077	20,412	46,604	129,855

During the first quarter of 1923 the United States export trade in leather boots, shoes, and slippers showed an increase of 42.1 per cent in volume and 36.9 per cent in value over shipments made during the corresponding period of 1922. The 1923 quarterly shipments included 631,112 pairs of men's, 594,634 pairs of women's, and 416,696 pairs of children's boots and shoes, and 43,800 pairs of slippers, as compared with shipments of 461,685 pairs of men's, 467,656 pairs of women's, and 237,884 pairs of children's boots and shoes, and 19,100 pairs of slippers during the 1922 quarter.

INCREASED PRODUCTION OF FOOTWEAR IN UNITED STATES.

The production in the United States during the first quarter of 1923 of 95,315,574 pairs of footwear other than rubber was an increase of 20.6 per cent over the quantity manufactured during the corresponding period of 1922. All classes of footwear shared in this increase, but the most important advances were shown in men's shoes (approximately 5,000,000 pairs); women's (about 3,000,000 pairs); and infants' (about 2,000,000 pairs).

The following table shows, by class, the number of pairs of footwear other than rubber manufactured in the United States during January, February, March, 1922 and 1923, and the quarterly totals:

Quarterly production of footwear in United States.

UNITED STATES EXPORTS OF LEATHER BELTING.

The United States export trade in leather belting in the first quarter of 1923 amounted to 222,581 pounds, which was approximately 35,000 pounds more than the quantity exported in the corresponding period of last year. It is noted, however, that the 1923 shipments show a steady though slight increase over the three-month period, from 66,496 pounds in January to 76,874 pounds in February and 79,211 pounds in March, whereas during the same months of 1922 there was the pronounced increase from 43,086 pounds in January and 48,091 pounds in February to 95,558 pounds in March.

The following table shows for March, 1922 and 1923, the number of pounds and the value of the leather belt-

ing exported by the United States to various important markets (United States shipments of leather belting during the first two months of the year were shown in COMMERCE REPORTS for March 19 and April 16).

Items of Interest to the Trade.

Exports of Manufactured Leather Goods From United States.

The United States exported during March, 1922 and 1923, respectively, 935 dozen pairs of leather gloves, valued at $6,405, and 1,311 dozen pairs, valued at $7,577; 37,946 pounds of harness and saddlery, valued at $19,638, and 126,424 pounds, valued at $66,549; 4,910 bags, suitcases, etc., valued at $13,518, and 9,054, valued at $40,048; and 39,925 pocketbooks and purses, valued at $31,491, and 54,509, valued at $27,143. It will be noted that each class showed in March, 1923, an increase in volume.

Shipments of Leather Athletic Footwear Increase.

The export trade for American manufactured athletic shoes, sandals, overgaiters, leggins, puttees, and other leather footwear, exclusive of boots, shoes, and slippers, amounted in March, 1923, to 10,032 pairs, valued at $14,130. During the first quarter of 1923 the foreign demand for this class of goods amounted to 29,340 pairs, as compared with 23,174 pairs during the corresponding period of 1922.

BRITISH EXPORTS OF LEATHER BOOTS AND SHOES.

During the first quarter of 1923 the United Kingdom exported 150,802 dozen pairs (1,809,624 pairs) of leather boots and shoes, which was an increase of 58.3 per cent over the quantity exported during the corresponding period of 1922. The principal increases were in the consignments to New Zealand, Australia, and British South Africa. The largest quarterly decrease is shown in the shipment to the Netherlands.

The following table shows by principal countries of destination the United Kingdom's exports of leather boots and shoes during March, 1921, 1922, and 1923, and the first quarter of these years:

HIDES AND LEATHER

Wilber J. Page, Chief, Hide and Leather Division

ARGENTINE HIDE AND SKIN EXPORTS IN 1922.

Commercial Attaché Edward F. Feely, Buenos Aires.

The depression in the Argentine live-stock industry, which became evident in 1921, was still a cause for grave concern at the close of 1922, and resulted in demands on the part of the breeders for Federal intervention to relieve their difficult situation and to curb the alleged monopoly of the packing houses. Several bills were introduced at the special session of Congress, and some of these measures will probably be passed, but it is questionable whether or not they will have any beneficial influence on the industry.

A careful study of the causes leading up to the present situation leads to the conclusion that it has been brought about by an overproduction during the war years and the period of inflation which followed; by speculation favored by the liberality of the banks in making loans on live-stock collateral; and, finally, in no small degree, by inefficient management and lack of foresight on the part of the breeders themselves. Wholesale killing of calves throughout the country and forced liquidation by breeders had by the end of the year brought prices in the local market to the lowest point in the history of the industry. It is anticipated, however, that this year will see a gradual improvement in prices of hides, as well as meat, owing to the reduction in the number of cattle in the country.

Export Trade in 1922.

During the last quarter of the year the market for dry hides was favored by the fine weather, and European and American demand continued steadily and at increasing prices throughout the period. Shipments of dry hides during the year 1922 was greatly in excess of any previous year for which statistics are available. Exports of salted and dry hides and skins for the 12

months ending December 31, 1922, with the principal countries of destination, were as follows:

Argentine exports of hides and skins during 1922.

The United States is the principal outlet for salted hides, and during the year in question took more than half of the total quantity available for export. There is every indication that the year 1923 will record a large increase over the 1922 figures. The United States was also a leading market for dry hides, being second only to Germany, and the United States absorbed the bulk of the horsehides, calfskins, and goatskins that were exported. It is interesting to note that France took the greater proportion of the sheepskins. Germany was a particularly heavy buyer of dry and salted hides and calfskins at a period when it was advantageous from the standpoint of Argentine prices and the purchasing power of the mark for the German tanning industry to absorb the raw materials. The prices of dry hides of first quality ranged from 10.50 to 11.50 paper pesos per 10 kilos (about 20 cents per pound) at the close of the year, and for salted hides the quotation was 65 pesos per 100 kilos (about 11 cents per pound).

Development of the Tanning Industry in Madras.

Assistant Trade Commissioner C. B. Spofford, jr., Calcutta, India, March 15.

The government of Madras has appointed a committee of 10 men, composed of government officials and civilian experts, to examine the steps which are desirable to further the development of the leather industry in the Presidency of Madras, with special reference to the present constitution and aims of the Leather Trades Institute. The main object is to reduce exports of raw hides and skins from Madras and to increase the manufacture and export of tanned leather and possibly manufactured leather goods. If this purpose is realized, a supply of skilled laborers, artisans, and tannery managers is essential.

The committee is requested to report in particular on the points specified below, but need not confine its report to these items:

(1) Whether it is advisable to attach a workshop and business tannery to the institute.

(2) What opportunities should be provided for those actually engaged in the manual work of tanning, Madigas for example, so that they may become skilled laborers.

(3) Whether a monthly report on the lines of the Calcutta Research Tannery reports should be published by the Madras Leather Trades Institute also.

(4) Whether any increase in staff and equipment in the institute is necessary.

(5) Whether the average cost of imparting instruction in the institute, which now stands at 1,100 rupees per annum per student, can be reduced, and whether the receipts of the institute can be increased.

(6) Whether the committee would recommend the appointment of itinerant tanning instructors, as in Bengal, to familiarize improved methods of tanning.

(7) What will be the estimated cost, capital and recurring, of the Leather Trades Institute should the recommendations of the committee be adopted.

Live-Stock Slaughter in North Manchuria.

Consul George C. Hanson, Harbin, March 15.

Cattle bred in the enormous steppe district of Manchuria are distributed throughout the various markets of the Far East. One-half of the total quantity of sheep produced in China originates in Heilungkiang and Kirin Provinces. According to official Chinese information there were in north Manchuria in 1922 nearly 11,000,000 head of sheep. Hailar and Manchuli, on the western branch of the Chinese Eastern Railway, are centers for exchange with Mongolia. Nearly 200,000 sheep move into the Chinese Eastern Railway zone yearly from Mongolia; of this number, approximately 35,000 are consumed locally by the European population, 100,000 by the Chinese population, and in 1922 there were exported to Soviet Russia approximately 65,000.

The number of horses in north Manchuria and adjoining districts of Mongolia is estimated at more than 3,500,000 and there is also a considerable number of mules. Chinese official statistics give the number of horned cattle in north Manchuria at 5,000,000. Mongolian cattle produce good meat and the production is high. The principal markets for north Manchurian and Mongolian cattle are the cities and villages of the railway zone and the adjacent districts of Soviet Russia. In 1922 the Chinese Eastern Railway carried approximately 13,000 head of cattle, 2,000 tons of meat products, and 81,200 skins.

Additional information regarding hides and leather appears in this issue under the following section:

American Consular Officers on Leave.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Huddle, J. Klahr	Hamburg, Germany.	May 25	Shawhan Hotel, Tiffin, Ohio.
McDonough, Dayle C.	La Paz, Bolivia	June 16	Department of State, Washington, D. C.
McMillin, Stewart E.	Antofagasta, Chile	June 12	1419 Las Palmas Street, Hollywood, Calif.
Memminger, Lucien	Leghorn, Italy	June 29	Department of State, Washington, D. C.
Savage, John M	Southampton, England.	May 16	Care of Manhattan Club, Madison Avenue and Twenty-sixth Street, New York City.
Thackara, Alexander M.	Paris, France	June 12	Department of State, Washington, D. C.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

CUBAN BANKING AND FINANCE.

Acting Commercial Attaché Paul L. Edwards, Habana, April 27.

The Banco Gomez Mena has been purchased outright by the Royal Bank of Canada, according to an announcement made to-day. The transfer is to be effective April 30, 1923, and is to include the bank building and the entire banking business of the Cuban firm. From present indications it appears likely that the liquidation of four of the banks now in the hands of the liquidation commission will be completed in the course of the next month, and it seems probable that the creditors will realize practically nothing. The four banks are: Banco Federal, Cienfuegos, suspended March 1, 1921; Propietarios Industriales y Arrendatarios, Habana, suspended June 14, 1921; Victor E. Escartin, S. en C., Moron, suspended July 18, 1921; and Francisco Diaz Vega, Ciego de Avila, suspended May 30, 1921. The prospects for the creditors of the Banco Nacional, on the other hand, have improved greatly and it is possible that this bank may later be reorganized and reopened.

Operations of Debt Commission.

Claims reaching a total of approximately $45,000,000 have been filed with the Cuban Debts Commission, but only departmental obligations due prior to July 1, 1922, amounting to a total of $3,362,000, have been approved by the commission to date. Of the $50,000,000 foreign loan recently negotiated in the United States, the portion of the proceeds which is allotted for the payment of this indebtedness amounts to but $17,000,000. No payments have yet been made on these approved claims, but legislation before the Cuban Congress provides for the immediate liquidation of 50 per cent of the approved claims.

The Debts Commission was created by a law published in the Gaceta Oficial, September 15, 1922, to examine and determine the claims outstanding against the Cuban Government. The law provides that all claims must be presented to the commission before April 15, 1923, and that claims not presented prior to that date will have to be made to the courts. The Cuban Congress is considering a measure for extending this period.

Expenditure of Appropriations.

Unsettled political conditions, particularly with regard to the cabinet personnel, have delayed arrangements for the expenditure of the $6,000,000 made available from the proceeds of the loan for reconstruction, maintenance, and continuation of public works. Payment orders have already been issued for practically the entire $9,000,000 appropriated for wages, salaries, pensions, etc., and for the bulk of the $3,000,000 fund destined to service on interior loans.

ENGLISH ASSOCIATION OF AMERICAN BOND AND SHARE HOLDERS.

Trade Commissioner Leland Rex Robinson, London, April 5.

The Stock Exchange Year Book of 1922 defines the functions of the English Association of American Bond and Share Holders as "representing and protecting the interests of holders of American and Canadian securities in the United Kingdom—acting as fiscal agents for supplying statistical information for the registration of shares, collection of dividends, etc." To summarize the functions of the association in a more specific way it may be said that it is occupied at the present time with the following duties:

1. The association acts as transfer agent for several North American railways, including the Quebec Central Railway Co. and the Buffalo & Lake Huron Railway Co.
2. It carries on a general business as registration and transfer agents primarily in connection with railway company securities, but also for a wide range of industrial issues. In this connection its service to its broker clientele in connection with foreign collections and the conversion of currencies is most important. The association undertakes to change into sterling all dividends collected in New York for its wide shareholding clientele, as they may desire, at service fees which are much lower than those formerly exacted by the arbitrageurs, and which are merely high enough theoretically to give the association shareholders their constitutional rate of dividend for this and other services.
3. The association renders large service in connection with the payment of American State and Federal inheritance taxes. Owing to the complexity of the American system and the liability of the estates of many English decedents, the expert services of the association are frequently resorted to. Upon inquiring whether the association is called upon to advice its clients concerning the American income tax it was ascertained that the burden of its work was in connection with inheritance taxes.
4. The association occasionally cooperates in underwriting the issuance of securities of high character, although it never enters into the issuing business itself. However, this is a minor phase of its activities. It has no particular relation with investment trusts.
5. The association, while an organization of long standing, postdates the Corporation of Foreign Bondholders. It has no particular relationship with the latter organization. In general it may be said that the Corporation of Foreign Bondholders has busied itself in representing the interests of English bondholders of foreign defaulting governments and has therefore been engaged largely in a sort of financial diplomacy, whereas, the association has only once concerned itself with readjustment claims on a foreign government and carries on a more routine-like range of activities as indicated above.

The English Association of American Bond and Share Holders is a limited company whose capital consists entirely of ordinary stock. The articles of association provide that the dividends shall never exceed 7.5 per cent. The reason for the limitation of the dividends to the above figure lies in the fact that the association was not organized for profit making but rather for the service of the London and provincial stock brokers and their clients, by whom it was originally organized in 1884.

Assessable Wealth of the City of Bergen.

Assistant Trade Commissioner H. Sorensen, Copenhagen, March 1.

In connection with the recent flotation in London of the £1,000,000 loan for the city of Bergen, Norway, certain recent developments in connection with the finances of that city will be of interest to American investors.

In a survey of the prospects for the 1923–24 budget the mayor stated that, whereas for the fiscal year 1922–23 taxes were assessed on a total wealth of 646,000,000 crowns (1 crown=$0.268 at normal and $0.1726 at present exchange), the assessable wealth

for the coming fiscal year will only amount to about 550,000,000 crowns. Moreover, in 1922–23 the assessable income was 195,000,000 crowns, while in 1923–24 it will be reduced to 140,000,000 crowns. The tax rate last year was 12.5 per cent and the returns totaled 27,800,000 crowns. If the rate is raised to the full legal limit, the returns for 1923–24 will amount to only 24,200,000 crowns. The mayor added that, even if several items on the expense side are curtailed, it will still be a difficult matter to get the budget to balance. This condition will be aggravated if proposals for the extension of furloughs to certain municipal employes and for reduction of rents in the municipal apartment houses are passed.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

NEW GREEK TAX ON PROFITS.

Acting Commercial Attaché R. O. Hall and Chargé d'Affaires Jefferson Caffery, Athens.

On August 3, 1922, the Greek Government passed a law (No. 2965) which provided for a tax on profits made by corporations doing business in the country, but by virtue of the wording of that law only domestic corporations came under its provisions. To remedy this situation a supplemental decree was enacted and published in the Government Gazette on January 21, 1923, amending the law of August 3 so as to specifically subject to the tax foreign corporations operating in Greece.

Both law and amendment apply to profits made since the beginning of 1921, and as retroactive laws are unconstitutional in Greece there is much opposition from various sources. The law, however, is in force. The Minister of Finance stated that the amendatory decree was enacted in part to prevent Greek corporations reorganizing under foreign laws for the purpose of evading taxation.

The law exempts profits up to 6 per cent in the case of incorporated banks and up to 10 per cent in the case of other incorporated enterprises, as stated in article 2. The following data showing the scale of taxation for banks are given in article 3 of the law:

Scale of taxation on profits of Greek banks and corporations.

Banks.		Other incorporated business enterprises.	
Taxable portion of profits.	Percentage of tax.	Taxable portion of profits.	Percentage of tax.
6 to 10 per cent	20	10 to 15 per cent	10
10 to 20 per cent	25	15 to 20 per cent	12.5
20 to 40 per cent	30	20 to 30 per cent	15
40 to 50 per cent	35	30 to 40 per cent	20
50 to 100 per cent	40	40 to 50 per cent	25
100 per cent and above	50	50 per cent and above	30

Taxation of Foreign Corporations Operating in Greece.

The recent decree of the Government, modifying law No. 2965, alters appreciably the amount of tax payable by American companies doing business in Greece. Law No. 2965 imposed a provisory additional tax on net profits of all joint-stock companies of any kind and nature, with retroactive power from the year 1921, as specified by said law. However, in applying the law it was construed to affect only domestic joint-stock companies, as a number of its provisions definitely stated its application to Greek companies and omitted mention of foreign companies. Article 1 of the amendatory decree of January changes this by providing particularly for a provisory additional tax to be imposed on net profits realized in Greece by foreign corporations from the year 1921.

The rate of tax varies according to the type of company; that is, banking, commercial, industrial, or other. Under this law banks deduct as nontaxable 6 per cent of their net profits and other companies deduct 10 per cent. The working capital of foreign corporations is considered to be the capital which they use for their operations in Greece. In case the capital and profit accounts of domestic or foreign companies are kept in foreign currency, the conversion into drachmas for the reckonings required by this law is made, as regards capital, on the basis of the current rate of that currency on the day of payment, and as regards profits, on the basis of the rate prevailing on the date of the drawing up of the balance sheet.

Provision for Ascending Scale of Taxation.

It results from the tables given in article 3 of No. 2965, that the law has adopted a system of ascending scale of increase of taxation and that the balance of profit to be taxed, after deductions, must be divided into portions, each of which will be charged with the equivalent rate of tax and will not be taxed in total by the rate mentioned in the scale.

In exposition of this provision a well-known firm of attorneys in Athens cites as example:

Suppose that a banking company, disposing of working fund of 6,000,000 drachmas, has realized in the course of the year 1922 profits of 1,800,000 drachmas. The tax to be paid by this bank, on the basis of the above law, will be as follows:

First, the amount exempted is deducted, which, as already stated, is at 6 per cent on the working fund, or 360,000 drachmas, and there remains a taxable balance of 1,440,000 drachmas, as follows:

1. Amount corresponding to 4 per cent of the working fund, i. e., 240,000 drachmas, to be taxed according to the scale at the rate of 20 per cent, viz 48,000 drachmas tax.
2. Amount corresponding to 10 per cent of the working fund, i. e., 600,000 drachmas, to be taxed according to the scale at the rate of 25 per cent, viz 150,000 drachmas.
3. Amount corresponding to 10 per cent of the working fund, i. e., 600,000 drachmas, to be taxed according to the scale again at the rate of 30 per cent, viz 180,000 drachmas.

Consequently the bank, on its profits of 1,800,000 drachmas, will pay a tax of 378,000 drachmas.

The above scale will enter into force from the taxation period of the year 1922 and on. Regarding profits of the year 1921 the tax will be calculated according to a special commandment of the law at a fixed rate of 50 per cent without any gradation.

45712°—23——6

From the above it is evident that after a company has deducted from its profits an amount of 6 per cent per annum on the working fund during the year 1921, it must pay half of it to the public treasury. For 1921, however, the law makes an exception, granting the right to taxable companies to pay the tax in 10 equal yearly installments, and in addition exempts them from the 10 per cent overtax in favor of the forced loan which, from 1922 and on, will be applied in addition to the above tax.

Rumanian Decisions on Debt Payments.

Acting Commercial Attaché Louis E. Van Norman, Bucharest, March 16.

A great deal of interest has been evinced by American inquirers regarding the attitude of the Rumanian courts toward the payment of debts contracted by Rumanian merchants in the course of foreign trade. The following extracts give in substance the judgments rendered by Rumanian law courts during the past few years:

Payments in foreign money.—The debtor of a bill of exchange can not invoke equity on the plea of unforeseen circumstances (imprevision) with the object of escaping the payment of a bill of exchange in foreign money mentioned therein, because, in accordance with articles Nos. 41 and 315 of the Commercial Code, payment must be made in the currency mentioned in the bill of exchange, when such currency has a legal or commercial rate of exchange in the country. (Tribunal of Ilfov, section No. 2 Commercial, November 22, 1921.)

When a bill of exchange mentions payment in a foreign money which has had and continues to have a commercial rate of exchange in the Rumanian financial market, this bill of exchange must be paid only in the money so mentioned, and the tribunal can not, on grounds of equity, compel the creditor to receive lei, or any other kind of money, since to do this would be to change the object of the obligation without taking due account of the agreement which has the force of law between the two contracting parties. (Tribunal of Ilfov, section No. 2 Commercial, June 8, 1921.)

Meaning of due date.—By "due date" must be understood the date of payment. The debtor owing a bill of exchange which mentions as the medium of payment a money which has no legal rate of exchange may fulfill his obligation by payment of the value in lei as of the due date, and not at a rate of a later date when the external value of the leu may be less.

Interest on a bill of exchange.—In an action on a bill of exchange only the legal 6 per cent interest rate can be claimed, and under no consideration can the ruling interest rate be claimed, since a bill of exchange is a title of credit and not an obligation. Consequently, whenever in an action on a bill of exchange claims are made upon other grounds than those of the bill of exchange, they must be separated, leaving to the action on the bill only its own special domain. (A notation of C. Stoenescu, Tribunal of Dolj, section 3, December 4, 1918.)

Guaranties by separate document.—The obligations of those who guarantee the payment of a bill of exchange shall be brought into the action on the bill only when the obligations result from the bill itself. Should any person, therefore, undertake the obligation of guaranteeing the payment on the instrument by separate document, while the guaranty would be perfectly valid, it could not be brought into an action on the bill. It could, however, be made the object of an ordinary commercial suit. (Tribunal of Ilfov, section No. 2, Commercial, October 19, 1921.)

Fall in the value of the leu.—The fall in the rate of exchange of the leu (when the obligation of the debtor is to pay in some other specified money) can not exercise any influence whatsoever upon the contract and can not exonerate the debtor from full payment in the kind of money stipulated. (Tribunal of Ilfov, section No .2, Commercial, June 8, 1921.)

It is properly inferable from these decisions that bills of exchange in foreign moneys are legally enforceable in Rumania to-day regardless of any fluctuation in the rate of exchange, and that such rate is the rate of the day of payment. Any failure on the part of foreign merchants to collect money justly owing to them is not due to the attitude of the Rumanian courts but to other causes (moral, psychological, and political) over which the courts have no control.

Finally, the securing of a decision and even a judgment in a Rumanian court does not give any assurance as to collection.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

THE LOW-GRADE LUMBER PROBLEM.

A frequent criticism of our lumber export trade is that our lumber exporters are supplying foreign markets with only the higher grades of lumber. It has been the contention that the shipment of high grades abroad has meant that the domestic market must consume more than its share of low grades. This criticism of the lumber export trade is not justified, because our lumber exporters are just as much interested in moving the accumulation of low grades as is the domestic trade.

There is a large export business in the form of logs and timbers and it is obvious that every log or timber exported has in it all of the low-grade lumber that would have been produced had the log been sawn into lumber. The importance of the portion of the export trade represented by logs and timbers is shown by the following figures:

In 1922, 25 per cent of the 633,000,000 feet of southern yellow pine exported was in the form of logs and timber, while for Douglas fir the figure was 25 per cent of 820,000,000, and for oak 2 per cent of 110,000,000 feet. In the case of one important American wood practically the entire export is of logs or timber. This wood is cedar, of which in 1922, 58,800,000 feet of logs and timber were exported, while exports of cedar lumber were too small to be shown separated in the statistics.

The export trade in railroad ties, amounting to 1,835,071 ties last year, is another item accounting for a considerable amount of low-grade material. The average railroad tie is manufactured from that part of the log, or from a small log, which would produce only low-grade lumber. Further, the 60,000,000 feet of box shooks exported last year represented not only the product of a large amount of low-grade lumber but also a considerable amount of short lengths and other waste at sawmill which otherwise could not have been put in salable form.

Certain Countries Take Large Amounts of Low-Grade Lumber.

In addition to the foregoing there are considerable amounts of low-grade lumber exported. A large part of the lumber exported to the West Indies is low grade. Cuba in one recent year took about 250,000,000 feet. A portion of our large exports of southern yel-

low pine and Douglas fir to Mexico are lower grades. China has taken considerable low-grade lumber and doubtless will take more in the future.

All lumber importing countries are accustomed to using low-grade lumber because in most countries the local production is in general of a low grade. Further those countries which secure their supplies from northern Europe have to expect a proportion of fifths or wracks, corresponding to our culls. Not only do customers of the northern European countries take low-grade stuff but they take short lengths; for instance, Finland exported last year 49,000,000 feet of lumber less than six feet long. The market for short lengths is obviously an advantage to the shipper; it is of advantage to steamship lines in facilitating stowage, for it can often be used as dunnage with other cargo such as cotton; and it has been found that short lengths are very often advantageous in utilization.

An interesting market for low-grade material is Egypt which takes each year large quantities of hewn small timbers which may be knotty or partly waney for use in building native huts. The United States exported last year 11,582 cords of fuel wood which obviously is of low grade.

Railway Tie Supply in Jamaica and Cuba.

Jamaican Supply of Wood for Cross Ties Small.

Jamaica can not be considered as a future source of supply for crossties for American railways owing to the lack of a sufficient supply of wood of any kind that might give service. Several of the native woods, such as mahogany, lignum-vitae, mahoe, and logwood, are too valuable for other purposes to permit of their being used for crossties. In fact almost all ties used locally are imported from the United States or Canada, the standard size being 8 feet by 5 by 9 inches. Of the native woods that have been used the following service records of the ties, without treatment, were: Red bullet, 18 years; naseberry bullet, 16 years; fiddlewood, 14 years; Brazilletto, 14 years; greenheart, 16 years; dogwood, 14 years; sapadilla, 16 years; combwood, 14 years; and red ironwood, 16 years. (Consul Charles L. Latham, Kingston, April 17.)

Increasing Quantities of Cuban Ties Being Used.

Cuban railways at present are obtaining increasing quantities of ties of native woods. When the railways were originally constructed, most of the ties were of imported cypress. Although there were important timber resources in Cuba, labor, being attracted by higher wages in the cane fields, proved too costly to properly exploit them. In addition, interior waterways could only be used in a meager way for transportation.

Cuban hardwood ties cost $1.60 each as compared with $1.75 for imported cypress ties. They are not treated and usually give from 12 to 15 years' service. None has been exported in important quantities. Cuban hardwood generally being shipped rough in the log.

There are no freight rates quoted for railway ties from Cuba to the United States, but recent quotations on logs have been about $15 per 1,000 board feet, and on sawed lumber $10 per 1,000 feet to New York from Habana. Mahogany, cedar lignum-vitae, and majagua are the native woods most abundant. (Consul General John R. Putnam, Habana, April 2.)

Finnish First Quarter Sales.

Consul Leslie A. Davis, Helsingfors, April 7.

Up to April 1, about 633,600,000 board feet of lumber had been sold from Finland. The quantity is not small for this time of year, but had the sales progressed as favorably as during January, it would have been considerably greater.

Although the lumber market continues weak, Finnish lumbermen believe there are signs indicating that better conditions are at hand. French importers, who have thus far kept off the market on account of the depreciation of the franc, have now begun to make inquiries of Finnish exporters due to the fact that the franc is now more stable. Considerable hopes are placed in the French market, as it is known that the demand there is large and that stocks are very limited. So far, however, only a few small sales have been concluded.

It is thought that purchases by the French will stimulate the lumber market in England and that purchases may be expected from that country within a few weeks. The prospects seem better now than some weeks ago, although it is said that English importers think that the uncertain conditions on the Continent will increase the supply for England and are refraining from purchases at present in the expectation of decreased prices. Otherwise, the lumber market has been stable both as respects prices and sales.

Logging in northern Finland, which has about ended, has been of greater scope than usual. Last fall it was predicted that the total number of trees to be felled in northern Finland would amount to over 2,000,000. This number has been exceeded, the total number reported cut being about 2,900,000 trees. One firm cut the greatest number, of which 424,000,000 broad feet were for sawn timber and 84,800,000 board feet were for pulp wood. The increase in logging has been greatest in respect to the Swedish firms operating in Finland.

1922 Exports of Lumber and Timber Products.

The total exports of lumber and timber products for 1922, as computed by the Lumber Division, were 2,267,028,000 board feet, of which 1,768,911,000 feet were softwoods and 276,761,000 feet hardwoods. In addition there were 221,356,000 feet of softwoods and hardwoods not separated in the export statistics. In this estimate are included timber, round, hewn, and sawn; lumber; box shocks; shingles; staves; heading; sash and doors; moldings; lath; cross arms; telegraph poles; piling; props; pulpwood; and firewood.

Methods of Handling American Lumber Abroad.

A very important survey of the various methods of handling American lumber imports in every important district in the world is being prepared by the Lumber Division. The first series of these surveys, bearing on conditions in South America, will soon be published in the form of a trade information bulletin, and a copy will be sent to every lumber exporter listed in the Exporters' Index of the Department of Commerce. In connection with these reports the Division has also compiled new trade lists which represent a material improvement over previous lists of lumber importers and agents abroad. The second report will soon go to press and will bear on condi-

tions in the West Indies, Central America, and North America outside of the United States.

Other reports on the rest of the world will follow from time to time. The information contained in these reports is of basic value and has been prepared by consular officers, commercial attachés, and trade commissioners located in foreign countries.

CUT-OFFS.

Samples of Cedar Pencil Slats Available.

The Lumber Divisiion has received from Consul William L. Jenkins, Nairobi, Colony of Kenya, East Africa, several samples of cedar slats suitable for the manufacture of pencils. These samples may be examined upon application to the Lumber Division.

Quarterly Lumber Exports from Vancouver Island.

Exports from Cumberland, Vancouver Island, during the first three months of 1923 were as follows: Cedar logs, 966,000 feet; fir logs, 2,416,000 feet; hemlock logs, 1,267,000 feet; fir lumber, 1,927,827 feet; and spruce lumber, 41,081 feet. There were also 1,646,000 cedar shingles shipped. (Consular Agent George W. Clinton.)

Seasoned Lumber Disposed of in Toronto District.

There has been an increased movement of lumber from this district during the first quarter of the present calendar year and there is said to be but little seasoned lumber left in the district for export. On account of the lateness of the spring season the cut of this year's timber is being delayed and exports will undoubtedly decline during the present quarter. (Consul Chester W. Martin, Toronto, Canada, April 17.)

Latvian Lumber Comprises One-third of Total Exports.

During the first six months of 1922, 137,103 tons (estimated 100,770,000 board feet) of Latvian lumber valued at 9,098,000 lats ($1,755,914) were exported. This sum is equal to one-third of the value of the total exports. The greater part of this lumber went to England. (Robert R. Bogenberger, clerk to trade commissioner, Riga.)

Forest Resources Development in British Honduras.

The legislative council of British Honduras has decided to make provision for the development of the timber resources of the colony. A forest trust is to be created for the purpose, 50 per cent of the export tax on wood and chicle going toward the trust fund for the upkeep of an adequate forest staff. As a result of negotiations which are proceeding, it is possible that the Government of Jamaica will purchase at least 2,000,000 feet of pine annually from British Honduras for the Government Railway and Public Works Departments. It is expected that the colony will supply immediately 10,00 hardwood ties to the Jamaica Railway. ("Commercial Intelligence Journal" Department of Trade and Commerce, Ottawa, Canada, April 28.)

Greek Government Housing.

The Ministerial Cabinet has charged the secretary general of the Ministry of Supplies with the preparation of a legal decree concerning the construction of cheap houses for public officials, pensioners, wounded soldiers, and laborers, refugees, and indigent people. The secretary general declared on March 29 that this decree was drawn up and would be immediately submitted to the cabinet for approval. According to the provisions of the decree, the Government may contract with any Greek or foreign concerns for the construction of small houses on communal, municipal, State, or monastery lands. The Government will assume the proper obligations to the contracting companies and will maintain a fixed rate for the houses thus to be created. Under the terms of the decree, the owners of these houses will have the right either to sell or modify them. (C. E. Dickerson, jr., clerk to trade commissioner, Athens, March 29.)

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS.

ITALY-AUSTRIA.

Cable from Commercial Attaché H. C. MacLean, Rome, May 2.

Commercial Treaty Granting Reciprocal Duty Concessions.

A commercial treaty between Austria and Italy has been signed whereby Italy has granted a reduction of import duty on pumps, metal and wood furniture, wire, nickel articles, agricultural machinery, paper, and leather articles. Austria has granted, on the other hand, a reduction of import duty on Italian agricultural products. Special facilities will be provided for Austrian trade through Trieste.

GENERAL TARIFF CHANGES.

CHILE.

Assistant Trade Commissioner W. E. Embry, Santiago, March 20.

Proposed Tariff Revision.

A copy of the proposed revisions of the Chilean Tariff Commission to date has been forwarded to the Department of Commerce recently by Assistant Trade Commissioner W. E. Embry, Santiago, Chile. The work so far includes mainly new classifications on many articles of merchandise hitherto difficult to classify. Very few new rates have been suggested by the commission, but it is expected that this part of the work will be taken up later.

[The full text of the present proposals is available for examination in the Division of Foreign Tariffs, and further information will be furnished upon request.]

IRISH FREE STATE.

Consul John A. Gamon, Queenstown, April 11.

Certain Effects on American Trade of Separate Customs Tariff.

The adoption by the Irish Free State of import duties applicable to British goods, effective from April 1, 1923, would appear to be a handicap to the trade of certain British manufacturers in that portion of the British Isles, and consequently a considerable advantage to United States exporters interested in goods used in the Irish Free State which are subject to duty under the English customs tariff. To begin with, the English tariff is to be used, although the new State enjoys the right to modify this tariff to suit its own re-

quirements. There still seems to be some uncertainty as to whether British goods are to receive the rates of the preferential duties, though in the Articles of Agreement for a treaty drawn up in December, 1921, it was stipulated that the position of the Irish Free State in the British Empire would be identical with that of Canada.

Prominent among articles of United States trade which may be affected are automobiles, cinematograph films, and certain tobacco products. The duty on automobiles is 33⅓ per cent ad valorem, and even with the preferential duty the British product would still have to pay 22⅔ per cent, as compared with former free entry. The duty on cinematograph films is 1d. per linear foot, with a similar reduction of one-third for the preferential rate. The establishment of both a customs duty and an excise tax on tobacco will probably influence the trade in tobacco products, and may bring about the importation of raw tobacco for manufacture.

Assistant Trade Commissioner W. M. Park, London, March 27.

Warning Against Transshipments via Great Britain or Vice Versa.

In view of the conditions mentioned in the preceding item, care should be used in routing shipments of dutiable goods to avoid the entry of those destined for the Irish Free State into the territory of Great Britain or vice versa; otherwise double duties may be incurred.

[Where exporters wish to make transshipments, temporary provisions for transfers in bond have been made to aid shippers. These provisions were outlined in COMMERCE REPORTS for April 9, page 127.]

ITALY.

Commercial Attaché H. C. MacLean, Rome, May 6.

Expected Increases in Import Duties.

The parliamentary tariff commission will present its report when the Italian Parliament opens May 15. Although the present customs tariff has been in effect since July 1, 1921, it has not yet been approved by Parliament. It is expected that increases in duties on certain commodities will be recommended. The policy is to fix high rates on manufactured products and to grant concessions through the negotiation of commercial treaties.

PERU.

Cablegram from Acting Commercial Attaché W. E. Dunn, Lima, April 26.

New Peruvian Tariff Probably Effective in June.

The adjournment of the Peruvian Congress on April 7 marked the conclusion of some very important legislation, including the passage of the new tariff bill. The new tariff rates, however, will probably not become effective until some time in June or later, owing to a long delay in the work of printing the schedule.

YUGOSLAVIA.

Consul K. S. Patton, Belgrade, April 4.

New Tariff Bill.

The Interministerial Economic and Financial Committee on March 2, 1923, urged the Yugoslavian Minister of Commerce and Industry to expedite the elaboration of a new tariff bill. The draft of the new bill is now in the hands of the Minister of Finances, who will submit it shortly to the Ministerial Council. The new tariff legislation will probably reduce export duties and increase import duties.

IMPORT AND EXPORT RESTRICTIONS.

FRANCE.

Consul William J. Pike, Strasbourg, March 20.

Establishment of French Government Tobacco Monopoly in Alsace-Lorraine.

The manufacture and sale of tobacco in Alsace-Lorraine are to be under the French Government monopoly. Under the German administration no direct monopoly existed in this region. In applying the monopoly regulations the French Government has under consideration plans for concessions or reimbursements to the large tobacco interests now established in this territory.

Journal Officiel, Paris, April 6.

Temporary Export Restriction on Animals and Fresh Meat.

The exportation from France of cattle, sheep, goats, and pigs, and of fresh meat, is temporarily under restriction, according to a decree of April 5, 1923.

[A decree of March 12, 1922, had removed the export restriction on these products which was established by decree of July 12, 1919.]

Journal Officiel, Paris, April 13.

Export Restriction on Sulphate of Ammonia Reestablished.

The exportation from France of sulphate of ammonia is again under restriction, according to a decree of April 12, 1923, repealing the decree of March 11, 1922 which had removed the previous restriction on the exportation of this article.

GERMANY.

Commercial Attaché Charles E. Herring, Berlin, April 29, May 2.

Relaxation of Export Duties and Restrictions.

The abolition or reduction in the German export duties on chemicals, glass products, and certain other items of less commercial importance, became effective on April 29, 1923. It is stated that this measure has been deemed necessary on account of the recent high prices and the heavy decrease in orders for export.

It is reported that the wholesale dealers and manufacturers, with the exception of the clothing industry, are generally in favor of the abolition of the export control boards, known as the Aussenhandelsstelle. There is prospect of the early relaxation of the controls over the leather and rubber trades.

NETHERLANDS.

Cable from Commercial Attaché Paul S. Guinn, The Hague, May 5.

Passage of Bill Restricting Importation of Footwear.

The shoe imports restriction bill, which was passed by the second chamber of the Dutch Parliament on March 23, passed the first chamber on May 3. It is thought that within 10 days after the passage of this bill the commission provided for by its terms will convene for the purpose of recommending regulations to govern the imports of footwear.

[The provision of this shoe imports restriction bill were referred to in COMMERCE REPORTS for April 9, 1923, on page 125.]

SPAIN.

Gaceta de Madrid, Madrid, April 8.

Removal of Export Prohibition on Certain Early Potatoes.

The exportation from Spain of early potatoes of the "Royal Kidney" variety up to 30,000 metric tons is

permitted until May 31, according to a decree of April 2, 1923.

[The exportation from Spain of early potatoes had been under prohibition since June 20, 1922.]

TUNIS.

Journal Officiel Tunisien, April 14.

Renewal of Export Restriction on Molasses.

The exportation or reexportation of molasses from Tunis, except to France or Algiers, is again placed under restriction by a decree of March 31, 1923, repealing the decree of May 10, 1923, which had permitted the exportation of this product.

[This follows a similar export restriction in France, announcement of which was made in COMMERCE REPORTS for April 23.]

TARIFF CHANGES ON SPECIFIC ARTICLES.

ARGENTINA.

Cable from Trade Commissioner Geo. S. Brady, Buenos Aires, May 3.

The Argentine export duties for the month of May are as follows:

Article.	Duties in gold pesos per metric ton.		Article.	Duties in gold pesos per metric ton.	
	Former.	May.		Former.	May
Oats in sacks	0.76	0.80	Goatskins	50.00	50.00
Oats in bulk	.70	.74	Horsehides	.90	.895
Corn in sacks	1.34	1.39	Oxhides, salt	None.	.66
Corn in bulk	1.25	1.29	Sheepskins	None.	1.41
Linseed in sacks	2.73	3.35	Quebracho extract	1.78	1.93
Linseed in bulk	2.49	3.10	Quebracho logs	.35	.33
Barley	.53	.48	Margarine	15.00	15.00
Bran and middlings	None.	.08	Tallow	2.74	2.74
Wheat in sacks	.83	.88	Dried blood	2.10	2.10
Wheat in bulk	.57	.62	Oil cake	1.53	1.53
Wheat flour	.56	.88			

[For the April changes see COMMERCE REPORTS for April 9, page 125.]

AUSTRALIA.

Commonwealth Gazette, Melbourne, March 15.

Customs Classification of Parts and Unassembled Articles.

The Australian Minister for Trade and Customs issued the following orders on March 8, 1923, as to the duty on parts:

ORDER NO. 1.

Except where otherwise expressly provided by the customs tariff 1921–22, any part of any goods which are dutiable ad valorem or exempt from duty shall, though imported by itself, be dealt with under the tariff item applicable to the complete goods, provided that in terms of section 138 of the customs act 1901–1922, if any such part is commercially usable on more than one article, the part shall be classified under the tariff item applicable to the higher or highest rated article with which it is commercially usable, or if the same article is part of goods which are exempt from duty and also part of dutiable goods, the part will be classified at the same rate as the dutiable goods of which it forms a part.

The foregoing direction shall not apply to any part or parts which may, by notice published in the Commonwealth Gazette from time to time, and shown hereunder, be individually or collectively exempted from its operation.

Parts of any article, machine, or appliance, although specifically or generically provided for in the tariff as parts, shall, if imported with any such article, machine, or appliance in a complete or substantially complete state be classifiable under the tariff item applicable to such article, machine, or appliance. Articles, machines, and appliances shipped in an unassembled condition ready or practically ready for assembling shall be treated as though actually assembled.

ORDER NO. 2.

The following parts shall be classified for tariff purposes as indicated hereunder:

(*a*) Motor chassis parts, viz: Axle shafts; bushings of bronze, steel, or white metal for parts of a chassis; brake rods; brake-rod pins; distance-rod pins; gear shafts for gear transmission; king pins; knuckle-joint pins; propeller shafts; shackle pins and plates; steering-gear rods and cranks; stub axles; and yoke and cross pins; under tariff item 359 (f) as vehicle parts, n. e. s.

(*b*) Wheels made expressly for and usable only as parts for motor cars, under tariff item 359 (d) (4) as motor-car chassis.

(*c*) Chains, being parts for rabbit traps, under tariff item 220 (b) as rabbit traps.

(*d*) Hand (ringing) generators, being parts for telephones, under tariff item 180 (a) as telephones.

(*e*) Motor engines, being parts for fire engines, under tariff item 168 (a) as fire engines.

(*f*) Reeds, being parts for wind instruments (musical), under the tariff item applicable to the instrument of which the reeds form a part.

BOLIVIA.

Cable from Consul Doyle C. McDonough, La Paz, April 23.

Withdrawal of Export Duty Increase on Silver.

The increased export duty on silver, effective February 15, has been withdrawn. The schedules of export duties on silver in Bolivia, both old and new, were published in COMMERCE REPORTS for April 2, 1923, page 68.

COSTA RICA.

La Gaceta, San Jose, April 14.

Removal of Certain Export Duties.

A Costa Rican decree of April 12 removes all duty, except the wharfage tax (2 centimos, or about one-half cent per gross kilo) from the following articles of native production:

Electrical manufactures, such as cooking ranges, heaters, irons, etc., made entirely or in part from native materials; footwear of all kinds; knit goods, undershirts, hose, etc.; straw for the manufacture of brooms; brushes of fiber roots; printed, lithographed and photogravure work; pharmaceutical preparations; machinery constructed in the country for the manufacture of starches, and the starches and flours or meals produced at these plants; buttons; crackers; cordage and hemp, manufactured or in bales.

DENMARK.

Cablegram from Assistant Trade Commissioner H. Sorensen, Copenhagen, May 2.

Upward Revision of Certain Import Duties.

According to a law passed by the Danish Rigsdag, effective immediately, the import duties on the following commodities have been increased.

Item No.	Articles.	Former duty.	New duty.
		Crowns per kilo.	*Crowns per kilo.*
26	Turtle, lobster, crab, and shrimp	0.40	1.00
27	Salmon and trout, fresh and salted	.20	.80
	Salmon and trout, smoked	.20	1.00
64	Auto tires and tubes	.50	.40
	Plus ad valorem		6%
73	Keyed musical instruments	ad valorem 10%	12%
74	Binoculars	.70	15%
98	Vanilla	10.00	20.00
166	Electrical machines	ad valorem 5%	7.5%
	In knocked-down condition	do. 5%	5%
185	Hand firearms	(1)	15%
194	Aluminum products	.30	.45
211	Cardboard	.08	1.00
212	Wall paper	.20	.25
	Plus ad valorem		5%
216	Photographic paper	.70	1.00
248	Candles	.10	1.00
107	Furniture	.30	50%

[1] Formerly dutiable at 0.20 or 0.50 crown net per kilo, according to finish.

Assistant Trade Commissioner H. Sorensen, Copenhagen, April 7.

New Duties on Footwear and Cigars Effective.

A temporary increase in duties on footwear and cigars became effective on April 1, 1923, to remain in force until July 1, as follows:

Item.	Article.	Former duty.	New duty.
		Crowns per kilo.	*Crowns per kilo.*
255	Cigars	2.80	6.00
164	Footwear in which the covering contains silk	3.00	4.00
	Plus ad valorem		15%
157	Footwear with leather or rubber soles with woolen uppers	2.00	4.00
	Plus ad valorem		7½%
236	Footwear with uppers of unpatterned vegetable material	0.60	1.25
	Plus ad valorem	7½%	
	Other footwear	0.60	2.00
	Plus ad valorem	7½%	

[The announcement of the proposed duties on these commodities was published in COMMERCE REPORTS for April 2, 1923, p. 69.]

ITALY.

Cable from Commercial Attaché H. C. MacLean, Rome, May 2.

Removal of Import Duty on Sugar.

The Italian cabinet has approved a decree admitting sugar free of duty until further notice.

[The recent import duty on sugar has been 30.60 gold lire per 100 kilos for "first class" sugar, and for sugar of the "second class" 24 gold lire per 100 kilos.]

MEXICO.

Diario Oficial, Mexico City, April 13.

Duty on Automobile Accessories and Motors Changed From Specific to Ad Valorem Basis.

The import duty on automobile accessories and motors (items 633–C and 633–D) has been changed from 1.50 pesos per gross kilo to 20 per cent ad valorem, by a decree effective April 13. These items include (633–C) bodies and frames, and separate parts not specified for all classes of automobiles; and (633–D) motors for automobiles, repair parts for same, and other parts composing the propelling mechanism of these vehicles.

(See COMMERCE REPORTS for April 16, 1923, concerning former changes in these items.)

PERU.

Acting Commercial Attaché W. E. Dunn, April 5, 1923.

Suspension of Export Tax on Cotton in the Province of Tacna.

A recent law placing a surtax on raw and ginned cotton exported from the Province of Tacna (see COMMERCE REPORTS of May 7, page 396) has been suspended by legislative ruling of March 28, 1923, according to "La Cronica" of April 1.

POLAND.

L. J. Cochrane, Clerk to Trade Commissioner, Warsaw, March 28.

Removal of Tax on Imported Coal.

All black coal, sorted or not, imported from abroad into the territory of the Polish Republic is exempted until further notice from the 40 per cent tax on coal, according to a decree of the Minister of Finance, dated March 8, 1923, and published in the Dziennik Ustaw, March 20, 1923. This decree came into effect on the day of publication.

RUMANIA.

Consul Ely E. Palmer, Bucharest, March 31.

Decreased Export Duties on Walnuts—Modified Export Duties on Certain Other Products.

According to a decision published in the Monitorul Oficial for March 25, 1923, effective April 1, the Rumanian duties on walnuts are reduced. The new duties are to be effective only until October 1, 1923, when the duties operative since December 20, 1922, will likely be reestablished. The table below gives the former and the new rates:

Articles.	Rate of export duty.	
	Former.	New.
	Lei per kilo.	*Lei per kilo.*
Walnuts:		
Shelled	20.00	3.00
Unshelled	8.00	7.00

Export duties on cement, toys of local manufacture, cloth of flax and hemp, iron sulphate, articles of wood, such as parts of wagons and tool handles, fermented fruits, and oil cakes have also been revised. The new duties on these articles will be furnished upon request.

TURKEY.

Consul General G. B. Ravndal, Constantinople, March 7.

Increase in Import Duty on Rye.

The import duty on rye (item ex 47) has recently been increased from 19 to 228 piasters per 100 kilos.

CUSTOMS REGULATIONS.

AUSTRALIA.

Necessity for Itemizing Charges on Invoice.

In view of the fact that some American firms continue to include in a single total all charges for cartage, inland freight, labor in packing, and outside cases, merely indicating that these items are included in the total invoice value (as reported by Mr. M. B. Synan, New York, the official representative of the Department of Trade and Customs of Australia), it has been thought advisable to call attention to the Australian regulations for itemizing these charges on invoices of goods shipped to that country.

The five items for cartage, inland freight, labor in packing, value of outside cases, and royalties must be enumerated separately at the foot of the invoice, and after each item must be noted "Included in above current domestic value" or "Not included in above current domestic value," as the case may be.

[Announcement setting forth this invoice form in full appeared in COMMERCE REPORTS of April 17, 1922, page 179.]

SIERRA LEONE.

Consul W. J. Yerby, Dakar, Senegal, March 28.

Valuation of Imports for Duty Purposes.

An ordinance has been enacted to amend the law relating to the calculation of customs duties, passed by the Legislative Council on February 21, 1923.

This ordinance, cited as the Customs Duties Ordinance, 1923, provides that the value of goods for customs purposes shall be calculated at the current domestic value in finished condition at the time of exportation, including the cost of such packages as are sold with the goods in domestic trade, and taking into account royalties, commissions, and sample discounts; the deduction of recognized trade and cash discounts (but not contingent discounts or rebates) is also allowed, if clearly shown and properly attested, as prescribed.

SPAIN.

Gaceta de Madrid, Madrid, April 3.

Temporary Duty-Free Importation of Articles For Sample Fair at Valencia.

The temporary duty-free importation into Spain of articles for the sample fair at Valencia in May is authorized by a decree of March 26, 1923. Importation must take place through the customhouses at Valencia, Barcelona, Port-Bou, Irun, or Valencia de Alcantara.

UNITED KINGDOM.

Counselor of Embassy Post Wheeler, London, April 12.

Proposed Regulations for Export of Live Stock.

Regulations have been drafted by a joint committee consisting of the Royal Agricultural Society and several stock-breeding associations relative to the export of live animals from the United Kingdom. The regulations call for more stringent control and localization of outbreaks of diseases and certificates from responsible veterinarians and the Ministry of Agriculture.

Special regulations are also suggested for export of cattle and other live stock from Australia, among which is the restriction of such exports to the months from October to May, inclusive.

INTERNAL REGULATIONS AFFECTING TRADE.

POLAND.

L. J. Cochrane, Clerk to Trade Commissioner, Warsaw, April 4.

Increase in Excise Tax on Sugar, Alcohol, and Beer.

The Polish excise tax on sugar has been increased from 600 to 1,500 marks per kilo, that on alcohol from 2,500 to 10,000 marks per liter, and that on beer from 25 to 150 marks per liter, effective March 28, 1923.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

SHIPPING.

POSTWAR GROWTH OF OVERSEA TRADE OF UNITED STATES.

F. E. Benjamin, Transportation Division.

In the postwar peak year, 1920, the volume of United States exports was almost double that of 1914, and the import tonnage was more than 50 per cent greater; but in 1921 there was a general decline in volume of our oversea trade, particularly in exports. In regional distribution of this trade there was a shift in favor of Mexico and South America at the expense of Europe and the Mediterranean region. The middle American region, in each of the years under consideration, accounted for considerably over half of the entire tonnage of oversea imports into the United States.

The great changes that have occurred in the level of prices since the outbreak of the war make figures of foreign trade in terms of value unsatisfactory as a basis for determining the growth of our commerce with other nations. For this reason and because data on volume of trade have a most important bearing on the establishment and maintenance of steamship services, the Transportation Division undertook the compilation of trade statistics, in terms of long tons, which would show the commerce of the United States with the main trade regions of the world.[1]

A summary of the results of this work covering the calendar years 1920 and 1921 is contained in the present article. An analysis of the volume of our oversea trade by customs district, which was included in this study, will appear in the next issue of COMMERCE REPORTS.

Trade Highest in 1920—Latin-American Trend.

The figures reveal the fact that the volume of export trade in 1920 was almost double that in 1914, while the import tonnage was more than 50 per cent greater than in the pre-war year. This increase in total imports is accounted for mainly by the enormous expansion in receipts from Mexico, the tonnage from that country and Yucatan constituting almost exactly 50 per cent of the total for all regions considered. Considerable expansion in trade with the United States has taken place also in the South American region. The volume of trade with the east and west coast of this continent reached a total of 9,211,000 long tons in 1920, as compared with 4,606,000 tons in 1914 and with 6,594,000 tons in 1918. The United States trade with Europe and the Mediterranean region in 1914 constituted slightly over three-fifths of our oversea exports and almost two-fifths of our imports. In 1920 this region took 71 per cent of the oversea exports, but contributed less than 8 per cent of our oversea imports.

[1] This work was based on figures prepared in the Statistical Division of the Bureau by converting into long tons the quantity items of Foreign Commerce and Navigation data for 1920 and 1921. Similar figures for the fiscal years 1914 and 1918 were prepared by the Division of Planning and Statistics of the United States Shipping Board to fill the wartime need for more accurate information on the volume of our oversea trade. The figures for 1920 and 1921 have been grouped in accordance with the geographic classification adopted by the Shipping Board, in order that comparison with the earlier years might be made. Accordingly, figures of water-borne trade with Canada have been omitted from the totals for 1920 and 1921, since they were not included in the compilation for 1914 and 1918. The water-borne imports from Canada amounted to 2,780,000 long tons in 1920 and to 2,056,000 tons in 1921; exports totaled 733,000 tons in 1920 and 709,000 tons in 1921.

While statistics for 1918 have been included in these tables as a record of the volume of our trade during war time, they do not materially assist in determining the trend of our trade. Military requirements naturally came first in this year, so that normal trade relations throughout the world were materially modified.

Decline in Volume of Trade in 1921.

The world-wide industrial depression in 1921 was reflected in the general decline in volume of United States oversea trade from the peak year of 1920, particularly in exports. In the West Indian, East and West Caribbean, West and South African, and Australian regions the tonnage of combined imports and exports in 1921 fell below the 1914 level by 27, 29, 10, and 4 per cent, respectively. South American trade also declined considerably, being lower than in either 1920 or 1918 but remaining above the pre-war total. The east coast of South America in 1921 took almost as much in tonnage as the whole of South America in 1914.

Statistics of Oversea Trade, 1914, 1918, 1920, 1921.

The following table shows the comparative volume of United States trade with the principal oversea regions for the years designated. The countries included in each of these regions are enumerated in the footnote to the table.

Oversea trade of the United States.

EXPORTS FROM UNITED STATES.

[1] Excluding shipments to the American Expeditionary Force.

[2] Bahama Islands, Bermuda, Virgin Islands, Cuba, Isle of Pines, Haiti, Jamaica, Turks Islands, Dominican Republic, other British West Indies.

[3] British Honduras, Costa Rica, Guatemala, Colombia, the Guianas, Honduras, Nicaragua, Panama, Canal Zone, Salvador, Venezuela, and adjacent islands, Barbados, Dutch and French West Indies, Leeward Islands, Trinidad and Tobago, Windward Islands.

[4] Mexico, Yucatan, and adjacent islands.

[5] Argentina, Brazil, Uruguay, Paraguay, Falkland Islands, South Atlantic Islands.

[6] Chile, Bolivia, Peru, Ecuador.

[7] Europe, Greenland, Iceland, Mediterranean Africa, French Africa, Canary Islands, Cyprus, Egypt, Greece, Turkey (all), Crete, etc.

[8] Dahomey, Gold Coast, Union of South Africa, French and Belgian Congo, French and Portuguese Guinea, French West Africa, Angola, Gambia, Ivory Coast, Cameroon, Liberia, Nigeria, Senegal, Sierra Leone, Spanish Africa (except North Coast), Togo, and British West Africa.

Character of Traffic with Middle America.

The principal exports from the United States to that region were coal and coke, foodstuffs, wood and its manufactures, iron and steel products, oils, greases, and fertilizers. The falling off in shipments of coal to this region in 1921 accounted for most of the decline from exports recorded in 1920.

Middle America, in each of the four years specified, accounted for over half of the entire tonnage of our oversea imports. The dominant position of the Mexican region in this respect rests almost wholly on the rapidly growing petroleum receipts from Mexico, which in 1921 constituted over 90 per cent of the volume of imports from the Mexican region. Bananas also figure largely in import tonnages.

Goods Exchanged With South America.

Like the middle American region, South America takes large quantities of coal from the United States; hence, when our shipments of this commodity are curtailed, as they were in 1921, there is a noticeable drop in total exports to the region. Coal accounted for about 2,000,000 long tons of this drop in 1921.

Other exports to South America that showed a decline in 1921 were iron and steel products (including machinery), manufactures of cotton, caustic soda, printing paper, sulphuric acid, rice, and fish. In general, mineral oil exports increased, except to Chile, where a decided decrease was registered.

Imports of Brazilian coffee during 1921 were the greatest since 1911, excepting the years 1916 and 1917. Our purchases of manganese ore, hides and skins, cane sugar, and several other commodities have grown substantially since the pre-war year.

Trade with Europe and the Mediterranean.

Because of the density of population and its relatively high purchasing power, the countries included in the European and Mediterranean region have been and continue to be our greatest market. To this district the United States sent well over half of its total oversea exports in all of the four years included in the tables, the percentage ranging from 61 in 1914 to 71 in 1920. In 1921 Europe took 69 per cent of the volume of our oversea exports, more than half of this going to the United Kingdom, France, and Belgium. The commodities accounting for the greatest increase over 1914 in shipments to Europe and the Mediterranean are corn, wheat, wheat flour, meat and meat products, sugar, and mineral oils. Considerable of this tonnage consisted of relief shipments to central and eastern Europe.

Normal imports from Europe and the Mediterranean include a large volume of printing paper, sulphur ore, pig iron, china clay, creosote oil, manure salts, magnesite, cotton and fiber manufactures, and other commodities in smaller volume. Since 1914 Europe has not been in a position to furnish the United States goods in the quantity formerly supplied, so that the diminution in volume of imports from this region is easily explained. It will be observed, however, that our receipts in 1921 were almost double those of 1920 and considerably over twice the volume received in 1918.

West and South African Commerce.

Exports to West and South Africa reached a total of 268,000 long tons in 1920, but declined to 115,000 tons in 1921, a figure less than half of the 1914 total. Commodities sent to this region include mineral oils, wheat flour, sugar, and tobacco. Return cargoes, on the other hand, increased from the small total of 36,000 tons in 1914 to 158,000 tons in 1920 and 137,000 tons in 1921. The increased shipments of crude cocoa and chromate of iron account for most of this increase.

East Asian Trade Increases.

The volume of United States exports to east Asia is not far below that of shipments to South America, the total having increased from 1,829,000 long tons in 1914 to 3,401,000 tons in 1920 and to 2,956,000 tons in 1921. The greatest increase in our exports to this region consisted of iron and steel manufactures, particularly steel plates and sheets. A very large increase in shipments to Japan of sulphate of ammonia was

[9] Afghanistan, Bhutan, British India, French and Portuguese ports, Ceylon, Napal.

[10] British East Indies, North Borneo, etc., Dutch Indies (all), French East Indies, Straits Settlements and adjacent islands, Siam, French Indo-China.

[11] Aden, Abyssinia, British Somaliland, Eritrea, Oman, Persia, Arabia, Palestine, British East Africa, German East Africa, Italian Somaliland, Madagascar, Mauritius, Portuguese East Africa.

[12] China, leased territory (British, French and Japanese), Hongkong, Chosen, Japan, Macao, Guam, Pelew, etc., Kwangtung, Far Eastern Republic, Russia in Asia.

recorded; the tonnage of mineral oils, cotton, steam locomotives, refined copper, and paraffin also showed gain.

While imports from this region in 1918 and 1920 were almost double the tonnage of 1914, they declined very sharply in 1921, and were approximately 25 per cent below the pre-war volume. Commodities received by the United States from the East Asian group of countries include antimony, rice, unmanufactured cotton, straw and matting, vegetable oils and oil cake, dried eggs, peanuts, cane sugar, and tea. The falling off in tonnage applied to most of the more important commodities.

Trade With the Indian Ocean Region.

The volume of United States trade with the Indian Ocean region has shown considerable increase, as far as exports are concerned, but the tonnage of our imports in the post-war years 1920 and 1921 was lower than it was in either 1914 or 1918. Increased exports of iron and steel and its manufactures accounted for most of the enhanced shipments to this region.

Decline in receipts of tin, vegetable oils, hides and skins, gums, gutta jelutong, jute and jute butts, and other vegetable fibers accounted for the falling off in 1921 imports. Tin imports (in bars, blocks, pig, etc.) from the Straits Settlements in 1921 dropped more than 50 per cent below the 1920 figure, falling below even the 1914 total. India rubber receipts from the East Asian region, although very much smaller in 1921 than in 1920, were more than twice the 1914 volume.

Australian Trade.

On the basis of the figures in the foregoing table, it is apparent that our trade with Australia had not, up to and including the calendar year 1921, regained its pre-war volume. Exports of printing paper, pig iron, steel rails, wire, and illuminating oil showed considerable decreases, which were partially offset by increased exports of tobacco and mineral oils.

Coal from Australia to the Pacific coast of the United States constitutes one of the largest items moving from that region to this country. The diminished volume of our coal imports, together with declines in receipts of meat and copper, account for most of the falling off in incoming cargoes from the Australian region.

Packing Hosiery for Export to Chile.

Assistant Trade Commissioner W. E. Embry, Santiago, March 13.

The continued pilferage of hosiery at ports in Chile again makes it necessary to bring to the attention of American manufacturers the necessity of taking extreme care to protect their goods destined for that country. In order to prevent, or at least to lessen, the amount of theft following the arrival of vessels at Valparaiso, it is urged that double cases be used. One large concern in Santiago, which represents several important American manufacturers in the Chilean market, has repeatedly asked exporters to pack hosiery in double cases that have the boards of the inner case running diagonally to those of the outer case. In spite of the fact that the Chilean agent has offered to pay the additional cost of such packing, including lumber, extra labor, etc.—assured that the saving effected would more than counterbalance the additional expense—American manufacturers have failed to comply with the request. Despite the growth of the hosiery manufacturing industry in Chile, there is still a market for this commodity which is well worth protecting and developing in every possible way.

Packing Foodstuffs for India.

Consul F. L. Thomas, Bombay, March 22.

American shippers have been packing canned goods for Bombay, such as meats, pickles, condiments, olives, and jelly, in small cases like those used for domestic shipments. As port and clearing charges at Bombay increase with the number of units, it is suggested that larger cases, holding approximately 100 to 150 pounds, could be used to great advantage, with an appreciable decrease in handling charges. The customs charge for clearing is about 12 cents on each case; in addition there is a charge of about 32 cents made by the importer's clearing agent, making a total of practically 44 cents.

Freight Forwarders in the United Kingdom.

The Transportation Division has available for distribution to interested persons lists of reliable freight forwarding agents at the ports of Cardiff, Hull, Glasgow, Leith (Edinburgh), and Southampton. These lists supplement those previously prepared for New York, Boston, Philadelphia, Baltimore, Chicago, New Orleans, Texas points, and London, copies of which may be obtained from the Transportation Division or from the district and cooperative offices of the Bureau of Foreign and Domestic Commerce.

Additional information regarding shipping appears in this issue under the following sections:

Cable review, western Europe: Increased activity in British charter markets.
Cable review, Far East: Small freight offerings reported from Java to American Atlantic coast ports.
Latin America: Shipping activities in Chile.
Tariffs and trade regulations: Necessity of itemizing all charges on invoices to Australia.
Foreign trade opportunities Nos. 6414, 6415.

COMMUNICATIONS.

Postal Notes of Commercial Interest.

Money Order Exchange with Siam.

A direct money-order exchange between the United States and Siam was established April 1, 1923. This does not include an exchange between Siam and the Philippine Islands or Siam and Panama Canal Zone. (Consul Maurice E. Dunlap, Bangkok, April 18.)

Mail for Eastern Thrace.

All communications for eastern Thrace must be written as briefly as possible in Turkish, French, Italian, English, Arabic, Greek, or Armenian, and are subject to examination by the Turkish censor. No responsibility is assumed by the United States Post Office Department for articles seized by the Turkish censor. (Postal Bulletin, April 26.)

Mail for Newfoundland.

Owing to general misunderstanding, mail for Newfoundland, which is a separate British colony, is frequently treated as if the mail were intended for Canada. While the letter-postage rate to Newfoundland is 2 cents an ounce or fraction of an ounce, the postage rates, conditions, and classifications applicable to other articles of mail are the same as for Postal Union countries. Parcel-post packages are acceptable at the rate of 12 cents a pound or fraction of a pound and must be accompanied by a customs declaration (Form 2966), to be secured at any United States Post Office at the time of mailing.

Charges on Parcels for Egypt.

As direct steamship service is now available for the dispatch of parcel-post packages for Egypt (including

the Egyptian Sudan) the transit charges heretofore applicable are discontinued. Only the postage rate of 12 cents a pound or fraction of a pound will be collected hereafter on parcels for Egypt. (Postal Bulletin, April 30.)

Parcel Post to Belgian Congo via England.

Unregistered parcel-post service to Belgian Congo (via England) may now be accepted for places in the east of Katanga and the Eastern Province (the latter comprising Lower Uele, Upper Uele, Stanleyville, L'Ituri, Lowa, Kivu, Maniema, and L'Aruwimi) and in the territories of Ruanda and Ituri, via Aden, Dar-es-Salaam, and Mombasa, up to a weight limit of 11 pounds when prepaid at the postage rate of 12 cents a pound or fraction of a pound, plus the following transit charges: 1, 2, or 3 pounds, $0.84; 4 pounds, $1.26; 5, 6, or 7 pounds, $1.26; 8, 9, 10, or 11 pounds, $1.68. All charges are paid at time of mailing, by postage stamps affixed to the parcel. (Postal Bulletin, April 7.)

Printed Matter for Cuba.

Requirements for consular invoice on printed matter to Cuba are published in this issue of COMMERCE REPORTS, under the section "Tariffs and trade regulations."

Indemnity Claims for Parcels to the Philippines.

Claims for indemnity involving alleged loss or nonreceipt of returns covering C. O. D. parcels mailed in the United States to the Philippine Islands should not be filed until the expiration of at least 5 months from date of mailing; claims on insured parcels should not be filed prior to 4 months from date of mailing. However, when the sender is informed that such a parcel has been received, rifled, or damaged, application for indemnity may be filed immediately. The requirement that claims for indemnity be filed within 6 months from date of mailing of parcel will be extended to 10 months. All such claims should be transmitted to the Third Assistant Postmaster General, Division of Registered Mails, with all available information regarding loss, damage, or nonreceipt. On C. O. D. mail from the United States, the Philippine Postal Administration will be responsible for indemnity only in case of loss of such parcels, but not in case of rifling or damage except when the evidence shows conclusively that this was done by an employee of the Philippine Postal Service. (Postal bulletin, April 27, 28.)

Telegraph and Cable Items.

Direct Service to Trujillo, Peru.

All American Cables has recently announced the opening of its office at Trujillo, Peru, which is connected with the main system by a cable from Tacna.

Earnings of Swiss Telegraph Administration.

The profit and loss account of the Swiss Telegraph and Telephone Administration for February, 1923, shows a deficit of 190,000 francs. The receipts for the month were 4,653,000 francs, and the expenses were 4,843,000 francs. During the month 397,944 telegrams were transmitted, and 10,102,668 telephonic conversations held. The number of telephone stations increased by 566, so that there now exist 129,215 throughout the country. The Basler National Zeitung reports that the receipts of the Administration for January and February amounted to 9,575,000 francs, in comparison with receipts of 9,334,000 francs during the corresponding period of 1922. The expenses for these two months in 1923 were 9,755,000 francs; in the 1922 period they were 9,655,926 francs. (American Legation, Berne, April 4.)

Half Rates for Deferred Cables.

Effective April 20, 1923, the Western Union Telegraph Co. has announced the extension of service for deferred messages at half rates to the following countries: Algeria, Austria, Belgium, Crete, Cyprus, Czechoslovakia, Danzig, France, Germany, Gibraltar, Great Britain, and Ireland, Greece, Hungary, Iceland, Italy, Lichtenstein, Luxembourg, Malta, Monaco, Poland, Portugal, Spain, Switzerland, Syria, and Trans-Jordania. Deferred messages must be written in plain language and must be preceded by the letters LCO (language of country of origin) or LCD (language of country of destination), which will be counted and charged for as an additional word. On full-rate messages to points in Africa, and to points in Asia and Australasia reached via London, there has been a further reduction of 5 cents per word. Arbitrage or trading messages identified as such and requiring specialized handling remain at 28 cents a word.

CANADA'S REVENUES EXCEED EXPENDITURES.

Consul General John G. Foster, Ottawa, April 10.

The ordinary revenue of the Dominion of Canada for the fiscal year ended March 31, 1923, was $384,790,135, and the ordinary expenditure totaled $307,731,559, according to a return issued by the Department of Finance. There was, however, an increase in the net debt of the Dominion of $45,206,160, accounted for chiefly by expenditures on railways which do not come within the class of ordinary expenditures.

The various items comprising ordinary revenue and ordinary expenditures for the last fiscal year, as compared with the previous fiscal year, were as follows:

Items of revenue and expenditure.

Items of revenue and expenditure.	1922	1923
REVENUE.		
Customs	$104,420,451	$118,275,804
Excise	36,581,356	35,367,430

Total	324,758,377	307,731,559

LATIN AMERICA

J. R. McKey, Acting Chief, Latin American Division

IMPROVED BUSINESS CONDITIONS IN NORTHERN CHILE.

Consul Homer Brett, Iquique, April 3, and Vice Consul B. C. Matthews, Antofagasta, March 30.

The course of business in the Province of Tarapaca, Chile, showed continued improvement during the month of March. Several hundred laborers have returned from the south and all have found immediate employment, a majority of them having been recruited by employers who paid their passages to Iquique. There is no involuntary unemployment, and there are several nitrate plants that would employ more men if they were available. An importing firm reports that February was its best month for more than two years.

On the other hand, a number of small firms which managed to weather the period of greatest depression are now going under, and it is noted that few of the retailers whose stores are destroyed in the fires so frequent in Iquique reopen their establishments. There are fewer retail hardware, drug, dry goods, and grocery stores in Iquique now than there have been at any time in the last 20 years, yet the number remaining is ample to fill all of the demands. The population of Iquique was 4,000 less in 1920 than in 1907 and there has been a further decrease in the last two years.

Funds for Longitudinal Railway—Shipping Activities.

In a recent communication to the local press the contractor for the Longitudinal Railway stated that he had reached the limit of his resources and that unless he received a part of the money due him he would have to disband his organization. The suggestion has been made that the Government put up at auction some of the nitrate grounds along the line and thus let the Province solve its transportation problem with its own resources.

Freight rates play an important rôle in the general life of this part of the world. Freight rates from Chile to Europe during February were from £1 8s. 5d. to £1 10s., but during March they dropped back to 22s. 6d. because of the competition of Dutch vessels.

Several Netherlands and Norwegian vessels recently cleared are under time charter to American firms and are engaged solely in trade into and out of the United States. Some of the Dutch vessels were chartered to an American firm for the remarkably low rate of 90 cents per dead-weight ton per month.

The results of limiting Chilean coastwise shipping to vessels of Chilean registry have not been universally satisfactory to the merchants, but, as yet, no modifications of the law have been made.

The Nitrate Situation.

In an economic sense northern Chile and nitrate are almost synonymous. Therefore, the condition of the one reflects that of the other, and the best means of arriving at an understanding of this section of Chile is through a study of the nitrate market.

The total quantity of nitrate sold from July 1, 1922, to March 27, 1923, was 2,160,720 metric tons—a figure considerably better than any that had been predicted. From March 1 to March 27, sales made by the Association of Nitrate Producers, plus the exports of independent producers, amounted to 214,745 tons. The statistical position at the end of February was:

	Metric tons.
Stocks in Europe and Egypt	225,000
Stocks afloat	282,877
Stocks on the coast	971,985
Nitrate produced in February (by 56 plants)	124,158
Nitrate exported during February	266,336
Association's sales during February	125,642
Stocks in the United States	Not stated

The most gratifying figure is that showing that the stocks on the coast are now below 1,000,000 tons. On June 30, 1922, the nitrate in Chile was estimated at 1,609,000 tons. This district lives by nitrate, and the mere sale of nitrate that has already been produced does not bring about commercial activity. More plants are now opening up and production is increasing. Exports for the seven months ended February 28 were: To Europe and Egypt, 736,326 tons; to the United States, 669,010 tons.

On March 16 the directors of the Nitrate Producers' Association resolved to suspend further sales for the second half of June and to call a meeting on April 4 to fix prices for the coming year, instead of in May or June, as provided in existing regulations. It is unanimously believed that the new prices will be higher than those now prevailing.

Statistics given out by the Nitrate Producers' Association, covering exports of nitrate, are as follows:

Chilean exports of nitrate.

Country of destination.	7 months ended Jan. 31—		
	1921.	1922.	1923.
	Metric quintals.[1]	*Metric quintals.*[1]	*Metric quintals.*[1]
United Kingdom, or Continent, for reexport	5,264,328	807,170	2,914,419
United Kingdom	918,484	361,790	619,625
Spain	603,238	63,756	356,616
France	463,965	290,179	328,295
Germany	98,164	209,989	279,464
Netherlands	448,161	128,524	415,736
Egypt	344,826	96,224	437,189
United States:			
West coast	148,793	171,382	350,475
East coast	5,127,370	749,500	5,145,819
Hawaii	111,607	140,070	258,132
Porto Rico	32,702	20,240	28,448
Other countries	893,149	915,137	1,427,813
Total	14,454,787	3,954,061	12,562,030

[1] 1 metric quintal = 100 kilos, or 220.4 pounds.

The markets for Chilean nitrate, as distinguished from the countries to which the nitrate was shipped from Chile, are shown in the following table:

Markets for Chilean nitrate.

Market.	7 months ended Jan. 31—			January, 1923.
	1921.	1922.	1923.	
	Metric quintals.	*Metric quintals.*	*Metric quintals.*	*Metric quintals.*
Europe and Egypt	8,700,302	2,349,711	5,982,785	1,046,531
United States	5,276,163	920,882	5,496,294	1,014,846
Other countries	478,322	683,468	1,082,951	163,462
Total	14,454,787	3,954,061	12,562,030	2,225,139

It is generally expected that the month of April will show continued and increased improvement in business, as it is believed that several more of the idle nitrate plants will relight their fires. The failure of the Chilean peso to recover strength is the most disappointing feature of the present situation, but this, of course, is pleasing to exporting and producing interests.

Central American Economic Notes.

Costa Rican Trade Small, but Apparently More Sound.

Commercial conditions in Costa Rica showed little change during March. Sales continue small, but banks report that merchants are paying their obligations promptly. An unusually large number of American and British salesmen visited Costa Rica during February and March.

Coffee exports up to April 1 totaled 111,323 sacks of clean coffee and 28,730 sacks of husks, something over 21,000,000 pounds, with about 1,500,000 pounds of the present crop awaiting shipment. This, while slightly in excess of previous estimates, is only a little over half the 40,000,000-pound crop of 1921–22, and the heavy shipments were several months early. So far about 50,000 sacks have gone to the United States, chiefly to San Francisco. Most of the balance has gone to London. Heavy seasonal rains have started, and planters say that the prospects for the 1923–24 crop are most attractive unless the pollen is washed off the flowers. (Consul Henry S. Waterman, San Jose, April 7.

Little Economic Improvement in Honduras.

The existing depression in the southern portion of Honduras is expected to continue, at least until after the national elections of the next October. While stocks of merchandise are lower than for several years, it is anticipated that the restriction on import orders will last until late in the year. In the northwestern sections increased banana and sugar shipments are causing a seasonal strengthening in the tone of local business. To the northeast, an unusual spell of dry weather and fires have reduced the banana crops materially and have seriously affected trade.

Credit inflation is still prevalent through the south. Increasing exports in the north have brought some reduction in outstanding accounts, except in the vicinity of La Ceiba, where the small amount of money in circulation, as a result of light crops following the long drought, is causing considerable embarassment to local firms. (Consul Robert L. Keiser, Tegucigalpa, April 7, and Consul A. K. Sloan, La Ceiba, April 19.)

Agriculture and Industries in Rio Grande do Sul.

Assistant Trade Commissioner Bernard H. Noll, Rio de Janeiro.

Rio Grande do Sul, Brazil, is primarily an agricultural and live-stock State, but other industries, mining, manufacturing, and trade, have advanced enormously in the last decade. The soil is rich in the great prairies, and there are also large forests containing valuable woods. Cultivation by modern intensive methods has made great progress in late years, notably since 1914. Rio Grande has more rural establishments than any other Brazilian State, the total number being 124,990, with an area of 18,578,923 hectares (1 hectare=2.47 acres) and a value of 2,010,999,280 milreis (1 milreis=$0.3244 normal rate; $0.1077 at present rate of exchange). Agricultural production in 1921 amounted to 4,262,280 tons and was valued at 736,572,500 milreis. The live-stock industry is one of the chief sources of wealth, the State leading in the number of cattle, being second in the number of swine, and having 65 per cent of all the sheep in Brazil.

The industrial development of the State has been great and rapid. In 1921 there were 12,288 factories with a combined capital of 248,913,000 milreis. These plants employed 66,000 people and produced goods valued at 474,600,000 milreis. Besides the sawmills, packing houses, and jerked-beef plants, there are canneries and factories for the manufacture of cotton, paper, straw and felt hats, tobacco, shoes, metal objects, soap, and candles.

The coal-mining industry, although not yet in the highest stage of development, has been aided in various ways by both the State and Federal Governments. There are four mines having an annual production of about 315,000 tons, which is approximately 50 per cent of all the coal mined in Brazil.

Exports and Imports.

Rio Grande do Sul ranks fourth in Brazil in point of value of exports, which amounted in 1921 to 120,405,000 milreis. During the same year imports were valued at 122,814,000 milreis and consisted principally of agricultural implements and machinery, textiles, hardware, industrial machinery, and food specialties.

The State has a fairly good network of railroads, particularly strategic, the total length of railway lines being about 2,600 kilometers (1 kilometer=0.62137 mile). There are nearly 2,000 kilometers of highways throughout the State and more are being constructed each year.

Latin American Briefs.

Ecuador Products to be Exhibited in Washington.

Samples of various Ecuadorean products have been sent to Washington to become a part of the Latin-American exhibit maintained by the Pan American Union. (Consul General Frederic W. Goding, Guayaquil.)

Brazil to Organize Forestry Service.

A Federal Forestry Service is about to be established in Brazil under the Minister of Agriculture, who has already appointed a special commission to draw up plans for the organization. This is in line with the general policy of the Brazilian Government of protecting and developing the natural resources of the country.

Index Table of Commodity Prices in Uruguay.

Copies of a table prepared by the Uruguay National Bureau of Labor, showing the average prices and corresponding index numbers for 31 articles of prime necessity for the years 1913 through 1922, will be sent to any of the Bureau's district or cooperative offices upon application to the Latin American Division for file No. 4619.

Additional information regarding Latin America appears in this issue under the following sections:

Finance: Liquidation of Cuban banks.
Transportation shipping: Packing hosiery for export to Chile.
Tariffs and trade regulations:
Proposed Chilean tariff revision.
The new Peruvian tariff probably effective in June.

FAR EAST

F. R. Eldridge, Chief, Far Eastern Division

FACTORS INVOLVED IN TRADING WITH CHINA.

A special knowledge of the ramifications of commercial mechanics involved in trading with China is highly desirable to the American manufacturer seeking to engage in business in this field. Satisfactory trade relations with China are largely dependent upon a close knowledge and understanding of the people and their customs, business practices, and general conditions. Situations arise in China which are not likely to be found in any other country, and the manufacturer who contemplates extending his activities to this field would do well to acquaint himself with some business practices which are peculiar to China.

Distribution of Chinese Trade.

The international aspect of China's trade may be estimated from Shanghai's total shipping tonnage of 28,000,000 tons in 1922, of which Great Britain's share was 40 per cent, Japan's share 25 per cent, and the United States 10 per cent, with more than 10 other participants. Shanghai, the premier port of China, representing about 40 per cent of the total trade, is the commercial center of north China. A similar position in south China is held by Hongkong. Other ports of growing importance are Tientsin, Hankow, Canton, and Dairen. These ports are the distributing centers of China's imports and are the means of supplying the interior with foreign goods.

Non-Chinese Importing and Exporting Firms.

It is pertinent to the American manufacturer to know that practically all of China's trade with foreign countries is handled in China by non-Chinese importing and exporting houses, maintaining head offices in Shanghai or Hongkong. These houses have branches in most of the larger ports, and through them commercial representation for all China may be secured. It is frequently found that a manufacturer's best interests may be served by entering into connections with importing and exporting firms in more than one of these ports. Interior markets are reached almost exclusively through the Chinese agents and staffs of these houses. Chinese merchants are not, as a rule, sufficiently experienced in foreign-business procedure to deal direct with foreign countries. This, in addition to the language barrier, is a handicap to direct trade relations. Hence Chinese merchants prefer to deal with foreign firms who are on the spot and with whom they are acquainted.

Relation of Foreign Exchange to Chinese Trade.

Another vagary found in trading with China is the question of the proper handling of exchange, which is vitally involved in the success of every foreign business transaction. Credit transactions are usually turned over to the exclusive jurisdiction of the compradore, who guarantees all Chinese buyers to the firm, but the burden of handling the exchange is of such importance that a knowledge of conditions and expert application are required. In China the price element is not only subject to the usual variations of the commodity itself, but the elements of foreign and domestic exchange must be taken into consideration. Chinese local currency is on a silver basis, and its value fluctuates daily and hourly. Merchandise purchased by the local importer at a time when the purchasing power of the silver dollar, in terms of the gold dollar, is low must be sold at a higher price in local silver currency than merchandise which was purchased when silver had a higher purchasing power.

An instance of the fluctuation of exchange is shown by the fact that the value of the silver dollar in January, 1920, was $1.085 (meaning that the gold dollar could be purchased for $0.92 silver), as compared with the value of the local silver dollar in March, 1921, when it was worth $0.41, or requiring $2.44, local currency, to purchase one gold dollar. The effect that such wide exchange fluctuations have on trade relations is apparent.

Best Policy for the American Manufacturers to Pursue.

Generally speaking, unless the American manufacturer is prepared to spend considerable money in making a close investigation of China, its resources, and the needs of the people, and unless the procurable business is sufficient to warrant establishing his own selling forces in China, it would prove more profitable at present to sell his goods to the representative American agent of the native merchants. The mere canvass of a territory and the placing of agencies with various local concerns, without personal representation, is not sufficient in dealing with China.

The policy usually followed by the American manufacturer who does not wish to establish selling offices in China at once is the placing of an agency with one of the large American importing and exporting houses in Shanghai. Such a firm, with its numerous branches throughout the country, is in a position to obtain the distribution of any commodity marketable in China, provided the agent receives the full support of the manufacturer in the United States.

India's Trade in February.

An analysis of India's trade for February, 1923, as compared with the corresponding month of 1922, shows a decrease of 7,200,000 rupees in the imports of food, drink, tobacco, and raw materials, while manufactured goods increased by 8,900,000 rupees. The decline of the former was due to a slump of 16,800,000 rupees in wheat and other grain stuffs, which could not be offset by an improvement of 9,400,000 rupees in sugar (an increase of 15,000 tons). Mineral oils and coal imports accounted for a further increase of 4,400,000 rupees in raw materials.

In manufactured articles imports of cotton piece goods increased from 78,000,000 yards in February, 1922, to 147,000,000 yards for February, 1923, and the value rose to 54,000,000 rupees—an increase of 24,800,000 rupees. A heavy decrease was registered in the imports of railway plant and rolling stock, amounting to 7,200,000 rupees, while decreases of 6,100,000 rupees in machinery, including belting, and of 3,500,000 rupees in iron and steel were recorded.

Exports of food, drink, and tobacco, compared with February, 1922, increased by 14,200,000 rupees, due largely to greater shipments of wheat and other food grains. Raw materials and produce also rose by 66,700,000 rupees, 52,300,000 rupees of which were credited to larger shipments of raw cotton, 7,600,000 rupees to shellac, and 3,600,000 rupees to raw wool. Of the total shipments of 91,000 tons of raw cotton in February, 44,000 tons (48 per cent) went to Japan, as compared with 33,500 tons (62 per cent) in February, 1922. England took 8 per cent and Belgium 4 per cent. Exports of jute bags and cloth declined in amount but increased in value by 6,400,000 rupees. The United States took most of the cloth, followed by Great Britain, Canada, and Australia.

Great Britain supplied 58 per cent of the total imports of India in February, 1923, compared with 59 per cent for the same month in 1922, while its share of the exports from India was 22 per cent, the same as for the corresponding period of 1922. The United States took 10 per cent of India's exports in both periods under review and furnished 6 per cent of the imports, while Japan's share of the exports and imports was 19 per cent and 6 per cent, respectively.

For the first 11 months of the fiscal year 1922–23 the net imports of gold were valued at 351,100,000 rupees and the silver imports amounted to 43,600,000 rupees.

DECLINE IN JAPAN'S TRADE WITH UNITED STATES.

Cable from Commercial Attaché James F. Abbott, Tokoyo, May 1.

Japan's trade with the United States during March showed a decline of 20,000,000 yen, as compared with February, and was 2,000,000 yen less than during January (1 yen=$0.4985). The trade balance during the month of March was in Japan's favor by 9,000,000 yen—a considerable decrease from February's favorable balance, which amounted to 25,000,000 yen. The outstanding features of Japan's trade with the United States during March were the slump in silk exports to the United States and the continued displacement of American cotton imports by purchases from India.

Exports from Japan to the United States during March aggregated 46,000,000 yen, as compared with 64,000,000 yen during the preceding month. This decline is accounted for by the decrease in the amount of raw silk and silk textiles shipped to the United States during the month, due largely to the refusal of American buyers to pay the high prices asked.

Imports of American Cotton Decline—Increase in Automotive Imports.

Japan's imports from the United States during the month under review amounted to 37,000,000 yen—a decline of 2,000,000 yen from February and 8,000,000 yen less than during January. The dropping off during March was due to a decrease in the amount of American cotton imported. All of the other principal items imported from the United States showed an increase. Imports of American cotton during March declined 121,000 piculs (1 picul=133⅓ pounds), while imports of India cotton increased 360,000 piculs, as compared with the preceding month.

A considerable increase, which may be taken as an encouraging sign, is noted in Japan's imports of automobiles, parts, and accessories during March. The increase in the number of cars coming from the United States during the month, as compared with February, amounted to 21, while the increase in the number arriving from all countries amounted to only 3.

Principal Japanese Imports and Exports in February and March.

The leading commodities entering into Japan's foreign trade during February and March, according to preliminary figures, based on quantity when possible, are shown in the following table:

Principal items imported and exported by Japan during February and March, 1923.

Articles and countries of origin and destination.		February.	March.
IMPORTS.			
Raw cotton:			
India	piculs	550,000	910,000
United States	do	270,000	149,000
China	do	70,000	43,000
Other countries	do	3,000	31,000
Total	do	893,000	1,133,000
Machinery and parts:			
United States	yen	5,100,000	5,190,000
Great Britain	do	2,900,000	6,170,000
Other countries	do	1,500,000	2,060,000
Total	do	9,500,000	13,420,000
Iron bars, plates, rods, etc.:			
United States	piculs	160,000	169,000
Great Britain	do	220,000	297,000
Other countries	do	290,000	543,000
Total	do	670,000	1,009,000
Pig iron, ingots, slabs, blooms, billets:			
China	do	80,000	171,000
India	do	310,000	288,000
United States	do		21,000
Other countries	do	140,000	139,000
Total	do	530,000	619,000
Automobiles			
United States	number	41	62
Great Britain	do	2	8
Other countries	do	48	24
Total	do	91	94
Automobile parts and accessories:			
United States	yen	250,000	653,000
Other countries	do	40,000	98,000
Total	do	290,000	751,000
EXPORTS.			
Raw silk:			
United States	piculs	25,000	15,800
France	do		700
Other countries	do		400
Total	do	25,000	16,900
Silk textiles:			
United States	yen	2,900,000	2,590,000
Great Britain	do	1,300,000	830,000
Other countries	do	4,500,000	4,010,000
Total	do	8,700,000	7,370,000
Cotton textiles:			
China	do	7,900,000	9,270,000
India	do	3,600,000	3,910,000
Dutch East Indies	do	1,600,000	1,340,000
Other countries	do	4,900,000	6,030,000
Total	do	18,000,000	20,550,000
Cotton yarn:			
China	piculs	22,000	64,000
Hongkong	do	9,000	13,000
India	do	16,000	8,700
Other countries	do	7,000	12,800
Total	do	54,000	98,500
Knit goods:			
India	dozen	99,000	126,000
Philippines	do	82,000	61,000
Africa	do	4,000	108,000
Other countries	do	268,000	211,000
Total	do	453,000	506,000

Japanese Trade Conditions in North Manchuria.

Consul G. C. Hanson, Harbin.

Economic depression has seriously affected Japanese trade and industry in northern Manchuria and the present position of the local merchant is considered very difficult, according to the secretary of the Japanese Chamber of Commerce in Harbin. Japanese imports into Harbin have represented about 44 per cent of the total yearly imports and 43 per cent of the northern Manchurian exports have gone to Japan during the past two years. The economic depression has resulted in a 50 per cent reduction in the Japanese imports into Manchuria during the last year.

The Japanese in northern Manchuria carry on largely a wholesale trade, selling their goods to the Chinese merchants, who, in turn, depend on trade with Russia for returns. Practically all trade with Russia has ceased and the Chinese merchants, having a large stock reserve (mostly dry goods), have been without a market. Large losses were incurred and several hundred Chinese merchants were compelled to declare themselves insolvent. This situation left the Japanese wholesale firms with few possibilities of selling their goods except on a credit basis, which is considered dangerous at present. The Japanese retail trade has also suffered heavy losses, caused to a great extent by the failure of the people to purchase.

These conditions are of a temporary character and it is expected that the situation will improve, for the reason that, after the closing of hopeless enterprises, the rest of the Japanese firms may expect to receive support from Japan and thus strengthen and develop their operations.

Far Eastern Trade and Economic Notes.

British Exposition in New Zealand.

Concurrently with the annual New Zealand Dominion Dairy Show, a British trade exposition is to be held at Hawera, which is the commercial center of Taranaki, North Island, and is rapidly increasing in importance. (Board of Trade Journal, April 5.)

Trends in India's Foreign Trade.

A study of the recent trends in the foreign trade of India by Trade Commissioner C. C. Batchelder and Assistant Trade Commissioner C. B. Spofford, jr., has been published by the Far Eastern Division of the Bureau of Foreign and Domestic Commerce. Those interested may secure copies by applying for Trade Information Bulletin No. 87, "Trade of British India with the United States, Japan, and Germany."

New Development Scheme for Northern Territory, Australia.

If favorable reports are received of hydrographic surveys to be made of the Gulf of Carpentaria, Northern Territory, to test its suitability for deep-sea shipping, a port may be developed at the mouth of the McArthur River, emptying into the gulf. It is believed that such a port would prove a valuable stimulus to foreign trade, as it would serve as an outlet for the rich Barkly Tableland. (London Times, March 27.)

Building Activity in New Zealand.

The very extensive expansion of suburban sections of Auckland, begun a few years ago but temporarily arrested by the slump in primary production, is again in full swing. There is great building activity, particularly in homes for people of moderate means. Construction costs are about 30 per cent lower than during the period of peak prices, although they are still well above pre-war prices. Many of the new homes are being built by people who have been waiting for the reduction. (Consul K. de G. MacVitty, Auckland, February 19.)

Japanese Firms in China to Use Silver Currency.

The House of Representatives in Tokyo has approved a bill permitting Japanese commercial companies establishing head offices in China to use the silver currency of China for the payment of their capital funds. Any company capitalized in accordance with this measure must issue shares to the equivalent of not less than 25 Haikwan taels each. In case, however, that the total amount of the capital is paid in full at once, the value of each share may be lowered to the equivalent of 10 Haikwan taels.

New Bank at Harbin.

The formation of a new bank at Harbin, supported by prominent Manchurian financial interests, is reported by Consul G. C. Hanson. The initial capitalization of this new enterprise is 50,000 yen, and its purpose is to give financial aid to the small merchants and other commercial interests. Shares of 10 yen each are being offered for sale. Every shareholder is to have only one vote, independent of the number of shares owned. The maximum amount of loans issued will not exceed 500 yen to any one borrower.

Australian Federal Tariff Board Representative to United States.

The Australian Commonwealth Tariff Board, in charge of Australian tariff procedure, is sending one of its members to the United States for the purpose of promoting American-Australian relations. The representative chosen is a former president of the associated chambers of manufacturers and during the World War was a member of the coal board and of the Victoria war council. It is expected that he will visit American industrial and kindred organizations and while in Washington will discuss informally the subject of a reciprocal tariff agreement. (Consul General Thomas Sammons, Melbourne, March 16.)

Murray River Valley Development.

The Murray River Commission has approved proposed expenditures for development of the Murray River Valley, responsibility for which is shared by the Commonwealth of Australia and the three States of New South Wales, Victoria, and South Australia. The estimates of New South Wales for 1923–24 call for an expenditure of £365,000; Victoria, £300,000; and South Australia, £374,000. Total estimated expenditures for the present fiscal year aggregate £1,039,000. When work is completed, the Hume Reservoir in New South Wales, which is part of the undertaking, will be the fourth largest in the world. (Dalgety's Review, March 23.)

Additional information regarding the Far East appears in this issue under the following sections:

Petroleum: Petroleum products in Ceylon.
Textiles: Wool, camel's hair, and cashmere industry of China.
Rubber:
Standard production for British Malaya.
Rubber production in Ceylon.
Plantation rubber in British Malaya.
Transportation—shipping: Packing foodstuffs for India.

WESTERN EUROPE

Charles E. Lyon, Acting Chief, Western European Division

BRITISH LABOR OPPOSITION TO WAGE CUTS.

Assistant Trade Commissioner H. B. Allin Smith, London, April 17.

A sudden flurry of wage-cut controversies has occurred in British industry since March 1. A tendency toward active resistance has been clearly revealed in several prominent trades. This signifies an improved bargaining position, with better employment and production. It may also be evidence of labor's new political strength. One suspects that the working-class family budget has now reached so restricted a state, from two years of forced wage reductions and idleness, that a rather common conviction has sprung up to "stand pat" on wage matters as trade improves. In any case, this is a sign definitely marking the limits to decline of manual workers' wages in Great Britain. All recent troubles have been dissipated without serious consequences. Some disputes have been settled or temporarily eased by resort to arbitration. The others, without exception, have been concluded by compromise, chiefly by substantial abatement of demands on the part of employers.

The most prominent issues have appeared among the national building trades operatives, Norfolk farm laborers, railway shopmen, vehicle workers' unions, and the pottery trades. A brief résumé of the outstanding controversies will bring to date certain discussions incorporated in Trade Information Bulletin No. 91, "Representative wages and wage bases in Great Britain," issued by the Bureau of Foreign and Domestic Commerce.

Increased Hours and Decreased Wages in Building Trades.

The building trades, for example, effected an eleventh-hour agreement to arbitrate during the week of April 16. The employers had posted notices that from Monday, April 16, (1) hours would be increased from 44 to 47 weekly in the eight summer months, and (2) wages of craftsmen would be reduced 1 or 2 pence hourly, according to the area of employment. This notice clinched an issue that had been agitated since the middle of February, when the intention had been to effect the two changes on March 1. Active antagonism then carried the discussion from one conference to another. A union ballot in mid-March showed a preponderant vote against acceptance. Finally the employers' organization decided to impose the new conditions forcibly by posting the notice. If arbitration had not been agreed to at the last moment, some 500,000 building workers would have been locked out.

Present hourly wages of craftsmen (including bricklayers, plasterers, masons, slaters, painters, carpenters, joiners, woodcutting machinists, and plumbers) range from 1s. 8d. in large town areas to 1s. 3d. in the lowest grade areas; these rates under the employers' new demands would be cut to 1s. 6d. in the former and 1s. 2d. in the latter, or a weekly decrease of total earnings by 2s. 10d. and 1s. 4d., respectively. Laborers' wages are to be not less than 75 per cent of the craftsmen's figures in a given area. The entire wage question is now in the hands of an arbitrator appointed by the lord chief justice; and a ballot among operatives is to be completed within a month to decide whether the proposed extension of summer hours shall be settled regionally or through the national wages and conditions council or by submission to the official arbiter.

Farm Workers' Strike.

The Norfolk farm laborers' dispute started on March 17. The farmers proposed to reduce wages and increase hours, as the building trades employers had done earlier. In place of 6d. an hour for a 48-hour week (24s. weekly), they proposed 5½d. hourly over 54 hours, or 24s. 9d. A strike of 2,000 men occurred at once.

As it has developed, the strike has persisted locally up to the present. In order to insure needed attention to growing grain fields, however, reports have persisted in the press that some farmers are offering men 30s. weekly. During the week of April 2 the Norfolk farm workers' committee decided that the striking men should be allowed to resume work at the 30s. offered as a basic rate for a 50-hour week. Farm workers are being imported from other localities, and in the meantime the entire national agricultural position is before Parliament.

Railway Shopmens' Bonus.

Some months ago the general engineers submitted to a cut of 16s. 6d. on the 26s. 6d. weekly war bonus then paid. The railway engineers, however, have only had 10s. removed from the bonus. The railway companies in March proposed negotiation or arbitration of a claim to reduce shop wages by the additional 6s. 6d. weekly that would level wages in the engineering trades. The National Union of Railwaymen refused to entertain the question and threatened a national strike involving all railway employees if the companies enforce the reduction.

Wage Dispute in Wagon and Coach Trades—Pottery Operatives.

A national stoppage was threatened early in March among wheelwrights, smiths, and kindred vehicle-building trades. Conferences in leading centers brought agreement to maintain status quo until June 1. A vote of members concerned shall decide on the proposed halfpenny hourly cut from June 1 and another from September 1, with a 12 months' agreement on that arrangement until March 1, 1924.

Railway wagon building and repairing trades, including several leading unions, have recently voted to stabilize existing rates, with certain modifications, until December 31, 1923, although employers intended reductions.

Toward the end of March the British Pottery Manufacturers' Federation gave notification that existing wage contracts would be terminated in a month, affecting 60,000 workers. A modified proposal of an all-round cut at 10 per cent, with 15 per cent in the sanitary fire-clay sections, was made by the manufacturers after they had suggested a 20 and 25 per cent cut, respectively, in gross wages. At present the operatives receive 66⅔ per cent over pre-war rates. Conferences are proceeding in the hope of settlement.

Present Position of British Labor.

Labor's position in Great Britain is still practically at its lowest. While the cost of living stands higher than 75 per cent above 1914 levels, manual workers in some cases, like coal mining, iron and steel manufacturing, or agriculture, are earning less than 50 per cent more than before the war. Although some classes of labor, notably railway men, receive double pre-war pay, the general average in any case is not over 1s. 6d. an hour in wage-earning trades, thus yielding for full-time weekly wages something less, on the average, than £3 10s., or $17 in United States currency. The plight of the worker has strengthened his organized fighting position. The governmental strength of the Labor Party, newly acquired, naturally insures that the conservative element in power shall be constantly reminded of industrial questions, such as inadequate housing, burdensome local rates and food taxes, the unemployed, and other matters which need to be reviewed wisely.

BARCELONA SAMPLE FAIR.

Consul F. A. Henry, Barcelona, Spain, April 7.

The fourth annual Barcelona sample fair was held from March 17 to 28, the period from the 17th to the 25th being for the buying public only and the remainder of the time for the general public. There were more than 2,000 exhibitors, and the industries of the principal manufacturing centers of the world were represented.

Exhibitors interviewed and requested to explain their opinions as to the results of the fair have been, as a rule, very frank in giving them out. They consider it primarily as an advertising medium and do not expect immediate large returns from it. The fair has been, according to general opinion, better managed this year than previously, owing apparently to experience gained in former years.

Progress Illustrated in Spanish Exhibits.

Spanish manufactures, especially of iron and steel products, were the most important of the fair, and marked progress in this respect was apparent in comparison with previous years. A large number of new articles of Spanish manufacture, including safes, agricultural machinery, and brickmaking machinery, was displayed. The Spanish leather industry was also very well represented with a large variety of first-grade products. Textiles, the main Catalonian product, had a very large number of exhibits. The products shown made a very favorable impression on visitors. Another good illustration of Spain's progress and activity was given by the book and printing trades, which exhibited rare and artistically printed and bound volumes in large numbers.

Leading Foreign Exhibitors.

Of the foreign exhibitors, Germany was easily first as regards number and importance of exhibits, especially of machinery, dyes, photographic supplies, and office equipment. Exhibits from the United States came next in importance, with displays of roofing materials, paints and varnishes, a great variety of office supplies, refrigerating, industrial, and agricultural machinery, petroleum and derivatives, pianos, telephone equipment, and various metal manufactures. A small installation for refrigerating and ice making attracted a great deal of attention. The only automobile exhibited at this fair was an American machine not previously introduced in Spain, which attracted many visitors by its workmanship, design, and, above all, its low price, 5,500 pesetas. England was well represented in the textile and industrial machinery field, and there were also some exhibits of linen yarns. France exhibited in this fair viticultural and agricultural machinery, perfumery, electrical goods, and novelties. Italy's industry was well represented, especially in brickmaking machinery, rubber and cotton goods, and straw hats.

There were in addition official stands where several European countries were represented and all kinds of information regarding industrial and commercial activities were disseminated. The countries thus represented were Belgium, Italy, Czechoslovakia, Germany, Switzerland, and France. Last year the American Chamber of Commerce in Spain occupied a large stand at the fair, in which a consular officer had a desk. This year, however, such an arrangement was not made.

Additional information regarding Western Europe appears in this issue under the following sections:

Transportation—shipping: Freight forwarders in United Kingdom.
Tariffs and trade regulations:
Commercial treaty signed by Italy and Austria.
Expected increase in Italian import duties.
Relaxation of German export control.

EASTERN EUROPE AND LEVANT

E. Dana Durand, Chief, Eastern European and Levantine Division

FOREIGN TRADE OF SOVIET RUSSIA IN 1922.

Abstracted from the Soviet publications, Economic Life of January 3 and April 11, 1923, and Russian Information and Review of February 24, March 3 and 24, and April 7, 1923.

The balance of trade of Soviet Russia for 1922, while remaining heavily adverse, showed less preponderance of imports over exports than in 1921. The value of exports came to 29 per cent of the imports, exclusive of famine relief supplies, as against 9.5 per cent in 1921. Outside of contributed relief supplies, a heavy proportion of total imports was still made up of foodstuffs and seed grain purchased by the Soviet Government, as well as fuel, practically all of the latter being coal imported from England. (For comparison with 1913 foreign trade data, see COMMERCE REPORTS, November, 27, 1922, p. 561.)

Imports Largely Food, Seed, and Rolling Stock.

The following table shows the imports into Soviet Russia for 1922, classified under 10 principal categories. It must be noted that the principal item under "Wood and seed" is grain for sowing, the only other item under this classification being a quantity of wood

pulp imported from Finland. The main item under "Metals and machinery" consisted of locomotives, of which 66,500 tons were imported, and freight cars and tanks covering 18,200 tons.

Imports into Soviet Russia during 1922, by commodities.

Commodity.	Weight, in long tons.	Value, in thousands of gold rubles.	Commodity.	Weight, in long tons.	Value, in thousands of gold rubles.
Foodstuffs	989,200	93,287	Textiles and rope	8,000	14,483
Animal products	9,300	11,301	Clothing	2,160	24,267
Wood and seed	215,580	4,034			
Earthenware	6,000	765	Total	2,100,110	273,806
Fuel	636,450	13,808	Famine relief goods	652,900	184,553
Chemicals	34,900	17,279			
Metals and machinery	148,800	83,475	Grand total	2,753,010	458,359
Paper and stationery	49,800	11,107			

The greater quantity of these came from the United States and Great Britain, followed by Germany, Finland, and Norway. The bulk of the imports from the United States consisted of relief supplies. Some of the imports from neighboring States represent transit trade. The distribution by countries is shown in the following table, all relief supplies being included in the figures:

Imports into Soviet Russia during 1922, by country of origin.

Country of origin.	Weight, in long tons	Value, in thousands of gold rubles.	Country of origin.	Weight, in long tons.	Value, in thousands of gold rubles.
United States	866,000	151,279	Poland	23,700	11,096
Germany	303,600	128,145	France	11,800	6,107
Great Britain	701,500	58,556	Holland	25,000	4,536
Latvia	91,000	23,767	Rumania	70,200	4,134
Sweden	80,800	14,506	Argentina	48,700	4,008
Esthonia	97,800	13,690	Czechoslovakia	18,150	3,604
Finland	244,650	12,093	Italy	5,400	3,308
Norway	114,000	11,570			

Exports Almost Wholly Raw Materials.

Russian exports consisted in the main of raw materials and therefore permit of much broader classification than imports. The largest class, "Raw and semimanufactured materials," is made up chiefly of the commodities indicated in the table below:

Exports from Soviet Russia during 1922, by groups of commodities.

Group.	Weight, in long tons.	Value, in thousands of gold rubles.	Group.	Weight, in long tons.	Value, in thousands of gold rubles.
Foodstuffs and tobacco	12,500	4,288	Animals and animal products		67
Raw and semimanufactured materials	923,600	74,151	Manufactured articles	2,900	3,114
Timber	617,000	15,151	Total	939,000	81,620
Flax	35,900	11,216			
Hemp	11,100	4,153			
Hides and skins	6,800	9,030			
Oil	61,000	11,186			
Manganese ore	38,700	453			
Scrap metal	81,500	7,128			

As shown in the following table, Great Britain was by far the largest buyer of Soviet Russian products, with Germany next:

Exports from Soviet Russia during 1922, by country of destination.

Country of destination.	Weight, in long tons.	Value, in thousands of gold rubles.	Country of destination.	Weight, in long tons.	Value, in thousands of gold rubles.
Great Britain	374,000	25,177	Poland	(1)	2,800
Germany	139,200	14,749	Italy	19,400	1,352
Latvia	90,400	10,502	Holland	57,200	1,323
Esthonia	51,250	7,723	Persia	(1)	1,200
Finland	92,700	3,590	Norway	11,200	470
Turkey	(1)	10,900	France	13,700	368

[1] Figures not available.

Almost one-third of Russia's exports in 1922 are shown as consigned to border Succession States and Poland—in the main, however, representing transit trade. The bulk of the articles sent to Latvia and Esthonia were flax and hemp, of which those countries are themselves exporters.

Russia's exports to the Near Eastern and oriental countries in 1913 amounted to 8.6 per cent of its total exports. In 1922 they accounted for 14.8 per cent of exports and were confined almost exclusively to Turkey and Persia. In 1913 exports to Persia were valued at 57,700,000 gold rubles; to Turkey, at 35,700,000 gold rubles. In 1922 the order was reversed, Persia receiving Russian goods to the value of 1,200,000 gold rubles and Turkey to the value of 10,900,000 gold rubles.

Recent Decline in Foreign Trade.

The figures of Russian imports and exports, by value, for the six months ended February 28, 1923 (relief supplies excluded), show a steady decline in imports and a corresponding decline in exports since the end of October.

Value of Soviet Russia's foreign trade, September, 1922–February, 1923.

[In thousands of gold rubles.]

Months.	Imports.	Exports.	Month.	Imports.	Exports.
1922—September	23,799	7,196	1922—December	11,595	6,600
October	24,080	12,107	1923—January	6,919	4,533
November	14,359	9,190	February	6,090	6,094

This decline may be attributed in some measure to the closing of navigation at the port of Petrograd during the winter months. The rapidity of the decline in imports was much greater, however, than in corresponding months of the preceding year, the chief reason being the dropping off in sales of Russian produce abroad. Imports during January, 1922, were valued at 11,034,000 gold rubles; during February, at 11,954,000. The value of exports amounted to 4,447,000 gold rubles in January, 1922, and to 1,675,000 gold rubles in February.

Russian Transit Trade Through Poland.

Consul Charles H. Albrecht, Danzig.

Goods passing from Poland during 1922, on their way to Russia and the Ukraine, comprised 3,954 carloads, according to statistics published in Gazeta Warszawski. Of these goods, only 546 carloads originated in Poland; the remainder was transit traffic from the following countries: Danzig, 1,952 carloads; Czechoslovakia, 1,171; Rumania, 180; Austria, 49; Switzerland, 32; Germany, 23; Belgium, 1 carload.

The shipments from Danzig did not, of course, originate there, but came through the port from other countries, principally Germany. The latter's share represented only a small part of Germany's shipments to Russia, as the great bulk passed over Reval and Riga and directly to Petrograd.

Of the 977 carloads of goods shipped from Russia and the Ukraine to Poland, 426 carloads were destined for Poland, while the remainder passed in transit through Poland to the following countries: Danzig, 489 carloads; Germany, 44; and Czechoslovakia, 18 carloads. The further destination of goods shipped to Danzig is not indicated, and goods credited to Germany evidently are only those that passed across the Polish-German frontier.

Unfortunately, no statistics are given as to the character or classification of the goods thus shipped in transit.

BALKANS AND THE LEVANT.

Economic and Trade Notes From Morocco.

Consul General Joseph M. Deming, Tangier.

Trade Conditions.

Trade throughout Morocco is depressed, although a hopeful tone has developed as regards the near future; good rains have fallen and the crop outlook is promising. The export trade has been limited by depletion of stocks; the import trade has shown no revival, owing to the continued depreciation and fluctuation in the value of the franc, thus limiting transactions with the United States, the United Kingdom, and other countries having currencies of high value. The depression in trade is further attributed to the excessive "tertib," or agricultural tax.

Loans for Public Works.

A 6 per cent loan of 65,000,000 francs, guaranteed by the French and Spanish Governments, for the Tangier-Fez railroad has been successfully floated. The loan of 200,000,000 francs for the Chemins de Fer du Maroc, a concessionary company constructing and operating various other lines in the French Protectorate, has also been floated. A sum of 115,000,000 francs also becomes available under the loan agreement between the French Protectorate Government and the Crédit Foncier de France. These loans will do much toward advancing the economic development of the country.

Declared Exports to United States from Tangier.

Exports declared to the United States from the consular district of Tangier show a decided falling off during the calendar year 1922, as compared with 1921. This resulted from the absence of seed exports in 1922, in contrast with the $20,000 worth shipped out in 1921, as well as from the one-third decrease in exports of goatskins in 1922. Returned American goods aggregated $104 in value during 1921 and $899 in 1922, the latter represented two cases of shoes; in both cases, the consignee was unable financially to take up the goods.

Declared exports to United States from Tangier, Morocco.

[1] Including in 1921 household goods, woolen rugs (Moorish), and fenugrec seed; in 1922, skins, leather goods, woolen rugs (Moorish), and silk pajamas.

Aden an Entrepôt to Somaliland and Arabia.

Consul Raymond Davis, Aden, Arabia.

Trade of Aden with Somaliland Ports.

The group of ports on the northeast coast of Africa, under Italian, French, and British administration are of the utmost importance to the general trade of Aden. Their principal exports to Aden are hides and skins, live animals, coffee, ghee, gums, and ivory; their imports from Aden are cotton piece goods, kerosene, grain, pulse, and dates. During the period from 1913–14 to March 31, 1922, this group of ports accounted for an average of 23 per cent of the total import and export trade of Aden; during 1921–22, for 18.9 per cent.

These ports are also of importance to American importers and exporters. The United States is not particularly interested in hides coming from this locality; but of all the goatskins exported from Aden, the United States takes on an average 59 per cent, and of sheepskins 37 per cent, while 65 per cent of all the skins imported into Aden come from Somaliland. Of the unbleached cotton piece goods which were imported by Aden during the fiscal year ended March 31, 1922, 68 per cent was furnished by United States exporters, and approximately 50 per cent of Aden's total exports of unbleached cotton goods went to Massowah, Jibuti, and British Somaliland.

Improvement in Exports to United States, 1923.

The March quarter of 1923, as regards shipments to the United States, is the most prosperous one that Aden has seen since the close of 1919. During this quarter the total value of exports to the United States was $1,178,925, as compared with $557,412 during the same period of 1922. Heavy gains are noted in both quantity and value of all the important articles of export, including goatskins, sheepskins, coffee, gums, and civet. Several items, such as gazelle, monkey, and leopard skins, hides, shells, and aloes, which did not appear in the list for 1922, have been added during this quarter, and have acquired considerable importance.

Registration for Hinterland Trade Abolished.

To effect economy in the expenditures of Aden, reductions have been ordered in all local government

offices, and it has been decided to do away with the office situated at the barrier gate, in which were kept daily decords of all imports from, as well as exports to, the hinterland. As there is no other provision for keeping these records, statistics of cotton goods exports, or of coffee imports, for example, will have to be obtained in future from the estimates of Aden merchants.

INVESTIGATIONS BY UNITED STATES TARIFF COMMISSION.

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 18 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Linseed or flaxseed oil.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922, and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of and of all other facts and conditions enumerated in said section with respect to the articles described in paragraph 54 of Title I of said tariff act, namely: Linseed or flaxseed oil, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 19 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Synthetic phenolic resin.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 28 of Title I of said tariff act, namely: Synthetic phenolic resin, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 20 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Smokers' articles made from synthetic phenolic resin.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 1454 of Title I of said tariff act, namely: Smokers' articles made from synthetic phenolic resin, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 21 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Phenol.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 27 of Title I of said tariff act, namely, Phenol, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

Trade Lists Available.

The Commercial Intelligence Division has recently compiled the following trade lists of importers and dealers. Most of these lists indicate the relative size and importance of the firms listed, their character of business, nationality, as well as side lines handled. The suffixes "A" or "B" added to the file numbers indicate that the lists are revisions of former lists, the new compilations being more complete and reliable than the original. All of these lists have been mimeographed, and copies can now be obtained from the bureau or its district and cooperative offices by referring to the titles and file numbers:

Agricultural implements, dealers, Canada	BE–1034.
Alcohol, distillers, Argentina	LA–10037–A.
Automotive products, importers and dealers, Tahiti and Samoa	FE–27004–A.
Boots and shoes, importers and dealers, Ceylon	FE–22011.
Boots and shoes, manufacturers, Cuba	LA–31034.
Building material, importers and dealers, Ceylon	FE–22012.
Building materials, importers and dealers, French Indo-China	FE–16006.
Clothing, importers and dealers, Costa Rica	LA–23012–A.
Drugs and druggists' supplies, importers and dealers, Costa Rica	LA–23003–A.
Drugs and chemicals, importers and dealers, Japan	FE–11010–B.
Dry goods and clothing, importers and dealers, Australia	FE–23029–A.
Dry goods and clothing, importers and dealers, Ceylon	FE–22013.
Dry goods, importers and dealers, China	FE–13031–B.
Dry goods and clothing, importers and dealers, Siam	FE–17018.
Electrical supplies, importers and dealers, Nicaragua	LA–27015.
Fruits, exporters, Cuba	LA–31036.
General merchandise, importers and dealers, Dutch West Indies	LA–36009.
General merchandise, importers and dealers, Nicaragua	LA–27014.
Hardware and machinery, importers and dealers, Costa Rica	LA–23001–B.
Hardware and machinery, importers and dealers, Dutch West Indies	LA–36007–A.
Hardware and machinery, importers and dealers, Nicaragua	LA–27006–A.
Iron and steel, importers and dealers, Cuba	LA–31032.
Leather, importers and dealers, Syria	NE–9010.
Lubricating oils and greases, importers and dealers, Cuba	LA–31035.
Lumber, importers and dealers, Argentina	LA–10096–A.
Lumber, importers and dealers, Bolivia	LA–11021–A.
Lumber, importers, agents, and dealers, British Guiana	LA–16004.
Lumber, importers and dealers, Colombia	LA–14025.
Lumber, importers and dealers, Dominican Republic	LA–32017–A.
Lumber, importers and dealers, Guatemala	LA–24024–A.
Lumber, importers and dealers, Honduras	LA–25015.
Lumber, importers and dealers, Nicaragua	LA–27008–A.
Lumber, importers and dealers, Peru	LA–20025–A.
Lumber, importers and dealers, Uruguay	LA–21014.
Lumber, importers and dealers, Venezuela	LA–22015.
Petroleum companies operating in Venezuela	LA–22013–A.

Typewriters, adding machines, office equipment, importers and dealers, Cuba	LA–31033.

COMMERCIAL INQUIRIES ANSWERED BY BUREAU AND DISTRICT OFFICES.

Correspondence Division, R. H. Brasel, Chief.

The following table shows the number of commercial inquiries answered by the Bureau of Foreign and Domestic Commerce in Washington and its seven district offices in the United States during the periods June 27, 1921, to July 1, 1922; July 2, 1922, to April 21, 1923; and the week ending April 28, 1923:

Correspondence Division, R. H. Brasel, Chief.

Classes.	June 27, 1921, to July 1, 1922.	July 2, 1922, to Apr. 14, 1923.	Week ended Apr. 28, 1923.
Total inquiries answered	[1] 505,661	[1] 688,560	[1] 18,781
The above total includes the following classified inquiries in addition to many others which could not be identified under a specific group: [2]			
Commodity:			
Agricultural implements	6,210	10,722	270
Automotive	17,674	43,529	1,090
Chemical		27,139	1,060
Electrical	7,822	23,703	614
Foodstuffs	28,565	81,742	1,862
Fuel—			
Coal	10,877	4,670	45
Petroleum		13,851	405
Iron and steel	7,456	20,522	678
Leather	2,923	9,507	427
Lumber	10,844	20,601	570
Machinery	11,178	35,714	883
Paper	2,829	10,322	365
Rubber	4,114	10,739	368
Shoes	3,803	7,835	212
Specialties	15,948	60,362	1,119
Textiles	18,503	49,722	1,406
Transportation	5,244	10,855	520
Technical:			
Commercial law	3,998	7,960	177
Finance and investment		5,621	241
Research	5,217	5,492	168
Statistics (foreign trade)	10,990	18,047	512
Tariffs, foreign	16,300	15,891	424
Miscellaneous	144,704	194,014	5,365
Trade opportunity addresses [3]	127,385	265,301	6,997
Trade lists (lists of foreign merchants)	71,900	129,351	3,676
Regional reclassification of above:			
Latin America	20,619	101,781	2,115
Near East	5,905	22,915	782
Far East	15,399	70,370	2,003
Eastern Europe	4,837	21,474	843
Western Europe	32,378	207,951	5,591

[1] Does not include inquiries handled by foreign service of the bureau (27 posts, 80 representatives) by the cooperative officers maintained by the bureau in 25 chambers of commerce and boards of trade in the United States.

[2] This classification of inquiries under "Regional," "Commodity," "Technical," and "Miscellaneous" headings cover only the period from Oct. 2, 1921, to July 1, 1922. The figures for trade opportunity addresses and trade lists are for the entire year.

[3] Information reserved from "Foreign trade opportunity" announcements, printed in each issue of the COMMERCE REPORTS. (Name and address of foreign inquirer interested in the purchase of American goods, including references, cable address, and other details.)

FOREIGN TRADE OPPORTUNITIES.

Reserved information may be obtained from the Bureau and its district and cooperative offices by duly registered firms and individuals upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Correspondence may be in English unless otherwise stated. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

Advertising novelties---------- 6421
Agricultural machinery---------- 6374, 6407, 6408, 6409
Automotive vehicles and accessories---------- 6373, 6374, 6376, 6377, 6378, 6379, 6380, 6381, 6382, 6413, 6424

FUNCTIONS OF THE DIVISION OF STATISTICS.

The Division of Statistics of the Bureau compiles and prepares for publication tables of imports, exports, vessels entered and cleared, and other statistics of the trade of the United States with foreign countries and its noncontiguous territories of Alaska, Hawaii, and Porto Rico. The basis of the published tables are monthly and quarterly reports compiled mechanically in the Section of Customs Statistics at New York from import entries and export declarations forwarded from the different customhouses in the United States.

The Monthly Summary of the Foreign Commerce of the United States shows imports and exports by articles and principal countries, and total values by countries and customs districts for the month and cumulative period of the current year compared with previous years. Totals of imports and exports by months, great groups, grand divisions, and principal countries are furnished to the press in advance of the Monthly Summary.

About 200 special monthly statements are issued in mimeographed form and distributed to a mailing list covering 12,000 names giving for the commodities covered complete details by countries, which are not published in the Monthly Summary. This special service is highly appreciated by the trade and extended on request to other commodities as far as the facilities of the division permit.

The annual report of Foreign Commerce and Navigation of the United States contains tables giving imports and exports by articles, countries, and customs districts in complete detail, also imports for consumption with tariff rates and duties collected, vessel movement in the foreign trade at each customs district by countries from which entered and to which cleared, drawback paid on imported articles, and other tables pertaining to foreign trade.

Close contact is maintained with the trade and the commodity divisions of the Bureau on questions of classification in the statistical schedules of imports and exports. The division also handles the correspondence concerning statistics of foreign trade of the United States, and special attention is given to every case in order to furnish all statistics bearing upon the inquiry submitted.

COMMERCE REPORTS

A WEEKLY SURVEY OF FOREIGN TRADE

HERBERT HOOVER, SECRETARY OF COMMERCE — JULIUS KLEIN DIRECTOR BUREAU OF FOREIGN AND DOMESTIC COMMERCE

Courtesy Fundamental in Business Correspondence.

Nothing is more certain to alienate the foreign buyer than discourtesy in business correspondence with him. Always the American exporter should remember that the creation of good will is important far beyond the gaining or losing of an individual order. Even when the order has been lost, a courteous acknowledgment of the fact may lay the foundation for orders from the same source in the future. But a display of ill temper is sure to lose what might have been a valuable connection.

For example, an American manufacturer, in a moment of irritation over his failure to close a deal with a reputable and experienced dealer in construction material, wrote a letter in which he assailed the judgment of the dealer, stating that the materials which the dealer had finally decided to buy were "worthless by-products, unsuitable for any purpose," and predicting that "no satisfactory results would be obtained."

The American trade commissioner in the city in which the buyer was located was able to repair the damage to a certain extent by sending a formal expression of regret to the local firm, but, even so, it is doubtful whether the American manufacturer who wrote the letter will secure any orders from this particular dealer.

Fortunately, such instances are of rare occurrence, but this one case illustrates the futility of "scolding" the foreign merchant, when a more sportsmanlike attitude might have served as a stepping stone for orders in the future.

Better Publicity for Foreign Agents.

Advertising matter inserted by American manufacturers in foreign trade journals or in newspapers is naturally of greatest value when it includes the name of the local selling agent or indicates how the goods may best be secured by local merchants.

In many instances, it would appear that the advertising value is very low where that point is neglected. Foreign buyers will not often go out of their way to send inquiries to a distant advertiser when competing lines are represented locally.

Of course, frequently American manufacturers will advertise with the idea of securing such agents, but in that event the advertisements should be so worded as to invite inquiries on that basis.

Elimination of "Guessing" in Filling Orders.

An order from abroad recently placed in this country for pistons, piston pins, and piston rings did not specify what proportion of the total was to be oversize. As it is a common practice to use oversize rings even in comparatively new cars and both rings and pistons of oversize in old cars, the manufacturer was at a loss to know what proportion of the total should be oversize. What should he do in such a case, and how can he guard against its recurrence?

The manufacturer or his export agent may either "take a chance" and fill the order in the same proportion in which he usually fills domestic orders (jobbers' assortment) or hold up shipment until he can receive advice from abroad. If he proceeds with the order he risks sending an improper proportion of oversizes, as he has no way of knowing just what is the prevailing ratio demanded in the particular country or the local tendency toward certain oversizes in preference to others. Waiting for advice from abroad, on the other hand, might hold up delivery so long as probably to inconvenience his foreign customer through a depleted stock and delayed deliveries.

The responsibility for the uncertainty rests first with the manufacturer who neglected to furnish his customer with a supply of correct order blanks on which the various specifications of the manufacturer's different products are provided for. It rests secondly with the buyer, who in the absence of such an order blank, placed an order without specifying exactly what he wanted. But thus placing the responsibility does not relieve the vendor of the necessity of discovering what his customer does want now the order is at hand, and the only way he can do this without unduly delaying the filling of an order is to cable the customer for exact information. It is true that the cost of the cable is likely to be more than the profit on the order, perhaps it will be more than the entire revenue derived from the order, but in handling a transaction of this kind profit and revenue are not nearly so important as service and good will, and by spending $6 or $10 on a cablegram the manufacturer may so impress the foreign buyer with his desire to serve him intelligently that the buyer will be made into a permanent friend and customer.

MONTHLY CABLE REVIEWS

WESTERN EUROPE.

Alan G. Goldsmith, Chief, Western European Division.

LITTLE CHANGE IN FRENCH SITUATION.

Based on cable from Commercial Attaché Chester Lloyd Jones, Paris, May 13.

The French budget is still being debated in the Senate Finance Committee. The deadlock in metallurgical industries resulting from the Ruhr occupation continues without important changes, although some progress is being made in fuel shipments from the Ruhr. Internal private economic conditions are good, crop conditions favorable, and unemployment low. Some labor difficulty has been experienced in the textile industry. The foreign trade balance continues to improve.

Exchange Rates—Bank Clearings—Algerian Bond Issue.

The French general budget for 1923 is still under discussion in the Senate Finance Committee, and although serious effort is apparently being made, little actual progress has as yet been reported.

New York buying rates on franc cable transfers advanced from a low of $0.0649 on April 4, to $0.0679 on April 27, but have since fallen off gradually to $0.0659 on May 12.

Debits and credits of the Paris clearing house totaled 41,000,000,000 francs during March as compared with 38,000,000,000 francs in February. The average daily clearance draft required, however, was 754,000,000 francs in March as against 791,000,000 francs in February.

By a decree of May 3, an Algerian bond issue of 335,000,000 francs was authorized. This loan is for the purpose of settling past budget deficits and for railway and other construction projects.

Ruhr Coke Receipts Slightly Improved—Iron and Steel Production.

The Ruhr situation shows no important change. The Saar coal strike is said to be weakening and French coal production is increasing, although shortage of labor is felt. During March production amounted to approximately 3,000,000 tons, and it is unofficially reported that the April total increased over March. Large imports of British coal continue. British coke prices are lower, but the quality of deliveries is being criticized, and several cargoes of American coke which have arrived were said to be in bad condition. Prices of blast-furnace coke distributed by the Société de Coke des Hauts-Fourneaux are unchanged, but the percentage delivered at basic requirement prices (198 francs per ton) is expected to be increased from 20 per cent to 88 per cent. French coke production is slowly rising and new ovens are being started. Imports from the Ruhr are irregular in volume, but now average about 6,000 tons daily (see "Minerals and Metals" section).

Pig-iron production during March totaled 316,000 tons (305,000 tons in February and 426,000 tons in January); steel ingots and castings, 315,000 tons (289,000 tons in February and 407,500 tons in January). Prices of iron and steel are from 15 to 30 per cent off on various products, but continued reduction is considered unlikely.

Labor Unrest in Textiles.

Although conditions are generally satisfactory, labor unrest is felt in both cotton and woolen textile industries. In the Elbeuf woolen mills 10,000 strikers are out. The strikes of the Lille cotton workers and Paris dressmakers, which started during April, ended in favor of the employers. Present high prices are causing general uncertainty concerning future prospects in the silk trade. Silk mills are well supplied with orders, but there is little new business. Artificial silk textiles are in strong demand.

Hide and leather prices show little change, and sales are slow. Shoe factory conditions are somewhat better and retail business is picking up.

Annual reports of a number of automobile manufacturers for 1922 indicate increasing activity, but losses incurred during 1920 and 1921 have not yet been compensated.

Foreign Trade for March.

March foreign trade values again increased over previous months. Based on importers' declarations, total imports amounted to 2,486,736,000 francs as against 2,343,014,000 francs in February and 2,144,294,000 francs in January. Exports (based on 1921 values) were valued at 2,474,378,000 francs compared with 2,328,858,000 francs in February and 1,695,898,000 francs in January. Considerable fluctuation in volume is evident, as imports dropped from 4,111,056 tons in January to 3,883,970 tons in February, and then rose to 4,087,473 tons in March. Exports increased from 1,895,683 tons in January to 2,490,459 tons in February, and fell off to 1,821,935 tons in March.

Car Loadings and Railway Receipts.

Average daily freight car loadings for the first four weeks in April were 54,900, compared with 56,900 for the same period in March. Receipts of the principal French railways up to April 15 amounted to 1,916,000,000 francs, and were 4.4 per cent greater than a year ago. Canal and river traffic in France in 1922 showed an increase of more than 55 per cent over 1921. Financial reports of operations of French shipping companies reflect conditions during the past year, some of the largest companies having declared no dividends.

GERMAN INFLATION CONTINUES WHILE PRODUCTION FALLS.

Based on cable from Commercial Attaché Charles E. Herring, Berlin, May 11.

The business outlook in Germany is now more serious than at any time since the armistice. The rise in domestic prices and the stoppage of trade in the Rhineland have combined to bring about an increasing industrial stagnation. Production is declining; unemployment and labor disputes are growing in importance. The Government support of the mark has met with indifferent success, while the rise in the discount rate of the Reichsbank from 12 to 18 per cent has failed to check the speculation at which it was aimed. Currency inflation continues, and the Reichsbank is marketing large quantities of treasury bills.

Reichsbank Support of the Mark.

The Reichsbank support of the mark continues as an essential element of the passive resistance policy, although the currency was allowed to decline after the middle of April from approximately 21,000 marks to the dollar to 37,000. This sensational decline of April 18 was due to the renewed panic speculation in foreign exchange which the Reichsbank could not immediately control. At the same time the Government is apparently not averse to a lower level for the mark, provided violent declines do not occur which would result in dangerous price increases and public unrest. Industry also welcomes a lower level in view of high gold prices.

An industrial depression has accompanied the comparative stabilization of the mark, as this leads to a consumers' strike both at home and abroad. The depression is also due in part to the inability of industry in the occupied area to make export shipments or to manufacture further for stock, because of the difficulty of obtaining raw materials in the occupied area.

Industrial Stagnation in the Ruhr.

The stagnation of industry in the occupied area continues, coal production having practically ceased and the metallurgical, chemical, and dye production being greatly cut down. Chemicals and dyes declined by at least 50 per cent. All unemployment crises have been avoided thus far by the institution of repair and extension work in various plants, particularly coal mines; this has been financed largely by the Government.

There is continued agitation against foreign trade control which has resulted in the reduction of some export taxes, but industry continues to complain that world market prices have been reached. According to the price indexes of the Berliner Tageblatt, the general level in April was 125 per cent of the 1914 gold price level; this means that, considering the rise in world gold prices since 1914, the average world prices have not yet been reached. Certain industries, however, have of course reached and surpassed this point.

Prices and the Labor Situation.

Wage demands occasion much apprehension, and there is a probability of large price increases on account of inflation even without a further decline of the mark. The continued industrial depression and growing unemployment makes the labor outlook serious. The wage level in April was practically the same as in March. The general attitude on wage questions is indicated by the refusal of the miners in the Ruhr (although not elsewhere) to accept 15,000 marks per shift or an 11 per cent increase instead of the 40 per cent demanded; and likewise by the refusal of the employers to concede more. The effect of wage disputes, however, is temporarily minimized by the oversupply of labor, and the probable average increase in wages for May will be only 10 per cent. In April, as in March, only minor strikes were reported.

Discount Rate Advances—Capital Increases.

The raising of the Reichsbank discount rate from 12 per cent to 18 caused severe criticism from German business; it undoubtedly increases the hardships of legitimate industry, although probably not restraining speculation and alleged profiteering by private banks as was intended. The Government has announced several measures designed to support the mark. These are concerned with control of speculation in foreign exchange, the registration of foreign currency, and the further restriction of imports. Such proposed measures, however, even if they are effective, are of superficial value in comparison to the enormous present and prospective currency inflation and to the subnormal and declining production.

April bankruptcy figures are given as 45, but there are no figures showing the absorption of insolvent concerns by others. The Frankfurter Zeitung gives capital increases for April at 15,900,000,000 marks, of which new incorporations amounted to 11,000,000,000. In March capital increases had been 13,800,000,000 marks with new incorporations of 6,700,000,000 marks.

Increase in the Cost of Living.

The April position of the Government cost of living index, covering food, rent, heat, light, and clothing, stood at 2,954, showing a 3.5 per cent increase over March. The March figure had shown an increase of 136 per cent over the January figure. Doctor Kuczynski estimates the weekly expenditure for a family of four in Berlin at 72,832 marks for the first two weeks in April and 78,711 marks for the last two weeks. Rationed bread now costs 900 marks for a 1,900-gram loaf, with nonrationed bread at 2,200 marks for a 1,200-gram loaf.

The agricultural report for the first week in May shows a particularly favorable condition in the spring crops, while winter crops are generally reported as somewhat above the average.

Rents in Berlin on May 1 were 180 times the pre-war figure, exclusive of the building tax.

Passenger and postal rates are unchanged, but freight rates now average 5,712 times their pre-war position.

Frankfurter Zeitung Wholesale Price Index.

The general index for the level of wholesale prices, according to the Frankfurter Zeitung, stood on May 8 at a position 8,237 times the 1914 level. For textiles and leather the increase was 14,066 times; for mineral products, 10,186 times; and for manufactured goods, 5,903 times. The general index was 28 per cent above its position at the beginning of April.

Shipping in Port of Hamburg.

Hamburg entrances during April amounted to 1,165 ships, aggregating 1,319,000 registered tons; among these, 601 ships, amounting to 403,000 tons, were of German registry. Clearances came to 1,438 ships, of 1,324,000 tons, among which 837, of 425,000 tons, were of German registry.

Present Character of Inflation.

Since the occupation of the Ruhr the floating debt, in discounted treasury bills, has increased from 1,611,000,000,000 to 8,442,000,000,000 marks on April 30. The note issue in the same period advanced from 1,300,000,000,000 to 6,500,000,000,000 marks. During April both the floating debt and bank note inflation were slightly less rapid than during March, probably on account of increased taxation returns. While the Ruhr deadlock continues further inflation is to be expected. The present inflation is radically different from that which preceded the occupation of the Ruhr. The former found compensation in large measures by constantly increasing price levels, resulting primarily from the foreign exchange depreciation of the mark. The present inflation, however, is a direct issue of fiat money to cover abnormal government expenditures, and is accompanied by a continuing decline in industrial production and distribution.

The floating debt of the German Government in discounted treasury bills on April 30 amounted to 8,442,000,000,000 marks, of which 6,225,000,000,000 were held by the Reichsbank. These figures show an increase for the month of April of approximately 3,000,000,000,000 marks. However, the Reichsbank seems to have been able to market a slightly larger proportion of the bills, as it held at the end of April 74 per cent, as compared with 82 per cent at the end of March. Private discounts at the Reichsbank are given as 2,900,000,000,000 marks. The German gold reserve is given as 920,000,000 gold marks, and this must be well distinguished from the sum called metal reserve, including token coins of base metal (as well as gold), amounting to 13,600,000,000 marks.

AUSTRIAN STOCK MARKET VERY ACTIVE.

Based on cable from Trade Commissioner William Ford Upson, Vienna, May 13.

The Austrian situation was characterized by a steady exchange and an extremely active stock market during April. Some improvement in industrial and commercial activity was noticeable, particularly in the exports of machinery, electrical manufactures, and leather. Important strikes were settled, with an increase of unemployment, while living costs and wages increased by 7 per cent. Reconstruction of Austria progressed favorably, principally on account of a final decision to increase the import duties on about 15 commodities.

Favorable Progress on Austrian Reconstruction—Deficit Decreasing.

Progress on the reconstruction of Austria was favorable as a result of an agreement finally reached between the political parties. This agreement concerned a tariff amendment which has now been reenacted to increase the import duties on about 15 commodities, comprising chiefly foodstuffs. Further progress was as follows: Further consolidation of the ministries, reducing their number from 11 to 7; passage of a law for the appointment of a foreign adviser to the National Bank, assuring an effective control over the bank by the commissioner general; and continuance of the dismissal of Government employees, the number of which has been reduced by 35,000 since October 1. This number includes 12,000 in the administration and 23,000 in Government enterprises. Plans for the big loan are along lines similar to those for the recent preliminary loan which was placed in sections in different countries, collateral bonds of the guaranteeing powers being deposited in the Swiss National Bank.

The Government deficit (in billions of crowns) amounted to 404 for January, 372 for February, 308 for March, 305 for April, and 305 (estimated) for May. These totals average 339 billion crowns per month, which is within the limit fixed by the League of Nations for the first six months of the year. Gross revenues for the first quarter of 1923 amounted to 13,500,000 gold crowns from the customs duties and 23,000,000 gold crows from the tobacco monopoly.

Note Circulation—Crown Stable—Stocks Increase.

The note circulation of the National Bank on April 30 increased 3 per cent, to 4,577,000,000,000 crowns from 4,440,000,000,000 crowns on March 31. As shown by its equivalent in paper crowns, the metal reserve rose 6 per cent, to 1,513,000,000,000 crowns. Commercial deposits decreased 31 per cent, to 226,000,000,000 crowns, while commercial discounts decreased 10 per cent, to 741,000,000,000 crowns. The official gold parity has amounted to 14,000 paper crowns for 1 gold crown since April 2.

Stabilization of the exchange continued, averaging 71,045 crowns to the dollar for April. During the month the highest quotation for the dollar was 71,075 crowns, and the lowest 71,025 crowns.

Savings deposits in 12 banks at the end of March amounted to 146,000,000,000 crowns, against 125,000,000,000 crowns on February 28, or an increase of 17 per cent; this compares with an increase of 8.6 per cent in February and of 46 per cent in January.

The rise of stocks was sensational during April, the average quotation of 12 industrial stocks increasing by 36 per cent, and of 5 bank stocks by 68 per cent, whereas foreign securities advanced only 1 per cent. Important foreign investments in Austrian stocks were made during the month.

Cost of Living and Unemployment Increase.

The cost of living in Austria continued to rise during April, as indicated by the Government and Volkswirt indexes. The Government index (based on 1 for July, 1914) covering food, clothing, rent, heat, and light stood at 10,897 on April 14, against 10,151 on March 14, or an increase of about 7 per cent. The Volkswirt index (based on 100 for January, 1921), purporting to represent the minimum living costs in Vienna, was 23,032 on April 30, against 20,376 on March 31, or an increase of about 13 per cent for April. This increase is accounted for by higher meat prices and the effect of the 1 per cent turnover tax which became effective on April 1. Both indexes show an increase of 16 per cent since January 1.

Unemployment in the Vienna industrial district numbered 102,000 on April 21, against 100,000 on March 24 and 90,000 at the end of December, 1922, or an increase of about 13 per cent so far this year.

Foreign Trade—Transportation Agreement.

The value of Austrian exports for the first two months of 1923 amounted to 128,000,000 gold crowns, while imports were valued at 210,000,000 gold crowns, leaving an adverse balance of 82,000,000 gold crowns.

Declared exports to the United States amounted to $324,500 as compared with $312,000 in March, $280,520 in February, and $319,257 in January, according to Consul Foster, Vienna. Thus declared exports for the first four months of 1923 amounted to $1,248,777, showing an increase of about 39 per cent over $898,819,

the total for the first four months of last year. Principal commodities exported to the United States during April were incandescent lamps, undressed furs, wrapping paper, and manufactures of rubber, cotton, and glass.

An agreement signed by Austria, Italy, Yugoslavia, and Hungary regulates the Suedbahn railway through those countries and settles certain financial contributions, putting only a light burden on Austria in the future.

EASTERN EUROPE.

E. Dana Durand, Chief, Eastern European and Levantine Division

FINLAND PROSPEROUS DESPITE UNFAVORABLE TRADE BALANCE.

Based on cable from Trade Commissioner Carl J. Mayer, Riga, Latvia, May 4; Finnish commercial press; and other sources.

Owing to more favorable ocean transportation conditions, Finland's imports throughout the winter were much larger than in 1922; this, with the seasonal decline in exports, especially of timber, resulted in a large unfavorable trade balance. Since this is a normal phenomena and since large advance sales of timber have been made for future delivery, the financial position has continued strong, and the value of the Finnish mark rose considerably during February and March and remained stationary in April. Increased demand for credit has led to a considerable addition to the note circulation.

Increase of Imports Over 1922.

The most striking feature of the Finnish trade situation during the first quarter of 1923 was a great increase of imports, as compared with the corresponding period in the preceding year—878,000,000 marks' worth (about $23,700,000 at the average rate of exchange), as against 488,000,000 marks in the first quarter of 1922. This increase resulted partly from growing prosperity and ability to pay for foreign goods, but in large measure to more favorable port conditions, the ports during the winter of 1921–22 having been blocked to an abnormal degree by ice.

Exports during the first quarter of 1923 amounted to 503,000,000 marks, an increase of 50,000,000 marks over the 1922 period. The improvement in port conditions had less effect on exports, because normally the export of timber virtually ceases during the winter; in a typical pre-war year (1913) the imports during the first quarter were more than double the exports. About two-thirds of the total exports for the 1923 quarter consisted of pulp and paper, the shipments of which were greater than during the corresponding period of 1922, although for March they were less than in 1922.

Financial Situation Steady.

That the large excess of imports was not considered an unfavorable indication is evident from the continued rise in the exchange value of the Finnish mark throughout the winter. Its value averaged 2.48 cents in January, 2.63 cents in February, and 2.76 cents in March, while the average for April was practically unchanged (2.75 cents). As usual, the unfavorable balance of trade was in considerable measure offset by advance payments on sales of timber for summer delivery. The credit balances of the Bank of Finland with foreign correspondents increased from 708,000,000 marks at the end of December to 803,000,000 at the end of February, and to 813,000,000 at the end of March. The net indebtedness of the joint-stock banks to foreign countries, however, increased somewhat during this period, amounting to 900,000,000 at the end of December and 962,000,000 at the end of March.

The money market throughout the winter showed an increasing demand for credit. The loans of the joint-stock banks and of the Bank of Finland increased, with the result that the circulation of bank notes, while keeping strictly within the legal limit, rose from 1,421,000,000 marks on December 31 to 1,513,000,000 on February 28, and to 1,555,000,000 at the end of March.

Industrial Situation.

General industrial conditions are reported satisfactory. The total number of logs cut during the winter reached 2,900,000. The timber market indicated increased activity during March. Up to the middle of April 350,000 standards had been sold for export.

Owing to the rise in exchange value of the Finnish mark, the prices received for paper in foreign currency have, in some cases, been less than production costs, which have not fallen with the rise in exchange. Several paper mills have stopped the output of paper while continuing the production of pulp. The pulp industry is experiencing fairly active demand at passable prices.

The metal and textile industries are maintaining their firm position. The iron works have profited by the reduction of imports from Germany. On the other hand, the machine shops have suffered inconvenience from liability to obtain materials and supplies from the Ruhr district. The leather manufacturing industry has, in general, declined during the past two years as the results of foreign competition, and large stocks of leather remain unsold. The boot and shoe industry, however, is gaining, and domestic product is gradually replacing imports. The usual seasonal increase in production and exports of butter began in the spring, but with the usual decline in price. Finland is gradually recovering its former important position as a butter exporter.

CREDIT STRINGENCY AFFECTS BUSINESS CONDITIONS IN RUMANIA.

Based on cables and reports from Acting Commercial Attaché Louis E. Van Norman, Clerk Gilbert Redfern, and Consul Ely E. Palmer, Bucharest, as well as other sources.

Arrangements have been made for consolidating into long-term bonds the greater part of the foreign privately held debt of the Rumanian Government incurred during the war and post-war periods. Financial and exchange situation shows no improvement. French Chamber votes to Rumania a loan of 100,000,000 francs. Business continues dull. New rent law is causing friction. Plans are projected for the establishment of a National Bank of Industrial Credit. Trade with Russia is reported to be on the increase. The petroleum situation shows improvement. Exports of lumber and cattle decline.

Consolidation of Foreign Debt.

The Minister of Finance has announced that the negotiations which have been going on for a year or more, for consolidating the Government's foreign debt (war and post-war obligations only) to private individuals,

have been successfully carried through in the case of much the greater part of the obligations in question. Most of these obligations consist of short-term treasury notes, usually bearing about 8 per cent, and they have been placed very widely in foreign countries, chiefly during 1919 and 1920. There had been frequent instances of default in payments of interest and principal on these notes.

The consolidation involves exchange of these short-term obligations for long-term bonds bearing 4 per cent interest and expressed in pounds sterling. The total amount of sterling bonds required for carrying out the arrangements made up to April, 1923, were stated to be £26,599,000—equivalent, at par of exchange, to about $130,000,000. All of the floating debt, expressed in pounds sterling, Czech crowns, and Swedish crowns, has been arranged for, as well as the greater part of that expressed in dollars and in French francs, but only a smaller fraction of that in lire and Belgian francs. There remained unconsolidated thus far similar short-term obligations amounting, at the same conversion rates used in the consolidation, to somewhat over $12,000,000.

The short-term debts, expressed in different foreign currencies, were converted to sterling under this arrangement at rates differing not very greatly from the current market rates. Taking the value of the pound at par and expressing the equivalent of the various conversion rates in terms of dollars, it appears that they were substantially as follows: French franc, $0.0975; Italian lira, $0.0481; Spanish peseta, $0.19; Czech crown, $0.47; Portuguese escudo, $0.81; Swedish crown, $0.295; and Belgian franc, $0.092.

The foreign debt thus will stand at a much lower figure in terms of dollars than would have been the case if all the obligations had been considered as based on full-valued currency. This consolidation does not cover the Rumanian debts incurred before the war or those to foreign governments.

Exchange and Note Issue Stationary.

Leu exchange remains substantially the same, standing at $0.004767 on April 6 and at $0.004775 on May 10. The bank-note circulation on April 15 was 15,590,000,000 lei as against 15,460,000,000 lei on March 17. The French Chamber has voted to Rumania a loan of 100,000,000,000 francs to cover materials and supplies for the Rumanian Army. Export taxes on several commodities, notably petroleum and lumber, have been substantially increased during recent months.

The New Rent Law—Housing Facilities Inadequate.

A new rent law, signed toward the end of March, is creating considerable friction. It is stated that about 10,000 actions are pending between landlords and tenants, principally over the clause which provides that landlords may increase by three times the 1916 rent paid by resident tenants and by five times the 1916 rent paid by business tenants. The rents, however, are still much lower than in pre-war times if the decline in the value of currency is taken into consideration.

Owing to the general financial stringency, there is very little liquid capital available for building construction; as borrowers have to pay from 25 to 30 per cent for building loans, no considerable amount of new construction may be expected, though housing facilities in Bucharest are entirely inadequate. Four thousand building permits were issued in Bucharest in 1922, and less than two thousand new buildings were completed.

Plans For a "Credit Industriel"—Cost of Living.

A projected law for the establishment of a national bank of industrial credit was submitted to Parliament on March 30. The Ministry of Finance, the Ministry of Industry and Commerce, and the National Bank are to participate in the company. Its object is to grant credits for facilitating industrial and commercial transactions and to develop Rumanian industry.

The tightness of money throughout 1922 had its effect on the formation of new incorporated companies; only 179 were formed, as against 238 during 1921.

The cost of living index stood at 2775 at the end of April, as compared with 2617 on March 20.

Sugar Situation Unfavorable—Imports of Colonials Increase.

The importation of 25,000 metric tons of sugar will be permitted without import duty. The area sown in sugar beets this year is approximately 50 per cent more than last, and the expected yield is about 75,000 metric tons.

The colonial-products market remained dull during January and February, the depreciation in exchange considerably curtailing imports of coffee, tea, and rice; but there was a slight increase in imports of these articles during March and April.

Petroleum and Lumber Situation—Cereals and Cattle.

Crude petroleum production during March shows improvement, being 139,000 metric tons, as against 102,000 in February. The production for the first three months of 1923 shows an increase of about 15 per cent over the corresponding period of 1922. Exports of petroleum products during March (35,000 metric tons) exceeded those of February by 15,000 tons, but the total exports during the first three months of 1923 were about 20 per cent less than in 1922. Exports of lumber show a further decrease to 48,000 metric tons during March.

Exports of cereals showed a slight improvement, being 111,000 metric tons during March, as against 102,000 tons during February; these are about double the exports of the corresponding period of 1922. Only 7,000 head of cattle were exported during March, as against 20,000 head during February. The average monthly exportation during the first quarter of 1922 was about 20,000 head.

Trade With the United Kingdom and Russia.

In spite of the increased employment of British capital in Rumanian industries, exports from the United Kingdom to Rumania slumped considerably during 1922, their value being £2,700,000, as against £6,000,000 during 1921 and against £7,500,000 during 1920; exports to Greater Rumania during 1922 were thus only about 25 per cent more than those to the old Kingdom alone during 1913. Rumania ratified the commercial debt agreement with Great Britain on April 25 (see COMMERCE REPORTS, April 16, 1923, p. 151; May 14, p. 450); the approval of Parliament, however, will probably await the conclusion of negotiations with other European creditors.

Private trade with Russia over the Bessarabian border, for gold or on a barter basis, is reported to be on the increase.

CONTINUED INDUSTRIAL DEPRESSION IN POLAND.

Based on reports and cable from Acting Commercial Attaché H. B. Smith, Warsaw.

Although the average amount of currency outstanding in April was 30 per cent greater than in March, the average exchange rate of the Polish mark fell only 4 per cent and the average wholesale prices increased only 7½ per cent. The previous excessively rapid increase in prices, due in large measure to speculation, has been definitely ended. Manufacturers and middlemen hold large stocks and plants are operating on part time only; export demand is checked by the relatively strong exchange. Although there is increasing unemployment, no serious labor disturbances have arisen, and labor is disposed to accept relatively lower wages. No important finance legislation has as yet been enacted.

New Finance Measures Still Lacking.

Negotiations, thus far uncompleted, for a combination between the Conservative and Moderate Left parties, with a view to securing control of the cabinet, have resulted in a postponement of the important finance measures proposed by Mr. Grabsky, the present Minister of Finance. The Government has been able, in a small measure, to check the inflation of currency by the issue of short-term treasury notes bearing 6 per cent interest. These are expressed in terms of "zloty"—a theoretical currency unit equal to the gold franc; that is, the notes will be paid back in Polish marks, taking account of any depreciation that may have taken place, as indicated by the wholesale price index.

This new feature of Polish Government borrowing has proved successful within the moderate limits so far attempted. The first issue of 10,000,000 zloty on April 1 was oversubscribed and another 10,000,000 was issued on May 1; the first was at the rate of 7,500 Polish marks per zloty, and the second at 8,000. The issue of paper currency during April amounted to 491,000,000,000, bringing the total up to 2,332,000,000,000; the increase was 27 per cent, as compared with 56 per cent during the preceding month (erroneously stated as more than 60 per cent in the cable summary of March 23, owing to a garbled cablegram). For the first time in several months the Government debt to the State Bank increased less than the increase in the total paper currency outstanding. It is stated that during the past two months the Government has taken advantage of the comparatively stable rate of exchange to buy considerable quantities of foreign currency.

The ministry has submitted to the Diet a budget for 1923, expressed in terms of zloty, which is the only practicable way of estimating Government receipts and expenditures, in view of the continual depreciation of the currency. This provides for expenditures of 1,700,000,000 zlotys and current revenues of 990,000,000. It is proposed to cover part of the deficit by a new general property tax or capital levy similar to that collected in 1922; but a net deficit of 430,000,000 zloty is anticipated, to be covered by credit operations or the printing of paper money.

Comparative Stability of Exchange and Prices.

Notwithstanding the large increase in the amount of paper money outstanding, the number of marks necessary to buy a dollar on the exchange increased during April only from 41,800 to 46,250, or a little over 10 per cent. This comparative stability of the exchange was due to the steadiness of the German mark, to the Government's restriction on exchange transactions, to reduced importation, and to a continuance of the reaction from the abnormally sharp fall in exchange during January and February. Moreover, the level of wholesale prices increased only 7.6 per cent during April, continuing the comparative steadiness of March. In March there had been an actual decline in the average prices of leather and its products and of textiles. The extraordinary advances in all prices early in the year have been in part due to speculation of merchants and others who bought goods feverishly in the belief that their value would be more stable than that of paper currency. The reaction has brought with it a sharp business depression.

Business Depression Continues.

The depression has affected seriously the vast number of middlemen—mostly small dealers, who conduct the distribution processes of Poland and who ordinarily rely on a quick turnover, but who are said to be now collectively carrying large stocks that were bought at high prices and are slow to move. Numerous failures have been reported. Manufacturing industries have been forced to curtail operations, although the curtailment has been somewhat lessened by the increased use of accepted bills in payment for merchandise otherwise unsalable. Discounts allowed for payment, wholly or in part in cash, largely offset the moderate price advances which took place during April. Undigested stocks everywhere obstruct new production, and plants are operating only on old orders and Government orders placed to relieve the situation. Exports are checked by the comparatively high level of prices already attained and by the steadiness of exchange. The Polish Government, through the State Bank, continues to aid the leading industries with loans, though to a somewhat less extent than during the last quarter of 1922; but since these loans are now calculated in zloty, instead of being repayable in Polish marks worth less than when the money was borrowed, they no longer constitute a virtual subsidy.

There has been recently a tendency to turn speculative activity, formerly directed toward exchange transactions and the purchase of commodities, into the local security market. The value of securities had, in general, been considerably under the earning capacity of the properties represented. During April, there was active buying of industrial and banking shares which, in many instances, doubled or even tripled in price. The movement, however, is a comparatively narrow one.

Labor Conditions.

The business depression has resulted in increasing unemployment and increasing part-time pay for labor. Employers have lately hesitated to continue the general policy of raising wages in close harmony with the cost of living. Despite the 60 per cent increase in living costs which occurred in February, labor in general was satisfied with wage increases averaging from 40 to 50 per cent, and since that time it has been disposed to accept further concessions. No important strikes have been reported.

Foreign Trade Statistics for January.

Owing to the difficulty of securing returns following the incorporation of Polish Silesia, the Govern-

ment has for the time being abandoned the presentation of foreign-trade statistics for the last few months of 1922. It has, however, published figures for January, 1923. These show a considerable unfavorable balance of trade, notwithstanding the fact that the annexation of Polish Silesia last year increased enormously the quantity, and very considerably the value, of exports. Imports in January weighed 220,500 tons and were valued at 484,000,000,000 marks ($18,900,000, at the average rate of exchange for January). Exports totaled 1,368,000 tons (half or more in weight consisting of coal), and were valued at 349,000,000,000 marks ($13,600,000).

Polish imports of cotton, which normally constitute about one-sixth of the total value of imports, were large during January (6,152 tons), but fell somewhat during February (4,614 tons).. The great bulk of this cotton comes from the United States, mostly by indirect channels. Further curtailment of imports occurred later on, and the depression is now such that previous estimates of the total cotton imports for the year may have to be revised downward.

Coal Production and Car Loadings.

The daily average of coal production during February was about the same as during January, both in Poland proper and in Polish Silesia. The average daily car loadings during April fell considerably in both sections of the country, amounting to 7,511 in Poland proper and to 5,550 in Polish Silesia. The first of these figures, however, was nearly 20 per cent greater than in April, 1922.

SQUANDERING GOOD WILL ABROAD.

Julius Klein, Director, Bureau of Foreign and Domestic Commerce.

An old abuse, so costly in the past to American prestige abroad, is again creeping into our export trade. Under the allurements of domestic boom conditions many of our manufacturers are showing increasing apathy to the legitimate requests and orders of foreign contacts whose patronage they so carefully solicited during the past few years. The sound policy of definite allotments for export is being ignored in far too many cases. Unless this disloyalty to firmly established foreign contacts is promptly overcome, American commercial prestige and good will abroad is likely to suffer serious damage.

A group of strong British firms—the representatives of a number of prominent American manufacturing exporters—have just advised the American commercial attaché in London that they are "through for all time with the unreliability of American business executives—thoroughly sick and tired of the foreign-trade 'flirtations' of their American connections whose export interest shifts with every vibration of domestic demands." For years before the war the serious intentions of American exporters had been questioned, and there had been allegations concerning "poor packing," "short-sighted credit policies," and "linguistic shortcomings;" but the strong efforts made in foreign markets since 1914 seemed to remove any doubts as to the permanence of America's intentions. Now, however, the accumulated assets of good will and experience are, in a number of important cases, likely to be thrown away overnight and squandered by a reversion to those haphazard, spasmodic policies—or utter lack of policies—which had been the most serious handicap to our commercial progress abroad before the war.

This is a serious indictment. And yet it seems to be getting uncomfortably close to the truth. Good will, that most precious of business assets, is certainly being wasted when two leading American manufacturers, who for years had been building up their trade in a foreign market, curtly brushed aside a six-figure order in that market because they are "too busy with domestic demands"; when a prominent specialties firm suddenly wipes out its export department, with the blunt explanation to loyal foreign connections, who had labored for years to build up a reputation for its product, that "home markets are once more sufficient to take care of our entire output."

If the offending firms were the only ones to suffer from such ruthless violations of the first principles of commercial loyalty, the situation would be of no concern to anyone save themselves. Unfortunately, however, every exhibition of such unethical practices is announced far and wide, with ample embellishments, by corps of ever-ready critics and rivals of the United States. The result is a serious blow to the basic integrity and good faith of the whole American business community in the given foreign market.

Permanent Foreign Outlets Must be Maintained.

If the United States is to level out the valleys of periodic depression in the curve of its business cycles and is to keep its factories and farms steadily and fully occupied, the maintenance of permanent foreign outlets must be assured regardless of fluctuations in domestic market conditions. It does not improve the standing of America's business abroad to have the first sign of better domestic trade bring about the immediate abandonment of all interest in those foreign contacts which had been hailed with such joy and solicitous regard during the dark days of 1921.

The bitter enmity engendered among foreign customers by such rough-shod impertinence survives abroad long after the episode is forgotten here. As an example there is the case of our textile exports to a certain Latin-American market, which were inaugurated on a large scale during the domestic depression of 1907. Then came the revival of home demand, and the foreign buyers were promptly ignored. It took 10 years

of hard work by our textile exporters, aided, of course, by the war situation, to overcome the effects of that affront. And unless we observe the elements of common courtesy and foresight during the present period of tempting domestic demand, a similar reaction may be expected.

Inflexible Policies Create Difficulties for Agents.

There are other aspects of this problem of due consideration and support for foreign business relations. For example, a feeling of hopelessness and resentment is frequently created in the overseas agent by the adoption in the home office of absolutely inflexible policies regarding credits, terms of sale, prices, and the disposal of stocks on hand. Such rigid requirements prevent the foreign representative from adjusting his attitude to meet changing local conditions. In this connection the case may be cited of one American company which finds itself obliged to pay many thousands of dollars in additional customs duties because it refused to relax its stock-movement policy and to rush through certain emergency shipments to anticipate an increase in tariffs in a foreign country. The company's foreign agent had the American commercial attaché supplement his plea for help, but their joint efforts fell on deaf ears and the company is now paying for its rigid "consistency."

Representative's Advice on Credits Should be Heeded.

A vital phase of this general question is that of recommendations with regard to extending credits. One of the important advantages of having a representative abroad, especially a man who has been trained in the home organization, is the facility with which he can investigate the business reputation and paying ability of prospective clients. When such a representative recommends the extension of credit, the home office should be prepared to act, within reasonable limits; unwillingness to do so may mean the loss of much of the business that would otherwise be obtained. On the other hand, if the foreign representative is of sufficient experience and acumen, his advice to restrict or withhold credit may save his principal heavy losses and expensive lawsuits.

Cases regarding credit policies often involve the most delicate relations between the foreign representative and the home office, for, while business is booming and credits are being extended freely by competitors to the same persons who desire to place orders in America, it is hard for the representative in the field to insist that the firm shall forego what seems like the prospect of large profits. Both the credit man and the manufacturing department of the home organization may oppose his advice. It may be difficult to arrive at a compromise. Yet the desirability of following such advice is strikingly illustrated by certain experiences that preceded and attended the collapse of the post-war boom. The shrewdest of the men in the field saw the crash coming (on the average) two months or more before the executives at home were aware of its imminence. Where the former commanded the confidence of their principals and "stood by their guns," they saved American firms tens of thousands of dollars. In cases were they were overruled, the home managements now realize, more keenly than ever before, the necessity of keeping in close touch with the men who represent them abroad and of giving special consideration to their warnings of impending danger.

Faith in Judgment of Foreign Representative Essential.

Compliance by the home office with recommendations by the foreign representative is often a means of avoiding serious legal losses. Legal action by Americans in a foreign country is something to be shunned, because the procedure is unfamiliar, the local courts may be influenced by considerations other than those of strict justice, and public sympathy is almost invariably alienated, even though the foreigner may be technically in the right.

Executives in the United States should be willing to believe that their foreign representative is more familiar than they are with problems in his special field. Yet they frequently fail to manifest any such faith in his judgment. One may cite the example of the American manufacturing company which was about to give an exclusive agency for a certain European country to a firm that already represented two rival concerns whose products it preferred to sell. The company insisted on concluding these arrangements despite the protests of its general representation for this region of the Continent. On his own responsibility and almost at the risk of losing his position the general representative succeeded in modifying the terms of the contract so that the American company may have a "loophole" enabling it to withdraw from the arrangement in the event that it proves unsatisfactory, as both the representative and the American commercial attaché are convinced that it will.

Hasty Action by Home Office Ill-Advised.

It is unwise and unjust for the home office to "cut the ground from under" the foreign representative by precipitate and independent action. A firm making office equipment sent a representative to Great Britain to investigate the possibilities of the market and to negotiate with local houses regarding permanent handling of the lines. Various encouraging reports as to the sales outlook were sent to the home office, together with suggestions as to policy, and, in due course, recommendations were made concerning prospective agents. Meanwhile, the exports manager at home, over-eager to get results, began to carry on certain direct negotiations by mail, and, shortly thereafter, committed himself to an agency representation of an undesirable kind, without any reference whatever to the advice that could have been obtained from the man on the spot. That such inconsiderate haste is as injurious as it is shortsighted goes without saying.

Foreign representatives of even the most progressive firms often voice the complaint that they are accused by the home office of "ceasing to be good Americans" whenever they express some appreciation of the foreign buyer's point of view or because they find it necessary to advocate doing business in the customer's way in order to get the trade and keep a satisfied client. It seems to be a deplorable fact that distance and time tend to place even the best of representatives under a growing cloud of suspicion in many home offices. This is a condition that should not be permitted to exist.

Adherence to Prices Quoted by Representatives.

One grave fault is the failure of the home office to abide by prices at which representatives take orders. A large American house which recently entered a European market sent its agent a price list covering standard lines, on the basis of which he was to solicit orders. Accompanying the price list was the statement that the quotations would hold for a specified length of time. Within two days the agent cabled an order of substantial size, for prompt shipment. By return cable he received a prompt refusal by his company to accept the order except at a price advance of 7½ per cent. The excuse was that raw materials had gone up in the meantime, though it is reasonable to suppose that the firm had the goods on hand (or at least the raw materials to make the goods) when the original prices were quoted. This illustrates a general weakness on the part of the export and sales manager at home. Such action antagonizes potential customers and weakens the position of the foreign representative by discrediting him in the eyes of those from whom he must secure business.

Cooperation With Field Force—Psychological Factors.

It is a mistake to think that, when once a first-class sales force has been put in the field, the salesman is entirely responsible for the development of a good foreign trade. The field force should be accorded information, cooperation, and guidance by the management, though, as already indicated, such guidance should not take the form of arbitrary rulings, officious meddling, or the overriding of sound recommendations.

The home management must also keep in mind the psychology of its foreign sales force to a greater extent than is necessary in the case of domestic salesmen. It must be remembered that the foreign salesman is alone on the job, and the farther away he is the more lonely he is. The home office should not complain about his minor mistakes and should resolve every doubt in his favor as long as possible. Moreover, the executives in this country should not reserve all their politeness for correspondence with customers. The salesman in the field gets just as much encouragement from the human touch in a letter or a postscript, and he is often in greater need of it than most other persons.

The home office should aid the foreign representative by bringing about a certain degree of intimacy and personal regard in its relations with the customers. A closing sentence such as "We want to thank you on behalf of our firm for the courtesies that you were kind enough to extend to our Mr. White on his recent visit to your city," or "We wish to extend to you and your good family our cordial Christmas greetings and best wishes for the New Year," will be an important factor in the creation of good will.

Tendency to Change Agencies Unjustifiably.

Executives in the United States are sometimes inclined to change agencies on slight provocation when actual conditions in the foreign field do not justify such action at all. A middle western firm was about to take away an agency from a man in a European country, and before proceeding to this extreme asked the American commercial attaché to make recommendations. The latter investigated the case and found that the agent was selling in the face of strong foreign competition which was apparently delivering a product of equal quality at a much lower price. This agent had many times refused other representations that offered better inducements because he believed in the quality of the American output and in his ability to win out in the long run. The attaché pointed out some of these facts to the American company, along with the additional consideration that this company had not reduced its prices since the high tide of prices in 1919 and 1920, while competitors had made reductions of as much as 40 per cent. As a result, the company has retained the agent, giving him greater encouragement, and he is now selling more American goods than ever before and prospects are excellent for the continuance and upbuilding of this business. Yet, before the American company was brought to a realization of the true state of affairs, it had gone so far as to offer its representation to another man, whose facilities were incomparably inferior to those of the present agent.

Keeping Same Salesmen and Local Connections.

The home management should bear in mind the advantage of keeping the same traveling salesman on a given route year after year. It is usually a great mistake to take a man who has made a success in one field and transfer him to another merely because he proved himself a good ground-breaker in the field of former endeavor. A decided prestige is derived from permanent representation. The fourth or fifth time that a man covers a route he does not need to "break the ice." It may take him as long to sell his goods, but he holds with his customers a trade position that a new competitor or a new representative of his own house can hardly hope to enjoy. Many a case is cited where a house in a nonindustrial country waits, before making its purchases, until the annual visit of Mr. So-and-so occurs, because he represents a business connection based on ripened friendship. Certain foreign representatives maintain connections with "the trade" that

no competitor could duplicate even after years of effort. Very substantial loss would be involved if their principals should shift them from one region to another.

The home office must also realize the importance of working with its sales force to keep the same local connections abroad. This is often as vital a matter as the choice of salesmen and their permanence. The local firm takes pride in making its name stand for certain goods and qualities. The house comes to feel a proprietary interest in its principals' wares. It is proud also of the extent of its powers, indicating the confidence placed in the concern. In addition, the impression made on the community by long-continued relations between principal and local merchant can not fail to be favorable. A firm which has the same connections, shows the same reliability, and sustains a reputation for fair prices year after year writes a record on public confidence of a very lasting sort.

EXPORTING AMERICAN CAPITAL.

[Excerpts from an address by Grosvenor M. Jones, Chief of the Finance and Investment Division, before the New England Foreign Trade Convention at Boston, May 18.]

The logic of the economic situation of the United States at the present time indicates clearly that there should be a large outflow of capital from this country for years to come and that if wisely directed this export of capital should prove highly beneficial to our people.

Prior to the war, the conditions affecting the outflow of American capital were, in many respects, quite different from those that now prevail. Then, the investment of American capital abroad was induced almost entirely by the desire of individual American enterprises to extend the field of operations primarily for the protection of their position in international trade.

Factors Influencing Outflow of American Capital.

A cursory study of our pre-war foreign investments indicates that they were made chiefly by our large oil, mining, meat packing, fruit, and timber concerns, and by companies manufacturing special types of machinery. To a very large degree, too, these investments were concentrated in adjacent or near-by countries, such as Canada, Mexico, and Cuba.

The establishment of most American factories in Canada has been influenced to a large degree by the desire of our manufacturers to avoid fairly high import duties on such goods as would naturally be sold in Canada and to obtain the benefit of the preferential duties on exports to such British areas as accord concessions in duties to goods of Canadian manufacture. This movement was also stimulated in part by the fact that from many points of view Canada and the United States form an economic unit.

Some American branch factories have been established in Great Britain, largely as a result of British patent laws enacted since 1907.

To meet strong international competition, to be better placed for the distribution of their product, and, in some cases, to secure the benefit of lower labor costs, certain American corporations have invested large sums in foreign establishments in other parts of the world.

In the pre-war period other considerations determined the investment of American capital abroad in certain cases, but the factors named were the most influential.

Other factors of a more potent character are now in operation to induce the outflow of American capital. Among these may be mentioned the following:

1. The United States is now the world's chief source of floating as well as of fixed capital.

2. The United States has reached the stage in its economic development at which a portion of its capital savings can profitably be exported.

3. The development of many manufacturing industries has reached the point at which, if these industries are to be fully and efficiently operated, a certain proportion of their production must be exported regularly. This exportation must be facilitated in many cases by loans placed in this country. This is true particularly in the case of locomotives, freight and passenger cars, rails and other railroad equipment, and of electrical, mining, and other heavy machinery.

4. The manufacturing industry of the United States has, moreover, become so extensive and diversified that it must draw increasingly upon foreign countries for a wide range of materials. The development of such resources under the auspices of American capital, would, therefore, assure to American industry a steady and certain supply of such raw materials at prices at least as low as those obtained by our foreign industrial competitors.

5. Our total foreign loans, including the allied debt, and our foreign investments are now so large that the interest and amortization on the one hand and the dividends on the other aggregate huge sums, which, if paid directly in goods (as they must be in large measure, despite the efforts of our debtors to pay as much as possible through increased exports to other countries) will greatly increase competition in the home market. If payment can not readily be made in goods or in goods and services, the debtor countries will be obliged to restrict their purchases in this country to the barest minimum. If, however, the returns on our foreign loans and investments are reinvested abroad, either this importation of goods will be avoided or it will be offset by a corresponding exportation of goods.

6. Other nations are looking to this country for capital for the development of their natural resources

and for other purposes. The development of the natural resources, the transportation systems, and public works of many foreign countries was retarded during the war and the immediate post-war period, since the European money markets on which these countries depended were virtually closed to them.

7. The capital losses incurred during the Great War can be offset in great measure and the well-being of the world at large can be promoted by the development of the great natural resources of the newer countries. A given amount of capital when wisely applied to such development will, as a rule, yield larger returns than when invested in most of the older countries.

Mr. Jones continued, saying:

Enough has been stated to show that the export of capital has a new significance and that it affects not only particular industrial concerns but also practically every branch of industry. In its present phase, moreover, the export of capital demands, as never before, the intelligent interest and cooperation of our investors.

Exportation of Capital and Means of Effecting.

It is pertinent, then, to ask what is meant by capital for export, and how such export is effected.

A good definition of export capital for the present purpose is that given by C. K. Hobson, an English economist, in his work, "The Export of Capital," which is as follows: "Substantially capital consists of goods, of accumulated wealth. It is a stock of commodities employed to assist the production of further commodities." When, therefore, we refer to the export of capital we have chiefly in mind the export of commodities as that term is commonly understood, and not of gold, although, strictly speaking, gold is capital.

Without going into great detail, it might be stated that the export of capital is made by loans or credits in foreign Governments and to foreign enterprises, whether such enterprises are owned by foreign citizens or by citizens of the United States; by the diversion to foreign fields of a part of the capital of a domestic concern; or by the reinvestment in foreign enterprises of the returns on previous investments therein, by earnings put back into plant, railroad, mine, etc.

The export of capital may be effected either directly or indirectly, and in various ways. The movement is not always easy to follow. Nor is it possible to earmark the particular commodities bought in this country as a result of the issuance of bonds or shares in a foreign enterprise. The process of exporting capital is not so simple or direct as that.

We know for a certainty, however, that the dollar proceeds of the bonds of foreign governments or the bonds and shares of foreign enterprises, whether owned by American citizens or by foreigners, must be used chiefly in this country. Drafts will be drawn against such proceeds either to liquidate past indebtedness in dollars or to buy American goods. This occurred in the case of the large loans to foreign governments and to foreign railroads and public utility, shipping, and industrial enterprises which our investment bankers placed in this country in the last few years.

Conservative Policy Advisable.

These facts make any discussion of the probable course of our export of capital of vital relevancy, since the export of capital means essentially the export of commodities. Even if for a time the export of capital is in the form of gold, our export of commodities is facilitated, since with an outflow of gold the upward movement of prices is bound to be retarded or reversed and the ability of our exporters to compete in foreign markets correspondingly improved.

The question naturally arises: Will it prove wise and profitable in the long run for the United States to export capital? There can be little doubt, I believe, that for a number of years the export of capital would be advantageous if it were kept within proper limits and if it were covered by sound loans to stable Governments and reliable enterprises or by reasonably safe investments.

By proper limits I have in mind the fact that for years to come the continued development of our own resources will require the major portion of our capital savings and that the capital for this development should be provided at reasonable rates, which probably could not be done if domestic enterprises had to compete for capital too keenly with foreign Governments and foreign enterprises. Our railroads, for example, will require huge amounts of capital for many years; likewise irrigation and other similar large scale enterprises.

In suggesting that our export of capital should be kept within reasonable limits I have also in mind the fact that our people should be on their guard against rushing too quickly into the field of foreign loans and investments, as the investors of other nations have done occasionally to their detriment. Time and care are required for learning the essential facts regarding the investment of capital abroad.

The limits that should be set for our foreign loans and investments will not be easy of determination, but if we proceed therein with caution and conservatism we shall not go wrong. A great deal could be said on this subject, as I have indicated in an article on "The need of a sound foreign-loan policy," which was published in COMMERCE REPORTS, December 18, 1922.

Within these limits there is no doubt that the export of capital would be beneficial to the American people in general and to our manufacturing industries in particular.

There is no question but that the present productive capacity of many of our industries can not be fully and profitably employed year after year without foreign outlets for a fair proportion of their products. This fact is not clearly perceived in busy periods such as the one through which we are now passing. But if we hark back to that other busy period in 1919 and the first half of 1920 and reflect on the great volume of goods sent abroad, and when we remember the losses incurred in the latter part of 1920 and early in 1921 when export orders were canceled and our export shipments were abandoned in foreign ports, the fact becomes clearer. At this moment, when the domestic demand appears insatiable, there is the usual tendency to minimize the importance of exports; but to tell New Englanders that even now exports are vital to many industries would be presumptuous.

When provision has been made for the shortage in building and for the restoration and improvement of our transportation system, which are important factors in our present prosperity, most of our industries will need new stimuli; and a strong stimulus would doubtless come from increased export trade.

But how can exports be stimulated then? Even assuming that by that time the economic status of Europe will have been restored to something like its pre-war basis, will its purchasing power be sufficient to take up any considerable amount of the slack? I fear not, for even then the direction of that purchasing power will be changed.

Advantages of Investments in Developmental Enterprises.

We must look, therefore, to the newer countries—those that have natural resources awaiting the magic touch of foreign capital for their development. We should remember the part that British capital played in the early economic development of our country and the great benefit that accrued to British manufacturers of rails and railroad equipment for which British investors took our bonds. Not only did the British investors and the British manufacturers benefit from this operation, but also the British people as a whole, since the building

of American railroads opened up our great Mississippi granary and made foodstuffs cheaper. The same process occurred later in Argentina.

The construction by British capital of railroads in Argentina, for example, is largely responsible for the high economic development of that important country, which is not only an important source of Great Britain's supply of wheat, wool, linseed, and meat products but also a great buyer of British textiles, machinery, and a host of other manufactured goods.

Similar opportunities are now presented to us in various parts of the world and similar benefits would accrue to us, both in the immediate sale of rails, locomotives, electrical, industrial, and mining machinery, etc. and also in the sale of practically all lines of goods which the whole country when developed would constantly require. In addition, our capitalists and investors would secure, on the average, a higher return on their capital, if the proper wisdom in investments were shown. But I would lay greater stress on the trade phases of the export of capital.

If our investments abroad should result in the increased production of raw materials needed by our industries, such as tin, rubber, sisal, nickel, chrome, and vanadium, or of foodstuffs which we do not produce at all, such as coffee, cacao, tea, and bananas, or of such commodities as sugar, tobacco, wool, cotton of certain classes, hides, petroleum, wood pulp, etc., the domestic production of which is insufficient even now for our requirements and will probably become more so with the years, this stimulation of the development of the resources of new countries would cause us no inconvenience but rather bestow a great blessing on our people and the world at large.

The development of the newer countries would thus be a benefit to the American people in many directions. It would also raise the standards of living of millions in foreign lands. It would moreover, create markets not only for American goods but also for European goods, and the economic position of our European debtors would be improved. Just as the United States has shared in the prospertiy of Argentina, which British capital has in large measure created, so we should be pleased to find that the prosperity of other countries in the development of which American capital may play a large part had proved a great boon to the export trade of European nations.

Great Britain's experience with foreign investments over at least three-quarters of a century confirms us in the belief that the export of capital is beneficial. That country has profited greatly from investments abroad, even in instances like that of the United States, in which the investment of her capital assisted in the development of a country that was destined to become her great competitor in international trade. After the American railways ceased to buy British rails and railroad equipment, the American people, as a result of their increased prosperity, bought more British textiles, textile machinery, cutlery, etc.

In short, economic laws will work themselves out; their operation can not be indefinitely thwarted or postponed.

MINERALS AND METALS

Luther Becker, Chief, Iron and Steel Division

CONDITIONS IN THE BRITISH IRON AND STEEL INDUSTRY.

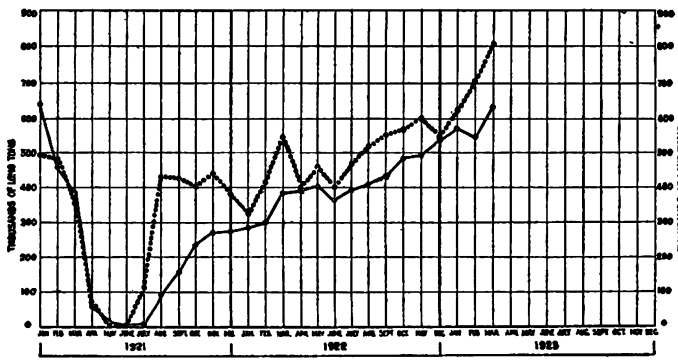
Assistant Trade Commissioner H. B. Allin Smith, London, April 18.

The French occupation of the Ruhr was the dominating feature of the British iron and steel industry in the first quarter of 1923. At the close of 1922 a slow tendency toward improvement was evident, but this tendency has since been accelerated rapidly as a result of the conditions in the competitive cross-channel industry.

The continental situation, while it was a boon to productivity in the British industry up to the close of March, also created obstacles to the smooth current of future business. A transference of orders to England that might originally have gone to French, Belgian, or German mills, and a growing colonial and foreign buying, even from the United States, on its ascending wave of domestic prosperity, created a temporary spot shortage of coke, pig iron, scrap, and semifinished materials. Quite naturally market quotations on scarce supplies have mounted weekly to what at present are looked upon as unreasonable and certainly unstable heights. These checks, both to production and to forward buying, have quickly beclouded confidence in the outlook, and as no dealers can foretell either the time or the effects on British industry of a possible Franco-German settlement in the Ruhr, local iron and steel firms have in general restricted their forward commitments to June or July at the latest. Until that time, however, mills are well booked and are operating on an increasing scale of output in order to fill urgent demands of customers.

The influence of this one political feature is summarized in the following quarterly tabulation of production, prices, and foreign trade:

Quarterly record of British steel industry, January 1, 1922, to March 31, 1923.



Item.	First quarter, 1922.	Second quarter, 1922.	Third quarter, 1922.	Fourth quarter, 1922.	First quarter, 1923.

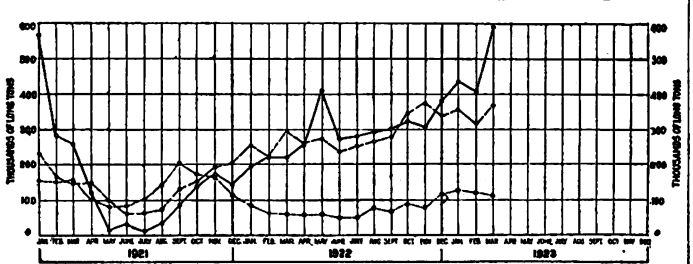
Present Position and Future of the Industry.

The outlook beyond July is a doubtful one, although British mills will continue their activities at the present wholesome rate until the opening of the third quarter at least.



The first weeks of April saw a sharp cessation of new business on account of high and uncertain prices

PRODUCTION OF STEEL AND PIG IRON IN GREAT BRITAIN BY MONTHS 1921-1922

..... STEEL INGOTS AND CASTINGS ——— PIG IRON

and doubtful future, but the manufactured iron and steel trades were very busy. In the Sheffield and Rotherham area some firms were operating night and day to keep pace with deliveries, and some were reported as refusing further orders. This boom was in open-hearth steel, in railway materials, such as wagons, wheels, axles, tires, buffers, and springs on home and foreign railway account. In this sense the Ruhr occupation was a good thing for Sheffield. At the same time, other local works were depressed and idle, as, for instance, those connected with alloy and tool steel trades, for general engineering and shipbuilding con-

EXPORTS AND IMPORTS OF IRON AND STEEL OF GREAT BRITAIN BY MONTHS 1921-1922.

——IRON ORE IMPORTS. ..... STEEL IMPORTS. - - - - STEEL EXPORTS.

tracts were retarded by scarcity and increased cost of raw materials.

It is believed in some quarters that a sound settlement between France and Germany will reintroduce continental competition (indeed, some supplies are already announced) and bring down British prices to a level harmonious with the needs of reviving trade.

French Iron and Steel Situation.

Cable from Commercial Attaché Chester Lloyd Jones, Paris, May 13.

The deadlock in the French metallurgical industry, due to the occupation of the Ruhr, continues, although there has been slight progress in Ruhr coal shipments.

French Coke Imports.

The supply of coke continues to be a matter of the first interest to the French iron and steel industry. While the prospects of securing a normal supply of coke are still distant, a number of factors are producing a gradual improvement in the outlook. It is reported that imports of Ruhr coke into France average 6,000 metric tons daily. The Ruhr coke is first brought to Weddau, whence it is sent through Aix-la-Chapelle to Belgium and Luxemburg, and to France by the unsatisfactory line through Eiffel. The French portion is delivered to the Société des Consommateurs de Coke des Hauts-Fourneaux, which expects to deliver to its members during May 38 per cent of the amounts allotted to them at the basic-requirements price of 198 francs per ton. The Government suggests that blast furnaces hoard one-third of the Ruhr coke deliveries until a 15-day emergency stock has been obtained.

French importations of British coke during February reached 63,000 tons. This source of supply is, therefore, one which is very important in the present emergency. There have been rumors that Great Britain intended placing restrictions on coke exports.

Large orders were reported as being made from America, and the Société des Consommateurs de Coke des Hauts-Forneaux placed orders there for 80,000 tons during March. But freight on American coke is said to be rising, while freight on coke from Great Britain has slightly fallen off.

Belgian coke deliveries are occurring under an agreement for the delivery of 15,000 tons per month of scrap iron by France against permission to import 30,000 tons per month of Belgian coke. Of the 30,000 tons, the Société des Consommateurs de Coke des Hauts-Forneaux disposes of 25,000 tons and 5,000 tons goes to outsiders. The French complain that the coke now being delivered from Belgium was originally ordered at 97 Belgian francs, but the suppliers avail themselves of the force majeure clause to break these contracts, and the deliveries which are made are paid for at 233 French francs. The Belgians are maintaining two prices for their coke, according to whether it is made from local fines or from the much dearer English fines. The coke delivered by Belgium to France is of the latter variety. All deliveries by the Société to French manufacturers are now made on the same price basis, irrespective of whether the products are manufactured for the local or the international market. Prior to February 16, 1923, manufacturers of products destined for export were granted special rebates by the scof on the prices of coke bought.

Iron and Steel Production in March—April Prices.

French production of iron and steel during March increased considerably, 316,000 tons of pig iron and 315,000 tons of steel ingots and castings having been produced, as compared with 305,000 tons of pig iron and 289,000 tons of steel ingots and castings in February.

It is unofficially reported that April prices of iron and steel are off 15 to 30 per cent, according to specifications, but a continuance at this rate is unlikely. Quotations are from 480 to 500 francs per metric ton on cast iron and 700 francs for merchant bars. Buyers' stocks are low, and manufacturers are producing for stock.

United States Steel Exports Increase in March.

Exports of iron and steel products from the United States during March, 1923, amounted to 165,624 long tons—an increase of 23 per cent over those of February and of 33 per cent over January. Outstanding gains in the March exports over those of the previous month were made in steel rails (8,056 tons); structural shapes,

plain material (3,835 tons); ingots, blooms, billets, sheet bars, and skelp (3,682 tons); galvanized sheets (1,992 tons); plain wire (1,524 tons); scrap (1,519 tons); tin plate, terneplate, etc. (1,421 tons); barbed wire and woven wire fencing (1,417 tons); iron and steel plates (1,395 tons); and wire rods (1,026 tons). An unusual shipment abroad was that of 1,000 tons listed under the classification covering ferromanganese and spiegeleisen, most of which was probably spiegeleisen. Then entire consignment went to Belgium.

Shipments of iron and steel to foreign countries during the first quarter of 1923 totaled 425,250 tons, which is 16 per cent under the exportation for the corresponding period of last year—508,070 tons. The following table analyzes the iron and steel exports for the first quarter of 1923 by commodities and affords a comparison between the months of February and March:

Exports of iron and steel from the United States in 1923.

Articles.	February.	March.	January-March.
	Tons.	*Tons.*	*Tons.*
Steel rails	16,227	24,283	50,490

Total	135,182	165,624	425,250

During March shipments abroad of wood screws amounted to 907,055 gross, in comparison with 583,909 gross in February and 984,166 gross in January.

A discussion of the various markets that received the March, 1923, exports will appear in COMMERCE REPORTS at an early date.

The Quicksilver Industry of Japan.

Consul E. R. Dickover, Kobe, March 26.

The production of quicksilver in Japan during the period from 1917 to 1921 has been: In 1917, 4,990 pounds, valued at 13,788 yen; 1918, 5,836 pounds, valued at 20,047 yen; 1919, 1,400 pounds, worth 4,199 yen; 1920, 5,965 pounds, worth 8,963 yen; and 1921, 13,221 pounds, valued at 12,692 yen. (1 yen=$0.4985.) The records of the mining authorities show that this quicksilver was practically all produced in the Hokkaido (Yezo), the large northern island of the Japanese group. From 1917 to 1920 the Meiji Suigin mine, in the Shiribeshi district, owned by the Tanaka Mining Co. of Tokyo, was the principal mine. In 1921, however, it appears that this mine was not worked and the unusually large production of that year came from a new one—the Aibetsu mine in the Ishikari district of the Hokkaido.

Japanese Imports of Quicksilver.

The consumption of quicksilver in the industries and arts of Japan, however, greatly exceeds the domestic production of the metal. Consequently, considerable quantities are imported annually. In 1913 Japan imported 344,010 pounds of quicksilver, valued at 324,988 yen; in 1914, 198,868 pounds, worth 190,497 yen; 1919, 992,665 pounds, with a value of 2,881,346 yen; 1920, 836,034 pounds, worth 2,136,668 yen; 1921, 402,240 pounds, valued at 864,550 yen; and 1922, 420,708 pounds, worth 610,420 yen.

The large importation in 1919 and 1920 was abnormal and was due to the fact that Great Britain released large quantities of quicksilver for export after the war. The market in Japan was quickly overstocked and in 1920 over 200,000 pounds of quicksilver were reexported, principally to the United States, to relieve the congestion on the local market.

Importers state that the local demand for quicksilver is from 5,000 to 6,000 flasks (375,000 to 450,000 pounds) annually, of which nearly all is imported. It is used locally in mining; in the manufacture of mirrors, thermometers, and drugs; and in lacquer work in the form of vermilion, etc.

Origin of Japan's Quicksilver Imports.

Before the war quicksilver was imported from Germany, Italy, and Austria-Hungary, but as these sources of supply were cut off to a large extent Japan later drew upon China, Great Britain, and the United States for the quicksilver needed. At present Great Britain supplies about 34 per cent of the imports, China 24 per cent, the United States 19 per cent, Germany 11 per cent, and Italy 8 per cent. As a general rule, the eastern part of the United States is not able to compete in this trade, as the Pacific coast exporters and the dealers in Great Britain and Europe can underbid New York. Only under exceptional circumstances can New York dealers get into the market. No duty is charged on the importation of this metal into Japan.

Mineral and Metal Items.

New South Wales to Have New Cement Works.

The Sulphide Corporation (Ltd.) has decided to establish cement works at Cockle Creek, New South Wales. The company will proceed immediately with the construction of the first unit of the plant, which is to be capable of producing 30,000 tons of cement a year. This plant will probably be duplicated later on. (Trade Commissioner J. W. Sanger, Melbourne, March 19.)

Cement Sleepers for Indian Railways.

The government of India has placed a contract with Messrs. Bird & Co., Calcutta, for 50,000 cement sleepers at 13 rupees per sleeper. The present output of this company is such that this number could not be supplied in time. Therefore the government entered into an-

other contract with the same company for sleepers to the value of 100,000 rupees at a higher rate of 16 rupees 12 annas. This is the only firm in India supplying such sleepers. (Assistant Trade Commissioner C. B. Spofford, Calcutta, March 27.)

Increased Copper Output in Belgian Congo.

The production of copper by the Union Miniere du Haut-Katanga in 1922 is estimated to reach about 42,000 metric tons, according to a circular issued by the Tanganyika Concessions Co. In addition, a reverberatory furnace is being erected to produce 6,000 to 8,000 tons per annum, and will be working during 1923. Tests with the pioneer leaching plant have come up to expectations and designs are being prepared for the installation of a plant to produce 30,000 tons a year. This will form the first unit of the large plant which the Union Miniere has in view. (Consul C. I. Pisar, Cape Town, South Africa, February 8.)

Situation in Czecho-Slovak Iron Industry.

Increased activity was reported in the Czecho-Slovāk iron and steel industry during the week ended April 7. Production recovered from the effects of the two weeks' strike in the coal and coke industry and the blowing in of three more blast furnaces in the immediate future was announced, the Witkovice Iron Works bringing in two and the Prague Iron Works one, which will make a total of 10 in operation in the country. Increasing foreign orders are being received, and several concerns are now reported to have orders booked sufficient to keep them going on their present scale for some months. (Trade Commissioner H. Lawrence Groves, Prague.)

Austrian Iron Furnaces Again in Blast.

Cable from Trade Commissioner William Ford Upson, Vienna, May 13.

The Alpine Montangesellschaft is now working three furnaces, despite the fact that it is severely hampered by the stoppage of the supply of Ruhr coke. Its unfilled orders amount to 33,400 metric tons. Production figures for April were 52,200 tons of iron ore, 21,000 tons of pig iron, 18,400 tons of steel ingots, and 11,000 tons of miscellaneous rolled-steel products. Prices have remained unchanged except for hoop iron, which has decreased 3.3 per cent.

Additional information regarding minerals and metals appears in this issue under the following sections:

Cable review, Western Europe: French iron and steel production.
Foreign trade opportunities Nos. 6455, 6456, 6457, 6458, 6459, 6486.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

COCONUT INDUSTRY IN CEYLON.

Consul Marshall M. Vance, Colombo.

Last season was generally favorable for the coconut industry in Ceylon, despite dry weather during early months. Exports of copra and coconut oil increased while exports of fresh and desiccated coconut and coconut oil cake declined.

The Ceylon coconut planting and manufacturing industry experienced an active demand for nearly all products during 1922. While the average prices procured were not as high as in 1921, the market was such as to give good returns to all private planters and to all planting and manufacturing companies not too heavily overcapitalized.

The first nine months of 1922 were abnormally dry, and it was only the heavy rains of October and November that brought the year's crop up to normal. The long-sustained dryness of 1922 is expected to affect adversely the supply of nuts maturing during 1923. A short supply will result unless exceptionally favorable growing conditions are encountered in the next few months.

Estates were comparatively free from insect pests in 1922. Planting districts in the Eastern Province were the only ones to suffer severely, the coconut caterpillar being responsible for the losses sustained.

Italy the Best Customer for Copra.

The total exports of copra during 1922 were 1,686,778 hundredweight, an increase of about 311,000 hundredweight over the exports of 1921. This total has been exceeded in only one previous year (1919). Italy replaced Denmark as the most important purchaser of Ceylon copra. Exports to Italy increased from 216,250 hundredweight in 1921 to 477,991 hundredweight in 1922.

Copra Exports and Distribution.

The following tables show exports of copra for the years 1913 to 1922 and distribution among consuming countries for the years 1921 and 1922.

Exports of copra from Ceylon, 1913 to 1922.

Years.	Hundredweight.	Years.	Hundredweight.

Desiccated Coconut Exports Decrease.

Exports of desiccated coconut fell behind the record established in 1921 by about 10,850,000 pounds. Practically all of this decrease is due to the smaller demand in the United States, exports to America showing a

decrease from 41,332,329 pounds in 1921 to 30,717,479 pounds in 1922, or about 10,615,000 pounds. The United Kingdom replaced the United States as the largest purchaser of Ceylon desiccated coconut, shipments to the United Kingdom increasing about 2,200,000 pounds.

The following tables show shipments of desiccated coconut for the years 1913 to 1922, and distribution of shipments for the years 1921 and 1922.

Exports of desiccated coconut from Ceylon, 1913 to 1922.

United Kingdom Largest Buyer of Coconut Oil.

Exports of coconut oil in 1922 showed an increase of about 52,000 hundredweight over those of 1921. The amount of exports in 1922 has been exceeded only in 1919.

The United Kingdom continues to be Ceylon's best customer for coconut oil. Exports to Germany increased greatly, the percentage of increase being more than 300. The United States has practically dropped out of the Ceylon coconut oil market.

The following tables show exports of coconut oil from 1913 to 1922, and distribution of exports for 1921 and 1922.

Small Decrease in Exports of Fresh Coconuts.

The number of fresh coconuts exported during 1922 decreased by about 1,290,000 from the number shipped in 1921. Shipments in 1921, however, were a record, and exports during 1922 have been a close second.

The United Kingdom and Egypt are by far the largest buyers of fresh coconuts. The following tables show exports for the years 1913 to 1922, and the distribution of exports for 1921 and 1922.

Exports of fresh coconuts from Ceylon, 1913 to 1922.

Exports of Coconut Oil Cake.

Exports of coconut oil cake (poonac) decreased in 1922 by about 52,000 hundredweight from shipments in 1921. Belgium purchased more than 88 per cent of the total exports. The only other important purchasers were France, the United Kingdom, and the Netherlands. Exports for the period from 1913 to 1922 are shown in the following table.

Exports of coconut oil cake from Ceylon, 1913 to 1922.

GRAIN TRADE IN EUROPE.

Alfred P. Dennis, special representative of Department of Commerce, Vienna, May 4.

The European wheat trade displays evidence of a healthier condition as native stocks diminish. According to the London Corn Circular, France must import from 22,000,000 to 24,000,000 bushels of wheat before the next harvest, Italy must import 26,000,000 bushels, and Germany must import 7,400,000 bushels. During the period from August 1, 1922, to April 14, 1923, imports of wheat into Europe were 20,000,000 bushels more than during the corresponding period of the cereal year 1921–22.

Recommendations of British Agricultural Tribunal.

Among other proposals for assisting English farmers, the British Agricultural Tribunal recommends the compulsory importation of milling offals in connection with all flour imports, at the rate of 25 per cent offals to 75 per cent flour. It recommends also an import duty of 1s. 3d. per bushel on malting barley, with a preference of one-third this duty for barley grown in the dominions. There is growing opposition to these measures, which, if passed, would place American exporters at a severe disadvantage. Their enactment is considered doubtful.

Germany Importing Russian Rye.

With the appreciation of the German mark, the controlled price of the last installment of assessed rye is only 27 per cent below the level of the open market. The Liverpool Corn Trade News reports that Germany has already received 480,000 bushels of rye from Russia. The new agrarian policy of Russia, abolishing grain requisitions, will probably have a stimulating effect on the agriculture of the country.

Changes in Exporting Ability of Rumania.

The present grain exporting capacity of Rumania as compared with the pre-war capacity may be expressed by taking 100 as the export index figure for 1913. On this basis, the export index numbers for 1921 are: Wheat 7; barley 103; oats 95; corn 79. Corresponding index numbers for 1922 are: Wheat 2; barley 155; oats 131; corn 29.

CROP CONDITIONS IN EUROPE.

Alfred P. Dennis, special representative of Department of Commerce, Vienna, May 5.

While no substantial increase has been effected in European grain sowings, the crops promise a much better harvest than was obtained last year. Official returns from 11 countries indicate aggregate increases in winter sowing of 2 per cent for wheat and 1½ per cent for rye. In Russia and the Balkans the condition of growing crops is reported about normal. Throughout central and western Europe the favorable appearance of the crops indicates a condition better than average.

It is reported that wheat acreage in France has been increased by 10 per cent, in Yugoslavia by 6 per cent, and in Italy and Greece by a small margin. With the exception of beet cultivation, spring farm work in Germany is more active than a year ago, for the reason that German farmers are anticipating release next autumn from State control of grain. In Czechoslovakia a decrease of 25 per cent is reported in sowings of winter and spring wheat, and a decrease of 12 per cent in sowing of barley, while the acreage of rye is about the same as last year. Reduced acreage of wheat in Rumania precludes any expectation of an exportable surplus at the next harvest, but substantial increases are indicated in plantings of corn, flax, and hemp. Estimates of sowings in Poland indicate an increase of 1.5 per cent for rye and a decrease of 3.4 per cent for wheat. In Spain there has been a decrease of 1 per cent in wheat acreage, but crop conditions there are the best they have been for the past five years.

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Eastern Europe:
Sugar situation acute in Rumania.
Exports of cereals and cattle during March.
Far East: Australian outlook hopeful.
Latin America: Nicaraguan coffee and sugar crops.

TOBACCO

EXPANSION OF TOBACCO MANUFACTURING INDUSTRY IN IRELAND.

Vice Consul Harold M. Collins, Dublin.

The cigarette and smoking tobacco manufacturing industry in the Irish Free State seems to be entering a period of expansion, as a result of the imposition of a duty of 8s. 6d. per pound on smoking tobacco and 10s. 5½d. per pound on cigarettes imported from Great Britain. This duty became effective April 1, 1923.

Retail Prices Advanced—Annual Tobacco Consumption.

The retail prices of the popular brands of British-made smoking tobacco and cigarettes have already been advanced 20 to 25 per cent, and Irish Free State manufacturers, whose prices have not been advanced, are beginning to find their production facilities severely taxed to meet the demand for their products.

The total annual consumption of smoking tobacco and cigarettes in the Irish Free State is about 7,200,000 pounds, valued at about $10,572,880 at the present rate of exchange. Of this amount Great Britain supplies at the present time 5,200,000 pounds, or more than 70 per cent, and domestic manufacturers about 2,000,000. Cigarettes constitute probably 75 per cent of the imports from Great Britain, but smoking tobacco constitutes about 75 per cent of the domestic production.

Possible Market for Cigarette and Tobacco Machinery.

It is rumored that the British firm whose products have figured most prominently on the Irish market may establish a factory in the Free State to avoid the new import duties. Regardless of whether this is done or whether the domestic manufacturers succeed in capturing the 70 per cent of the trade which now goes to the British manufacturer, it appears that there will be in the near future a brisk demand for machinery for the production of smoking tobacco and cigarettes.

If there is no preferential rate of duty established in favor of the British tobacco, this will afford an opportunity for American tobacco manufacturers to enter the Irish market under conditions not heretofore prevailing.

It is also probable that purchases of tobacco in this country ultimately destined for Ireland will be more widely distributed.

In view of the fact that practically all the cigarette machines now in use in the Free State were imported from the United States and are very favorably regarded, American manufacturers of tobacco machinery should get in touch with tobacco manufacturers in Ireland, as it is apparently a potential market for both cigarette and smoking tobacco machinery.

[A list of manufacturers of smoking tobacco and cigarettes in the Irish Free State, with full particulars as to packing, etc., is on file in the Bureau of Foreign and Domestic Commerce, and is available on request.]

SWEDISH TOBACCO MONOPOLY OPERATIONS FOR 1922.

Assistant Trade Commissioner Harry Sorensen and Consul General D. I. Murphy.

Although the total turnover in sales of the Swedish tobacco monopoly declined on account of the general depression more than 10,000,000 kroner (1 kroner equals $0.268), or 7 per cent below that of 1921, it was able to increase the net profits from 11,481,376 kroner in 1921 to 15,157,866 kroner in 1922. After placing 2,000,000 kroner to the credit of the pension fund, which at the close of the year amounted to 3,250,000 kroner, the monopoly paid a dividend of 10 per cent on the 17,000,000 kroner preferred stock, compared with 9 per cent paid last year, and 40 per cent on the common stock of 29,800,000 kroner (which is owned by the Swedish State) compared with a dividend of 31 per cent in 1921.

Monopoly Receipts and Expenditures in 1922.

The gross income from manufacture and sales was 85,290,000 kroner, to which must be added receipts from license fees amounting to 3,250,000 kroner, making a total of 88,540,000 kroner. The expenditures of the monopoly consisted of 35,360,000 kroner in taxes to the Swedish Government, 19,970,000 kroner to retail dealers in discounts on sales, and 4,554,314 kroner for the expense of the principal office in Stockholm and the 15 branch offices. A great saving was effected in the operation of their offices, the expense being reduced 1,365,686 kroner under that of 1921.

Production and Sales in 1920, 1921, and 1922.

As a result of increased sales on some of its products and the curtailing of its imports, the monopoly was able to reduce its inventory of raw leaf from 37,000,000 kroner to 20,000,000 kroner. The following table shows the quantity of manufactured tobacco produced and sold during the years 1920, 1921, and 1922.

Swedish tobacco monopoly's production and sales of own production.

Item.	Production.			Sales of own production.		
	1920	1921	1922	1920	1921	1922

Tobacco Imports and Consumption.

The area of land devoted to tobacco culture by the monopoly in 1922 was about one-third less than in 1921, and owing to unfavorable growing conditions the yield was below normal both in quantity and in quality.

The imports of raw leaf tobacco during 1922, by countries, were as follows: United States, 7,602,309 pounds; southeastern Europe (Turkish), 1,493,501 pounds; China, 283,507 pounds; Cuba, 186,745 pounds; and other countries, 173,740 pounds.

The total consumption of leaf tobacco in Sweden for 1922 was 10,892,090 pounds of imported leaf and 1,163,391 of domestic leaf. It will thus be seen that there was a draft on stocks on hand to the extent of 2,315,679 pounds.

The imports of manufactured tobacco by the monopoly during 1922 were 6,400,000 cigars, 19,100,000 cigarettes, and 3,968 pounds of smoking tobacco. The quantities imported by dealers were 12,800,000 cigars, 11,300,000 cigarillos, 40,100,000 cigarettes, and 201,948 pounds of smoking tobacco. There was a pronounced decrease in cigar imports, which may be attributed to the tariff of 4 ore (100 ore equal 1 kroner) on each cigar.

AUTOMOTIVE PRODUCTS

M. H. Hoepli, Acting Chief, Automotive Division

MARCH AUTOMOTIVE EXPORTS SHOW FURTHER INCREASE.

Exports of automotive products from the United States during March continued on the upward curve, reaching a total value of $15,682,896 and representing an increase of 20 per cent over similar exports during February. According to export figures in the past—with the exception of 1921, when overstocking abroad resulted in abnormally low shipments to foreign markets—exports tend to increase steadily until June or July, when a decrease in the size of shipments usually occurs. March exports of passenger cars, numbering 11,814, are the largest for any month on record, excepting in 1920 when all foreign markets were taking extraordinarily large shipments to meet the accumulated demand.

Passenger cars accounted for the major part of the March gain, shipments having increased 34 per cent in number and 31 per cent in value; truck exports, which had been large, decreased 9 per cent in number and 4 per cent in value. Unit values of passenger cars decreased $14 from the February unit values; the unit value of trucks increased $25. Exports of parts and accessories decreased 50 per cent in quantity, but increased nearly 22 per cent in value.

Exports of passenger cars, motor trucks, and busses from the United States during March, 1923.

All Leading Markets Take Increased Shipments.

Australia took only 10 cars more in March than in February, but continued to head the list of leading markets, in spite of large increases to the United Kingdom and Canada. All other leading markets took greater shipments than in February; Cuba's quota, in line with its automotive recovery, was more than in any other month this year. Belgium lost to Japan its position as the leading truck market, the shipments to Japan being very large as compared with previous months. Exports to Australia, as well as to Belgium, fell off; but other markets took increased shipments.

Exports of Other Automotive Products.

Motor-cycle shipments during March increased 42 per cent in number and 50 per cent in value, crossing the 2,000 mark for the first time since the early part of 1921, when shipments dropped below the 1,000 line. Automobile-engine exports showed a remarkable increase of 264 per cent in number and 144 per cent in value, with a unit value of $101 for passenger-car engines.

Ratio of Exports to Production.

Production during March totaled 318,424 passenger cars and 34,593 trucks. About 3.7 per cent of the passenger-car production was exported, as against 3.4 per cent in February; 4.5 per cent of the trucks produced were shipped abroad, as against 7.9 per cent during February.

CHILEAN AUTOMOTIVE TRADE SHOWS IMPROVEMENT.

R. H. Squirrell, secretary to commercial attaché, Santiago, April 5.

Motor-vehicle dealers in Chile have shared to a large extent in the revival of business that has followed the improvement in nitrate sales. This increase began in the latter part of 1922 and has brought a gradual but steady tendency toward freedom in buying on the part of the local public. Sales during 1923 have increased considerably and unexpectedly, the agent of one popular, medium-priced American make being left without cars for display purposes. One American truck representative has disposed of nine trucks during the year; although this number is not very large, it is an excellent showing as compared with 1922, and the agent anticipates an immediately prosperous future. Agents in general are pleased with current business, and all seem to expect a continuance of the comparative ease in buying. The use of motor vehicles is expanding day by day; imports in January and February of this year numbered 90 cars from the United States, 1 from Belgium, and 1 from Germany.

Main-Road Improvement Projected.

An authorization has been sought recently for the issuance of a loan of 3,000,000 pesos to improve the existing road between Valparaiso and Casablanca; the

district which supplies the larger portion of the dairy produce, fruit, and vegetables that Valparaiso consumes. If this project is carried through, car and truck traffic between the two towns will be considerably facilitated, and sales will be materially benefited. Traffic to-day on this route is very difficult and can not be considered economical. Undoubtedly motor-bus services will be established between the two points, in addition to the use of trucks for produce transportation, once this new road is finished.

Railway Motor Cars and Busses.

Motor vehicles have been put to a number of new uses in Chile. A small narrow-gauge passenger and freight line near Santiago, 5 or 6 kilometers in length, recently replaced two of its small locomotives—in the one case, by an open 38-passenger truck, driven by the engine of a low-priced American passenger car; in the other case, by a tractor driven by gasoline engine, for the haulage of freight. The results rendered by these two internal-combustion cars have proved so satisfying to the owner that he has decided to put an additional passenger car on the line.

Attempts at motor-bus services in Santiago in the past have resulted in failure, but several months ago a number of motor trucks with improvised seats were put into passenger service when the local electric street-car company was obliged to suspend its services. This initiative proved to be the forerunner of several small motor-bus companies that started runs on several of the main streets of the city, giving good service to the public in their punctuality and accommodation. The greater number of these busses are mounted on the chassis of a low-priced American car and have a capacity for 18 persons. It is thought that this motor-bus service will be successful, as the electric street-car service has shortened several of its runs and is using a smaller number of cars.

The distribution of gasoline in Valparaiso and Santiago has been facilitated through the recent installation of filling stations by two competitive oil companies.

British Passenger-Car Production in 1922.

Assistant Trade Commissioner W. M. Park, London, April 13.

An independent investigation by the Motor Trader, regarding passenger-car production in Great Britain during 1922, is summarized in the following table:

Production of British motor-car factories in 1922.

Class of firm.	Number of firms.	Approximate output.
Producing yearly 1,000 cars or over	13	28,600
Producing between 500 and 1,000	7	4,470
Producing less than 500	71	5,349
Total	92	38,419

Another investigation based on the returns made by the Ministry of Transport as to registration, gives a total of 52,753 cars. This estimate is derived by taking the total difference between registrations in 1921 and 1922, allowing 2¼ per cent for scrapped cars, deducting imports less reexports, and adding exports. Allowance for 15,000 American cars, assembled at Manchester from imported and locally produced parts, brings the total output of British-owned factories down to 37,753. Stocks held by agents and makers were estimated to remain constant for the two years.

AUTOMOTIVE DIGEST.

South Africa—Estimated Requirements in Motor Vehicles.

While the Bulletin of the South African Motor Traders' Association estimates the annual requirements at 4,500 motor cars and trucks, the Motor Weekly places the annual needs of the market between 5,000 and 6,000 motor vehicles of all classes, since imports during 1922 totaled 4,840 passenger cars, 144 trucks, and 1,317 motor cycles. [See COMMERCE REPORTS, April 23, p. 239, "Prospects Encouraging in South Africa."] (Consul G. K. Donald, Johannesburg, March 14.)

Brazil—Roads in Various States; Bus Service.

Recent statistics show 21,236 kilometers of roads in the State of Rio Grande do Sul, 4,798 kilometers in Santa Catharina (with 2,000 additional kilometers in construction), and 2,246 kilometers in the State of Goyaz, of which the longest is the 360-kilometer road between Roncador and Goyaz. An omnibus service was recently inaugurated in Nichteroy, the former capital of the State of Rio de Janeiro. It is reported that additional busses will be put into service if the present line proves profitable. (Assistant Trade Commissioner M. E. Cremer, Rio de Janeiro, April 17.)

Argentina—Local Representatives Needed to Market Airplanes.

American manufacturers desiring to market their airplanes and accessories in Argentina will find it necessary to have their own representatives in the country, as legal residence is required in order to bid on Government contracts. One American company and several European manufacturers have their own representatives there to demonstrate their machines and act as instructors. There is considerable interest in commercial and Government flying in Argentina; it is estimated that 1,500 flights are made a week from the several fields in Buenos Aires. (Trade Commissioner George S. Brady, Buenos Aires, March 26.)

Cuba—Car Market Highly Competitive.

Passenger-car manufacturers, before attempting to introduce their product into Cuba, will find it necessary to make a close study of the Cuban market and to establish personal contacts with their distributing organizations there. The Cuban motor-vehicle business has been the object of most careful study by various export managers of companies whose cars are already on the market, and the introduction of a new car must be taken care of by a factory representative, as its reputation will be permanently injured if the first few customers are dissatisfied in any way. The leading makes of American cars now on the market are represented by American agents, who supervise service and repair stations as a regular part of their business. It is almost necessary to sell on credit and an exhibition stock must be maintained in the country. (Acting Commercial Attaché Paul L. Edwards, Habana, April 11.)

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF.

Japan Purchasing Chinese Furs.

Japanese merchants are developing an increase in business in Chinese furs, large shipments going forward from Harbin. (Consul G. C. Hanson, Harbin, March 16.)

Bolivia Exports Small Quantities of Wool.

Wool in small quantities is being shipped from Bolivia to Liverpool and local merchants are contemplating making shipments of alpaca to the United States. (Consul Dayle C. McDonough, La Paz, March 5.)

New South Wales Cotton Growing Unsuccessful.

Experiments in growing cotton in New South Wales have in most instances this season met with failure. Poor results have been caused by the dry weather and insect pests. (Consul Romeyn Wormuth, Sydney, Australia, February 1.)

Montreal to Hold Late Fur Auction.

A late spring sale of furs will be held in Montreal on June 26 and days following. The last receiving date for this sale will be June 11. (Consul General Albert Halstead, Montreal, April 17.)

Chinese Supply of Pig Bristles Short.

Stocks of bristles, especially short lengths, are none too large, according to the general impression prevailing in Tientsin. Prices are reported as firm and high, due to unusually brisk demand both in Tientsin and Shanghai. (Trade Commissioner Lansing W. Hoyt, Shanghai, April 4.)

South African Mohair Growers Optimistic.

A good demand exists for South African mohair, but very little business is being transacted because of low stocks. Prospects are very good for the March to July season. Growers are especially optimistic, particularly as regards summer kids. (Consul Monnett B. Davis, Port Elizabeth, March 5.)

Ecuador Exports of Panama Hats.

The bulk of Ecuador's exports of panama hats is by parcel post, of which no record is kept. Declared exports of panama hats for March amounted to 14,288 kilos. The United States is the largest single customer but France and the United Kingdom also take large quantities. (Consul General Frederic W. Goding, Guayaquil, April 12.)

Burma Importing More Cotton Goods.

Imports of cotton goods into Rangoon, Burma, rose from 92,700,000 rupees in 1919–20 to 132,100,000 rupees in the fiscal year 1920–21 (the average annual rate of exchange for the rupee was $0.3325 in 1920 and $0.2575 in 1921). Apart from cotton drills, the United States does not participate in the Burma piece-goods trade. (Consul J. P. Moffitt, Rangoon, Burma, March 7.)

South African Wool Prices Weaker.

The Port Elizabeth, South Africa, wool market showed a decidedly weaker tendency in February. A fair demand existed at lower prices, but sellers generally were unwilling to operate, the volume of business transacted being small. Fairly large quantities of Free State and Karroo wools arrived during the month. (Consul Monnett B. Davis, Port Elizabeth, March 5.)

Poland Exporting Textiles to China.

Experimental stocks of cloth and wool blankets received by Polish textile mill salesmen at Harbin have enjoyed a ready retail sale. Orders of considerable size have consequently been placed as the result with mills in Lodz, Bielostok, and Warsaw. Although no piece goods have been received from Soviet Russia reports from Chita indicate that these goods are selling at prices 20 to 25 per cent above pre-war levels. (Consul G. C. Hanson, Harbin, March 15.)

Canary Islands Favor American Cotton Goods.

The Canary Islands imported $235,120 worth of cotton goods in 1920—a very substantial increase over the total of $22,331 in 1914. Direct importation on a small scale by a very large number of retail dealers through the medium of commission agents, is the usual method of conducting business. Thirty to 60 days' credits are customary. (Consul Frank Anderson Henry, Teneriffe, January 20.)

New Zealand Wool Prices Decline.

At the third Auckland wool sale held on March 17, prices of average and inferior wools declined compared with previous months. Keenest competition was from continental buyers, there being a lack of competition from American and local purchasers. About 80 per cent of the offerings were sold at auction, the balance being disposed of at private sale. The total number of bales offered was 7,573. (Consul K. de G. MacVitty, Auckland, March 19.)

Status of Algerian Wool Production.

Algerian production of wool amounted to 159,790 quintals in 1922 (1 quintal=220.46 pounds), according to Commercial Attaché Chester Lloyd Jones, Paris. Although this was a slight decrease compared with earlier years, Algerian wool production may be regarded as essentially stationary. Without greater conservation of water supply, extension of pasture land, and better methods of selection of stock, it is probable that production will decrease. A comprehensive report on the Algerian wool situation may be had by application to the Textile Division, reference 8525.

Silkworm Culture in Honduras.

The success that has attended the development of silkworm culture in San Salvador has attracted interest in southern Honduras. The National Congress has been petitioned for exclusive concessions for silkworm culture in Honduras for a period of 25 years, which includes free tenure of 5,000 acres of Government land. The Government in return, it is agreed, will receive one-half of the net profits. While it is not anticipated that this concession will meet with approval, it is believed that silkworm culture could be profitably undertaken in Honduras on a small scale. (Consul Robert L. Keiser, Tegucigalpa, March 6.)

HUNGARIAN MARKET FOR HOSIERY AND UNDERWEAR.

Vice Consul Digby A. Willson, Budapest, March 1.

There is an exceptional opportunity for American manufacturers to develop a market for hosiery in Hungary, as the better qualities are manufactured locally only to a very limited extent and the domestic production of cheaper grades is inadequate to supply the local demand. The importation of silk hosiery is not permitted at the present time.

More than 90 per cent of the imports of silk-lisle hosiery is from Germany, and while this article is said to be the best that can be obtained in European markets, it is decidedly inferior in quality and more expensive than the American silk-lisle product. Half-silk hosiery on sale on the Budapest market on March 1 ranged in price from $1.28 to $2.39 for stockings, and from $0.65 to $1.83 for socks, but the quality was rather poor.

The cotton hosiery imported from Austria, Germany, and Czechoslovakia, as well as the domestic product, is of a grade inferior to the American article. It costs from $0.58 to $1.28 per pair.

The following table indicates the amounts and sources of the Hungarian hosiery imports for the year 1922:

Hungarian imports of stockings and socks in 1922.

Country of origin.	Cotton.	Wool.	Half silk.
	Kilos.	*Kilos.*	*Kilos.*
Austria	188,400	1,700	200
Czechoslovakia	23,400	200	2,600
Germany	139,000	1,000	.....
England	100	.....	.....
Switzerland	100	.....	.....
Poland	700	.....	.....
Total	351,700	2,900	2,800

It should be noted that a large majority of Hungarian men wear stockings. This is especially true of the better classes, few of whom wear socks. The market calls chiefly for black and white products, although such colors as dark blue, dark green, tan, and gray are salable in small quantities.

Opportunity to Introduce American Underwear.

Local dealers think the chances are favorable for introducing American underwear into Hungary if the prices are not prohibitive, as these products are well liked in the Budapest market. The local trade is supplied to a certain extent by Hungarian manufacturers, but the greater part of the underwear is imported from Austria, Germany, and Czechoslovakia.

The Royal Hungarian Central Statistical Bureau of the Ministry of Commerce gives the following figures for the Hungarian imports of knitted underwear in 1922: From Austria, 29,200 kilos of cotton and 8,700 kilos of woolen underwear; from Germany, 23,100 kilos of cotton and 5,200 kilos of woolen underwear; from Czechoslovakia, 20,800 kilos of cotton and 1,100 kilos of woolen underwear; from England, 2,700 kilos of woolen underwear; and from Switzerland, 100 kilos of cotton underwear. The totals for the year were 73,200 kilos of cotton underwear and 17,700 kilos of woolen underwear.

Sales Methods—Imports Affected by Exchange.

Budapest dealers will not attempt the importation of foreign products through the medium of another European agent, but insist on dealing as direct and exclusive local representatives.

The introduction of any foreign merchandise is, at the present time, dependent upon the action of the Devisa Central in granting the foreign currencies, and dealers, before placing an order, must assure themselves of the currency, either purchased through the Government bureau or its commissioners or through other channels at rates considerably higher than the official quotation.

[Additional information regarding the Hungarian market for hosiery and underwear can be obtained from the Textile Division, Bureau of Foreign and Domestic Commerce, Washington, D. C. Refer to file No. 88497.]

French Textile Situation Marked by Labor Unrest.

Cable from Commercial Attaché Chester Lloyd Jones, Paris, May 14.

The French textile situation is marked by labor unrest in both the cotton and wool textile industries. There are 10,000 strikers in the woolen mills at Elbeuf. The strikers of the Lille cotton workers and the Paris dressmakers failed.

Stocks of raw cotton warehoused at Havre on May 3 amounted to 107,400 bales. Of this number 91,200 came from the United States. There were also 23,800 bales afloat for this port, of which 21,700 were American.

The operation of cotton textile plants is satisfactory, but the Calais lace trade is poor.

Heavy French purchases of raw wool were made at recent English wool sales, and conditions in the French wool industry are generally satisfactory.

Although stocks of raw silk are low, business is slow pending the arrival of the new crop, in which, however, there have been few transactions owing to the uncertainty as to its size and prices. There is general uneasiness in the silk trade regarding the future, caused by present high prices. Although silk factories are well supplied with orders, few new ones are being received. In contrast, the demand for artificial silk textiles is keen, many factories being unable to accept orders for short-time delivery.

The Situation in the German Fur Trade.

Assistant Trade Commissioner E. M. Zwickel, Berlin, April 11.

Business in the various branches of the German fur trade, largely centered in the city of Leipzig, has practically come to a standstill, according to the trade press. The comparative stability of the German mark at 20,000 to the dollar, since the middle of February, after having appreciated over 100 per cent in value, has naturally brought about a reluctance on the part of most inland wholesale buyers who anticipate further price reductions. In general, the quality of furs offered is considered poor. Nutria, Persian lamb, and American opossum are the imported furs in greatest demand.

The export trade has also suffered from dullness but is apparently endeavoring, with some success, to stimulate sales. Substantial and profitable orders for raw furs have been received from the countries to the north of Germany, as well as those to the south, and many inquiries have been received, especially from Spain. There is practically no business with France and Belgium on account of the boycott. English orders are

not brisk. The United States and other American countries, however, have resumed a lively interest in the Leipzig fur market. There appears to be a great demand for fox, especially for the better quality of domestic fox pelts.

The retail trade throughout Germany, on the contrary, reports favorable sales. There is a lively interest in blue fox furs for spring and summer wear, especially the larger and darker ones. There have been fewer sales in the cheap imitations, such as rabbit and kid.

In spite of the recent comparative stagnation in the German fur trade, as well as the capital shortage and difficulty of obtaining credit, there have been no serious disturbances or business disasters. In fact, the trade has experienced an unusual growth in the number of new establishments and enlargements. However, the number of new dressers and dyers is considered too large, and it is thought that their future prospects are not bright. Orders on hand are not sufficient to keep all busy.

Additional information regarding textiles appears in this issue under the following sections:

Cable review, Western Europe: Labor unrest in French textile industries.
Far East: Australian outlook hopeful.
Foreign trade opportunities Nos. 6445, 6460, 6461, 6462, 6463, 6464, 6465, 6466, 6467, 6468, 6469, 6478, 6481, 6487.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

MARCH ELECTRICAL EXPORTS.

Preliminary figures just available give value of the exports of electrical goods from the United States during the month of March, 1923, as $6,344,842, which shows a considerable increase over both the preceding month and the same month of last year. It is also nearly as great as the total for January, 1923. For the first three months of 1923 our total electrical exports have been $17,585,523, as compared with $14,199,436 for the first quarter of 1922.

Practically all classes of electrical goods maintained their position in March, very few showing decreases over the preceding month. Gains have been small in apparatus lines, but have been more marked in supply and appliance items. Electric-locomotive exports were $474,098 in March, as compared with $874,379 for January. None were exported in February. Fans, radio materials, wiring supplies, and insulated copper wire and cable all show steady gains. The increase in fans and various domestic electric appliances marks the seasonal buying from the Southern Hemisphere.

HYDROELECTRIC WORKS IN SARDINIA.

Consul H. Earle Russell, Rome, Italy, April 17.

At a recent conference held in the provincial government building at Sassari, Sardinia, Engineer Omodeo, who has for the last 15 years been directing the work of hydroelectric development in the island, gave some interesting data on the newly completed works on the Tirso River and the project for the storage reservoir on the Coghinos, which is designed to make possible a plan of electrification that will supply power to increase the agricultural development of the island.

In the whole of Sardinia there are no watercourses with running water at all times. For almost eight months of the year these streams carry practically no water at all, and during the other four months the amount varies greatly from one day to another. Consequently, without control they are of little value either for agricultural or industrial purposes. However, gaugings showed that in several of them, including the Tirso, the inflow of water is as large in 15 or 20 days as during the rest of the year, and studies made by Engineer Omodeo indicated that the flood waters resulting from melting snows during these few weeks could readily be stored.

A construction project of that nature on the Tirso River has just been completed and the reservoir is now being filled. This artificial body of water will have an area of 50 square kilometers (19.305 square miles) and will contain 460,000,000 cubic meters (601,701,000 cubic yards) of water.

It is calculated that this storage will produce 50,000,000 kilowatt-hours of electrical energy for industries and will irrigate 30,000 hectares (74,130 acres) of land.

Other Projects Possible.

This particular project is not the only one possible in Sardinia, either as regards the same river or others of that island. The Coghinos, the Flumendosa, and other smaller streams have numerous basins capable in the aggregate of storing billions of cubic yards of water which are now lost but which could be used to water lands at present producing little or nothing.

The Coghinos River, on which surveys have been made for the construction of a hydroelectric-power reservoir, is even better adapted for development than the Tirso. The damming of the latter gives a head of 50 meters (164 feet), while that of the Coghinos will give 100 meters (328 feet). The Tirso will produce 50,000,000 kilowatt-hours of energy, and the Coghinos 80,000,000 kilowatt-hours a year.

Central electric stations at these two points would, for a long time to come, supply the light and power necessary for the whole island of Sardinia, supplementing, as they would, the present smaller stations at Cagliari, Sassari, and elsewhere. They would also aid in the development of the Sardinian mining industry. The milling of minerals produced in the island is at present carried on abroad, owing largely to lack of power to operate the necessary machinery.

The irrigation of the 30,000 hectares of land in the plains of Campidano and of other large tracts in the Coghinos Valley would also give intensive development to agricultural and pastoral industries.

Inasmuch as the wealth of Sardinia depends on its mines, fields, and flocks, it can be seen how important is the development of these industries through the extension of the electric-power system and of irrigation facilities as planned in the above projects.

The energy supplied by the Tirso and Coghinos hydroelectric plants and by a supplemental steam plant on the Tirso River would reach a total of 160,000,000 kilowatt-hours, which is sufficient to electrify all the railways of the island and to operate a large number of potential industries.

Proposed Improvement of Algerian Telephone Service.

Consul Edward A. Dow, Algiers.

Changes and improvements needed in the Algerian telephone service are suggested in a report recently submitted by the Commercial Syndicate of Algiers to the colonial authorities at Paris.

The need for development is urgent, since long-delayed telephone improvements were retarded on account of the war. Subscribers are complaining of the old-fashioned methods and worn-out apparatus, and in the country districts, particularly, difficult and expensive repairs have to be made constantly. The equipment is fully 25 years behind that of the United States and the present requirements of repairs are more onerous than would be the complete rebuilding of the system. Weather disturbances quickly put the lines out of commission, resulting in serious interruption, especially in the case of the more isolated circuits.

The present cost of establishing new lines and installing new telephones is excessive and, since this is done at the expense of the subscriber, it tends to limit growth in the use of telephones and is even a detriment to changes in existing installations. In case of removal a subscriber is considered as having abandoned his line, which becomes the property of the telephone administration. It is proposed now to change this and to allow a subscriber, upon removal, the value of all wires, poles, etc., for which he originally paid.

It is proposed also to charge the same rate whether an installation requires underground or aerial connection. A plan of installment payments would also enable many more people to become users of telephones.

The present long-distance service is hopelessly inadequate. In fact, it is so slow that the mail is often preferred in doing business with a distant point rather than to endure the long delays incident to telephoning.

Italian Machinery Market Good.

Opportunities for the introduction of foreign-made electrical machinery into Italy have never been greater than at present, according to a special article from Genoa, sent to the Birmingham (England) Post. Owing to the almost entire absence of British or American electrical materials from the Italian market, Germany is regaining its pre-war trade in this class of goods, which amounted to 60 per cent of the electrical machinery required annually by Italy. Hydroelectric energy is being applied throughout Italy to railways, factories, and agricultural uses, and Government aid is being given to the more urgent projects.

Electric Pumps Proposed for Galician Oil Fields.

Developments are in progress in the Galician oil fields looking to the substitution of electric for steam pumping. The Premier Oil Co. (French) has already erected a power house at Boryslaw with this end in view. If present experiments show economy of operation, it is anticipated that the change will become general. (Assistan Trade Commissioner Elbert Baldwin, Warsaw, March 17.)

Additional information regarding electrical equipment appears in this issue under the following sections:

Tariffs and Trade Regulations: Increased import duty on radio apparatus in South Africa.
Foreign trade opportunities Nos. 6461, 6478, 6480, 6481, 6482.

CHEMICALS

Charles C. Concannon, Acting Chief, Chemical Division

GERMAN CHEMICAL EXPORTS AND PRICES IN 1922.

Assistant Trade Commissioner William T. Daugherty, Berlin.

The chemical industry is generally rated as occupying third place among German industries in total exports in gold values. It is said to have accounted for 7 to 8 per cent of Germany's total exports in the calendar year 1922, reckoned in gold marks. It is only exceeded by the heavy metals industry, participating to the amount of about 20 per cent of total exports; and the textile industry, with about 17 per cent. All other industries register a smaller participation in Germany's exports.

The chemical industry probably has even a prior claim to importance as an asset in Germany's foreign trade balance, for while the textile industry, for instance, depends almost exclusively on its importation of foreign raw materials, and the iron industry must import now not only large quantities of iron ore, but pig and scrap iron, and manganese, chromium, and tungsten ores, and even iron alloys (export articles before the war), the chemical industry uses chiefly domestic raw materials. The chemical industry imports about 1.8 per cent of total German imports, while the textile industry, in comparison, imports about 12.8 per cent.

The estimated quantity and value of German chemical exports (exclusive of reparations deliveries) in 1913, 1920, 1921, and 1922, were as follows: In 1913, 2,529,000 metric tons, valued at 912,000,000 gold marks; 1920, 514,000 metric tons, valued at 469,000,000 gold marks; 1921, 690,000 metric tons, estimated at 330,000,000 gold marks, and 1922, 890,000 metric tons, worth 290,000,000 gold marks.

These estimates of exports were prepared by the Verein zur Wahrung der Interessen der Chemischen Industrie Deutschlands (Union for the Protection of Germany's Chemical Industry)—referred to hereafter as "V. zur W."—in cooperation with the Foreign Trade Control Office for Chemicals. Both organizations are in Berlin. The figures do not compare with those prepared by the Federal Statistical Office.

Prices in the German Chemical Industry.

If the cost level of such economic factors as wages, dollar exchange, coal, freight, and chemical prices is placed at 100 for January, 1922, the indices of increase in December, 1922, over January, according to the "V. zur W.," are as follows: Wages, 3300; dollar exchange (monthly average), 3900; coal, 5500; freight rates, 6400: and chemical prices, 4030.

The essential difference between German inland prices and foreign or world market prices is that the former are calculated in the fluctuating paper mark and the latter are calculated in gold. In order to draw an accurate comparison between the two, one must either convert the former into gold or the latter into German paper. If, then, in theory, the prices of chemicals in foreign countries are converted into German paper marks (which fluctuated from an average of 192.59 marks for the American dollar in January, 1922, to an average of 7,593.20 in December, 1922), it is calculated by the "V. zur W." that foreign or world market prices for chemicals increased 41 times during the period January to December, 1922, compared with 40.3 times in the case of German prices for chemicals. The price curves of German and foreign chemical prices for 1922 ran almost identical.

It is a fallacy, according to the "V. zur W.," to think of effectually increasing the spread between German inland and foreign world market prices for chemicals. It has been characteristic of the collapse of the German mark, which first began in the summer of 1921, that German inland and foreign world market prices quickly adjust themselves to a close common curve, even though sudden and abnormal mark depreciation has temporarily increased the spread.

CHEMICAL TRADE OF THE NETHERLANDS IN 1922.

Consul General George E. Anderson, Rotterdam.

Chemical factories in the Netherlands, as a rule, did well during the year 1922. The export trade has increased materially in the past two years, with a considerable development of trade with the United States. The Dutch manufacturers also are finding it more nearly possible to supply their home market with many products which were formerly imported from other countries, this being the case especially with artificial fertilizers, which form an important item in the Netherlands. The manufacture of many varieties of drugs, formerly obtained mostly from Germany, is on the increase.

Imports of Chemicals.

As compared with the imports of chemicals into the Netherlands in 1921, those for 1922 recorded substantial increases, as shown in the following table:

Principal chemical imports into the Netherlands.

Item.	1921	1922
	Metric tons.	*Metric tons.*
Calcium acetate	2,055	3,561
Perfumery, etc	477	521
Soda salts	25,027	32,462
Sulphuric acid	77,297	110,877
Caustic soda	4,618	7,626
Calcium carbide	7,184	8,388
Magnesia	7,831	8,336

Of the calcium acetate imports in 1922, 2,376 tons came from the United States, which country also supplied 1,170 tons of the caustic soda. Germany supplied 262 tons of the perfumery in the same year, 146 tons having come from France, 56 tons from Great Britain, and 41 tons from the United States. Germany was also the principal supplier of calcium carbide, while Belgium furnished most of the sulphuric acid, and Greece was the principal source of magnesia imports.

The value of the chemical products imported by the Netherlands also increased in 1922 as compared with 1921. Imports of drugs and medicines were valued at $5,228,666 in 1921 and $5,144,820 in 1922; paints and dyes, $4,323,666 in 1921 and $5,241,340 in 1922; other chemical products, $7,506,275 in 1921 and $8,229,280 in 1922; turpentine, $919,333 in 1921 and $1,352,420 in 1922; pitch, tar, and resin, $1,967,666 in 1921 and $1,971,820 in 1922.

Imports from United States.

Turpentine and phosphate are the principal chemical products imported by the Netherlands from the United States. The following table shows the value of these and other important items imported from this country by the Netherlands in 1921 and 1922:

Value of principal chemical imports into Netherlands from the United States.

Items	1921	1922
Chilean nitrate	$105,916	$86,640
Phosphate	793,121	858,040
Caustic and other soda	47,996	96,900
Various chemical products	206,895	389,880
Dyes and colors	161,125	88,160
Turpentine	573,369	714,020

Netherlands Exports of Drugs and Chemicals in 1922.

There was an increase in both the volume and value of exports of all principal items in the drug and chemical list. The development of Dutch chemical factories during the past few years has been important and results in the country's export trade are becoming apparent. In miscellaneous chemicals the United States has been the best customer of the Netherlands, particularly in etheric oils, perfumery stock, and magnesia. Belgium, France, and the United States have been the best buyers of caustic potash, of which the total exports during 1922 reached 3,265 metric tons. Exports of magnesia totaled 11,430 tons, of which the United States took 4,720 tons, Great Britain 2,376, and France 1,791 tons. Egypt, Germany, and Mexico have been the best buyers of sulphuric acid; Belgium, Japan, and Great Britain have taken most of the glue exports, which totaled 1,430 tons in 1922; and the United States took 1,005 metric tons out of the total of 1,072 tons of gelatine exported. The United States also received 125 metric tons of the total of 271 tons of quinine exported in 1922, Great Britain being the next best buyer. Exports of white zinc totaled 11,762 tons in 1922, of which the United States took 738 tons, France 3,659 tons, and Great Britain 2,234 metric tons. Lithopone exports totaled 21,076 tons, distributed as follows: United States, 3,338; Great Britain, 6,762; France, 5,084; and Belgium, 4,003.

The export statistics of the Dutch Government show only such goods as have been exported from the Netherlands to the United States, which have originated in the country or which have been duly entered, duty paid,

and reexported in the ordinary course of business—thus eliminating all exports from the entrepôt system of the country as well as the transit trade. The values of chemical and allied products exported from the Netherlands to the United States in 1921 and 1922 were: Chemical products, drugs, paints, and dyes, $1,354,016 in 1921 and $3,071,427 in 1922; and oils, resins, wax, pitch, tar, distilled tar, and products thereof, $1,277,306 in 1921 and $4,625,365 in 1922.

Asiatic Firms Desire to Export Chemicals.

A firm in Hongkong has informed the American consulate general at that city of its desire to export cassia oil and anise oil. Further information may be obtained by addressing the Chemical Division of the Bureau of Foreign and Domestic Commerce, Washington, D. C., and referring to file No. 90657.

An export firm in India has informed the American trade commissioner at Calcutta of its desire to communicate with American importers of nux vomica, other crude drugs, and gums. Further information may be obtained by addressing the Chemical Division of the Bureau of Foreign and Domestic Commerce, Washington, D. C., and referring to file No. 7540.

In a recent communication from Commercial Attaché James Abbott, stationed at Tokyo, it is reported that a firm in Seoul is in a position to fill orders for Korean arsenic. Interested parties may obtain further information from the Chemical Division of the Bureau of Foreign and Domestic Commerce, Washington, D. C., by referring to file No. 8486.

Additional information regarding chemicals appears in this issue under the following section:

Foreign trade opportunities Nos. 6488, 6489, 6490.

SPECIALTIES

Henry H. Morse, Chief, Specialties Division

THE CUTLERY AND SILVER-PLATE INDUSTRY OF SHEFFIELD.

Consul William J. Grace, Sheffield, England, March 20.

The year 1922 offered little encouragement to cutlery manufacturers in Sheffield. Wages and costs of steel, ivory, celluloid, pearl, and other materials which enter the manufacture of cutlery were considerably reduced. Prices of cutlery generally were not sufficient to meet expenses and profits were very small. Even the sales of stainless knives fell off. The large firms were the principal sufferers, while the small firms and little "mesters" did better business proportionately. Price was the dominant factor with purchasers. The smaller firms, with little or no overhead charges, were in a position to sell cheaply, often 50 per cent under the large firms, and succeeded in obtaining a fair amount of work. London mail-order houses offered cutlery at less than wholesale quotations in Sheffield.

The trade in scissors, razors, and pocketknives was extremely poor in 1922, with German competition keen. Quantities of German razors, scissors, and pocketknives were sold in England at retail for less than the cost of manufacture in Sheffield.

British Export Trade in Cutlery.

The cutlery exports in 1922 were 5.3 per cent less than in 1913; 59 per cent less than in 1920; and 38 per cent less than in 1921. In 1913, 54.7 per cent of the exports were taken by countries included within the British Empire; in 1920, 61 per cent were taken by these countries; in 1921, 67 per cent; and in 1922, 71 per cent. Each of the years 1920, 1921, and 1922 has shown a gradual proportionate gain in the cutlery exports within the British Empire as compared with the exports to other countries. The total exports of cutlery for 1912 were valued at £883,418. The following table shows these exports by countries of destination in 1913, 1920, 1921, and 1922.

Exports of cutlery from United Kingdom.

Countries of destination.	1913	1920	1921	1922
British Empire:				
British South Africa	£66,240	£162,775	£118,241	£56,105
British East India	82,135	206,143	78,636	61,803
Australia	152,696	411,871	373,428	272,584
New Zealand	41,834	148,256	74,606	34,267
Canada	106,706	245,073	202,534	107,890
Total	449,614	1,174,118	847,445	552,449
United States	57,512	75,834	62,949	47,323
Cuba	5,646	18,849	7,097	3,444
Russia	1,555	4,588	1,055	522
Sweden	977	13,150	3,272	3,705
Norway	3,900	36,031	9,252	11,091
Germany	58,448	1,190	1,012	511
Netherlands	3,880	7,102	6,361	4,082
Belgium	3,659	6,725	3,584	4,084
France	6,961	15,103	6,469	8,785
Spain and Canaries	3,158	10,094	4,168	4,256
Chile	17,950	23,766	18,731	4,784
Brazil	63,432	121,189	47,033	17,267
Argentina	20,690	61,404	62,695	16,348
Other countries	124,438	327,407	176,289	99,409
Total	821,820	1,896,550	1,257,422	778,060

England's best customer has been, and is, the group of countries within the British Empire. Throughout Great Britain there is a campaign to develop trade within its domain. Every encouragement is to be given to the production of raw materials, especially cotton, in order to render England independent of other countries for the crude products upon which many of its most important industries are founded. It is also expected that the countries within the Empire will consume more and more of Great Britain's manufactures and offer, through preferential tariffs, greater opportunities for the output of British factories. An extraordinary increase of trade within the Empire, however, will not be sufficient to furnish the necessary markets for England's cutlery and iron and steel production. The rehabilitation of Europe and the cultivation of the South American field is necessary.

Conditions in the Silver-Plate Industry.

From January, 1922, until the end of April the electroplate business was very depressed. Toward the end of this month there was increased activity in the production of spoons and forks. There was great demand for these in the new stain-resisting nonferrous alloy. This alloy is a substitute for plated nickel silver. It is cheaper and extremely durable. It resists remarkably well the action of the atmosphere, of acid, alkali, and water. With little cleaning it retains its excellent silver-like color for a long time. It is not entirely untarnishable. It contains about 35 per cent of nickel, compared with about 16 per cent to 18 per cent in the ordinary nickel silver.

In the early part of May, 1922, trade in this commodity began to brighten. This improvement, however, did not continue throughout the month. The more fortunate firms were working about three days a week. It was not until September that the electroplate works began to be busy, but in October nearly all these works were running at full capacity. The spoon and fork department was especially active. This improved condition continued until nearly the end of December. Prices throughout the year were low, and there was keen competition and little profit. The demand was for the cheaper and medium-priced goods.

In December the manager of the largest electroplate factory in Sheffield stated: "In all departments—electroplate, silver, and cutlery—we have been on full time ever since last Christmas (1921) and still have a considerable amount of work on hand. Our business has been largely contract work for hotels and ships. We have a number of contracts for South America and Canada and also some for Holland, one of which is on a very extensive scale." This factory is the exception. It has the latest improved machinery and mass production.

COOKING AND HEATING EQUIPMENT.

Selling Gas Stoves and Heaters in France.

At present American manufacturers of gas stoves, ranges, and water heaters have not built up a very large business in France, the chief source of supply being local, or from Great Britain. However, there is a favorable market for gas stoves (more for cooking than heating purposes), which, if properly developed, should yield good results.

Gas stoves have been marketed successfully in France by a British stove manufacturer in the following manner: He has intrusted his agency to a representative in Paris who, at the same time, acts as agent for two other noncompeting British firms. The three manufacturers each pay their share of the warehouse, office, and other expenses and give the representative a small salary and commission on sales. Goods are sold from the warehouse in Paris, the representative having paid, for the account of the manufacturers, all transportation and customs charges, so that his customers are quoted a flat rate in francs, all charges paid.

An important point in securing a good market is to obtain the approval of the gas companies operating in each city, as they usually do a large business both in selling and renting gas heaters, and display them in their show rooms in various parts of the city.

The cost of coal gas varies, according to localities, between 50 and 60 francs per cubic meter. Recently, in order to effect an economy, some gas companies have been authorized to mix water gas with ordinary coal gas, but the result has been very unsatisfactory, the mixture clogging the apparatus and making frequent cleaning necessary.

In the largest cities of France the gas supply is conceded to a single company, which works under agreement with the municipality, the latter fixing the price of gas and making up any deficit which may arise if the price be too low. In Paris this company is known as the Société Generale du Gaz de Paris, with offices at No. 6 rue Condorcet, Paris. (Consul Ernest L. Ives, Paris, April 10.)

Market for Kettles and Charcoal Stoves in Haiti.

There is a considerable market in Haiti for iron kettles (known as "chaudieres") and for combined kettles and stoves (known as "rechauds"). The former is an outdoor cooking device and is almost universally used in the rural districts. It is set directly upon stones and its contents are heated by a fire built on the ground underneath. They are imported mainly from northern France and Belgium in sizes varying from 5 to 40 points (3 to 30 inches) and retail at a price varying from $0.48 to $4.50. It is estimated that nearly half a million points of "chaudieres" are exported from these countries to Haiti each year.

The "rechaud" is a kettle under which is a small pan in which a charcoal fire can be built. The fire is separated from the kettle by a cylindrical grating. These "rechauds" are used largely by residents of the towns, for, as charcoal is almost smokeless, they can be used indoors for all types of cooking. While reliable estimates are lacking, probably about 1,000 "rechauds," valued at nearly $5,000, are imported annually into Haiti. England is the chief source of supply.

There seems little doubt that American manufacturers could secure a valuable share of this trade, provided an adequate study were made of the market and of the particular type of cooking equipment desired. (Consul Damon C. Woods, Cape Hatien.)

The Spanish Market for Gas Stoves.

The United States, Belgium, France, and Germany are the chief exporters of gas stoves to Spain, the United States having a small but growing share of the trade. Gas stoves are used in fair quantity for cooking and, to a certain extent, except in the most southern parts of Spain, for purposes of heating in winter. If gas were to be used extensively, however, a certain amount of educational work would be necessary, because many people, who would welcome the use of gas stoves for heating if their convenience were better known, now contrive to get along without them. The cost of coal gas in Barcelona is about $0.09 per cubic meter, which is fairly typical of the rates in the principal cities of Spain. Furthermore, coal gas is available in nearly all the large cities of Spain, as 65 factories are operating in various parts of the country. (Consul General Ralph J. Totten, Barcelona.)

Medical Directory of South Africa.

An official supplement to the Government Gazette of the Union of South Africa, prepared by the department of health, contains a medical directory of the entire Union. This includes both doctors and dentists. Firms interested can secure the loan of this supplement for a short period by referring to the Specialties Division, Bureau of Foreign and Domestic Commerce.

Office Appliance Exhibit in Goteborg.

Consul Walter H. Sholes, Goteborg, Sweden, April 19.

An international office-appliance exhibition will be held at Goteborg, Sweden, in connection with the Goteborg Jubilee Exposition, from June 20 to July 31, 1923. The purpose of the exhibit is to provide an opportunity to gain a comprehensive view of the appliances which are available for modern organization and a knowledge of where such appliances can be obtained. Opportunity will also be afforded for making business connections and concluding business transactions.

The exhibit will cover a floor space of nearly 1,000 square meters. Most of this space has already been reserved (a considerable part of it by American exhibitors), but about 80 square meters yet remain unsold. Firms interested can secure space by communicating with Gust Wahlgren, Jarntorgspalatset, Goteborg, who is commissioner general of the exhibition. As the time is short prospective exhibitors may wish to make inquiry by cable, in which case the cable address "Office, Goteborg" should be used. Prices for exhibiting range between $10 and $100, according to location.

Special Reports on File.

The Specialties Division has on file the following reports, which can be secured for a short period by firms interested. On all inquiries both the title of the report and the proper file number should be mentioned.

The sewing-machine market in Portuguese East Africa—88240.
Market for sewing machines in South Africa—88208.
The button industry in Lombardy—89763.
The Saxon button industry—88374.
Market for textbooks in Latin America—88636.
The British lock industry—88535.
Market for vacuum bottles in China—8307.
German padlock industry—8410.

CONSTRUCTION NEWS

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by referring to the reference numbers given. Where no reference number is given further information is not available.]

Argentina.—The Minister of Public Works of the Province of Buenos Aires has formulated plans that will put highway construction within the Province on a more organized basis. Highways will be divided into zones, each zone supervised by a zone chief, who will be provided with equipment and personnel for construction and repair work. The funds available have been limited to about 1,000,000 pesos ($370,000) a year but it is planned to levy a land tax to increase this amount. (Trade Commissioner George S. Brady, Buenos Aires.)

Brazil.—The Comp. Constructora de Santos has contracted with the Federal Government for the construction of the naval base in Rio Grande do Sul, as well as for a building to be erected there to serve as a training school. The cost of the work involves 8,000,000 milreis. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro.)

The city of Sao Paulo lately entered into agreement with Monteiro & Aranha of that city for the asphalting of 100,000 square meters of its streets. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro.)

The city of Sao Sebastiao do Paraiso, in the State of Minas Geraes, plans to contract for a loan of 1,000,000 milreis for the purpose of carrying out a number of civic improvements. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro.)

India.—The Sree Meenakshi Mills (Ltd.), at Madura, South India, recently incorporated with an authorized capital of 5,000,000 rupees ($1,600,000), are planning to begin operations within fifteen months and to have an initial installation of about 30,000 spindles and 300 looms. Reference No. 92357. (Consul Hooker A. Doolittle, Madras.)

Canada.—The Province of Quebec intends to expend $5,000,000 on its roads during the coming summer, as compared with some $11,000,000 spent during 1922. About $1,500,000 will be used to complete sections of roads already started, while $500,000 will be used for new roads. The sum to be expended on maintenance will be $2,000,000, which will practically be an annual expenditure. Resurfacing alone will cost about $1,000,000. In addition to the sum allotted, there will be $5,000,000 spent on colonization roads in the new colonization centers of the Province. (Consul E. Haldeman Dennison, Prescott, Ontario.)

Greece.—The Commissioner of the Port of Piræus has asked for proposals for the partial construction of the port works, designed to improve the harbor. The complete plans provide for a foundation wall about 2,750 meters in length, dredging of the harbor, docks, and dock facilities. Bids must be submitted by June 10, 1923. It is understood that in order to have bids considered it will be necessary to have local representation. A résumé translation in English of the terms of the convention regarding the construction work, announcement of bids, wage chart, and specifications, in Greek, will be made available to American firms applying to the Bureau of Foreign and Domestic Commerce, Washington. Reference No. 92785. (Consul General W. L. Lowrie, Athens.)

Chile.—Report has been received from Assistant Trade Commissioner W. E. Embry, Santiago, that bids for construction of port works of Constitucion will be opened on September 27, 1923, instead of December 27, 1923, as was previously announced by the Ministerio de Hacienda and published in COMMERCE REPORTS of April 23, 1923.

Nova Scotia.—Plans are being prepared for the erection of a new three-story Masonic temple on Barrington Street, in the city of Halifax, as well as for the thorough remodeling of the old Masonic building adjoining the site of the proposed new one. This building project is expected to cost in the neighbor-

hood of $150,000. The plans and specifications for the new edifice will be completed about the end of May, when the work will be submitted for tenders. (Consul General Edwin N. Gunsaulus, Halifax.)

Canada.—Contract for the construction of an electrically driven grain elevator at Port Arthur, Manitoba, at an approximate cost of $750,000, has been awarded, and it is suggested that American manufacturers or others in a position to supply machinery or other equipment should communicate with the contractor. Reference No. 92417. (Consul Dudley G. Dwyre, Fort William and Port Arthur, Ontario.)

RUBBER

P. L. Palmerton, Chief, Rubber Division

RUBBER PRODUCTS.

THE EXPORT MARKET FOR BICYCLE TIRES.

E. G. Holt, Assistant Chief, Rubber Division.

It would probably be safe to estimate the value of the total annual export bicycle-tire business of the world around $9,000,000, or about one-tenth of the total world export trade in rubber tires.

United States exports of casings and tubes, other than for automobiles, amounted to 54,931 casings, valued at $234,718, and 40,343 inner tubes, valued at $49,648, for the calendar year 1922. A large part of these exports, it is believed, consisted of motor-cycle tires, hence our exports of bicycle tires were considerably below the above figures.

Germany secures about 9 per cent of the total export tire trade of the world, and 60 per cent of that country's tire exports, by weight, during the first seven months of 1922 consisted of bicycle casings and inner tubes. Approximately one-fifth of the value of the United Kingdom's tire exports in 1921 comprised outer tires for bicycles, and that country secured about 12 per cent of the total world export tire trade that year. French and Japanese manufacturers likewise export a considerable quantity of bicycle tires, but no statistics are available.

In the bicycle-tire trade we would estimate the order of importance of various manufacturing countries to be: Germany, the United Kingdom, France, Japan, the United States, and Italy. Large quantities of bicycle tires are manufactured for local consumption in Australia, Belgium, Holland, Denmark, and elsewhere.

Number of Bicycles in Various Countries.

Official statistics of the number of bicycles in use in foreign countries are very incomplete. In 1921 there were 4,307,089 bicycles registered in France, and, according to semiofficial statistics, 2,051,104 in Japan. The number in use in certain other important markets is estimated as follows:

Country.	Number.	Country.	Number.
United Kingdom	4,000,000	Australia	100,000
Germany	2,000,000	Canada	100,000
Netherlands	1,000,000	China	200,000
Belgium	500,000	Dutch East Indies	100,000
Denmark	500,000	British South Africa	70,000
Switzerland	400,000	Argentina	40,000
Italy	125,000	Brazil	30,000
British India	200,000		

While these figures are rough estimates, they are (except for the United Kingdom and Germany) based on exports of bicycles from the principal producing countries over a period of several years. So far the motor car has superseded the bicycle in but few countries outside the United States. Europe is the principal bicycle-tire market, but owing to the exchange situation and the keen competition between British and German producers, the United States secures very little of the European trade. The Far East market is next in importance, but the Japanese bicycle tires secure most of the trade there.

Our principal markets for bicycle tires are Mexico, Cuba, the Philippine Islands, the West Indies, and certain parts of South America.

Double-tube tires generally predominate in foreign markets. Single tubes are in use in many markets to a limited extent, however; and in Cuba, Mexico, and the West Indies they perhaps predominate. The popularity of the double-tube tire is due to its economy; the European will patch a bicycle tube until it is absolutely incapable of further repair, while it is difficult to repair leaks in a single-tube tire. Both the ordinary clincher type and the Dunlop wired-on type of bicycle casings are in use in foreign countries.

Stocks Normal in South Africa.

Consul G. K. Donald, Johannesburg, March 27.

The heavy overstocks of tires South African dealers were carrying last year have been largely absorbed, and it is doubtful if any serious overstocks now exist. At present prices speculators and agents who did much to disrupt the market last year can only compete with difficulty. Attempts on the part of manufacturers' branches to come to an agreement regarding stabilization of prices have failed. It is likely, however, that agreements to eliminate trade abuses and to govern general sales policies might be reached.

Many new garages and retail tire dealers have started operations during the last few months. The manufacturer's branches supply the retailer on consignment with as many tires as are needed. Some of the American manufacturers held out against this practice, but it is said that they have now all adopted this policy. Michelin led in the February price reduction, followed by some American firms. Dunlop prices have not changed.

Rubber Trade Notes.

Competition Overdone in Algerian Tire Market.

The Algerian tire market is controlled by Michelin, whose prices must be met in order to compete. French Goodrich, Dunlop, and two American makes are represented. The volume of business, based on the number of cars in circulation, is too small for the number

of different makes on the market, so competition is exceedingly keen. The usual discount allowed dealers is 20 per cent, while retailers allow from 5 to 12 per cent discounts to chauffeurs, purchasing agents, etc. (Consul D. C. Elkington, Algiers, April 16.)

Tire Price Increase Expected in France.

There are persistent rumors of further tire price increases in France. Early in February Assistant Trade Commissioner Singer reported that a rise in prices was expected. On March 30 Consul Wesley Frost, Marseille, reported persistent rumors in the trade that an increase of 10 per cent was impending, but had not yet been put in effect. On April 16 Consul Paul H. Cram, Nancy, reported that a 10 per cent increase was expected in the course of a few weeks.

Few Trucks in Portuguese West Africa.

The roads in Angola are very poor; there is not a mile of macadamized road and but a small mileage of gravel roads. There are not more than 25 heavy trucks in all the Province, and these are used only in or near the towns. (Consul Reed Paige Clark, Loanda.)

Motor Trucks in New South Wales, Australia.

The latest statistics show 4,465 motor trucks in New South Wales. There are approximately 200 motor trucks in the vicinity of Newcastle and 300 in Brisbane, Queensland. The majority of these vehicles are of American manufacture—light, reasonably priced, and economical. (Vice Consul Walter T. Costello, Newcastle, March 23.)

CRUDE RUBBER.

Crude Rubber Exports from British Malaya in February.

Vice Consul Hugh S. Miller, Singapore, March 8.

The total exports of crude rubber from British Malaya in February, 1923, amounted to 44,593,300 pounds. The following table shows the countries of destination and quantities exported thereto.

Crude rubber exports from British Malaya in February, and countries of destination.

Source.	United States.	United Kingdom.	British Possessions.	Continent of Europe.	Japan.	Other countries.
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*
Singapore	24,819,900	479,200	78,700	1,522,500	1,929,500	33,500
Penang	3,514,900	623,300	13,400	698,600	.....	100

Increase in Standard Production Granted Small Holders in British Malaya.

Consul Renwick S. McNiece, Penang, March 3.

Under the restrictive scheme now effective in the Federated Malay States the standard production of estates of 25 acres or less amounts to 28 per cent of the total standard production of all estates, according to a recent report of the Controller of Rubber Export for the Straits Settlements and the Federated Malay States.

The restriction scheme provided that the standard was to be based on the actual figures of production for the year ending October 31, 1920, with certain modifications based on the age of the planted areas. Many small holders of a few acres were unable to show any actual figures, as records had not been kept. Furthermore, many of the small holders are dependent for their living on their few acres of rubber trees. The restriction scheme became effective after only about three weeks' notice, and the sudden restriction of their output by 40 per cent came as a blow to these small holders who did not understand the operation of the scheme. After considering the matter, the Government fixed a flat rate of 320 pounds per acre per annum as the standard production of holdings not exceeding 25 acres. This figure represents the maximum allowance for any estate planted in 1915 or prior thereto for which figures of actual production during the year ending October 31, 1920, are not available.

On February 1, 1923, the flat rate of 320 pounds per acre for small holdings was increased to 426 pounds for the first 5 acres and 320 for the remainder of the holding, not exceeding 25 acres in all. The Controller of Rubber Export estimates that the latest concession to the small holder will increase the standard production of the Federated Malay States by about 10,000 tons and of the Malay States not in the Federation by about 6,000 tons. At this rate the standard production in the Straits Settlements would be increased by about 2,200 tons. The concession to small holders thus increases the total standard production by about 18,200 tons, which under the present scale of 60 per cent permits an additional yearly export of 10,920 tons.

Crude Rubber Notes.

Crude Rubber Exports from Medan.

Crude rubber exports from Sumatra to the United States, as shown by the Medan consular returns, totaled 6,729,607 pounds in December, 1922, as compared with 5,385,178 and 7,030,986 in October and November. This includes rubber shipped in latex form, according to its dry weight. (Consul Carl O. Spamer, Medan.)

Bolivian Rubber Trade Reviving.

There is considerable optimism in Bolivia over the possible revival in the rubber industry. Rising prices of rubber are reported to be the chief factor in this revival. (Consul Dayle C. McDonough, La Paz.)

Brazilian Trade in Rubber for 1922.

Brazilian exports of rubber showed an ascending movement in 1922, and after having been on the decline for a long time the increase is very gratifying, although the figures given are still below those for previous years except 1921. Exports of rubber for 1922 were 19,855 tons; 1921, 17,429 tons; 1920, 23,531 tons; 1919, 33,252 tons; and 1913, 36,232 tons. (Commercial Attaché W. L. Schurz, Rio de Janeiro, April 3.)

Additional information regarding rubber appears in this issue under the following sections:

Tariffs and Trade Regulations: Further extention of time for Spanish tire marking requirements.
Foreign trade opportunities No. 6479.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

INCREASE YOUR PROFITS ON EXPORTS.

No one can tell exactly how many lumber exporters are scrambling for a share of the eighty to one hundred million dollars' worth of our foreign business in lumber and lumber products, but so far as the Lumber Division can see, there are probably between two and three thousand concerns in this country engaged in the export business. It appears that the lumber export trade is not capable of unlimited expansion unless vigorous efforts are made to insure a permanent supply of raw material. The number of lumber exporters is already large, and the aim of the Lumber Division is, therefore, not to increase this number, but to make the lumber export trade more profitable to the concerns in the business to-day. This can be done in various ways. Through dissemination of information in regard to the world's markets for lumber, the Lumber Division is endeavoring to show that our lumber exporters have been too much inclined to throw their stock into highly competitive markets, such as, for instance, the United Kingdom, and have not paid so much attention to far-away markets, which in many cases would offer a good opportunity for the sale of American lumber and lumber products. In other words, our lumber trade has in the past followed the line of least resistance.

Another unfortunate condition which the division is attempting to remedy has been the practice of several competitive lumber exporters placing their agencies in the hands of a few agency concerns abroad which have often been able to play one exporter against the other. As a consequence the profit realized by the exporting concerns has often been unsatisfactory. The Lumber Division is now building up a file of foreign agents, indicating the kinds of lumber and lumber products handled by each, and can be of great assistance to American lumber exporters desiring foreign connections.

Our lumber exports are satisfactory as far as quantity is concerned and any increase in our exports of lumber might not easily be maintained in times when the domestic market is booming. It is therefore felt that it is better to have a relatively small but steady foreign business than to overexpand when dull times are prevalent in the domestic market, and then, later on when the domestic market is satisfactory to give up the territory gained.

TIMBER AND LUMBER EXPORTS INCREASE.

Comparing the nine months ending March, 1923, with the nine months ending March, 1922, our exports of lumber and all wood products increased 27 per cent. There was a slight decrease in lumber exports, accounted for by a large drop in Douglas fir lumber exports, since all other kinds of lumber, shown separately, increased. The drop in Douglas fir lumber exports was sufficiently large to offset the other lumber increases. Logs of Douglas fir, and timbers of southern yellow pine, railroad ties, cooperage, and doors, sash and blinds, all showed large increases. The largest increase, as shown by the table below, was in cooperage.

The total value of exports of wood and manufactures of wood during the nine months ending March, 1923, was $81,029,718 compared with $63,671,840 for the corresponding nine months ending March, 1922. Increases and decreases in different items are indicated by the following table:

Exports of timber, lumber, and wood manufactures for nine months.

Item.		Nine months ending March, 1922.	Nine months ending March, 1923.
Logs and round timber:			
Southern yellow pine	M ft.	5,790	2,028
Douglas fir	do.	10,547	33,108
Timber, hewn and sawed:			
Southern yellow pine	do.	73,697	112,755
Douglas fir	do.	[1] 39,915	128,793
Railroad ties	number.	1,348,902	1,706,847
Boards, planks, and scantlings:			
Cypress	M ft.	3,180	6,054
Douglas fir	do.	515,133	337,961
Southern yellow pine	do.	334,147	396,800
Western yellow pine	do.	2,687	7,795
White pine	do.	15,382	19,488
Redwood	do.	15,564	29,564
Spruce	do.	10,127	19,648
Gum	do.	26,700	36,219
Oak	do.	60,885	96,890
Poplar	do.	9,862	13,836
All other	do.	136,865	114,101
Total	do.	1,130,532	1,078,356
Cooperage	value.	$3,243,863	$6,439,622
Box shooks	do.	$1,526,508	$1,959,054
Veneers and plywood	square feet.	[1] 6,989,216	32,748,161
Doors, sash, and blinds	value.	$688,749	$1,076,873

[1] Three months, January 1 to March 31, inclusive, 1922.

MARCH EXPORTS LESS THAN FEBRUARY.

The March exports of boards, planks, and scantlings are slightly less than either February or January but better than December. The exports in March, 1922, were nearly one-quarter larger than in March this year. In the spring of 1922, Douglas fir lumber ranked first in amount exported, with southern yellow pine next, but during the past few months the situation has changed and so far this year, and in fact since July 1 last year, southern yellow pine lumber exports have exceeded those of Douglas fir.

United States exports of boards, planks, and scantlings.

Month and year.	Southern yellow pine.	Douglas fir.	Redwood.	Oak.	Gum.	Total including "all other."

Monthly average, 1913	100,432	56,302	4,325	22,108	6,510	198,005
Monthly average, 1921	36,481	37,936	1,324	5,785	2,303	100,587
Monthly average, 1922	39,521	51,225	2,762	9,018	3,796	127,744

Exports by Countries of Destination.

Of the total March exports of southern yellow-pine boards, planks, and scantlings, as shown in the table, 31,990,000 board feet were rough and 16,505,000

board feet were dressed. Both rough and dressed combined were shipped as follows: River Plate, 16,210,000 board feet; Cuba, 12,201,000 board feet; Mexico, 5,025,000 board feet; United Kingdom, 3,965,000 board feet; West Indies (other than Cuba), 3,222,000 board feet; Spain, 1,601,000 board feet; and Italy, 1,371,000 board feet. Besides Southern yellow-pine lumber, there were exported in March 11,987,000 feet of Southern yellow-pine hewn or sawed timber and 410,000 feet of Southern yellow-pine logs and round timber.

The March export of Douglas fir lumber shown in the table was largely rough, only 913,000 board feet being dressed. The largest amounts of Douglas fir lumber exported in March were 16,992,000 board feet to Japan and 11,195,000 board feet to Australia. Other important markets were—China, 4,169,000 feet; Chili, 1,950,000 feet; Peru, 1,689,000 feet; Mexico, 1,682,000 feet; and British South Africa, 1,570,000 feet. Also in March 21,994,000 board feet of hewn or sawed Douglas fir timber and 5,556,000 feet of Douglas fir logs and log timbers were exported.

The next important softwood exported in March was cedar, of which 6,849,000 feet of logs and round timber and 1,566,000 board feet of hewn or sawed timber were shipped. Cedar was followed by lumber as follows: Western hemlock, 5,164,000 feet; spruce, 2,600,000 feet; white pine, 1,468,000 feet; cypress, 1,278,000 feet; and western yellow pine, 1,099,000 feet. The March export of oak lumber shown in the table was principally as follows: United Kingdom, 6,544,000 feet; Canada, 3,027,000 feet; and River Plate, 1,046,000 feet. In addition to lumber there was also exported oak timber to the extent of 282,000 board feet. Other hardwood lumber, the March exports of which were over a million feet were: Gum, 4,179,000; poplar, 1,858,000; and ash, 1,202,000.

Cooperage Exports Increasing—Exports of Other Products.

March cooperage exports were $180,000 more in value than the February exports and $400,000 more than in March, 1922, the total March value being $867,702. The total March export of 5,454,457 staves was made up of 2,017,628 tight staves and 3,436,829 slack staves. Of both kinds about one-third went to the British West Indies, one-quarter to Canada, one-seventh to Cuba, and one-eighth to France.

March box shook exports included 1,964,828 board feet of southern yellow pine shooks and 4,962,505 board feet of other kinds. The exports of veneer and plywood amounted to 3,384,435 square feet and hardwood flooring to 312,000 board feet. The export of door sash and blinds was 2,066,119 pounds.

Basket Willow in Poland.

Leon J. Cochrane, clerk to Trade Commissioner, Warsaw, March 27.

There are at present in Poland 58,692 morgs (44,019 acres) devoted to basket willow, according to "Przemysl i Handel" for March 1, 1923. Of these, 28,186 acres support wild willows, 1,296 acres the so-called American variety, and the balance other varieties of lesser importance. The total may be subdivided into 31,798 acres which are actively producing and 12,221 acres which are not now being worked over. (1 morga equals approximately 1⅓ acres.) Average annual production of basket willow amounts to a total of 179,470 metric tons (1 metric ton equals 2,204.6 pounds) of which 23,810 tons are produced in Congress Poland, 630 tons in the eastern districts, 53,160 tons in Prussian Poland, and 102,870 tons in Galicia. Of this total production 153,445 tons are wild, 10,258 tons are of the so-called American variety, and 15,767 tons are of other cultivated varieties. About 80,000 tons are produced on State lands and 99,470 tons in privately owned fields. A table giving the basket willow position in detail may be obtained from the Lumber Division.

International Fair at Lyon.

The semiannual international fair at Lyon, France, will be held from September 16 to September 30, according to advice from Commercial Attaché Chester Lloyd Jones. This fair will include a section devoted to forest products.

CUT-OFFS.

Swedish March Lumber Exports.

Swedish March exports of rough lumber were 20,047,568 board feet, including 2,867,512 board feet of box shooks; and of planed lumber, 6,212,872 board feet, including 156,880 board feet of box shooks. (Consul Walter A. Leonard, Stockholm, April 13.)

Hardwood Stand in Sault Ste. Marie District.

Through statistical information obtained from the board of trade, there are estimated to be 6,400,000,000 board feet of uncut hardwood in Sault Ste. Marie district of Ontario. At the present rate of cutting, not figuring on new growth, it is estimated tha 20 years will elapse before he hardwood now standing will be cut out. This includes maple, elm, oak, ash, and birch. Quite a few United States lumbermen are interested in this area. (Vice Consul L. Dale Pope, Sault Ste. Marie, Canada, April 11.)

Netherlands Outlook Uncertain.

At this season of the year it was naturally expected that building operations in the country would show increased vigor. It is said, however, by most reliable sources, that no appreciable change is shown in the situation. Wages have dropped from 5 to 10 per cent, but this is offset by higher prices. It is the opinion of most people that existing conditions will continue so long as the Ruhr occupation, with its influence on Netherlands trade, continues. A large importer in the country states that the outlook for lumber importing is somewhat more encouraging than it has been, but he fears that increased prices in America will militate against the business. The lumber market is reported as showing some improvement over the beginning of the year. Prices have during the first three months of the year been hardening and there is now less inclination on the part of importers to wait for lower values. Most importers are gradually making preparations for new purchases. (Paul B. Guinn, office commercial attaché, The Hague, April 16.)

Additional information regarding lumber appears in this issue under the following section:

Cable review, Eastern Europe: Timber market in Finland.

COAL

HUNGARIAN COAL PRODUCTION IN 1922.

Consul Digby A. Willson, Budapest, April 3.

The coal production of Hungary during 1922 was 7,117,910 metric tons or an average of 593,159 tons per month, as compared with an annual production of 6,419,861 tons and an average monthly production of 534,980 tons in 1921, according to figures supplied by the National Miners and Smelters' Association. This noticeable increase in production is due to the improved methods for the utilization of brown coal for domestic and industrial purposes, which of necessity has caused a greater demand, and to the campaign among the miners conducted by Government and special organizations in an effort to create an interest in increasing the production in order to decrease importation.

Imports and Exports.

Owing to the fact that about nine-tenths of the coal mined in Hungary is a brown coal used for the manufacture of gas and for use in certain specially equipped industrial plants only, the importation of hard coal is unavoidable at present. In order to illustrate the import and export movement of coal in 1922 as compared with 1921 the following figures have been obtained from the Royal Hungarian Central Statistical Bureau of the Ministry of Commerce:

Hungarian imports and exports of coal.

Classes of coal.	Imports.		Exports.	
	1921	1922	1921	1922
	Metric tons.	*Metric tons.*	*Metric tons.*	*Metric tons.*
Brown coal	79,446	49,823	157,100	31,788
Bituminous	363,410	605,001	33,388	271,925
Coke	160,619	133,236	315	4,767
Briquets	9,820	5,022	.....	.....
Total	613,295	793,082	190,803	308,481

The above figures not only show a greater import in 1922, as compared with 1921, in spite of the increased production of the domestic mines, but also show a greater excess of imports in 1922. It should be noted that the bituminous coal exported in 1922 was shipped to Yugoslavia as reparations deliveries in accordance with the peace treaty.

Consumption and Distribution.

The total production of 7,117,910 metric tons, plus the excess of imports amounting to 484,601 metric tons, shows a theoretical consumption for Hungary of 7,602,511 metric tons of brown coal, bituminous coal, coke, and briquets. However, according to the coal administrator of the Ministry of Commerce, the consumption amounted to only 7,581,783 metric tons, distributed as follows:

Coal consumption in Hungary.

Consumers.	1921		1922	
	Metric tons.	Per-centage.	Metric tons.	Per-centage.
Transportation (railway and shipping)	1,660,287	26.0	1,920,490	25.19
Industrial plants	2,559,396	39.0	3,797,300	48.76
Domestic (homes and agriculture)	1,706,254	25.3	1,102,280	14.53
Power and heat at the mines	636,553	9.7	761,713	11.52
Total	6,562,490	100.0	7,581,783	100.00

It is interesting to note that the consumption by the industrial plants greatly increased in 1922 as compared with the previous year; it is observed, also, that the consumption for domestic purposes decreased from 25.3 per cent in 1921 to 14.53 per cent in 1922. This is attributed to a greater use of firewood in the homes of the poorer classes.

The coal industry of Hungary is under the jurisdiction of the coal administrator, who is charged with all distribution and who fixes the sale price.

Miners' Wages—Strikes.

According to the latest agreement made between the operators and the coal miners the miners receive 50 to 60 crowns per hour, double pay for overtime, and allowances of bacon, flour, sugar, and potatoes at nominal prices. Also each miner receives two suits of working clothes, two suits of underwear, and three pairs of work shoes yearly. House rent is nominal, light free of charge, and an allotment of 80 quintals of coal per year is made at 60 crowns per quintal. Clerks are paid on the same basis as the miners, while technical men are paid higher averages in currency and kind. In converting the payment in kind into cash it is observed that the miner's monthly wage averages 32,000 to 40,000 crowns ($8 to $10).

Strikes during the past year were unavoidable, owing to the fact that the increases granted in wages were behind the advance in prices causing an increase in the cost of living. However, in most cases the miners showed a splendid spirit and settlements were reached without great difficulty to the operators or miners, except in the case of the bituminous miners, who were on strike for four weeks, causing a loss in production amounting to 100,000 metric tons.

Shift in Import Trade.

On account of the French occupation of Germany the supply of coal usually obtained from the Ruhr district is entirely suspended. Hungary is now temporarily importing hard coal from Czechoslovakia, Silesia, and England. Although the importation of British coal is not very great at this time, it is believed that it will be increased in the near future if the Ruhr occupation continues. This British coal is selling at 3 shillings more than American coal, f. o. b. Hamburg or Trieste.

Situation of the Austrian Coal Market.

Consul Robert W. Heingartner, Vienna, March 18.

The situation in the Austrian coal market at present is most unsatisfactory. The demand for fuel is not great, which is explained by the general industrial stagnation as well as by the warmer weather. There was a strong demand for Upper Silesian coal until the German mark began to improve, but this coal is now found more expensive than either Polish or Czechoslovakian coal and is too high for the Austrian market. Furthermore the lessened demand for coal is influenced by the fact that Austrian industries are provided with large stocks, which will enable them to wait until a change in the rate of the mark or in mine prices brings coal prices to a more normal level.

The difficulties in coal transportation, which up to a short time ago were due to the scarcity of German cars used for shipping coal to Austria, is no longer felt, as the method of transporting coal in trains sent out by the Austrian Federal Railways has proved successful. Moreover, arrangements have been made with the Czechoslovakian railways by which coal is shipped to Austria in Czechoslovakian trains. The high Austrian freight rates have an unfavorable effect on coal imports, and the decrease in tariffs of about 10 per cent, effective February 15, will cause no important improvement.

On the whole, the situation in the Austrian coal market has completely changed, as compared with the preceding year. Neighboring countries, especially Czechoslovakia, have removed all restrictions on coal exports to Austria, and at present Austrian coal imports are limited only by prices and by local demand.

Additional information regarding coal appears in this issue under the following section:

Cable review, Western Europe: Ruhr coke receipts slightly improved.

PAPER

John Matthews, jr., Chief, Paper Division

BRITISH PAPER TRADE AND INDUSTRY.

Trade Commissioner Alexander V. Dye, London, April 25.

The prosperity which struck the British paper industry during the latter part of 1922 has continued through the first three months of 1923. Newsprint paper mills are reported to be working full strength and are well booked for forward delivery. That the paper trade will continue active is indicated by the fact that the import of raw material during the first three months of this year, which was 192,306 tons, is more than double the import of the same quarter of last year (97,249 tons).

Pulp for paper making comes almost exclusively from Finland, Sweden, and Norway, the proportions for the first three months of this year being as follows:

	Tons.
Chemical dry unbleached:	
Finland	15,264
Sweden	36,404
Norway	19,064
Chemical wet:	
Sweden	11,381
Norway	94,661

Increase in Export and Import Paper Trade.

The prosperity in the British paper industry has been due to the export trade in paper principally, although the home demand has increased. The principal increase in demand for British paper has come from Australia, which, in the first quarter of this year, took 20,565 tons, as compared with 3,839 tons in 1922 and 4,465 tons in 1921.

It is interesting to note that the United States has increased its importation of printing paper from Great Britain more than ten times, the export to the United States being 1,027 tons in the first quarter of 1923, 80 tons in 1922, and 90 tons in 1921.

The total exports of printing paper from Great Britain were 34,326 tons in the first quarter of this year, as compared with 9,943 tons in the same period of last year and 12,403 tons in 1921. The total exports of writing paper in large sheets were 59,624 tons, as compared with 31,291 tons in 1922 and 45,036 tons in 1921.

In spite of the large export of paper, there was also an increase in the imports of paper both from Scandinavia and Germany. The total imports of printing paper and writing paper in large sheets were 597,356 hundredweight in the first quarter of this year, as compared with 563,038 last year. Packing and wrapping paper also showed a total increase in imports in the first quarter of this year, being 865,405 hundredweight, as compared with 643,073 last year. Sweden was the largest source of supply of packing and wrapping paper to this market, with 308,471 hundredweight, Germany being second with 185,115 hundredweight, followed by Norway, with 173,563 hundredweight.

Developments in the British Paper Industry.

New developments in the paper industry include the manufacture of cigarette papers, which before and during the war came largely from France. There has been also a considerable growth in the use of pasteboard boxes and cartons as a substitute for timber containers, caused by the very high price of lumber during and after the war.

There seems to be little possibility at the present time of the United Kingdom importing either pulp or paper from the United States, and the only raw material which enters into paper making and is supplied by the United States is rosin. So far, however, the increase in the amount of paper manufactured has not made any appreciable difference in the price of rosin, which maintains about the level it has held for a year or more.

Swedish Prices of Wood Pulp and Paper.

Consul General D. I. Murphy, Stockholm, April 13.

Swedish prices of wood pulp at the middle of April were as follows: Unbleached sulphite, first quality, 240 to 250 crowns (1 crown=$0.266 at present rate of exchange) per metric ton; unbleached sulphate, first quality, 235 to 245 crowns per metric ton; and mechanical pulp, wet, 80 to 85 crowns per metric ton.

It is difficult to give actual domestic prices of bleached and easy-bleaching sulphite, because only very small quantities are sold to domestic consumers. The following are believed to represent as nearly as possible the prices per ton: Bleached sulphite, 375 crowns; easy bleaching, 265 to 270 crowns. There is likewise no home market for dry mechanical pulp, the present export price for which is 170 to 175 crowns per metric ton. All of the above prices are f. o. b. Swedish ports.

The prices on wrapping paper (kraft and sulphite) on April 13 were as follows:

Wrapping-paper prices.

Grams per square meter.	Kraft.	Sulphite.	Grams per square meter.	Kraft.	Sulphite.
	Crowns.	*Crowns.*		*Crowns.*	*Crowns.*
40 and up	400	400	20 to 24	520	520
35 to 39	420	420	18 to 19	560	560
30 to 34	450	450	17	600	600
25 to 29	480	480			

This table shows that prices on kraft have remained the same, but that there has been a slight increase in the case of sulphite wrapping. The average domestic price of newsprint in rolls, 50 to 52 inches, is 280 crowns per metic ton, f. o. b. mill.

Side Runs of the Paper Trade.

Decline Anticipated in Prices Quoted on German Pulp Wood.

Top prices appear to have been reached for pulp wood from coniferous timber, states Consul F. T. F. Dumont, quoting the Frankfurter Zeitung of March 15. Prices asked for domestic pulp wood range from 80,000 to 90,000 marks per cubic meter ($13.83 to $15.56 per cord) while Czechoslovakian pulp wood could be obtained at from 71,300 to 80,600 marks, free to the frontier town of Eger.

Brazilian Imports Principally From Scandinavian Countries.

Rio de Janeiro and Santos imported 805 metric tons of paper from the Scandinavian countries between March 25 and April 22. American quotations are reported to be generally high in comparison with those of other countries. (Commercial Attaché Schurz, Rio de Janeiro, April 27.)

High-Grade Paper From Flax.

It is reported that a discovery in the manufacture of high-grade paper now makes it possible to eliminate the brown stain, which hitherto has confined the use of New Zealand flax to the making of wrapping paper and millboard, and opens up the prospect of utilizing this fiber in the manufacture of higher grades of paper. (Trans-Pacific.)

Decline in Swiss Imports of Paper During 1922.

In consequence of the import restrictions, Swiss importation of paper and cardboard during 1922 fell off nearly 50 per cent in quantity and from 21,000,000 to 10,000,000 Swiss francs in value. (Consul General George H. Murphy, Zurich.)

Increase in The Netherlands' Imports of Paper During 1922.

Imports of different classes of paper into the Netherlands showing an increase during 1922 as compared with the previous year include: Newsprint, which increased from 9,872 to 13,827 tons; ground-wood printing paper, which increased from 6,663 to 9,751 tons; printing paper free from ground wood, which increased from 5,770 to 10,589 tons; and ordinary packing paper, which increased from 9,602 to 11,930 tons. Germany was the source from which most of these papers were obtained, although shipments of newsprint also came from Finland and Great Britain.

Additional information regarding paper appears in this issue under the following sections:

Cable review, Eastern Europe: Finnish paper mills.
Foreign trade opportunities Nos. 6460, 6470, 6471, 6472, 6473.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

MARCH IMPLEMENT EXPORTS HIGHEST IN MANY MONTHS.

Exports of agricultural implements from the United States in March totaled $3,709,743. This exceeds the exports for the preceding month, as well as those for January, by nearly a million dollars. This figure was not equaled by the exports for any month during 1922, and by only three months in 1921—January, February, and April, when the experts were $7,306,577, $7,082,800, and $4,014,882, respectively.

The value of implements exported in the first quarter of 1923 exceeded the value for the first quarter of 1922 by nearly 100 per cent, as shown by the following export figures:

1921:	
First quarter	$17,642,015
Second quarter	10,619,100
Third quarter	6,507,713
Fourth quarter	2,821,825
1922:	
First quarter	$4,764,794
Second quarter	5,342,947
Third quarter	8,021,741
Fourth quarter	6,168,125
1923:	
First quarter	9,339,233

These figures show that exports during the first quarter of 1923 were not equaled by exports during any quarterly period in 1922, and were exceeded only by the first and second quarters of 1921. The figures also bring out clearly the decrease in exports of agricultural implements which occurred during the economic depression of 1921, together with the gradual recovery which extended throughout 1922 and has continued into the present year.

Increased Exports of Tractors.

Probably the outstanding feature of exports during the first quarter of 1923 is the greatly increased exports of tractors, which were as follows: Garden tractors, $57,374; wheel, $2,185,859; track-laying, $326,585; total, $2,569,818. This is one-third of the total ex-

ported in 1922 and is 12 per cent greater than the total exports of farm tractors for 1921.

Greatest Increase Shown in Harvesting Implements and Parts.

The principal increases in the exports for March, 1923, as compared with the preceding month, were in the miscellaneous classes and were as follows: Other cultivating implements and parts, $265,353 in March and $184,698 in February; other harvesting implements and parts, $374,730 in March and $148,008 in February; other agricultural machinery, implements, and parts, $413,572 in March and $191,252 in February. Threshers showed the largest relative increase, 116, worth $117,639, being exported in March, while in February only 21, valued at $16,496, had been exported. Mowers exported increased by 100 per cent, since 15,072, worth $265,353, were exported in March, as compared with 7,192, valued at $132,998, in February. Harvesters and reapers showed another increase, this time rising to 3,418, valued at $412,044, as compared with 3,599, worth $357,013, in February. Exports of these articles to France decreased, however, from 3,225, valued at $301,131, in February, to 1,702, valued at $246,714, in March. On the other hand, 1,622, worth $150,179, were exported to Spain in March, as compared with none in the two preceding months. Exports of windmills nearly doubled, 1,241, valued at $70,180, being exported in March.

Tractors exported continued to increase, although in March there was a decrease in the exports of wheel tractors and increases in the exports of garden and track-laying tractors, the number of each of the two latter classes exported being more than double the number exported in February, though the value increased to a somewhat less extent. The exports for March were as follows: Garden tractors, 92, worth $23,948; wheel tractors, 1,469, valued at $739,304; track-laying tractors, 129, with a value of $139,807.

Implement and Tractor Notes.

Steady Demand for Implements in Argentina.

The demand for implements in Argentina continued steady throughout the month of April. It is reported that the acreage to be put under cultivation during the next season will be greatly augmented and this has given a steady impetus to sales of agricultural implements and machinery. (Assistant Trade Commissioner William A. Brady, Buenos Aires, April 28.)

Tractors in Chihuahua, Mexico.

In the State of Chihuahua, 1922 was a disastrously dry year and consequently not a favorable one for the sale of agricultural implements and tractors. About 15 tractors, however, were sold during the year, a number of which were purchased by the Mennonite colonists, who have settled in the State. Medium-priced tractors are preferred in this district, and, even under favorable conditions, the market for high-powered and high-priced tractors will be limited. (Vice Consul Harry B. Ott, Chihuahua, April 20.)

Encouragement of Tractor Purchase in Spain.

The Catholic Agricultural Syndicate of Roja (one of the most powerful syndicates in Spain) has adopted a proposal to aid its associates in the purchase of motor tractors. The syndicate will pay 20 per cent of the purchase price and will advance loans up to a total of 50 per cent, provided the tractor is purchased through the syndicate, these loans to be repayable in three years. The associate must guarantee to lend the tractor to the syndicate when not using it. All expenses during the period of the loans are to be paid by the syndicate, including breakage and repairs. (Commercial Attaché Chas. H. Cunningham, Madrid, March 24.)

Condition of Polish Implement Market.

Present prospects for sales of American agricultural machinery in Poland are not encouraging. Imports of tractors have been small and will probably continue so, as the number of draft animals in the country has increased. Domestic production of farm machinery is increasing and the Polish production of smaller agricultural implements is now sufficient to supply the bulk of Polish requirements at domestic levels of value. Recently there have even been noted small exports of one-furrow plows. Present exchange rates make the prices of American implements almost prohibitively high and these factors, together with the farm machinery already in the country and available for use, would seem to preclude any large sales of imported implements in Poland during the present season. (Assistant Trade Commissioner Elbert Baldwin, Warsaw, March 27.)

Hauling Ore by Tractor in Canada.

A large American tractor has solved the difficulty of the transportation of silver ore during the winter months for one of the mining companies in northern Ontario. This company, which operates a rich mine 22 miles from its mill, was faced with the possibility of having to hold all ore mined during the winter until lake navigation opened in the spring, or of paying prohibitive transportation charges. A large track-laying tractor, handling an average load of 17 tons of ore on each trip of 22 miles, was operated during the winter at a cost of less than $1 a ton. This method of delivering ore from the mine to an efficient mill for refining is said to be much cheaper than transportation by water and obviates the necessity of constructing an expensive mill at the new mine. (Vice Consul Harold S. Tewell, North Bay, Ontario, April 10.)

Agricultural and Industrial Exposition in Riga, Latvia.

The Third International Agricultural and Industrial Exposition, to be held at Riga, Latvia, July 22 to August 5, 1923, offers an opportunity to American manufacturers of agricultural and industrial machinery, as well as other articles, to bring their products to the attention of Latvian buyers. Agricultural implements made up 85 per cent of the total exhibits at the second exposition held in June and July, 1922, and for that reason the exposition should be of greater interest to implement manufacturers than to manufacturers of other lines. Exhibits by German firms at the 1922 exposition predominated, but five American manufacturers of agricultural machinery were represented by exhibits of tractors and implements. Numerous purchases of dairy and agricultural machinery were made at that time for future delivery. Additional information regarding this fair may be obtained from the Bureau of Foreign and Domestic Commerce by referring to file No. 8815. (Trade Commissioner Carl J. Mayer, Riga, April 18.)

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

THE DANISH FOOTWEAR MARKET.

Assistant Trade Commissioner Harry Sorensen, Copenhagen, April 17.

The Danish footwear trade since the close of the war has experienced a very difficult period and has during the last 18 months undergone changes which, while perhaps not all of a lasting character, will strongly influence the opportunity for sale of American footwear in the Danish market.

The post-war depression, the central European exchange dumping, and the strong protectionistic tendencies in Danish tariff legislation are the factors which have been and to some extent still are the disturbing elements. The depression has undoubtedly run its course, and can be largely discounted as a factor in shaping the future of the market. Competition from Germany and Czechoslovakia, while declining, is still strong, and will undoubtedly exert a very strong influence on the market for some time to come. Danish shoe import legislation has just passed the second stage in its development by being changed from a temporary regulative measure to a more or less permanent high tariff measure.

Consumption and Import Trade.

The annual Danish consumption of shoes, boots, and other footwear aggregates in weight approximately 2,000,000 kilos. Of this total, about 40 per cent is at present supplied by importation and the other 60 per cent by the domestic industry. Imported footwear is playing an increasingly important part in the Danish market, however, and the percentage supplied through importation is steadily increasing, owing mainly to the inability of the Danish manufacturer to compete on a price and style basis, although the wearing quality and workmanship of the Danish product are good.

There are at present approximately 110 Danish footwear manufacturing establishments with about 3,000 employees. During 1921, the latest year for which detailed information is available, the Danish footwear industry produced approximately 2,315,000 pairs of boots and shoes, having a total value of about 38,000,000 crowns. During 1922 the production declined still further in quantity as well as in value, the estimated value of last year's production being 30,000,000 crowns. Total imports, which in 1913 were less than 300,000 kilos, in 1922 reached a figure of 790,800 kilos. Imports from countries with depreciated currency during 1922 rose to about 625,000 kilos against 225,000 kilos from the same countries in 1913. Importations from the United States at the same time dropped from 373,000 kilos in 1920 to 98,000 in 1922, a figure which, however, is still much above the 1913 export figure.

Factors Affecting Sale of American Footwear.

Since the close of the war Denmark has offered a very attractive market for American footwear, but developments during the last 18 months have had a strong adverse influence on this trade and have, in fact, reduced present exports of American shoes to Denmark to about 15 per cent of the high record figure of 1920. Of the factors which have caused this movement away from the American shoes, the most important are the German and Czechoslovakian competition and the protective trend in Danish import tariff legislation.

The increasing sales of German and Czechoslovakian footwear have not only resulted directly in the reduction of American sales, but have also caused the promulgation of Danish tariff legislation, which while designed primarily to furnish protection to the Danish shoe manufacturer against competition from low-currency countries, has unfortunately also had a very strong adverse effect upon imports from high-currency countries, chief among which is the United States.

It was first attempted through import legislation taking effect on August 4, 1922, to regulate importation according to quantities imported during post-war years. This law was only of a temporary nature and soon proved unsatisfactory in its application and in the results obtained, causing also protests from Central European governments. On April 7, 1923, the regulatory law was therefore replaced by a straight tariff measure greatly increasing the duty on footwear. This new law remains in effect until July 1 of the current year, and its extension beyond that time is dependent upon an agreement being reached before that date between employers and workers which will insure reduced cost of production in the Danish shoe industry. If such agreement is reached, which appears extremely doubtful, the present high rate of duty will continue until November 1, 1923, when a reduction will become effective.

Both of these protective measures have had very adverse effects upon importation of footwear from the United States to Denmark, and have failed almost entirely in guarding the domestic industry against the severe competition from Central European countries.

United States Exports to Denmark.

The dwindling exports of footwear from the United States to Denmark and details regarding types mostly sold to Danish firms are given in the following table:

United States exports of leather boots, shoes, and slippers to Denmark.

Year.	Men's.	Women's.	Children's.	Slippers.	Total.
	Pairs.	*Pairs.*	*Pairs.*	*Pairs.*	*Pairs.*
1913 [1]	9,616	2,894	.....	48	12,558
1918	5,829	6,847	3	.....	12,679
1919	410,401	117,107	61,140	30,307	618,955
1920	222,588	335,334	96,407	33,638	687,967
1921	33,420	44,438	1,155	599	79,612
1922	28,486	60,723	7,295	2,552	99,056

[1] Fiscal year ending June 30.

It will be observed that total exports of American footwear to Denmark dropped from 687,967 pairs in 1920 to 99,056 pairs in 1922. Sales of women's shoes of American manufacture, on the other hand, appear

to have increased somewhat during the last year as compared with the 1921 sales. Dealers state that this development is likely to continue, as American women's shoes are generally recognized and sold for their superior appearance and wearing qualities, and find a ready sale in spite of their rather high price. Another factor which should work in favor of the sale of American women's shoes is the import tariff which levies the duty partly on weight and therefore provides a comparatively lower duty on the lighter women's shoes.

Approximately 30 American shoe manufacturing firms are represented in the Danish market; two of these having their own sales organizations, while the others are represented through local agents dealing usually only with retailers.

Types of Footwear Preferred in Danish Market.

The Danish market for men's and boy's shoes, because of the rather damp and cold climate is confined chiefly to the heavy types. A great many of the broad-toe type are sold, but in recent years the moderately pointed styles have been used extensively. Similarly the high-top shoe was until the last few years most in demand, while oxfords are now finding increased sales even as all-year-round footwear. Prices, of course, vary but the American shoe retailing at 25 to 35 crowns ($4.75 to $5.75) undoubtedly finds the best market. Women's shoes are largely of the high-heeled pointed-toe type; both high and low tops and many of the slipper variety are sold. Novelties and new styles are well received. Children's footwear is chiefly of the square or round-toe type with low heels and high tops. Black and tan are in equal favor, rubber heels are used only to a limited extent.

Production of Boots and Shoes in the United States.

Belated shoe reports for the month of March, 1923, have increased the total United States production of footwear (exclusive of rubber) to 35,792,193 pairs, or 21.9 per cent increase over the number of pairs manufactured in the United States during March of 1922.

Additional information regarding shoes and leather manufactures appears in this issue under the following section:

Cable review, Eastern Europe: Boot and shoe industry gaining in Finland.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division.

INDIA'S EXPORT TRADE IN GOATSKINS.

Assistant Trade Commissioner Charles R. Snofford, jr., Calcutta, March 27.

The exports of raw goatskins from India, by Provinces, during the fiscal years 1920, 1921, and 1922, and the 11 months ended February, 1923, are shown in the following table:

Exports of goatskins from India.

Provinces.	Fiscal years ended March 31—			11 months ended February, 1923.
	1920	1921	1922	
Bengal:				
Tons	14,418	3,583	9,795	6,928
Rupees	80,269,760	13,248,720	28,905,229	14,510,113
Bombay:

Port Elizabeth Hide and Skin Market.

Consul Monnett B. Davis, Port Elizabeth, South Africa, March 5.

There was an important increase in the quantity and value of sheepskins shipped to the United States from Port Elizabeth during February. Goatskins show a large increase in quantity but only a slight increase in value, as a large part of the skins shipped were very low priced. The quantity and value of the goat and sheep skins shipped to the United States during the last quarter of last year and the first two months of this year are shown in the following table:

Shipments of goat and sheep skins from Port Elizabeth to the United States.

Months.	Goatskins.		Sheepskins.	
	Pounds.	Value.	Pounds.	Value.
1922—October	38,676	$9,746	65,694	$10,199
November	53,933	14,784	107,214	28,021
December	132,677	22,256	85,278	20,716
1923—January	55,965	14,216	101,445	17,464
February	218,974	19,159	278,826	73,503

Hide and Leather Trade Notes.

Are You Interested in Nicaraguan Hides?

An exporter of hides in Managua, Nicaragua, desires to get in touch with American importers who are interested in the importation of hides. Further information may be obtained from the Hide and Leather Division by referring to import trade request No. 7.

Effect of Exchange on Aden Hide and Skin Trade.

The rise in exchange is reacting very unfavorably against trade at Aden, both as regards imports and exports. As long as this situation holds the purchase of hides and skins for foreign account will be greatly restricted, and the leading exporters in this trade are pessimistic as to the volume of business for the next few months. (Consul Raymond Davis, Aden.)

Polish Government to Assist Tanning Industry.

Business in calfskins in Poland has somewhat improved, and the price is about 40,000 Polish marks each. Manufacturers bought a few thousand skins at this price, payment to be made within four weeks. There is a great shortage of ready cash, and many tanners are compelled to work only three to five days a week. According to a report, the Government has

come to the assistance of the leather industry in this financial crisis by advancing several million Polish marks. The general tendency of the market has for this reason become much better, and it is expected that within three weeks the previous high prices will be obtained again. (Haute-und Lederberichte, Vienna, April 11.)

Shortage of Goatskins in China.

There is a shortage of goatskins in China at the present time, due to the unsettled conditions in the interior, whence the goatskins are supplied. Under usual conditions the Shanghai market opens in November and continues until May and June, but this season goatskins from the interior did not appear until January, and then only in very small quantities of an inferior quality. The season seemed to be practically closed at the end of March. The effect of this shortage is very evident in the figures for export. For the period July, 1921, to February, 1922, 4,203,406 skins were exported from Shanghai, while in the eight months ended February, 1923, only 2,414,684 skins were exported, or a decline of about 40 per cent. (Consul General Edwin S. Cunningham, Shanghai, March 27.)

Situation in Czechoslovakian Leather Market Improves.

The demand for leather continues fairly good in Czechoslovakia. Several tanneries have received important orders for export, owing in part to the failure of the German tanners in the occupied areas to effect delivery. Two large tanneries which have been closed for some time because of lack of orders recently resumed production. Shoe manufacturers have a fair amount of orders on hand. Many of the more conservative members of the industry are questioning whether this improvement is due merely to the approach of summer and the artificial conditions existing in Germany, and therefore of a temporary character. Generally speaking, there is no accumulation of stocks in the hands of the dealers or the tanners. Leather is moving just as rapidly as it comes on the market. (Le Cuir, Paris, April 19.)

Germany Abolishes Control of Export Duties on Leather.

The German Government has yielded to the urgent representations of the federation of exporters, tanners of leather, and manufacturers of shoes, as well as other industries, against the control of foreign exports. The vital necessity of Germany's exporting a certain volume of leather and manufactured leather goods if the German industries are to be in a position to purchase necessary raw materials has also led to the abolishing of export duties. Prices of leather are again slowly rising, but this is not due to an increased demand. The political situation in Germany is influencing many leaders in these industries to cover by purchase of larger stocks as a protection against a further depreciation in the mark. According to latest preliminary statistics, the exports of leather rose to 2,336,876 pounds in February, against 2,194,459 pounds in January. (Le Cuir, Paris, April 22.)

Additional information regarding hides and leather appears in this issue under the following sections:

Cable review. Eastern Europe: Leather stocks in Finland unsold.
Foreign trade opportunities No. 6478.

PETROLEUM

Henry C. Morris, Chief, Petroleum Division

BRITISH PETROLEUM TRADE DURING FIRST QUARTER OF 1922.

Total British imports of petroleum and products during the first three months of 1923 were slightly above those for the corresponding period of 1922, according to British official statistics. The gain in the total was due to increased receipts of crude, as refined products showed a decline. Illuminating oil imports for the three months registered an increase of 17 per cent, and lubricating oils made a small gain. Imports of motor spirit and of fuel oil, on the other hand, declined approximately 8 per cent and 11½ per cent, respectively, and receipts of gas oil were slightly less than during the first quarter of 1922. Detailed figures for March and the three months ending March are shown in the following table:

British imports of petroleum products.

Petroleum products.	March—		First three months—	
	1922	1923	1922	1923
	Imperial gallons.	*Imperial gallons.*	*Imperial gallons.*	*Imperial gallons.*
Crude petroleum	12,825,520	24,403,522	43,790,880	59,573,572
Illuminating oil	13,219,351	11,369,265	38,293,557	44,746,900
Motor spirit	27,494,464	28,906,554	76,758,276	69,846,248
Spirit other than motor spirit			400	177,182
Lubricating oil	5,537,906	4,560,046	17,843,164	18,213,600
Gas oil	5,372,704	6,198,519	19,746,704	19,128,004
Fuel oil	25,970,170	23,647,120	84,630,845	72,031,118
Other sorts	9,675		13,972	10,512

Exports Show Large Increase.

The results of the increased refinery capacity of the United Kingdom are apparent in the larger exports of petroleum products. British petroleum export statistics are not classified in detail, the only items shown being lubricating oils and "other sorts." Exports of lubricating oil during the first quarter of 1923 increased only slightly as compared with the first quarter of 1922, while the products classified as "other sorts" were about 6½ times as large as in the preceding year. The following table gives comparative figures for the first quarter of 1922 and 1923:

British exports of petroleum products.

Petroleum products.	March—		First three months—	
	1922	1923	1922	1923
	Imperial gallons.	*Imperial gallons.*	*Imperial gallons.*	*Imperial gallons.*
Lubricating oils, mixed	96,551	50,309	129,100	143,389
Petroleum lubricating oil	651,337	515,629	1,389,019	1,425,760
Other sorts	677,224	3,004,148	3,462,587	19,565,484

Little Change in Reexports.

Reexports of petroleum products from the United Kingdom during the first quarter of 1923 showed relatively little change as compared with the same period of 1922. The principal changes appear in the figures

creasing considerably, chiefly during March, while fuel oil exports declined. The detailed figures are shown below:

British reexports of petroleum products.

Petroleum products.	March—		First three months—	
	1922	1923	1922	1923
	Imperial gallons.	*Imperial gallons.*	*Imperial gallons.*	*Imperial gallons.*
Crude petroleum	.....	1,676,745	5,943	1,701,538
Illuminating oil	122,628	257,990	343,243	554,811
Motor spirit	2,375,600	2,233,950	6,745,331	6,450,054
Spirit other than motor spirit	3,866	2,340	16,239	8,586
Lubricating oil	90,433	201,752	406,188	621,287

Other sorts	.....	.....	20	40

PETROLEUM PRODUCTION AND TRADE OF BURMA, BRITISH INDIA.

Consul J. P. Moffitt, Rangoon, March 2.

The production of crude mineral oil in Burma for 1921 amounted to 296,092,057 imperial gallons (1 imperial gallon=1.2 United States gallons), as compared to 279,707,170 gallons in 1920 and 293,748,807 gallons in 1919. The production varies little from year to year owing to the steady output of the very rich field in the Yenangyoung area, upon which Burma's oil production largely depends. The various districts of Burma yielded the following amounts of crude oil during 1921: Akyab, 9,780 gallons; Kyaukpyu, 27,869 gallons; Thayetmyo, 67,372 gallons; Pakokku, 2,510,533 gallons; Minbu, 3,706,831 gallons; Yenangyoung, 184,420,141 gallons; Singu, 104,166,749 gallons; and Upper Chindwin, 1,182,782 gallons. The two principal districts, namely, Singu and Yenangyoung, showed a gain in 1921 over 1920 of 8,910,000 and 8,140,000 gallons, respectively. This increase is attributed to new wells brought into production and the more extensive use of the rotary drill.

A more general review shows that the petroleum yield has been comparatively stationary during the past six years. The production has come almost entirely from the Yenangyoung and Singu fields of the Magwe district. The output from the Yenangyoung field has decreased from 240,000,000 gallons in 1916 to 184,000,000 gallons in 1921, while during the same period the output from the Singu field has increased from 44,000,000 to 104,000,000 gallons. Fear of a lower production of oil is leading the companies operating in Burma to sink more wells and hence it is possible there will be an increase in yield.

Distribution of Production.

Of the total production, about 100,000,000 gallons, either crude or refined, are shipped to India, 25,000,000 gallons are sent abroad, chiefly to the United Kingdom, and the remainder is presumably used or wasted in refining or sold in Burma. Up until the recent installation of electrical power equipment in the Yenangyoung field one-third of the production was used for power. Under present conditions the gas which usually was wasted is utilized, as well as the gas from dry gas wells. About 500,000 barrels a year is the estimated saving.

An important new feature in the fiscal year ended March 31, 1922, was the import into Rangoon of nearly 18,000,000 gallons of fuel oil from Persia. This, combined with the construction of extensive new storage facilities at Rangoon, indicates an intention to make Rangoon an important depot for the supply of fuel oil from Burma and other sources.

Additional information regarding petroleum appears in this issue under the following sections:

Cable review, Eastern Europe: Rumanian production and exports during 1923.
Tariffs and Trade Regulations: Proposed changes in oil taxation in the Dutch East Indies.
Foreign trade oppportunities No. 6479.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

Government Guaranties for Export Credits in the Netherlands.

Consul General George E. Anderson, Rotterdam, March 22.

The plan adopted by the Netherlands Government last September for the guaranty of export credits, with a view to encouraging export trade, has not turned out so successfully as had been anticipated, and certain changes in the law have been made recently. Under the old system if it was found, after due investigation, that an export credit was needed and that a guaranty of the credit was necessary, the Government gave the guaranty. This guaranty, however, was in reality extended to the bank granting the credit and not to the exporter. Under the new plan the Government extends its guaranty not to the bank but to the exporter to cover the actual export transaction. Against payment of a small premium the Government actually guarantees payment of the invoice up to 40 per cent of the whole amount. Such a guaranty is extended upon the recommendation of a committee similar to the commission set up to pass upon the credits guaranteed under the system inaugurated last fall.

By the new arrangement the guaranty can be given for an indefinite number of transactions of the same sort for the same concern. This procedure was not practicable formerly. According to the old system the credit was guaranteed on the financial responsibility of the firm and its bank, while now it is guaranteed on the basis of the export transaction itself.

Under the new arrangement the Government also requires the exporter's bank to join with the exporter in the application for the guaranty, the bank in all cases being required to give all necessary information to the Government as to the financial standing of the exporter.

Polish Treasury Notes to be Issued.

L. J. Cochrane, clerk to American trade commissioner, Warsaw.

The Polish Minister of Finance has been authorized to issue, on or after April 1, 1923, Polish 6 per cent Treasury notes to the value of 50,000,000 zlotys ($10,-

issue. Interest is payable in advance, is not subject to taxation, and the notes will be accepted in payment of obligations to the Government.

The zloty notes are redeemable in Polish marks at the average Swiss-franc exchange rate for Polish marks on the Warsaw Bourse for the 15-day period ending three days before the date of payment. One Polish zloty is reckoned as equivalent to one Swiss franc.

The first issue of 10,000,000 zlotys occurred on April 1, when the Postal Saving Bank subscribed to half the issue, and the remainder was oversubscribed by private banks.

Balance Sheets of Vienna Banks.

Trade Commissioner William Ford Upson, Vienna, April 14.

The balance sheets of the big Vienna banks for the year 1922, of which two have now been published, show on both sides tremendous figures in crowns but poor results in real money, especially for the stockholders. In the case of banks, even more than in the case of the industrial corporations, any substantial dividend causes a great outcry. Although the nominal value of the shares is small, it is hard to convince the average man that even a dividend of 20 per cent is reasonable. Moreover, the rate of taxation rises rapidly with the percentage of dividends and the amount distributed, so that banks and corporations generally pay practically nothing to their stockholders. In the case of banks the dividends shown are of 3,000 crowns or 4 per cent per share, as against 15 to 30 crowns ($3 to $6) per share before the war. In spite of the high rates of interest and charges of all kinds made for loans, the figures seem to show that such business is unprofitable, taking the expenses into account, and that the chief income of the banks is from speculative business in stocks, drafts, and participation in syndicates. However, since there is no such effective Government control of the banks as there is in the United States, one can not be too confident of the figures published.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

SHIPPING.

THE ARGENTINE MERCHANT MARINE.

Winfield W. Riefler, office of commercial attaché, Buenos Aires.

The operations of the Argentine merchant marine are confined almost entirely to the coastwise trade of Argentina and to the river trade with Uruguay and Paraguay, although a small commerce is carried on with the southern ports of Chile and Brazil by ships under the national flag. A long but intermittent local propaganda has advocated various measures, such as bounties and subsidies for national ships and shipyards, with the object of building up an oversea merchant marine to be used in the transport of the extensive foreign trade of the country; but as yet this agitation has not achieved tangible results, and oversea operations by national ships have been confined to a few small sailing vessels and occasional trips of Government transports.

Although materials for ship construction are allowed to enter free of duty when they can not be produced by Argentina in sufficient quantity or quality to serve the purpose, local ship construction has been confined to the building of small craft. It would seem that the total absence of suitable construction materials and facilities, as well as the relatively undeveloped state of the manufacturing industries in general and the scarcity of skilled labor and competent technical personnel, would make Argentina unsuited at present to produce ships in competition with more favorably situated countries. The inducements extended by the Government to shipowners for placing their tonnage under the national flag have not produced results, except in the case of the coasting and river trade, which is reserved to ships of Argentine registry. This reservation has furnished the field for a national marine, the possibilities of which are increasing rapidly as portions of the country become more fully developed and as the ports and harbor facilities of these regions improve.

Composition and Distribution of Argentine Merchant Marine.

In 1922 there were 216 ships of over 100 tons, totaling 181,555 gross registered tons, under the Argentine flag, as compared with 317 ships totaling 222,533 tons in 1915, according to statistics from Lloyds. The steady increase in the Argentine merchant marine which took place before 1915 was reversed after that time, following the sale of the larger ships to belligerents during the war; by 1920 there were only 198 craft of over 100 tons, with a total tonnage of 150,023. Since 1920, however, the growth of the merchant fleet has been rapid; it would seem, with the present rate of development of the southern territories which require not only tankers for transporting petroleum from the new fields but additional cargo and passenger carriers as well, that the total tonnage would soon surpass that of pre-war years.

Of the total tonnage in 1922, that part made up of sailing vessels comprised mostly small craft used principally as lighters, their ocean-going tonnage probably not exceeding 10,000 tons. Of the steamers, many were tugs and steam barges, and 75 per cent of the total were made up of 49 vessels of more than 1,000 gross tons. This steamer tonnage is distributed as follows:

	Tonnage
Over 4,000 tons (5 vessels)	28,478
Between 2,000 and 4,000 tons (22 vessels)	60,530
Between 1,000 and 2,000 tons (22 vessels)	31,002
Total (49 vessels)	120,010

At least three large ocean-going steamers have been added to the merchant marine since these figures were published.

More than half of the Argentine merchant fleet is owned by the Government and three local shipping companies, the S. A. Importadora y Exportadora de la Patagonia, the "Argentina" Compañia General de Navegacion, and the Compañia Argentina de Navegacion. The fleets of the Government and the first two of these companies are engaged in the trade between the southern ports of Argentina and Buenos Aires, while the fleet of the last company is employed principally between the different ports of the River Plate system. The general traffic of the country, both cargo and passenger, is handled by these four fleets, the rest of the merchant marine being employed chiefly as lighters, tugs, and fishing craft. Some ships are also operated by companies to transport commodities for their own use.

Southern Coast Service.

The Argentine Government owns and operates a fleet of 14 ships, totaling about 48,000 tons, 5 of which are tankers with a combined tonnage of 18,000, used to transport petroleum from the Government oil fields in Comodoro Rivadavia to Buenos Aires. The other ships are used for transporting Government supplies and some general cargo to the south, returning loaded mostly with Patagonian wool.

The S. A. Importadora y Exportadora de la Patagonia is an Argentine company, financed largely by Argentine capital. It has branches in different parts of the southern territories, where it is engaged in importing provisions, clothing, hardware, drugs, etc., and in exporting the products of these territories. In addition, it operates a fleet of five ships, with a tonnage of over 12,000, on a regular schedule between Buenos Aires, Montevideo, and all the principal southern ports from San Antonio to Punta Areñas. Besides carrying its own merchandise it conducts a regular cargo and passenger service.

The "Argentina" Compañia General de Navegacion is also an Argentine company, said to be controlled by the Hamburg & South America Line. It has been operating three cargo and passenger ships, totaling over 8,000 tons, from Buenos Aires to the various ports on the southern coast, and has just announced the acquisition for the same service of two new passenger and cargo ships, which are said to be the largest and most luxurious under the Argentine flag.

Patagonian ports are too shallow for ships to enter, and cargo must be lightered to the beach. To cover this service, an extra loading and unloading charge of 7 to 8 pesos per ton is made.

River Service—Variable Freight Rates.

The extensive general cargo and passenger traffic of the many navigable rivers included in the River Plate system is handled largely by the Compañia Argentina de Navegacion (N. Mihanovitch) and its allied companies, in which the Royal Mail Steamship Lines are said to be interested. The headquarters of this company are in London, but it has general offices and a local board of directors in Buenos Aires. More than 60 cargo and passenger ships (most of them constructed for river service) and over 60 tugs, as well as a great number of lighters and smaller craft, are included in the fleet which it operates, some under the Uruguayan and some under the Argentine flag. That portion of the fleet under the Argentine flag comprises about 60 steamers, with a total tonnage of approximately 48,000, of which 16 ships are over 1,000 tons and have a combined tonnage of nearly 30,000. Besides the cargo trade, regular passenger schedules are maintained on different river runs—on the Parana, as far up as Mendez, some 300 miles beyond Posadas; on the Paraguay, as far as Corumba (Brazil); and on the Uruguay as far as Concordia-Salto.

Freight rates on the river lines of the Compañia Argentina de Navegacion vary according to market conditions, available space, the speed of the boat used, and the competition of various small ships also in service on the River Plate system. The upriver traffic is composed mainly of general merchandise imported for the most part from abroad, while the downstream traffic is generally made up of lumber and other exportable products of northern Argentina, Uruguay, Paraguay, and those portions of Brazil for which the River Plate serves as an outlet.

Future Competition Within Argentine Marine Obviated.

The possibility of future competition between the companies engaged in the river and southern coast trade seems to have been avoided as the result of an extensive negotiation entered into during the latter part of 1922. At that time the Compañia Argentina de Navegacion announced the purchase of two steamers, the *Byron* and the *Tennyson*, from the Lamport and Holt interests, to be used in opening up a service to the Patagonian coast in competition with the two companies already engaged in this trade. As a result of an agreement by the three companies, it was finally announced that the Chilean firm of Braun y Blanchard, affiliated with the S. A. Importadora y Exportadora de la Patagonia, would purchase the aforementioned two steamers for use in Chile; the "Argentina" Compañia General de Navegacion, on its part, would sell to the Compañia Argentina de Navegacion the two large river steamers, *Cabo Corrientes* and *Cabo Santa Maria*, which had been engaged in the run between Buenos Aires and Montevideo in competition with the latter company.

Opportunity for Expansion in Southern Coast Traffic.

The most profitable field for future expansion of the Argentine merchant marine will probably be in the coast traffic between Buenos Aires and the southern ports. Patagonia (a general term for that part of Argentina south of the Rio Colorado where most of these ports are located) is at present sparsely populated and devoted mostly to the raising of sheep. There is, however, a Welsh agricultural colony at Trelew just south of Puerto Madryn, which may become the center of an extensive agricultural development.

The discovery of rich petroleum deposits at Comodoro Rivadavia and Neuquén and their exploitation both by the State and by private companies, together with the Government program of a system of Patagonian railroads from the ports to the interior which is now under way, is giving an impetus to the general development of the region. This is already noticeable in the increased volume of passengers and freight carried on the Patagonian run and in the improved service offered.

The S. A. Importadora y Exportadora de la Patagonia has added to this service the *Jose Menendez*, a new 4,570-ton steamer of modern and luxurious construction; the "Argentina" Compañia General de Navegacion, as previously stated, has acquired two large new steamers for this run. Furthermore, a new company, the Austral Steamship Co. (Ltd.), is being formed with local capital to enter this trade.

Even these improvements in ocean transportation probably will prove inadequate to handle the great volume of traffic which, it would seem, should follow the completion of the railroad program and the full development of the petroleum workings. Large sections hitherto relatively inaccessible will be opened up, and their products, together with the augumented demands of the increased population, should offer a profitable and expanding field for the coastwise merchant marine. [The conclusion of this report will be published later.]

Cable review, Western Europe: Shipping at Hamburg.

RAILWAYS.

BRITISH RAILWAY STATISTICS, 1922.

Assistant Trade Commissioner H. B. Allin Smith, London, April 11.

Preliminary official returns of the standard-gauge railways of Great Britain for 1922 afford suitable comparison with records shown in the statistical appendix to the Bureau's Trade Information Bulletin No. 79, on the Reorganization of British Railways. However, the following tables are not strictly comparable with those in the Trade Information Bulletin, as only standard-gauge railways are included, whereas the figures published in the Bulletin cover about 136 miles of narrow-gauge line, as well as other small items.

Preliminary railway returns for Great Britain—Standard-gauge railways, December 31 of 1913, 1921, and 1922.

(See footnotes at end of table.)

	1922	1921	1913
FINANCES.			
Capital expenditure on the railway, all property and equipment (total)	£. 1,164,700,000	£. 1,161,000,000	£. 1,131,500,000
Capital receipts, from capital issued and other sources (total)	1,115,000,000	1,110,100,000	1,095,800,000
Gross receipts	237,800,000	236,200,000	129,700,000
Gross expenditures	190,600,000	246,000,000	83,500,000
Net income, including Government compensation and miscellaneous items	54,400,000	50,400,000	48,900,000
Actual operating revenue	219,000,000	217,700,000	119,900,000
Actual operating expenditure	174,400,000	226,600,000	75,800,000

[1] Deficit. [2] Not available.

Exhibits Available.

Persons interested in the following exhibits may obtain them from the Transportation Division or through proper district or cooperative office of the Bureau of Foreign and Domestic Commerce by requesting the specific number in each case:

91591—Bristol.—Copy of national agreement and schedule of rates of pay for casual workers at the docks of Bristol. (Consul Robertson Honey, Bristol, England, March 26.)

8465—Berlin.—Detailed description and photograph of improved Diesel motor adapted for use on railways. (Assistant Commercial Attaché Donald L. Breed, Berlin, March 24.)

8625—London.—Copy of first annual report (1922) of Railway Rates Tribunal, referred to in Trade Information Bulletin No. 79, The Reorganization of British Railways. (Assistant Trade Commissioner H. B. Allin Smith, London, April 17.)

Additional information regarding railways appears in this issue under the following section:

Cable review, Western Europe:
Car loading in France and railway receipts.
Railway agreement signed by Austria.

COMMUNICATIONS.

Earnings of Danish Telegraphs.

The Danish Telegraph Department's operating income for the October quarter of 1922 was 3,018,602 crowns, as against 3,726,191 crowns during the same quarter of 1921; disbursements for same periods were 3,138,040 crowns and 3,609,424 crowns, respectively, showing a deficit for the 1922 quarter of 119,438 crowns, as against a surplus of 116,767 crowns in the corresponding quarter of 1921. For the period, April–December, 1922, however, the income totaled 9,412,170 crowns, as against 10,894,080 crowns in the 1921 period. The expenses during these periods were 9,246,585 crowns and 11,111,365 crowns, respectively. For the full three quarters, therefore, there was a surplus in 1922 of 165,585 crowns, as against a deficit in 1921 of 217,285 crowns. (Assistant Trade Commissioner H. Sorensen, Copenhagen, March 8.)

Inauguration of Trans-Europe Airplane Service.

Consul K. S. Patton, Belgrade, April 4.

The airplane service linking Belgrade with Budapest, Bucharest, and Constantinople was inaugurated March 20, 1923 (see COMMERCE REPORTS, March 19, p. 766). Planes leave Belgrade on Mondays, Thursdays, and Saturdays, for Bucharest, and on Tuesdays, Thursdays, and Saturdays for Budapest. Planes from Budapest arrive at Belgrade on Wednesdays, Fridays, and Saturdays, and from Bucharest on Mondays, Wednesdays, and Fridays. The flight to Constantinople is via Bucharest. These services connect with the Budapest, Vienna, Paris, and London air line, and with the Prague-Warsaw air line. The landing grounds are at Pancevo, and not Zemun as previously contemplated. A special motor-boat service, requiring about two hours, furnishes transportation between Belgrade and Pancevo for the air-line passengers.

Air service rates out of Belgrade.

[In French francs.]

Belgrade to—	Passengers.	Baggage, per kilo.	Parcels, per kilo.
Paris	725	7	8
Strasbourg	565	5.50	6
Prague	350	3.50	3.75
Warsaw	570	5.50	6.25
Vienna	235	2.25	2.50
Budapest	145	1.50	1.75
Bucharest	215	2	2.25
Constantinople	425	4	4.50

Latin America: Aviation section established by Salvador War Department.

Electrical equipment: Proposed improvement of Algerian telephone system.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

CONSIGNMENT LAWS OF CHILE.

Consul George A. Makinson, Valparaiso.

A foreign firm may authorize a Chilean agent to undertake consignment sales by means of a public or private instrument, by letters, or even verbally. Testimonial proof, however, will not be admitted in legal actions if not in conformity with the general rules of evidence. Neither will a private instrument be admitted in court in cases where the law requires an authenticated instrument. The agency contract is deemed complete when it has been expressly or tacitly accepted by the agent. Without express approbation the agent may not, either in his own name or in that of another, buy the merchandise which his principal has authorized him to sell; but he may, in the discharge of his duties, contract in his own name or that of his principal. If he contracts in his own name, third parties are not obligated to the principal.

Responsibility of the Agent.

The agent may, by special agreement, take upon himself the responsibility for the solvency of the debtors and all the uncertainties and embarrassments of collection. He thereby makes himself the principal debtor of his principal and becomes responsible even in case of force majeure. He is responsible not only for that which he has received from third parties on account of his mandate, but also for that which he has failed to collect through negligence.

Laws Regulating Agent's Discharge of His Commission.

In the discharge of his commission the agent should conform his actions strictly to the orders or instructions which he has received from his principal. If he believes, however, that by complying with the letter of such instructions he might thereby gravely injure the interests of his principal, it is then his duty to suspend the execution of his contract and inform his principal at the first opportunity. In no case may he proceed contrary to the clear and express dispositions of his principal. The agent may sell on the terms in general use in the local market, provided this is not contrary to instructions. Even when authorized to sell on time, he may make such sales only to persons of recognized solvency. The agent should collect the credits of his principal on the dates when they become due, and failing in this, he may be held responsible for damages caused by his omission.

Agent's Accounting to His Principal.

The law requires the agent to submit to his principal an accounting of his acts upon the completion of the object of the contract and such accounting must be in accord with the entries in his books. If it is not, the agent may be criminally prosecuted. The same applies to agents who, when rendering accounts, alter the prices or conditions of contracts.

Retention of Title by Shipper—Security of the Agent.

Under Chilean law American shippers of goods consigned to a firm in Chile retain title to the goods until sold. It is only a question of establishing clearly in the contract that the goods are placed at the order of said firm under consignment and that title remains in the consignor.

An agent is prohibited from giving as security for his personal obligations any merchandise which he may have received on a consignment basis. If, however, in contravention of this prohibition he delivers such merchandise to his creditor, the principal can not recover it except by paying the guaranteed debt up to the concurrent value of the merchandise, unless he proves that the creditor upon receiving it had knowledge that it did not belong to the agent. The mere fact of such pledge makes the agent guilty of a breach of confidence and liable to punishment under the Penal Code.

Attachment of Consigned Goods.

Consigned goods may be attached or seized under the presumption that they are the property of the person who has possession of them, and may even be merged in his estate in the event of his bankruptcy, unless evidence of their true ownership is clear. The consignor should insist that his consignee prepare a statement showing which shipments have been received by him under consignment and specifying the pages and dates in his books where a list of such goods may be found. This certificate should be delivered to shipper's representative in Chile. If he does not have one here, he can probably arrange with a local bank to act in that capacity. The agent can then make an agreement to notify the representative in case of attachment or bankruptcy. Articles 1509 and 1510 of the Commercial Code give further regulations regarding property in the hands of a consignee who becomes bankrupt.

Action Against Third Parties—Breach of Contract.

According to the regulations governing the transactions of third parties dealing with the agent of an undisclosed principal the former have nothing to do with the undisclosed principal once the sale of the goods is completed. The shipper may compel the agent to transfer to him all actions that he may have against third parties on account of goods, property of the shipper, but sold in his own name. If sold in the name of the shipper the actions and responsibilities are his own.

If an American shipper sells goods on consignment to be paid for as sold, and a portion of the goods is sold without payment being made to the principal as agreed, the shipper has the case of breach of contract. He may sue the agent for money due, damages, etc., according to circumstances, or may prosecute criminally for undue appropriation of goods and money. It all depends upon the features of the individual case. The actions are those to be exerted under the contract of agency.

Conditional sales or consignments are regulated in Chile by Title XXIX of the Civil Code (arts. 2116 to 2173) and Title VI of the Commercial Code.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS.

CZECHOSLOVAKIA-HUNGARY.

Acting Commercial Attaché H. Lawrence Groves, Prague, April 18.

Ratification of Commercial Agreement.

A provisional commercial agreement went into effect on April 10, 1923, between the Czechoslovakian and Hungarian Governments regulating the commerce between the two countries. The agreement provides for favored treatment on a special list of articles for which both countries agree to raise no difficulties in the way of granting import licenses, or of providing the necessary foreign exchange. The articles not in this list will receive no special consideration, and shippers will assume all risks in the matter of the allotment of foreign exchange and the obtaining of payment for the goods involved.

GENERAL TARIFF REVISIONS OR CHANGES.

CANADA.

Customs Memorandum No. 32, Ottawa, May 12.

Summary of Budget Changes in Tariff and Taxes.

The budget presented to the Dominion Parliament by Minister of Finance Fielding makes provision for a number of important changes in duties and taxes affecting imports, effective on and after May 12, 1923. The changes in duties are being collected provisionally, and if approved by Parliament, will affect goods imported or taken out of warehouse for consumption on and after May 12, and goods previously imported for which no entry for consumption was made before the effective date.

Changes in import duties.—The changes in duties effected are mostly downward, varying in amount with different commodites. The principal articles affected are hemp seed for agricultural purposes, refined and raw sugar, cigarettes, malt flour, malt extract, metal parts, unfinished, for the manufacture of spectacle and eyeglass frames; iron or steel scrap; and a number of minor articles.

Changes in sales and other internal taxes.—Instead of the present sales tax, lower domestic than foreign goods, the budget provides for the imposition at the source of a consumption or sales tax of 6 per cent on the sale price of all goods produced or manufactured in Canada, as well as of all imported goods, with certain exceptions. The taxes on confectionery, beverages, and beet root sugar have been repealed.

Rebate of duty on direct shipments.—Importers of goods subject to duty under the preferential tariff are, with certain exceptions, granted a discount of 10 per cent on the amount of duty when the goods are imported, without transshipment, from a port of a country entitled to the preferential tariff into a sea or river port of Canada. This discount would apply to the British Empire, with the exception of Australia, whose products are subject to the general rates pending the conclusion of negotiations for a reciprocal tariff arrangement.

Authority for reciprocity with the United States.—A significant feature is the provision vesting in the governor in council power to authorize negotiations with any authorized representative of the United States Government for the purpose of making a commercial agreement between the two countries on terms that may be deemed mutually beneficial, subject to the approval of the Canadian Parliament.

[A full analysis of the budget changes will be published in the next issue of COMMERCE REPORTS, and copies of the full text will be on file shortly in each branch office of the bureau.]

SPAIN.

Cablegram from Commercial Attaché C. H. Cunningham, Madrid, May 11.

Extension of Second-Column Rates to Honduras, the Dominican Republic, Haiti, and Panama.

A Spanish decree of April 30, 1923, grants the benefit of the second-column rates of the import tariff to Honduras, Haiti, the Dominican Republic, and Panama, thereby according them the same treatment as is accorded other American Republics by previous legislation. The decree specifically excepts from this privilege the United States, Brazil, and Canada, which remain subject to such treaties as may now be in effect or which may be negotiated in the future.

IMPORT AND EXPORT RESTRICTIONS.

ITALY.

Trade Commissioner A. A. Osborne, Rome, April 12, 13.

Permission for Exportation of Hay and Metal Wastes.

The Italian customs authorities have been authorized by the Ministry of Finance to permit the exportation of hay and the filings, spangles, dross, and scoriae (slag) of all kinds of metals.

[These products have been subject to license formalities since during the war. The restrictions on certain wastes of metals were removed in February, 1923, as noted in COMMERCE REPORTS for April 2, 1923.]

Removal of the Restriction on the Importation of Rice.

Permission has also been granted by the Ministry of Finance for the importation of rice, whether husked, semihusked, or polished.

[The importation of rice has been under government monopoly for several years.]

NICARAGUA.

La Gaceta, Managua, February 23.

Restriction on Exportation of Archæological Objects.

The exportation of archæological objects, except under authorization from the executive, has been prohibited, according to a Nicaraguan decree of February 15, 1923, effective from date of publication on February 23. When permission is granted to export these objects, the export duty will be 5 córdobas per kilo (1 córdoba=1 dollar), except on silver articles, which are dutiable at 25 córdobas per kilo, and gold articles at 100 córdobas per kilo.

The executive may permit the exportation of archæological objects free of duty when exportation is requested by other governments.

PERSIA.

Consul Bernard Gotlieb, Teheran, March 10, 1923.

Export Duty on Aniline Rugs to Remain in Force.

In view of rumors that the 12 per cent export tax on rugs containing aniline dyes had been removed, it has been definitely stated by a Persian official that the government has no intention of removing the duty on aniline rugs which was designed, apart from revenue purposes, to discourage the deterioration of Persian weaves by the use of unstable aniline dyes.

According to the local press, the Ministry of Finance has notified the public that the importation of dyed wool and cotton thread will be forbidden from March 21, 1923.

TARIFF CHANGES ON SPECIFIC ARTICLES.

GERMANY.

Deutscher Reichsanzeiger, April 13, 1923.

Reduction of Import Duties on Tobacco.

An order dated April 1, 1923, provides for a reduction in the import duties into Germany on the following tobacco products, effective April 1, 1923:

Tariff No.	Articles.	Import duties, marks (gold) per 100 kilos.	
		Former.	Present.
29	Tobacco leaves, unmanufactured, or simply fermented or smoke-dried; also in bunches, bundles, or packets	60	30
Ex 220	Tobacco, manufactured:		
	Stalks and ribs, even treated with tobacco juice	23	12
	Tobacco lyes, mixed or not with tobacco juice	37	19
	Carrots, plugs, and rolls for the manufacture of snuff	70	35

[The duties are paid in paper at a rate fixed weekly by the Government. This rate for the period 18th to 24th of April, 1923, was 5,000 paper marks to 1 gold mark.]

NICARAGUA.

Consul Harold Playter, Corinto, April 13.

Increased Import Duties on Wheat Flour and Rice.

A Nicaraguan law effective April 11, 1923, increased the import duty on wheat flour (item 964) from $0.60 to $2.10, and on rice, hulled or not (item 961), from $0.50 to $1.50 per 100 net kilos. There is in addition a surtax of 12½ per cent of the duty.

SALVADOR.

Minister Montgomery Schuyler, San Salvador, April 13.

Repeal of Duty-Free Privilege Granted Certain Costa Rican Products.

The decree granting free interchange between Salvador and Costa Rica of national products or manufactures produced chiefly of national materials (decree of September 4, 1920) has been repealed, according to a Salvadorean decree effective April 12, 1923.

[See COMMERCE REPORTS for July 17, 1922, concerning withdrawal of Costa Rica from the agreement.]

UNION OF SOUTH AFRICA.

Consul C. J. Pisar, Cape Town, February 8.

Increased Import Duty on Wireless Apparatus.

The government of the Union of South Africa has increased the import duties on wireless and radio apparatus to 20 per cent ad valorem, general tariff, and 17 per cent British preferential. Wireless goods were formerly dutiable under the general tariff at 3 per cent ad valorem, and from the United Kingdom and reciprocating British dominions were admitted free.

CUSTOMS REGULATIONS.

CUBA.

Postal Bulletin, Washington, April 17.

Consular Invoices Required for Certain Printed Matter.

The Cuban Consul General at New York communicates the information that articles of printed matter dutiable in Cuba require consular invoices when mailed at localities where Cuban consular representatives are located. Articles classed as merchandise, such as books, photographs, and calendars, sent in large quantities and subject to duty, require consular invoices when mailed at such localities. Articles such as newspapers, single copies of magazines, catalogues, calendars, or single books intended for use by the addressee, and not dutiable, do not require consular invoices.

FEDERATED MALAY STATES.

Government Gazette, Kuala Lumpur, March 23.

Customs Enactment of 1923.

The Customs Enactment of 1923, modifying previous regulations bearing on the importation and exportation of goods in the Federated Malay States, became effective on April 1, 1923. No change is made by this act in the present schedule of import and export duties. Import duties are leviable only on liquors and spirits, other articles being admitted free with the exception of those mentioned in this article subject to the indicated restrictions. Export duties are leviable on many native products, among which are vegetable oils, coffee, gambier, gutta-percha, pepper, rubber, sugar, tapioca, forest products, gold, tin, and a few other miscellaneous products.

The revised provisions carried by this enactment are essentially as follows:

Goods free of import duty.—The following articles are exempted from the payment of import duties:

Rectified spirits and petroleum ether imported by or on behalf of the Federated Malay States Agricultural Department; spirits of wine and medicinal spirits imported by or on behalf of the Federated Malay States Medical Department.

Import prohibitions.—The importation of paddy (unhusked rice) into the Federated Malay States from all sources is prohibited.

Import licenses.—Denatured spirit, tobacco, and petroleum may be imported into the Federated Malay States only under special license. Tobacco intended for private consumption, however, may be imported without a license through the post office, or as part of personal baggage, provided the quantity thus imported shall not exceed 10 pounds in weight.

The fee for each of the above-mentioned licenses for importing denatured spirits, tobacco, and petroleum is $8 for every calendar month or part thereof. The licenses may be for any period not exceeding 1 year, but every license shall expire not later than the 31st day of December next following the date of issue.

Export prohibitions.—The export of the following articles is prohibited except to the United Kingdom, British possessions, protectorates, and protected States:

Ammunition, cocaine, firearms, opium, and explosives other than industrial.

Export licenses for ceramic materials.—Licenses are required for the exportation of the following materials: China clay or kaolin, china stone, potash feldspar or soda feldspar intended for use as a flux or a glaze.

Separate packing of dutiable and nondutiable goods.—No dutiable or restricted goods shall be packed in the same packages or receptacles as nondutiable or unrestricted goods, when imported into or exported from the Federated Malay States, under penalty of seizure and the offender's becoming liable to a fine not exceeding $200, in addition to any fine that may be imposed for attempted evasion of the payment of duty.

This regulation does not apply to dutiable goods brought into the Federated Malay States by any person in his personal baggage and intended for his own consumption.

Warehouse regulations, charges, and transshipment.—Provisions are made for the deposit, custody, and removal of goods in customs warehouses upon payment of duties and charges. The warehouse rents are leviable after 48 hours, Sundays excepted, after landing of the goods.

Petroleum, petrol, benzene, etc., may not be stored in any customs warehouse.

Transshipment of nondutiable goods may be made by obtaining a permit for this purpose.

PERU.

El Peruano, Lima, April 7, 1923.

Regular Consuls Only May Certify Parcel-Post Invoices.

A resolution of December 28, 1922, established a rule that the certification of consular invoices for merchandise shipped by parcels post to Peru shall be made by regular Peruvian consuls only, and honorary consuls may not make such certifications. The declared purpose of this legislation is to adapt the consular service to the regulations for centralizing Government funds.

SPAIN.

Commercial Attaché C. H. Cunningham, Madrid, April 16.

Gold Customs Surtax Calculated on the Date of Entry.

The amount of the gold surtax on import duties paid in silver, or notes of the Bank of Spain, is to be determined by the rate of exchange on the day the goods enter through the Spanish customs, according to a royal order of April 7, 1923, effective April 10. Hitherto, the surtax was levied in accordance with the rate of exchange on the date the goods were invoiced.

Commercial Attaché C. H. Cunningham, Madrid, April 23.

Further Extension of Period for Compliance with Marking Requirements on Imported Tires and Tubes.

The period granted for compliance with the Spanish decree of January 13, 1923, requiring that invoices accompanying shipments of tires and tubes shall bear the serial number of each tire or tube, has been further extended to May 31, 1923, according to a decree of April 22, 1923.

[Notice of previous extension of period of grace appeared in COMMERCE REPORTS for April 2, 1923.]

INTERNAL REGULATIONS AFFECTING TRADE.

AUSTRIA.

Trade Commissioner Wm. Ford Upson, Vienna, April 7, 1923.

Establishment of New Sales or Turnover Tax.

The new turnover tax of 1 per cent on all sales of goods became effective in Austria April 1, 1923. It is understood that arrangements are being made to collect the tax from the producer or the importer, who is required to pay a rate calculated on all sales, thus relieving merchants generally from the requirements of keeping books and records. The payment is based on the number of transfers that is believed the different articles would pass through on their way to the ultimate consumer. A table of the rates of assessments compiled for certain articles shows that on most of the articles a fraction over 1 per cent is collected. This tax may also operate as a protective duty, as the compensating payment upon imported articles is usually fixed at a higher rate. Rebates are allowed on export or reexport of goods so that the tax may be considered as in effect one on consumption.

[A fuller report on the application of the new sales tax, now being prepared by Mr. Upson, will be announced later.]

CUBA.

Commercial Attaché Paul L. Edwards, Habana, April 26.

Temporary Increase in Production Tax on Raw Sugar.

Raw sugar having been quoted and sold in Habana on April 19, 1923, at six cents per pound, the surtax of 30 cents per bag of 320 pounds became effective on all sugar put in bags after that date.

A Cuban law of July 1, 1920, provides for an "Ordinary tax" of 10 cents per bag irrespective of the price of sugar, and a surtax of 30 cents per bag when, and as long as, the price is 6 cents or more per pound in the warehouses of Habana. The proceeds of this sugar tax are to be applied toward the $30,000,000 internal war loan of 1917.

DUTCH EAST INDIES.

Commercial Attaché Paul S. Guinn, The Hague, April 12, 1923.

Proposed Changes in Oil Taxation.

During the latter part of April a bill was introduced into the States General designed to alter the plan of oil taxation in the Dutch East Indies. The new bill provides for the complete removal of the export duty on oil and in its place a tax based on the production of oil. The bill as introduced will terminate December 31, 1923, and is retroactive to January 1, 1923.

The present rate of duty on petroleum and its by-products, payable upon exportation, is as follows:

(*a*) Kerosene and its by-products not mentioned under sub. B., 7.50 florins per 1,000 kilos.

(*b*) Liquid fuel, residue-solaroil, filter-press-oil, lubricating oil, greases, betching oil, pitch and wax oil, 1.50 florins per 1,000 kilos.

FRANCE.

Journal Official, Paris, March 31.

Abolition of Luxury Tax on Resales of Automotive Products.

The application to automobiles of the luxury tax, established by article 63 of the law of June 25, 1920, has been modified by a decree of March 30, 1923, so that the 10 per cent luxury turnover tax is to be collected once and for all from the manufacturer or importer, and subsequent sales are no longer subject to this tax. The tax on new passenger automobiles, their chassis, bodies, fittings, and accessories of 10 per cent is to be paid by the manufacturer on the sale price; the exception already made in respect to export sales is continued.

Second-hand automobiles, automobiles purchased for certain kinds of transport service, and detached repair parts, as well as new cycle cars, side cars, and the like, the price of which does not exceed 5,000 francs, are not subject to the 10 per cent tax, but only to the general sales tax of 1.10 per cent.

The first paragraph of article 72, dealing with the payment of the 10 per cent tax at the time of entry into France, is repealed. This tax is now payable upon entry, regardless of whether the importation is made by a dealer or by a private user.

[Hitherto the tax of 10 per cent on automobiles was paid on every retail sale; no distinction being made between new and second-hand sales. Announcement of the proposed reduction was made in COMMERCE REPORTS for February 19, 1923, on page 516.]

WESTERN EUROPE

Alan G. Goldsmith, Chief, Western European Division.

DECREASING UNEMPLOYMENT IN GREAT BRITAIN.

Commercial Attaché Walter S. Tower, London, April 20.

An encouraging decrease of unemployment during the first quarter of 1923 has been one of the substantial signs of improving conditions for British industry and trade. The official returns for the end of March show a total of 1,303,476 persons wholly unemployed and claiming insurance benefit. This number represents a decrease of almost 13 per cent from the January figure (1,493,036) and is the lowest total reported for any month during the last year and a half. As compared with the same period of 1922, there are now close to 500,000 fewer recipients of the unemployment dole.

Situation Encouraging.

The degree of employment in British industries as a whole is now at the highest point reached since the definite collapse of the post-war boom. This situation is ample proof that British business, both domestic and foreign, is making headway despite the effects of continental uncertainties and the continued disorganization of formerly important overseas markets. In fact, a simple process of reasoning leads logically from the better volume of employment in Great Britain to the conclusion that the current state of world markets and trade is better than at any other time since 1921.

That there is room for further improvement, however, appears from the figure showing 11 per cent of the workers in insured trades as idle at the end of March. According to pre-war standards, that percentage is considerably above the figure reached during periods of business depression and about three times the figure for times of ordinary business prosperity. For those who persist in making all comparisons solely by reference to pre-war normals, the current situation, therefore, is still most discouraging. On the other hand, those who are inclined to measure progress since the post-war crisis find much encouragement in the steadily dwindling numbers of unemployed.

Degree of Unemployment in Leading Industries.

Conditions differ greatly in the various lines of trade, but it is significant that among the 10 leading British industries textiles alone have failed to show improvement since January. The following table gives the number of unemployed reported for each month of the first quarter of this year, as shown in the British Labor Gazette:

Unemployment in leading British industries.

Industries.	Jan. 22.		Feb. 26.		Mar. 26.	
	Unemployed.	Per cent of industry.	Unemployed.	Per cent for industry.	Unemployed.	Per cent for industry.
Engineering	236,612	20.5	216,590	18.8	203,016	17.6
Textiles	128,884	9.6	118,876	8.8	139,987	10.4
Building	156,157	20.3	141,803	11.4	116,439	15.1
Shipbuilding	123,024	34.3	114,988	32.1	107,570	30.0
Iron and steel	62,394	20.2	52,838	17.1	47,227	15.3
Coal mining	55,717	4.5	50,383	4.1	43,745	3.6
Chemicals, etc	27,608	11.5	25,885	10.7	24,113	10.0
Boots and shoes	13,161	8.8	12,323	8.2	12,978	8.6
Vehicles, etc	28,593	13.2	24,938	11.5	22,064	10.2
Electrical	11,558	11.0	10,758	10.3	9,778	9.3

Engineering lines far outstrip all others in actual number of unemployed, but in percentage of idleness the shipbuilding industry still stands in a class by itself, in spite of the increased volume of contracts placed for new ships during recent months. The other extreme is represented by coal mining, in which the percentage of idleness is close to what might be called normal for the industry. It also is worth noting that in several other industries the percentage of unemployment is distinctly lower than the general average for the country and that some of these represent lines from which keen competition is felt by American products in world markets.

Establishment of new sales tax in Austria.
Ratification of commercial agreement by Czechoslovakia and Hungary.
Spain extends second-column tariff rates to Honduras, Dominican Republic, Haiti, and Panama.

FAR EAST

F. R. Eldridge, Chief, Far Eastern Division

AUSTRALIAN OUTLOOK HOPEFUL.

The general situation in Australia is favorable. Barring the possibility of drought, all signs point to a season of prosperity. The price of London exchange is steadily advancing toward par, and, with heavy importing in full swing and the export season nearly ended for Australia's chief commodities (wool and wheat), the value of Australian money in London should continue to appreciate unless the State governments borrow so heavily as to have a deterrent effect upon this advance.

Melbourne and Sydney clearing-house returns are increasing, the total amount for the two cities in the period from January 1 to March 3, 1923, being £259,480,500, as compared with £232,662,400 for the same period in 1922.

Exports and Imports Considerable.

Exports continue on a large scale. From July 1, 1922, to January 31, 1923, they totaled £68,138,500. Imports for the same period totaled £77,248,400. January imports showed increases in knitted apparel, textiles, oils, machinery, iron and steel wire, rough and dressed lumber, paper and stationery, and particularly in automotive vehicles, imports of which in this month were 57 per cent greater than in January, 1922. A large increase was also shown in imports of rough lumber, which were 58.39 per cent larger in January, 1923, than in January, 1922.

Lack of segregated figures for products makes it impossible to determine the competitive position of any one country. The following comparison of official statistics for six-month periods shows the relative position of the United States in a few important commodity groups, among those countries which are the principal sources of Australian imports:

Principal sources of Australian imports.

Articles and countries of origin.	Imports during last six months of—			
	1921		1922	
	Value.	Per cent of total.	Value.	Per cent of total.
All imports	£44,410,492	100	£65,496,278	100
United Kingdom	20,992,912	47	34,255,499	52
Canada	1,319,429	3	2,208,751	3
United States	8,423,400	18	11,723,584	17
Japan	1,650,896	4	2,368,497	3
Machines, machinery, and metal manufactures[1]	10,939,806	100	1,907,034	100
United Kingdom	6,089,162	55	7,582,006	48
United States	3,573,387	32	4,141,933	27
Canada	546,287	5	1,174,051	7
Lumber and wicker, raw and manufactured[2]	1,203,051	100	1,907,034	100
United Kingdom	70,908	6	80,612	4
United States	362,533	30	738,122	38
Canada	94,185	7	169,712	9
Japan	25,976	2	68,527	3
Oils, fats, and waxes[3]	2,492,556	100	2,822,102	100
United Kingdom	110,245	4	135,576	4
United States	1,178,720	47	1,640,817	58

[1] Includes motor chassis. [2] Includes rough lumber. [3] Includes gasoline.

Australian Wool Outlook Favorable.

Reports from wool sales in the various centers show that prices have fallen off somewhat, but the margin of profit is still sufficient to yield good returns to the grower. It is stated on reliable authority that half of this season's wool clip had been disposed of by the middle of March. Japan was competing with Great Britain for eastern markets for woolen and cotton goods, and according to last reports had become the chief foreign buyer of Australian wool. America was a regular buyer of the finer crossbred wools.

Position of Australian Wheat and Cotton.

The position of Australia in the world wheat market is not altogether satisfactory. The crop fell considerably below preharvest estimates and dullness of the London market adversely affected the wheat pools, whose policy of artificial-price maintenance has not been successful under more recent world conditions.

An effort is being made to expand cotton growing in Queensland, and indications point to the success of this movement. Queensland already has many thousand acres of cotton under cultivation. There is said to be plenty of capital for the establishment of ginneries, and Federal and State Governments are cooperating to place the industry upon a sound basis. A cotton expert from India has been appointed director of cotton growing.

Confidence Reflected on the Stock Exchange.

An encouraging advance in the price of base metals is reported. Copper is moving steadily to the levels reached in 1921, and this upward movement is expected to do much to promote copper mining in Australia. Prices of most agricultural products are firm, and resumption of work on large undertakings is favorably reflected on the stock exchange. There are no prospects of labor unrest, and successful flotation of State government loans has relieved financial strain.

Japan's Trade With China.

Japan's trade with China during the first quarter of 1923 showed a tendency for exports to decrease while imports increased. The result was a less favorable trade balance for Japan than during the same period last year, or a decrease from 34,543,000 yen for the first three months of 1922 to 18,836,000 yen for January, February, and March, 1923 (1 yen=$0.4985).

Japan's Exports to China Show a Decrease.

Exports to China for the first quarter of this year aggregated 64,731,000 yen, compared with 69,943,000 yen in the same period of 1922—a decrease of about 10 per cent. Japan's export of cotton textiles and cotton yarn to China showed a decline from 8,000,000 yen during January to 7,900,000 yen in the following month, but during March increased to 9,270,000 yen. Exports of cotton yarn from Japan to China amounted to 64,000 piculs in March, compared with 22,000 piculs in February and 43,000 piculs the preceding month (1 picul=133⅓ pounds).

Japan Imports More Chinese Goods.

Japan's imports from China during the first quarter of 1922 totaled 45,895,000 yen, as compared with 35,543,000 yen during the same period last year, or an increase of about 27 per cent. This increase in imports from China is accounted for principally by the rapid increase in the amount of pig iron, ingots, slabs, etc., taken by Japan. Imports of these items during March amounted to 171,000 piculs, as compared with 80,000 piculs during February and 30,000 piculs during the preceding month. Japanese imports of Chinese cotton during the first quarter, however, showed a decline, falling from 100,000 piculs in January to 70,000 piculs in February and to 43,000 piculs during March.

Japan Needs China's Raw Materials.

The trend of trade between China and Japan during the first three months of 1923 would seem to indicate that the demand in China for Japanese goods is decreasing, due, no doubt, to the competition being offered by the reintroduction of European and American products into this market, coupled with local prejudice against goods of Japanese origin. Japan's increasing imports from China may be explained by the fact that its industries are requiring more and more of China's raw materials.

Far Eastern Trade and Economic Notes.

Japan Will Use Specie Held Abroad to Meet Loan Obligations.

According to a statement made by the Japanese Minister of Finance, the Government of Japan is attempting to convert its foreign loans, meantime planning to use specie held abroad to meet the foreign-held loan obligations. (The Japan Chronicle.)

Growth of Savings Accounts in Australia.

Recent returns from State savings banks throughout Australia (with the exception of Queensland, which has no State banking system) show a most encouraging growth, not only in their total balances but also in the number of their depositors. On January 31, 1921, there were 3,368,855 people in Australia who had savings in State banks and in the Commonwealth Bank, their aggregate deposits on that date being £163,545,702, as compared with 1,797,730 depositors, who had savings accounts totaling £70,872,990 in 1915. The increase in these balances from year to year has been steady, as has also the increase in the number of depositors, and indicates a healthy economic situation.

Handbook on Netherlands East Indies and British Malaya.

The Commercial and Industrial Handbook on the Netherlands East Indies and British Malaya, by Trade Commissioner John A. Fowler, is a comprehensive study of this territory of immense value to the American manufacturer, exporter, and business man. The work is the result of three years' activity in the field concerned and offers a concise picture of native resources and economic background in relation to the potential opportunities for marketing American products in this part of the world. The book is amply supplied with illustrations, maps, and charts, and can be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., or from any of the district or cooperative offices of the Bureau of Foreign and Domestic Commerce; price $1 prepaid.

Relinquishment of Government Control of Australian Industries.

In pursuance of the declared intention of the new Australian Commonwealth ministry to restrict and eventually to abandon control of commercial and industrial enterprises, the cabinet announced on February 26 that the Government harness factory at Clifton Hill, Victoria, would be closed immediately. This enterprise has never been a financial success and it has been necessary to give it aid from public funds. Shortly before this decision the Government offered the Geelong Woolen Mills, at Geelong, Victoria, for sale to private interests. With the exception of the Commonwealth line of steamers (the largest and most important of its ventures), the only trading enterprises which the Government is now conducting are a small-arms factory at Lithgow, New South Wales; a clothing factory at South Melbourne; a lime factory in Queensland; and a cordite factory at Maribyrnong, Victoria. Present indications are that Government control in the near future will be confined to public utilities. (Trade Commissioner J. W. Sanger, March 7.)

EASTERN EUROPE AND LEVANT

E. Dana Durand, Chief, Eastern European and Levantine Division

CURRENCY TRANSACTIONS IN SOVIET RUSSIA.

Abstracted from the official Soviet publications, Economic Life and Izvestiya.

The decree on "currency transactions" of January 29, 1923, passed by the Soviet Government, represents a new stage in the cycle of legislation on the subject of currency and finance promulgated by that Government within the last five years.

The decree of July 25, 1918, made the "purchase, sale, or possession of precious metals in bullion or in coin punishable by imprisonment of not less than 10 years with hard labor and confiscation of entire property of the culprit." The decree of the Council of Commissaries of July 25, 1920, made subject to confiscation: Platinum, gold, or silver in coins, bullion, nuggets, or dust; interest-bearing securities; and paper currency acquired for purposes of speculation. The decree of October 17, 1920, designated gold, silver, platinum, foreign exchange, etc., subject to compulsory delivery to the State, against a compensation fixed by the Commissariat of Finance according to average market price, under penalty of confiscation of property of private persons or organizations failing to comply with this demand. Thus, at the end of 1920, all transactions in valuables or currency were still completely prohibited.

The decree of November 18, 1921, granted to the State Bank the monopoly of purchase and sale of foreign currency and precious metals in coin and bullion. From this indirectly followed the right of other legal persons to sell money and valuables to the State Bank, if not to purchase them from the bank. The decree of April 4, 1922, abrogated the principle of confiscation and compulsory delivery to the State of property in gold, silver, and platinum (bullion or coin), or foreign exchange; but it permitted free circulation of precious metals in the form of bullion only, leaving in force the monopoly of the State Bank on the purchase and sale of coin and foreign exchange. By the decree of the Council of Labor and Defense of July 27, 1922, State and cooperative institutions were permitted to accept gold or precious metals in coin in payment for goods or services, provided immediate deposit thereof was made to their accounts with the State Bank. These institutions, however, were forbidden to trade in—that is, to buy or sell—coins, foreign exchange, and bullion.

Finally, the decree of the Council of Commissaries of January 29, 1923, ratified by the All-Russian Central Executive Committee, abolished the monopoly of the State Bank on the purchase and sale of foreign currency and admitted trading, under certain restrictions, in gold and silver bullion, in foreign currency, and in checks and bills of exchange. The circulation of Russian gold coin, however, was prohibited, canceling in this respect the previous decree of the Council of Labor and Defense, on the ground that its circulation has not been legalized and that it does not represent any world exchange because, owing to abnormal Russian conditions, it is appraised above the intrinsic value of bullion.

The governmental machinery provided in this decree, through which all exchange transactions must pass, imposes a number of restrictions designed essentially to bring about a concentration of a gold and exchange reserve by the Government. The Government reserves the right of first purchase of foreign currency, and compels all institutions authorized to perform transactions in foreign currency to hold all their receipts on deposit with the State Bank.

BALKANS AND LEVANT.

GREECE IMPOSES TAX ON UNEARNED INCREMENT.

Acting Commercial Attaché R. O. Hall, Athens.

By a decree which became effective on April 1, 1923, the Greek Government levies a tax on the unearned increment of real estate that is sold after that date. The amount of such increase is determined in accordance with article 3 of Law 1642, and is estimated, without exceptions, as follows (Official Gazette, No. 30, February 10, 1923):

On the unearned increment, or automatic increase, there shall be levied: 18 per cent, if the date of the value taken as a basis [purchase price] falls within the present 10 years' period of taxation (April 1–14, 1919–March 31, 1929); 15 per cent, if the above mentioned date falls within the previous 10 years' period of taxation; 12 per cent if the said date falls within the "anteprevious" period; 8 per cent, if it falls before the "ante-previous" period.

To the amount of the tax thus obtained there shall be added a fraction of this tax (as provided by paragraph 1 of article 3 of Law 1642), having as numerator the automatic increase (after deducting 4.000 drachmas, or a corresponding amount if only part of the real estate was sold) and as a denominator the basic value (purchase price) including the upkeep expenses.

The total tax on unearned increment, however, can not exceed 25 per cent of such increment.

No notarial act, transferring the ownership or conferring real rights on real estate located in Greece, can be made unless the notary public is furnished with a form filled out by the competent district tax officer, showing the unearned increment of the estate, as well as with the receipt for the payment of this tax.

UNITED STATES TRADE WITH GREECE.

Acting Commercial Attaché R. O. Hall, Athens, March 31.

During every month prior to September, 1922, for the past three years Greece has had an unfavorable balance of trade; but in the month of September Greek exports exceeded imports by 56 per cent. This was the result of the Consortium control of exchange, which greatly checked imports, and of the abnormal exportation of tobacco from Thrace. The exchange control adopted later has checked importation only indirectly, but has greatly deterred exportation.

Throughout the first nine months of 1922 the United States led all other countries in the foreign trade of Greece, both as purchaser and as seller, buying 20.4

per cent of Greece's exports and selling 23 per cent of its imports. Present indications point to continued American predominance in this trade, at least for the immediate future. Greek imports from United States during the period under review, as shown by official statistics, totaled 383,328,000 drachmas, or about $11,500,000; Greek exports to the United States, 270,977,000 drachmas, or about $8,000,000.

United States as Source of Greek Imports.

The principal articles for which the United States is either a primary or secondary source of purchase are enumerated in the following table:

United States as source for Greek imports, January–September, 1922.

[1] 1 kilo = 2.2046 pounds.

American Sales to Greece Widely Varied.

While it is true that Greek imports from the United States, so far as value is concerned, consist mostly of cereals, petroleum products, sugar, and leather, Greece does import from the United States in greater or lesser quantity a surprisingly miscellaneous list of articles which has been likened to a "department-store inventory," and there seem to be relatively few American products for which there is not at least a limited market in this small country. Besides the articles mentioned in the table above, Greece imported from the United States during the period under review, in quantities of 10 metric tons or more, fish in general, herring, corn, beans, vegetables, coffee, barrel shooks, cabinet wood, iron and manufactures, paints and varnishes, glue, soda, animal fertilizers, copper sulphate, bags, hemp rope, nails, machinery, wire, and condensed milk. Neither of these lists includes the many other articles that were imported in smaller quantity.

United States as a Market for Greek Exports.

Greek exports to the United States during the first nine months of 1922 are listed by quantity in the table below:

Greek exports to the United States, January–September, 1922.

Declared Exports from Cyprus to United States.

Consular Agent Lawrence A. Mantovani, Cyprus.

Exports declared from Cyprus through the American consular agency, during the calendar year 1922, show a gain of about 80 per cent as compared with 1921. This gain is accounted for by the exports of raisins and calcined umber which about tripled those in 1921.

Declared exports from Cyprus to the United States, 1921 and 1922.

[1] Comprising personal effects in 1921 and lace in 1922.

Exports Declared from Teheran to United States.

Consul Bernard Gotlieb, Teheran, Persia.

The declared exports to the United States from the consular district of Teheran, Persia, during the calendar year 1922 shows a gain in value of about 73 per cent, as compared with 1921. This is largely the result of increased shipments of carpets and rugs, sheep casings, gum tragacanth, and skins, although a small fraction is attributable to pistachio nuts, almonds, furs, and wool, which did not appear in 1921.

Declared exports from Teheran, Persia, to the United States, 1921 and 1922.

The Industries of Paros.

Acting Commercial Attaché R. O. Hall, Athens, Greece, March 3.

Paros Island is, with the exception of Syros, the most industrial of the Cyclades group. Its mineral wealth is centered in the yield of the renowned white marble; although there are deposits of manganese, lead, iron, and zinc, they remain unexploited. There is a small milling industry, which utilizes the island's annual production of about 1,500,000 okes (1,899 long tons) of cereals.

The most important industry is the making of wine and alcohol. There are 4 factories, employing 200 workmen. The annual production of grape juice is about 1,500,000 okes (4,245,000 pounds). The wine produced has a special aroma and is consumed abroad as well as in Greece.

Cheese is manufactured to a small extent. There are two textile factories, which produce cotton fabrics for local consumption. Some figs are raised.

The tobacco industry, on account of the high grade of the product, has in recent years become very important—so much so that the farmers have neglected the cultivation of cotton and are now raising tobacco.

LATIN AMERICA

J. R. McKey, Acting Chief, Latin American Division

MEXICAN STATISTICS ON IMPORTS FROM GERMANY.

An apparently inexplicable increase in the January, 1923, imports into Mexico from Germany was noted in statistics published by the press of Mexico City and mentioned on page 400 of COMMERCE REPORTS for May 7, 1923. According to the figures in question, total Mexican imports for the month were valued at 23,297,904 pesos, of which 13,884,860 were from the United States, 5,345,164 from Germany, 1,374,151 from Great Britain, and 794,334 pesos from France. Information from unofficial sources is to the effect that preliminary and as yet unpublished figures will show that imports from Germany during the year 1922 amounted to about one-fourth of the total value of those from the United States and to almost double those from Great Britain.

Reports from different districts in the Republic have tended to show an increase in the proportion of imports from Europe, particularly from Great Britain and France, although a decrease from 1921 figures in both quantities and values. These reports have not, however, indicated any material increase in Germany's share of the trade, and until a short time ago the bureau has been unable to comprehend this advance in value of German shipments from 24,000,000 pesos in the record year of 1921 to 43,000,000 pesos in 1922. It was equally inexplicable that Germany should ship over 5,300,000 pesos' worth of merchandise to Mexico during January, 1923, when its total shipments for the first six months of the banner year of 1921 amounted to only 11,800,000 pesos.

Now, however, the bureau is in receipt of information which, though unofficial, is considered trustworthy, indicating that in valuing, for statistical purposes, German imports into that country, the Mexican customs authorities have been using an arbitrary exchange rate of 100 marks to the peso. During February and March of this year, when this rate is said to have been used in making conversion, the average actual exchange value was approximately 11,000 marks to the peso.

It follows that if such an arbitrary rate was used, an inflated valuation was given to shipments from Germany and possibly from other European countries. If this is so, allowance for this element must be made in any consideration of recent Mexican import statistics, and the values of imports from Germany should be divided by about 110 in order to arrive at approximately correct figures.

Salvador Shows Economic Improvement.

Consul Lynn W. Franklin, San Salvador, April 14.

A marked tendency toward more stable economic and trade conditions was manifest in the Republic of Salvador during March and the first half of April. Imports and exports exceeded those for the same period of 1922, and the United States proportion of both was larger. Most mercantile houses are meeting their obligations, and the only failure of note was a San Salvador drug firm, taken over by its creditors. Exchange rates remained firm, the average for March being 2.01 colones to the American dollar, while the highest rate was 2.02, or 1 per cent above par.

Coffee prices held during the period and the 1922–23 crop will probably exceed, or at least equal, last season's production of over 100,000,000 pounds. With two such crops, the banks, the Government, and producers should be able to place their finances in good condition.

Sugar was exported in small quantities, and local food crops, such as corn, beans, and potatoes, have been plentiful and prices reasonable. Culture of henequen and cotton on a small scale is progressing.

But few public works or other construction, except railroad, are under way, as these are awaiting the necessary financing. A section of aviation has been established under the War Department and several American planes have been purchased.

Economic Situation in Nicaragua.

Consul Harold Playter, Corinto, April 13.

Business in general throughout the commercial sections of Nicaragua is approaching a sound basis. Roughly speaking, one-third each of the coffee and sugar crops have been exported at favorable prices and, although the price of coffee is falling, no serious reaction is anticipated. Some firms whose condition was considered precarious still have their doors open, with prospects that they will survive and pay obligations practically in full. While importations will naturally increase somewhat during the coming months, they show every indication of being confined to the actual needs of the people, and no great increase is expected.

Arrivals of cotton goods have been about normal; receipts of flour have increased in anticipation of a

higher import duty; and while the United States has held the bulk of trade, there has been a slight advance in the amount of German hardware and British cottons.

Crops are developing better than anticipated. Some estimates exceed the conservative figure of 30,000,000 pounds for coffee production (a gain of about 7,500,000 pounds over last year), and it is believed that sugar exports will approximate the past season's shipments of 266,000 tons. The United States is taking practically all the sugar and the bulk of the high-grade coffee.

Discussion of road building has been revived, especially the consideration of a wagon road to connect the lake region with Rama (head of navigation on the Bluefields River) and giving access to the east coast. This would be of great value to the country at large and particularly the cattle interests of Chontales. Talk of constructing the Atlantic Railroad to Monkey Point has given way to speculation as to a Nicaraguan canal.

Immigration into Brazil.

Commercial Attaché W. L. Schurz, Rio de Janeiro.

The Federal Government of Brazil is again making efforts, through the Minister of Agriculture, to interest the States of the Union in the subject of foreign immigration. The minister has made overtures to the various State governments, and has received favorable replies from those of Maranhao, Pernambuco, Espirito Santo, Parana, and Sergipe. These States offer to cooperate with the Federal Government in bringing colonists from Europe, and have named special commissioners to represent them in drawing up the terms of agreement with the Government in Rio de Janeiro.

Statistics of immigration into Brazil by nationalities for 1922 are not yet available. During 1921, 6,872 Germans migrated to Brazil, 4,000 of whom had their passage furnished by the Brazilian Government. As the Germans, however, did not take kindly to the conditions of life on the coffee fazendas, the Brazilian Government in 1922 ceased subsidizing immigration from Germany. Between January 1 and March 27 of this year 10,846 agricultural immigrants entered Brazil through the port of Santos.

Latin American Briefs.

Annual Budgets of Mexico.

A synopsis of the annual budgets of the Republic of Mexico for the last few years has been published by the bureau as a mimeographed circular. Copies may be obtained from the bureau or its district or cooperative offices by asking for Latin American Circular No. 124.

Dominican Republic Revenues Increase.

The revenues of the Dominican Republic for the month of March totaled $391,263, customs duties accounting for $231,591, while internal revenue during this period amounted to $159,672. These figures indicate an increase of $15,350 in internal-revenue collections during March over February, while customs receipts for March were $10,054 less than in February. (American Minister William W. Russell, Santo Domingo, April 14.)

Brazilian Curb-Market Sales.

During 1922 the sales of commodities at the curb markets, instituted by the Brazilian Government during the latter part of 1921 to reduce prices of staple articles to the retail trade, reached a total of 17,167,556 milreis (the average value of the milreis was approximately 13 cents). Since their inauguration the total sales have equaled 27,618,856 milreis. Of these sales, food products accounted for 10,675,920 milreis and dry goods amounted to 3,761,883 milreis, the balance being made up of sales of soap, hardware, crockery, footwear, and miscellaneous items. (Vice Consul Jack D. Hickerson, Rio de Janeiro, March 27.)

Message of Argentine President Optimistic.

Optimism pervades the message of President Alvear to the Argentine Congress, which convened in regular session on May 7 for consideration of the national budget. After expressing satisfaction regarding the excellent international relations of the country, he took up the discussion of the national finances and improvement program. Although the national debt has increased, the finances of the country are sound and the revenues are increasing. Bank deposits have increased, those of the Banco de la Nacion having amounted to 1,396,089,658 pesos on December 31, 1922, representing a rise of 86,000,000 pesos over the previous year's figure. Concerning the public utilities, the President noted especially the increase in railway traffic, the decrease in operation costs, the progress in the construction of new lines, and the fact that the postal and telegraph movement has increased approximately 10 per cent. The present administration has outlined an extensive program for improvement of sanitary and port works and highway construction. (Cable from Trade Commissioner George S. Brady, Buenos Aires, May 8.)

Additional information regarding Latin America appears in this issue under the following sections:

Automotive products: Chilean automotive trade shows improvement.
Transportation—Shipping: The Argentine merchant marine.
Tariffs and Trade Regulations:
Restriction in Nicaragua on archeological exports.
Spain extends second-column tariff rates to Honduras, Dominican Republic, Haiti, and Panama.

American Consular Officers on Leave.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Hathaway, jr., Charles M.	Dublin, Ireland	June 13	827 West Lincoln Avenue, Olyphant, Pa.
Huddle, J. Klahr	Hamburg, Germany	May 25	Shawhan Hotel, Tiffin, Ohio.

Weddell, Alexander W.	Calcutta, India	July 20	Department of State, Washington, D. C.

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The following figures, representing industrial and commercial movements during April have been received by the Department of Commerce:

Wool, Silk, and Cotton Consumption.

Receipts of wool at Boston in April amounted to 53,586,000 pounds, as compared with 64,537,000 in March and 34,194,000 in April a year ago. Wool consumption during March, reduced to grease equivalent, amounted to 62,859,000 pounds, as compared with 60,368,000 for the same month of 1922. Prices of wool and woolen goods during April showed no change from the prices prevailing in March.

Consumption of silk amounted to 38,193 bales, as compared with 24,247 in April, 1922, while stocks of silk on April 30 amounted to 28,657 bales, as against 39,436 on March 31, and 19,268 on April 30, 1922. The price of raw silk advanced to $9.31 per pound during April.

Consumption of cotton by textile mills amounted to 577,396 bales, as against 443,509 in April, 1922. The total consumption for the nine months ending April 30 amounted to 5,040,000 bales, as compared with 4,447,263 for the same period ending April 30, 1922. Total stocks of cotton amounted to 3,855,000 bales on April 30, being about evenly distributed between the mills and warehouses, and compares with a total of 4,674,000 bales at the end of April last year, when 3,213,000 bales of the total were held at warehouses. Cotton-fabric consumption by tire manufacturers in March, figures for which have just become available, amounted to 13,596,000 pounds, as compared with 9,431,000 in March a year ago. Cotton-cloth exports for the same month were on about the same level as that reached in 1922. Prices of cotton and cotton goods declined during April.

Metals—Bituminous Coal and Gasoline Production.

Pig-iron production in April amounted to 3,548,000 tons, as against 3,521,000 in March, and 2,072,000 in April of last year. Production of merchant pig iron reached 533,000 tons, and compares with 503,000 tons produced in March. Steel-ingot production, allowing for companies not reporting, amounted to 3,797,000 tons, compared with 3,889,000 during March. Exports or iron and steel for March were considerably lower than for the same month of last year.

During April orders were placed for 9,800 freight cars.

Zinc production amounted to 93,732,000 pounds, compared with 97,462,000 in March, while zinc stocks at the end of April amounted to 17,952,000 pounds, compared with 20,042,000 on March 31.

Bituminous-coal production in April amounted to 42,500,000 short tons, as against 46,807,000 produced during March. Beehive coke production increased slightly, while by-product coke decreased from the production figures of March.

March production of gasoline amounted to 630,701,000 gallons and stocks at the end of the month to 1,259,209 gallons, as compared with 854,232,000 gallons on hand at the end of March last year.

Building Costs—Northern Pine Production—Cement.

Building costs, as computed by the Engineering News Record on a 1913 base, stood at 217 for April, as compared with 165 a year ago. Figures on April building activity show that the aggregate value of new contracts awarded in 27 Northeastern States amounted to $356,000,000, as compared with $353,000,000 in April a year ago. Production of Northern pine amounted to 47,250,000 feet, as compared with 38,714,000 in March. Fire losses in April amounted to $32,638,000, compared with $41,160,000 in March.

Cement production for the month amounted to 11,322,000 barrels, as compared with 9,880,000 for March and 9,243,000 for the same month a year ago. April shipments of cement at 12,917,000 barrels compares with 10,326,000 for the preceding month, and 8,592,000 for April, 1922. Stocks of cement on April 30 amounted to 11,450,000 barrels, as compared with 14,470,000 at the end of April last year.

Coffee Supply—Railway Equipment.

The world visible supply of coffee stood at 6,104,000 bags on May 1, as compared with 8,944,000 bags a year ago.

Of the total freight locomotives in use, exclusive of those owned by switching and terminal companies, 23.7 per cent were in need of repairs on April 1, as compared with 25.5 per cent on April 1, 1922.

The weekly average car loading for April amounted to 940,991 cars, as compared with 916,492 during March, and 727,488 in April a year ago.

Data from Survey of Current Business.

The following table gives such data from the next issue (No. 22) of the Survey of Current Business as have been received up to May 15, 1923. Some data not included in the advance statements from the preceding issue (No. 21) are also given here. Another set of advance figures will be issued giving the remaining figures for the month of April.

All items given in the following table correspond with similar information in the issues of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the survey, where specific descriptions of the data and their sources are given. The figures given are in some instances collected by governmental agencies and in other cases by trade associations or technical journals. All of this is explained in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for $1 per year.

INVESTIGATIONS BY UNITED STATES TARIFF COMMISSION.

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 18 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Linseed or flaxseed oil.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922, and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of and of all other facts and conditions enumerated in said section with respect to the articles described in paragraph 54 of Title I of said tariff act, namely: Linseed or flaxseed oil, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 19 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Synthetic phenolic resin.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 28 of Title I of said tariff act, namely: Synthetic phenolic resin, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 20 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Smokers' articles made from synthetic phenolic resin.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 1454 of Title I of said tariff act, namely: Smokers' articles made from synthetic phenolic resin, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 21 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Phenol.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 27 of Title I of said tariff act, namely, Phenol, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 22 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Cresylic acid.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission hereby orders an investigation of the differences in costs of production of and of all other facts and conditions enumerated in said section with respect to the articles described in paragraph 27 of Title I of said tariff act, namely, Cresylic acid, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce, evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 23 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Briar-wood pipes.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 1454 of Title I of said tariff act, namely, Briar-wood pipes, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public

sion may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of Investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 24 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Print rollers.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 396 of Title I of said tariff act, namely: Print rollers, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of Investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 25 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Taximeters.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 368 of Title I of said tariff act, namely: Taximeters, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. Coal	10,877	4,715	51
Petroleum		14,256	547
Iron and steel	7,456	21,200	575
Leather	2,923	9,934	247
Lumber	10,844	21,171	565
Machinery	11,178	36,597	944
Paper	2,829	10,687	302
Rubber	4,114	11,107	299
Shoes	3,803	8,047	210
Specialties	15,948	61,481	1,332
Textiles	18,503	51,128	1,436
Transportation	5,244	11,376	377
Technical:			
Commercial law	3,998	8,137	160
Finance and investment		5,862	188
Research	5,217	5,660	94
Statistics (foreign trade)	10,990	18,559	700
Tariffs, foreign	16,300	16,315	360
Miscellaneous	144,704	199,379	5,948
Trade opportunity addresses [3]	127,385	272,298	6,5000
Trade lists (lists of foreign merchants)	71,900	133,027	5,459
Regional reclassification of above:			
Latin America	20,619	103,896	2,242
Near East	5,905	23,697	604
Far East	15,399	72,373	2,333
Eastern Europe	4,837	22,317	826
Western Europe	32,378	213,542	7,026

[1] Does not include inquiries handled by foreign service of the bureau (27 posts, 80 representatives) by the cooperative officers maintained by the bureau in 25 chambers of commerce and boards of trade in the United States.

[2] This classification of inquiries under "Regional," "Commodity," "Technical," and "Miscellaneous" headings cover only the period from Oct. 2, 1921, to July 1, 1922. The figures for trade opportunity addresses and trade lists are for the entire year.

[3] Information reserved from "Foreign trade opportunity" announcements, printed in each issue of the COMMERCE REPORTS. (Name and address of foreign inquirer interested in the purchase of American goods, including references, cable address, and other details.)

FOREIGN TRADE OPPORTUNITIES.

Reserved information may be obtained from the Bureau and its district and cooperative offices by duly registered firms and individuals upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

ACTIVITIES OF THE AGRICULTURAL IMPLEMENTS DIVISION.

All subjects relating directly or indirectly to the manufacture and export of agricultural implements and tractors, and their equipment, come within the scope of the work of the Agricultural Implements Division of the Bureau. The aim of the division is to maintain a close and effective contact with the trade through the medium of the National Association of Farm Equipment Manufacturers, to which 75 per cent of the manufacturers and exporters of implements belong. This relation is maintained by personal contact between the Chief of the Agricultural Implements Division and the officers and sectional divisions of the association by exchange of visits and through correspondence. Those manufacturers who are not members of any trade association are kept in touch with the work of the division by correspondence, through the Exporters' Index and COMMERCE REPORTS, and by exchange of visits whenever possible.

This cooperation having been established, it is the aim of the division to collect and disseminate information regarding the production and exports of implements in the United States; production and exports of foreign countries; the producing countries; the exporting countries; the importing countries; general trade and economic conditions which affect the sale and use of modern implements abroad; conditions of soil, climate, and custom that affect their sale and use; and, finally, the methods of foreign competitors, where competition is strongest, and the nature and extent of this competition.

All this information is intended to be handled in such a way that it will be of the most value to the trade. It will be sent to the association for distribution to its members; prepared for use in COMMERCE REPORTS; or digested, indexed, or filed so that it will be available for use for special purposes or in answer to inquiries. The division will prepare surveys of various markets from time to time and will endeavor always to have available information on matters of special and timely interest.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

Herbert Hoover, Secretary of Commerce — Julius Klein Director Bureau of Foreign and Domestic Commerce

Relying on Suggestion in Marking Export Shipments.

Advertising men value suggestion highly as a method of gaining attention. Many consider it more potent than bold-faced poster type. And advertisers are not alone in their realization of the value of suggestion, as this is keenly appreciated by experienced export managers.

In marking cases for oversea shipments it has always been difficult to decide as to the best methods to be employed in conveying the ideas of such marks as "HANDLE WITH CARE," "GLASS—FRAGILE," and "THIS SIDE UP." All shrewd exporters have come to the conclusion that such marks are a waste of time and stencil ink, because stevedores throughout the world are rarely able to read English. This renders precautionary words practically useless, and it is here that export managers have employed the valuable medium of suggestion.

A shipment of electric light bulbs from Germany arrived in New York the other day with a representation of such a bulb stenciled on each barrel. A similar practice is followed in handling shipments of fragile goods to Latin American countries. One firm places a sketch of a glass goblet on each package and all other precautionary marks are left off.

Another phase of this method of warning is utilized by a large cash register company. Wishing to impress upon the stevedores the fact that machines should ride in an upright position, it builds its cases in the shape of the cash register, making it obvious to all handlers how the machine should stand.

In all these practices the principle has been followed of suggesting to cargo handlers the nature of the commodity and relying on their inherent sense of care to bring about proper handling of the package.

Finland as a Field for Trade Development.

Finland, which since the World War has become an independent State, has an industrious population of 3,500,000, possessing a rather high degree of civilization and of education. The country has a stabilized currency and banks that are fundamentally sound, and is well on the way toward complete economic recovery.

In 1922 Finland exported goods valued at $96,000,000 and imported articles worth $85,000,000. These figures exceed the pre-war values of trade, and even if allowance is made for increase in prices, the volume of trade is not far short of that in the best years before the war. Finland's imports from the United States amounted in 1922 to $13,000,000, consisting practically in entirety of cereals, meats, and fats. The bulk of other requirements of the country, such as textiles, machinery, coal, and metals, was supplied by other nations. There is no reason why the United States should be unable to furnish the latter items to a larger degree.

American imports from Finland consist at present almost exclusively of one group—pulp, paper, and paper products. This country takes a large fraction of Finland's total exports of these products, but naturally very little of the other exports, which consist chiefly of lumber and dairy products. Shipments to the United States made up about 7 per cent of all Finnish exports during 1920, 1921, and 1922; but the proportion increased to 16 per cent in December, 1922, to 23 per cent in January, 1923, and to 22 per cent in February. This increase may bring about larger orders for American goods, provided the Finnish market is properly cultivated.

Such an expansion of our trade will depend mainly on the establishment of direct commercial intercourse, avoiding intermediaries; on the establishment of closer banking relations; and on better shipping facilities, insuring quicker deliveries.

Exhibiting at Foreign Trade Fairs.

The numerous trade fairs and exhibitions which are held in many countries throughout the world in the course of a year offer excellent opportunities for bringing American products to the attention of foreign purchasers. However, before going to the expense of placing an exhibit in one of these fairs, there are several points which the American manufacturer should consider carefully.

The most important consideration is the nature of the fair. To justify an exhibit the fair must be of a nature that will draw the class of people that will be interested in a particular exhibit. A careful investigation should be made of the probable success of the fair and the efficiency and honesty with which it is likely to be administered. The relative prominence that will be given to goods of foreign origin as against that to be given to domestic goods will help to determine the advisability of preparing an exhibit.

The manufacturer should know exactly for what purpose he wishes to exhibit his product, whether for propaganda or with a view to actual sales. An article which requires to be demonstrated or actually operated before it can be sold is especially well adapted for exhibition at such a fair. Many trade fairs are attended by thousands of persons drawn from an extensive area, and the advantage of reaching large numbers of people in one place will often justify what may appear to be a large expenditure for an exhibit. In this way one can sometimes accomplish results that otherwise would require expensive and protracted educational and sales campaigns over large areas.

The cost and the physical difficulties of getting an exhibit to the fair are two other important factors. They are frequently affected by concessions that may be made by the Government or by the promoters of the fair in order to attract exhibitors. These may include remission of customs duties, special arrangements for transportation to and from the fair, and others varying with the nature and location of the fair.

Having carefully weighed all these factors, the prospective exhibitor then has to determine: Is the fair being conducted by responsible and reliable parties? How large a market will it reach, and will it reach the particular market for which his product is suited? Is it possible to get an effective exhibit there on time? What is the cost; what are the results that may be accomplished, and are they of sufficient importance to justify the necessary expenditure?

The Bureau of Foreign and Domestic Commerce can frequently furnish information that will answer many of these questions, and a great deal of time may be saved by calling upon the Bureau for the information that it has available.

Adroit Bidding Wins Order in Anomalous Transaction.

Two American concerns, a short time ago, competed for the same business in a certain European port. The customer, who was unfamiliar with the American grading rules of the specific merchandise in question, received from one exporter a flat price covering all three grades included in his order. The other exporter, being fully familiar with the requirements of the foreign market, quoted three different prices for the three different qualities making up this order, and he secured the order. Upon investigation it was found that the firm receiving the order had in reality quoted a higher price than the first-mentioned firm, having pleased the foreign customer more because of the grading of the merchandise in the manner required by the particular foreign market. A peculiar part of the whole transaction is that the successful bidder bought his goods from his unsuccessful competitor.

QUERIES OF GENERAL INTEREST.

Briefly Answered by the Bureau.

Q. Is travel between Argentina and Chile over the Transandine Railroad possible throughout the winter months?

A. The regular semiweekly train schedule between Buenos Aires and Santiago is maintained with fair regularity throughout the year, although during the winter months, especially May, June, and July, there are occasional interruptions, sometimes lasting 10 days or 2 weeks. In case of such interruption it is customary for passengers to cross the Divide on mule back, and usually they suffer little actual delay.

Q. What country in the Far East offers the best opportunity for the establishment of a general import and export business?

A. At present India seems to be the best field for such an American house. There is not a single American import and export house in India at present and only one or two branches of export commission houses. The opportunities for the sale of iron and steel products, machinery, and miscellaneous bazaar goods are reported to be excellent.

Q. Banks in Venezuela decline to protest drafts. What can be done about this?

A. A bank is not obliged to accept a draft sent it for collection or to undertake the trouble and expense of protesting. The bank has the right to return the draft to sender, stating that it does not undertake protests. The subject of advisability of protesting drafts in Latin American countries is treated in a handbook which is now in course of preparation by the bureau.

Q. Do foreign customs officials object to including advertising matter in the same package with goods?

A. In general, if invoiced separately, the inclusion of advertising matter in the same package with goods is permissible, with a few exceptions. This should not be done in the case of Venezuela, Colombia, and the countries of Central America (except Panama), since the whole package may thus become dutiable at the rate of the most highly dutiable commodity in the package. In either case, and even if the advertising matter has no commercial value, their inclosure should be indicated on the invoice.

Q. Does the Mexican Government maintain a weather service?

A. Yes; the Mexican Department of Agriculture maintains the Central Meteorological Laboratory at Mexico City, with a station at Guadalajara.

Q. How does a declining silver market affect China's import trade?

A. It stimulates "spot" transactions, as the Chinese wish to purchase while silver has a relatively high purchasing power in gold countries. If the forward price of silver offered by the banks is believed to be lower than the actual price will be on a given date, it checks forward purchases of gold drafts to accommodate orders for future delivery. If the falling "spot" price of silver is slowed up or shows a tendency to strengthen, merchants again purchase gold drafts forward.

Q. Can foreign duties be prepaid?

A. No; except on advertising matter, and only when shipped to Australia, Canada, and the Union of South Africa (here limited to certain types of advertising matter), where special-duty stamps can be obtained for affixing to the package at time of shipment. In all other cases, if it is desired to have a package delivered without charge to the recipient, arrangement can be made with an international freight-forwarding concern whereby it will handle the shipment to the point of delivery and advance all charges for the shipper's account.

If the amount of duty can be definitely ascertained at this end, an international money order for that amount may be sent to most countries to reimburse the consignee.

MONTHLY CABLE REVIEWS

WESTERN EUROPE.

Alan G. Goldsmith, Chief, Western European Division.

COMMUNICATIONS STRIKE HALTS BELGIAN BUSINESS.

Based on cable from Acting Commercial Attaché Samuel H. Cross, Brussels, and Consul G. S. Messersmith, Antwerp, May 19.

Although the Belgian business and industrial situation showed a tendency to improve after the early part of April, the general strike of railway, telephone, telegraph, and postal operatives has proved a serious setback. Inability to transport British coal from the ports is causing further difficulties in the metallurgical industry which was already handicapped by the fuel shortage and lack of orders. Native textile markets are stagnant and the industries are kept in motion chiefly by foreign orders. Plate and window glass plants are the most favorably situated of the industries.

Note Circulation Slightly Lower.

The note circulation of the Banque Nationale during the past month was somewhat below the high March levels and remained close to 6,850,000,000 francs. Money was slightly tighter, although rates changed but little. Call money was available at 3½ per cent, bank indorsements at 4½ per cent, and bank acceptances at 4¾ per cent. The stock market was fairly steady during the month, the only noteworthy gain being made in glass shares.

Belgian exchange has been subject to considerable fluctuation, the low point for April having been $0.0559 on April 4, from which it rose to a high of $0.0589 on April 27. Since the latter date it has fallen off to $0.0575 on May 19.

Serious Tie-up From Communications Strike.

Business conditions have been severely affected by the strike of the railroad, telephone, postal, and telegraph employees, which began during the last week in April and has served to paralyze freight and postal service throughout the country. On May 16 the strike finally extended to passenger service on the most important rail line between Antwerp and Brussels, thus temporarily tieing up international traffic between France and the Netherlands. The Government mobilized 6,000 engineers of the reserves as a railroad battalion on May 12, and is endeavoring to clear up congested freight at Antwerp. Several trains are also being operated between Brussels and Antwerp under a military guard. While the postal strike has now been broken at Liege and Antwerp, the situation is still serious at Charleroi and Ghent.

Agricultural conditions are favorable and indicate a heavy production in all crops. Figures for sowings show little change, except for an increase in sugar beets and flax, and a smaller acreage of potatoes.

Metallurgical Conditions Less Favorable.

In the metallurgical industries, pig-iron production increased during April, recording 172,000 tons as against 169,000 tons for the previous month; but raw and finished steel production decreased, totaling 165,000 tons for raw steel and 145,000 tons for finished steel, as compared with the March figures of 177,000 tons and 157,000 tons, respectively. The producers' situation is generally less favorable as the result of the railroad strike, a decrease in unfilled orders, and offers of German stocks which have been seized by the occupying forces. Pig iron is now about 100 francs lower than a month ago, and even more violent reductions prevail on semifinished and finished steels.

Although the coke production showed improvement during the latter part of April and ovens were working at about 85 per cent of capacity, the difficulty of getting British coal shipments through from the ports has caused a reduction of coke-oven operation to 65 per cent. The present base price for blast-furnace coke is 199.36 francs per ton. Luxemburg plants are handicapped by the refusal of the French to furnish coke derived from confiscation of mine stocks in the Ruhr. The high price of tar caused briquet production to decrease 20 per cent during April. Internal coal shipments are tied up by the railroad strike and high freight rates demanded for canal barge hauls. Coke arrivals from the Ruhr during the first fortnight of May are reported at 6,500 tons.

Export Business Supporting Textile Industry.

The home demand for textiles is stagnant and the Flemish industries are sustained only by export orders. Very little new business is reported in cotton yarns, although weavers are operating for export and in some cases have orders which will carry them over the summer. Forward orders held by cotton spinners have decreased rapidly. Present deliveries represent orders taken at lower prices and comparatively little new business is coming in, which causes an uncertain outlook. Officially there is no short-time operation, however. Linen mills are working for American fabric orders and are engaged until September.

The position of the plate-glass industry is excellent, and window-glass plants are booked for three months ahead. Window-glass sales for the first quarter of the year totaled 76,000,000 feet, and 18 furnaces are now operating.

Conditions at Antwerp.

Consul Messersmith reports that an increased shipping movement was noted at Antwerp during April, and imports of British coal showed large gains. Although the petroleum rate war has been concluded, all companies are selling at cost. Grain stocks are smaller, with a good demand for corn and oats, especially spot. Hide transactions were only half of the March total, but the wool market has improved and prices are stronger. The expected spring demand for lumber did not materialize, and business is disappointing. Pork products have been affected by exchange, and large shipments are irregular and inferior to last year's total for the same period. While canned fruits find little demand, there is an increased interest in dried fruits. Business in American tobacco is limited to cheap grades, with an increased demand for yellow Virginia and light Burleigh.

DEPRESSION IN SPAIN CONTINUES.

Based on cable from Commercial Attaché C. H. Cunningham, Madrid, Spain, May 12, with cooperation of Consul General Totten, Barcelona.

The revenues of the Spanish Government, while slightly increased from last year, are still much lower than expenditures, and the general situation of the Government is growing steadily less favorable. The peseta has recently slumped after remaining practically stationary for about six months. An internal loan of 500,000,000 pesetas, issued on May 4, failed to receive the usual oversubscription. The new bank clearing houses seem to be a success, and foreign banks are soon to be admitted. The only Spanish industries showing signs of activity are coal and metallurgy. Textiles remain greatly depressed. Crop prospects are good, and with the improvement in the coal and metallurgical industries are expected to increase domestic purchasing activities. The cost of living remains high, and labor disturbances are frequent and violent. Spanish exports in 1922 declined considerably from the preceding year, and the unfavorable balance of trade increased notably.

No Improvement in Spanish Government Finances—Commercial Treaties.

The ordinary revenues of the Spanish Government for the 11 months ending February 28, 1923, amounted to 2,160,000,000 pesetas, compared with 2,060,000,000 pesetas for the corresponding period of the preceding fiscal year. Expenditures in the same periods amounted to 2,740,000,000 pesetas and 2,850,000,000 pesetas, respectively. The excess of expenditures, though somewhat lower than last year, is still extremely great.

On May 4 an internal loan of 500,000,000 pesetas, bearing 4½ per cent interest, was effected by the Spanish Government. The loan is payable in six months, subject to renewal, and the obligations are free from all taxes. Unlike previous loans of the same type, the May 4 issue was not greatly oversubscribed, and of the amount realized 215,000,000 pesetas were needed to cover the extension of the 5 per cent obligations from a previous loan.

Various treaty negotiations are being carried on by the Spanish Government. On April 30 the modus vivendi with Germany was extended to June 30, and on May 1 a modus vivendi was concluded with Rumania effective for three months, granting to Spain most-favored-nation treatment, and to Rumania second-column privileges. An emissary from the Russian Government visited the Madrid Commercial Mission to investigate the Spanish market for lumber, petroleum, and wheat and to urge the mutual advantages which would accrue from trade between Spain and Russia.

Peseta Declines—Operations of New Clearing House.

After remaining fairly steady around 15½ cents for several months, the peseta began to decline about the 1st of March, and on May 10 the quotation was 15.21 cents, the lowest since October 26, 1922. Various factors associated with the present unfavorable financial situation of the Government have contributed to this decline. A further drop in comparison with the dollar would tend to restrict Spanish import trade.

Trading on the Madrid Stock Exchange was fairly brisk in April, totaling 80,000,000 pesetas, compared with 55,000,000 pesetas in February. Industrial stocks were weaker, while bank and rail shares showed strength.

During the 20 days in April following the establishment of the Madrid clearing house on April 9 clearings totaled 289,000,000 pesetas. The present turnover is at the rate of 13,000,000 pesetas per day, and this is expected to increase to 25,000,000 pesetas when foreign banks enter the clearing house. Arrangements have been made for their participation without the discriminations against them previously established. The prospects are satisfactory for the fixation of the capital of foreign banks in Spain for taxation purposes at the conventional amount of one-sixth of their total deposits.

Statement of the Bank of Spain.

The statement of the Bank of Spain for May 6 shows a further slight increase in note circulation compared with April 7. The leading items for the two dates are as follows:

	April 7.	May 6.
Note circulation	4,140,000,000	4,160,000,000
Current accounts	1,040,000,000	950,000,000
Discounts	708,000,000	695,000,000
Guaranteed credits	845,000,000	898,000,000

The Government has a credit balance of 554,000,000 pesetas with the Bank of Spain due to the loan floated on May 4.

In the issue of COMMERCE REPORTS for March 26, page 791, it was stated that, "Gross earnings of the Bank of Spain in 1922 have been reported as 500,000,000 pesetas and a dividend of 28 per cent was declared." The figure given for gross earnings was incorrect due to garbling of the cable in transmission. Gross earnings in 1922 amounted to 125,900,000 pesetas; the dividend was 28 per cent compared with a 44 per cent dividend in 1921.

Industries Weak Except Steel and Coal.

Business depression continues in most lines, but the coal and steel industries are showing considerable strength. Prices of the best Spanish coal are at approximately the same levels as British pea and gas coal and are considerably lower than Cardiff coal. The Spanish railways are placing large orders for British coal, but American competition is believed to be impossible because of the tariff differential in favor of the British product.

No improvement has occurred in the textile situation, which has been bad for some months past, but enhanced purchasing power within the country resulting from good crops and the increase in siderurgical and coal production is expected to provide better demand in the home market. Consul General Totten, Barcelona, reports that large import shipments of British gray cloth are replacing the Spanish product.

Mercury production in the first four months of 1923 has amounted to 20,200 flasks. During the same period sales have reached 32,500 flasks, over half again as much as the total for 1922. The annual report of the Rio Tinto mines shows net earnings of over £1,000,000 compared with £500,000 for the preceding year, reflecting improvement in the copper mining industry and allowing payment of a 30 per cent dividend.

Crop Prospects Bright.

Abundant and timely rains have made crop prospects better than at any time in the past five years.

The outlook for fruit is also excellent. Locusts have appeared in Extremadura (in western Spain) and in Aragon (in northeastern Spain) and have caused considerable loss in the latter region.

Expanding Transportation Facilities.

Railways have been authorized to continue the 15 per cent surcharge inauguarated in 1918 in spite of increased earnings which amounted in the first quarter of 1923 to 10,000,000 pesetas more than in the corresponding period of 1922 and to 25,000,000 pesetas more than in that period of 1921. This action, however, has met with considerable opposition. Bonds to the amount of 30,000,000 pesetas have been issued for new railway construction. The Government has opened bids for the construction of a new section of the railway between Ferrol and Gijon at a cost of 3,700,000 pesetas.

A subsidized steamship service was opened this month with the west coast of South America through the Panama Canal to Valparaiso, Chile. The former Philippine service has been extended to Chinese and Japanese ports. Official statistics show approximately 600,000 tons of shipping under construction.

Labor Unrest Continues.

At Barcelona labor disturbances are frequent. Strong syndicalist outbursts have occurred, accompanied by violence and assassinations. Further strikes are threatened at the Barcelona metallurgical plants through demands for wage increases. Similar demands are being made by workers in the iron mines. The cost of living in Spain, though lower than last year, shows no tendency to decline further. The index number of wholesale prices in March, 1923 (average prices for 1913 equal 100) was 171 compared with 170 in February and 177 in March, 1922.

Trade Balance Increasingly Unfavorable.

Foreign trade figures for 1922 recently issued show a decline in exports and an increase in imports. Exports dropped to 1,453,000,000 pesetas in 1922 from 1,584,000,000 pesetas in 1921, while imports totaled 3,037,000,000 pesetas compared with 2,834,000,000 pesetas in 1921. The unfavorable balance of trade was thus increased from 1,250,000,000 pesetas in 1921 to 1,584,000,000 pesetas in 1922.

Exports to France in the first quarter of 1923 amounted to 125,000,000 francs compared with 27,500,000 francs in the first quarter of 1922, while imports in the same periods amounted to 208,000,000 francs and 71,000,000 francs, respectively. The following increases are shown in lines competitive with American products: Automobiles, 4,000,000 pesetas to 18,000,000 pesetas; rubber goods, 2,000,000 pesetas to 12,000,000 pesetas; lumber, 4,500,000 pesetas to 10,500,000 pesetas; and machinery, 2,500,000 pesetas to 9,500,000 pesetas. The small figures for last year are due mainly to the fact that at that time no commercial treaty was in existence between the countries. The present treaty, giving reciprocal most-favored-nation treatment did not go into effect until about July 1, 1922.

The consul general at Barcelona reports that exports to the United States from that district in April were valued at $600,000 compared with $350,000 in March. Inquiries have recently been made in various parts of Spain for American wheat, lumber, sugar, pharmaceutical products, and machinery.

SWEDISH FOREIGN TRADE CONTINUES UNFAVORABLE.

Based on cable from Consul W. A. Leonard, Stockholm, May 20.

The foreign trade of Sweden during April again showed an unfavorable balance, imports being twice as great as exports. The wood pulp and lumber industries are improving, but remain below normal. The stock exchange turnover during the month increased, as did likewise the issuance of new capital. Business failures during the month decreased in number as compared with the month of March.

Note Circulation and National Debt—Bourse Turnover.

The note circulation of the Swedish Riksbank amounted on May 12 to 529,000,000 crowns, a decrease of 20,000,000 crowns since April 7. The gold reserve, reported at 274,000,000 crowns, and the national debt at 1,568,000,000 crowns a month ago, remained practically unchanged. Clearings at the Riksbank amounted to 1,776,000,000 crowns and showed an increase of 8,000,000 crowns over a month ago.

The bourse turnover for February was given at 11,300,000 crowns—showing a considerable decrease from the January figure of 14,063,860 crowns. The total bourse turnover for the year 1922 was 195,000,000 crowns. The bourse index on May 7 showed industrials at 100.3 and bank shares at 86.3, as compared with 105 and 89.8, respectively, a month ago.

Capital Emissions—Price Movements.

Capital issues increased from 14,000,000 crowns in March to 32,200,000 for April. Commercial failures during April numbered 273, a decided decrease from 332 in March and 338 in February.

The wholesale price index, registering 159, shows a decrease of 3 points from the index number of a month ago.

Emigration to the United States, which amounted to 6,177 in the quarter ended March 31, totaled 3,779 during April.

Foreign Trade Shows Unfavorable Balance.

The imports by weight of the principal commodities for April as compared with March were as follows: Wheat—April, 28,000 metric tons; March, 16,000 metric tons; maize—April, 4,300; March, 3,400; mineral oils—April, 12,700; March, 12,600; cotton—April, 950; March, 2,300; iron and steel—April, 7,900; March, 18,000. There were 274,000 metric tons of coal and coke imported during April. Imports of automobiles numbered 1,594 during April as compared with 836 for March.

The exports of the principal commodities during the month were as follows: Wood pulp, 21,500 metric tons; sawn lumber, 37,312 M board feet, including 4,600 M feet box shooks; planed lumber, 8,650 M board feet, including 680 M feet box shooks; paper, 16,400 metric tons; matches, 2,300 metric tons.

Declared exports from Sweden to the United States during April were valued at $1,720,000, including paper, valued at $406,000; iron ore, $352,000; and wood pulp, $305,000.

Swedish imports during March were valued at 108,770,000 crowns, while exports were valued at only 60,914,000 crowns. The total value of imports during the first quarter of 1923 was 284,000,000 crowns and of exports, 175,000,000 crowns.

Economic Conditions in the Netherlands Unchanged.

Based on cable from Paul S. Guinn, office of commercial attaché, The Hague, May 18.

General business conditions in the Netherlands remain unaltered and continue to be unfavorably affected by the European political situation. Increased confidence for the future is in evidence, however, as a result of favorable developments in the Dutch East Indies. The results shown by 1922 reports, and dividends of old established local companies indicate adaptation to present conditions. Recent favorable developments in the Dutch East Indies include higher prices on colonial products, a large reduction in the 1923 floating debt, and an improved export trade. The number of unemployed in the Netherlands on May 5 was 83,764 as compared with 87,695 on April 14.

The foreign trade of the Netherlands for April showed imports amounting to 169,713,564 guilders and exports to 97,000,415 guilders; imports for March totaled 165,449,351 guilders and exports 106,977,347 guilders. The State revenue for April amounted to 36,880,927 guilders as compared with 39,500,000 guilders for April of last year. The March index figure for retail prices was 149 as compared with 149 for February and 148 for January. (The prices of 29 articles in 1913 are used as a basis of 100.)

FAR EAST.

F. R. Eldridge, Chief, Far Eastern Division.

FIRM TONE MAINTAINED BY CHINESE MARKET.

Based on cable from Trade Commissioner Lansing W. Hoyt, Shanghai, May 19.

With an active cotton piece-goods market and improvements in the steel and wood-oil markets, Chinese trade maintains a favorable position. The wheat, tobacco, and tea crops are estimated to yield 50 per cent more than 1922 crops. Business conditions in general are reported quiet.

Silver Stocks Increase.

Shanghai bank stocks of silver are estimated at 76,000,000 Mexican dollars—an increase of $5,000,000, compared with April stocks. The New York bank buying rate on May 19 was $0.7438 for the Shanghai tael and $0.5399 for the Mexican dollar. The silver market is holding firm. The announcement by the United States Mint that only 20,000,000 ounces of silver remained to be purchased under the Pittman Act had already been discounted and did not have any immediate effect. Province of Kwangtung notes are quoted at 90.5 per cent discount—practically the same as last month. The mint at Canton remains closed.

Active Market in Cotton Piece Goods.

The Shanghai cotton piece-goods market (one of the surest barometers of China's trade) is active with a good demand. Piece goods bought last year and held in godowns awaiting a favorable market are fast being removed to replenish the stocks of upcountry stores, which are practically bare. It is generally believed that the present crisis resulting from the bandit activities in Shantung will keep forces so occupied as to prevent expected military operations in North China, and, to this extent, exercise a beneficial effect on business.

Firm Lumber Market—Wood Oil Easier.

The lumber market is firm and stocks are light. The market for wood oil has become easier, owing to improvement in the movement of supplies from the upper Yangtze River above Hankow. It is reported that there are approximately 1,500 tons of wood oil in stock at Hankow.

Improvement is noted in the demand for steel. The charter market remains dull. The Canton silk market is reported active.

Crop Conditions Excellent.

With excellent weather conditions prevailing over a large section of China's crop-producing area, it is estimated that the wheat, tobacco, and tea crops will exceed last year's production by 50 per cent. Indications are that the 1923 crop of Yangtze Valley silk will equal 40,000 piculs, or a 30 per cent increase over last year's yield (1 picul=133⅓ pounds).

China's Declared Exports to the United States.

Exports to the United States from 14 principal districts of China for the first quarter of 1923 aggregated $45,600,000. The port of Shanghai led with $13,800,000—an increase of $2,500,000 over the same period in 1922. Next in order were: Tientsin, $10,300,000; Canton, $7,900,000; Hankow, $4,598,000; Hongkong, $3,300,000; Dairen, $1,392,000; and Chefoo, $969,000. The exports from these seven ports represent over 92 per cent of China's total exports to the United States.

Business Quiet—Imports Stationary and Exports Decrease.

In general, imports are remaining stationary and exports are decreasing. Business is quiet as compared with last month. The movement of goods in the interior is being greatly handicapped by increasingly heavy taxes levied by the provincial Tuchuns without the consent of Peking. In spite of these conditions several railroads have reported insufficient equipment available to handle the business offered.

Cost of Living Declines Slightly.

The cost of living, as represented by the Shanghai commodity index number, declined from 159 (based on 1913 as 100) for March to 158 for April. General building and construction continue normal.

AUSTRALIAN CONDITIONS CONTINUE FAVORABLE.

Based on cable from Trade Commissioner J. W. Sanger, Melbourne, May 18.

The general situation in Australia continues favorable. The total foreign trade for March was less than the February trade, but was greater than in March, 1922. The New South Wales Bank loan of £1,000,000 has been heavily oversubscribed. The Federal Government is considering a reduction in the number of ships of the Commonwealth Line.

Foreign Trade Shows Decrease and Seasonal Fluctuation.

Total exports for the month of March were valued at £13,490,000—an increase of £290,000 over February exports and of £170,000 over exports for the month of March, 1922. Total imports amounted to £10,190,000—a decrease of £770,000 from February figures, but an increase of £1,380,000 over the total imports of March, 1922.

February imports from the United States totaled £2,290,000; exports, £1,220,000. The former show an increase of £340,000 over January, 1923, imports and £50,000 increase over the figures for February, 1922.

Slight seasonal decreases were shown in imports of knit goods, textiles, agricultural implements, motor vehicles, lumber, and iron and steel wire. Imports of petroleum, motor spirits, and metal machinery from the United States exhibited an increase. Wool exports to March 31 amounted to 84,000,000 pounds. Wheat exports to April 30 totaled 22,716,000 bushels. This season's wool shipments received at the seaboard to April 30 aggregated 1,778,000 bales. Of this total, 1,709,000 bales were sold, 33,000 shipped, and 36,000 held in store.

Prospects are good for an excellent market in automotive vehicles, and stocks on hand are reported as adequate. The price of gasoline has declined to 20s. 8d. per case (equivalent to 8 imperial gallons or 10 American gallons).

Bank Accounts Increased—Bank Loan Issues Taken.

There has been a slight decrease in the exchange rate of the pound sterling. The Australian selling price is $4.60 and the buying rate is $4.65, as compared with April quotations of $4.64 and $4.71. The demand for bank loans is decreasing and both checking and savings accounts continue to show increases. Bank-note issue shows a slight contraction. Melbourne and Sydney bank clearances from January 1 to May 7 were £520,000,000.

New South Wales-London loans to the extent of £6,000,000, bearing interest at 4½ per cent, have been taken at an issue price of £94. A local loan of a New South Wales rural bank, amounting to £1,000,000, with interest at 5½ per cent, has been heavily oversubscribed.

Rainfall Benefits Crops—Proposal to Reduce Ships.

Slight rains early in May gave some relief from fears of a drought, but the fall was not sufficient to insure an average wheat yield next season. It is feared, too, that lack of rains will affect unfavorably the quality and quantity of the wool clip.

The Federal Government is considering a proposal to reduce the number of ships in the Commonwealth Line, retaining only 24. Present indications are that support of Government trading ventures is declining. The South Australian government has placed an order with an American firm for 6,000 tons of steel plate.

Efforts to stimulate immigration appear to be meeting with success and the movement is increasing. Strikes in the northern collieries of New South Wales continue and 8,000 miners have walked out.

A slight increase is registered in the cost of living, the commodity index for March being 1,628, against 1,612 in February and 1,654 in January.

The Queensland election was won by the Labor Party.

March Imports Into New Zealand.

The total amount of imports into New Zealand for March was £3,680,000, while exports totaled £5,740,000, giving the Dominion a favorable trade balance of £2,160,000 for the month. Exports of New Zealand's chief products (January to March) are given as follows: Wool, 235,000 bales; butter, 430,000 hundredweight; cheese, 531,000 hundredweight; mutton 241,000 hundredweight; lamb, 490,000 hundredweight.

47947°—23——2

ECONOMIC CONDITIONS IN JAPAN DURING APRIL.

Based on cable from Commercial Attaché James F. Abbott, Tokyo, May 18.

An unusually large demand existed in Japan for money during April to finance raw cotton movement. The scarcity of funds caused more foreign loan bonds to be sold on the New York market. The spring cocoon crop is predicted to be larger than last year, while the tea crop is normal. Warehouse stocks show increases, but Japan's trade balance was less unfavorable during April. April exports of silk textiles were greater than in March. Coal Production increased by one-third during the month. The automobile market is active.

Money Tight During April.

The month of April was characterized by a general tightness in the Japanese money market and higher bank rates, because of the unusually large demand for funds to finance the shipments of raw cotton and the payment for Government bonds held abroad. As a result of this scarcity of money abroad, Japanese bankers were selling foreign-loan bonds on the New York market in increasing numbers. The month closed, however, with a much more optimistic feeling, due to the certainty of a normal tea crop and predictions that the spring cocoon crop will be above that of last year.

Gold Holdings Decrease—Decline in Capital Expended.

Japan's gold holdings at the end of April stood at 1,182,000,000 yen (1 yen=$0.4985)—a decline of 28,000,000 yen from the amount held on the first of the year and 1,000,000 yen less than on March 31. The total gold holdings on April 15 amounted to 1,803,000,000 yen. Of this amount 648,000,000 yen were reported as being held by the Government and 1,155,000,000 yen by the Bank of Japan. On April 15, 1,208,000,000 yen of the total gold holding were being held in Japan and the remainder abroad, principally New York.

Capital expenditures during April, as reported by the Hypothetic Bank, amounted to 109,900,000 yen, as compared with 205,300,000 yen during the preceding month. These expenditures during April included Government issues amounting to 35,000,000 yen, as compared with 81,600,000 during March; municipal loans totaling 6,500,000 yen, as against 26,600,000 yen during the preceding month; debentures aggregating 29,800,000 yen, as compared with 56,400,000 yen during March; and capital-stock payments amounting to 38,600,000 yen, as against 40,700,000 yen during the previous month.

Note Issue Increases.

The total outstanding note issue increased 154,000,000 yen during the month of April, standing at 1,464,000,000 yen on April 30. Of this amount the Bank of Japan note issue amounted to 1,219,000,000 yen—a decline of 28,700,000 yen from the note issue outstanding

on March 31, and 35,600,000 yen less than a year ago. This issue of Government small notes amounted to 121,000,000 yen at the end of March, as compared with 203,000,000 yen of this class of notes outstanding a year ago.

Bills exchanged at the 16 clearing houses of Japan during the month of March amounted to 2,612,712 in number, representing a value of 6,509,993,000 yen. These totals, compared with March, 1922, represent an increase of 79,185 bills, but a decrease of 58,349,000 yen in value.

Postal Savings Show Large Increase.

Postal savings at the end of April had reached the record level of 1,029,000,000 yen—an increase of 35,000,000 yen during April. This rapid increase should not be taken, however, as an index of the prosperity during the month. It has resulted mainly from a feeling among the people that this method of saving is perhaps more secure than the banks. The fact that bank returns for the month show loans exceeding deposits may also have a bearing on this trend. Postal savings have been encouraged by the Government during the last few months. The moving-picture theaters have been used extensively as a means of placing before the people the advantages of this kind of saving.

Cost of Living Stationary—Wages Increase.

The cost of living during April showed no change from March. The index, as indicated by the average wholesale prices of representative commodities in Tokyo, stood at 259, as compared with 261 for April, 1922. The continued high level of commodities is variously attributed to reckless buying, improvement in the foreign trade, and an increase of import duties, which is forcing manufacturers to buy raw materials at higher prices. A comparison of index numbers of Japan with those of other countries seems to indicate that the Ruhr situation has also affected the general price level.

There was a noticeable increase in wages during the month of April, despite the fact that unemployment is still in evidence. This may be attributed to the growing strength of trade-unions and to the fact that the unemployment situation has been somewhat relieved by a "back to the land" movement. As a consequence of the raising of wages, unrest and strikes have been decreasing.

Larger Warehouse Stocks.

Warehouse stocks at the end of April stood at 446,600,000 yen—an increase of 27,700,000 yen, as compared with stocks on hand at the end of March. The value of the major commodities in warehouses at the end of April showed very little change from the preceding month, the principal change noted being an increase of 3,000,000 yen in the value of cotton textiles. An increase of 2,500,000 yen in the value of American raw cotton was compensated for by a decrease of 3,000,000 yen in stocks of Indian cotton, leaving the total raw-cotton stock practically the same as the amount held at the end of March.

Stocks of raw silk in Yokohama at the end of April amounted to 27,000 bales, as compared with 29,000 bales at the end of March. Wholesale stocks of cotton yarn at Kobe and Osaka totaled 36,000 bales—a decrease of 6,000 bales from the amount held on March 31.

The following table gives the value of stocks of leading commodities in Japanese warehouses at the end of March, as shown in the Mitsubishi reports for that month, compared with those at the end of the previous month.

Value of principal stocks in Japanese warehouses on March 31 and April 30, 1923.

NOTE.—All figures are preliminary and subject to revision.

Japan's Exports Increase—Imports Decline.

Japan's imports for April amounted to 188,000,000 yen—a decline of 12,000,000 yen from imports during the preceding month—while exports aggregated 149,900,000 yen, as compared with 121,000,000 yen during March. The unfavorable trade balance of March, which amounted to 79,000,000 yen, was cut down to 38,100,000 yen during April. This trade-balance improvement is to be expected at the present time, as the season of heavy imports in Japan is nearing its close. The chief items of Japan's trade during March and April, 1923, are shown in the following table. These figures are preliminary and subject to revision.

Japanese imports and exports in March and April, 1923.

Imports.	March.	April.
ARTICLES.		
	Yen.	*Yen.*
Raw cotton	62,871,000	55,700,000
Cotton textiles	667,000	400,000
Woolen textiles	4,452,000	1,300,000
Machinery and parts	13,079,000	10,200,000
Lumber	4,881,000	5,600,000
Rice	1,095,000	900,000
Automobiles, parts, and accessories	976,000	1,200,000
All other articles	111,979,000	112,700,000
Total imports	200,000,000	188,000,000
EXPORTS.		
Silk:		
Raw	(1)	(1)
Textiles	7,367,000	9,100,000
Cotton:		
Textiles	20,558,000	20,000,000
Yarn	9,919,000	10,010,000
Matches	1,210,000	1,000,000
All other articles	81,946,000	109,790,000
Total exports	121,000,000	149,900,000

[1] This item was garbled in transmission of cables. Statistics will be published in a later issue of COMMERCE REPORTS.

Imports of specie during April amounted to 26,500 yen, as compared with 15,000 yen during March. No specie was exported during the month.

Japanese Shipping Improving—Freight Rates Higher.

The charter market during the month of April was somewhat higher and general shipping conditions are reported to be improving. On April 15, 139 ships, with a combined tonnage of 58,000 tons, were reported as idle, as compared with 150 idle steamers of 57,000 tons at the same time in March. These figures indicate a greater demand for small-sized vessels, which is explainable by the fact that, in addition to increased local activity, a considerable number of small (tramp) steamers have been transferred to Atlantic waters during the last two months as a result of the demand for shipping in that quarter.

A shipping pool was organized during the month by four Japanese shipping companies for the purpose of maintaining high freight rates by chartering all vessels that are offered at low rates, each company contributing 500,000 yen. As a result of this action, the coastal-freight market is expected to remain firm. Another interesting development in Japanese shipping circles is the proposal of shipping men to reduce the capitalization of their ships and plants to somewhere near their actual present value, instead of trying to pay dividends on the artificial values of the war boom period.

Coal Production Increases—Automobile Market Active.

Coal production during April amounted to 2,400,000 tons, as compared with 1,800,000 tons in March. Stocks are increasing in various centers and it is possible that the 12 per cent restriction of production, which was agreed upon at a conference of coal operators last October, will not be removed this spring as was originally intended.

The lumber, iron, and steel markets were reported to be active during the month on account of seasonal activity. Imports of these commodities were difficult, owing to lower prices in the domestic market. Lumber importers are still complaining of the difficulty in securing supplies from America because of the large local demand in the United States for lumber.

The vegetable-oil market was active during the month, large shipments being reported. Prices were declining at the close of the month.

Automobiles enjoyed good sales during April and future prospects are said to be good. It is reported that the Government is buying large numbers of automobile trucks and, as a result of the lowering of taxi fares, the number of taxi companies in Tokyo are increasing.

EASTERN EUROPE AND LEVANT.

E. Dana Durand, Chief, Eastern European and Levantine Division.

GREEK PROPOSALS FOR INCREASING AGRICULTURAL PRODUCTION.

Based on reports from Acting Commercial Attaché R. O. Hall, Chargé d'Affaires Jefferson Caffery, and Consul General Will L. Lowrie, Athens; Consul George K. Stiles, Patras; and other sources.

Greek exchange is on the upward trend. Property holders are handicapped by heavy taxes. A free zone has been established at Saloniki. Measures to increase agricultural production are proposed by the Government. Exports of currants show a heavy decrease. The control of foreign exchange in connection with the exportation of tobacco has been practically abolished.

Exchange Situation Improves—Property Taxes Increased.

During the past month there has been a steady rise in the drachma. On April 14 it was quoted at $0.011561 and on May 14 at $0.018122. It is reported that this rise is due partly to the heavy drachma purchases by American tobacco buyers. The revenue of the customhouse at Piraeus during January amounted to over 29,000,000 drachmas, an increase of over 19,000,000 drachmas as compared with 1922; but this is partly if not wholly the result of currency depreciation. The revenue for the first half of February exceeded the total revenue of February, 1922. In order to curtail Government expenses, a decree of March 19 abolishes the Ministry of Posts, Telegraphs and Telephones and returns these functions to the Ministry of Communications.

Property holders in Greece will be seriously affected by the decree which became effective on April 1 imposing a heavy tax on unearned increment (see COMMERCE REPORTS, May 21, p. 526). On March 23 the Greek authorities enacted a decree imposing an extraordinary tax on real and personal property (a so-called capital levy). This tax applies to property owned in Greece by foreigners or foreign corporations and to property in foreign countries owned by Greeks. Estates not exceeding 50,000 drachmas are exempt. On other estates the tax progresses from 2 to 20 per cent. The payment of this once-for-all tax will spread over five years in semiannual installments.

Commercial Agreement With Yugoslavia.

An agreement relating to the establishment of a free zone at Saloniki has been reached between the Governments of Greece and Yugoslavia. This will give Yugoslavia an outlet on the Aegean Sea and should be beneficial to the trade relations between the two countries.

Proposed Measures of Agricultural Development.

The Minister of Agriculture declared in March that it was of paramount importance for Greece to increase its agricultural production. Since almost all credits abroad come from exports of agricultural origin and a great part of the debits abroad come from imports of other agricultural products which Greece is forced to buy, it is greatly to Greece's interest to increase its currant, oil, and tobacco output for export; also its wheat crop to lessen import. Many measures were suggested, such as the furnishing of work animals, tools, and seed to farmers; the strengthening of agricultural credit; the draining of swamps to furnish more land for farming; the making of olive groves by grafting wild olive trees on large tracts which are now only pasture land; the reestablishment of agricultural security; the improvement of communication; and especially a wider and more vigorous campaign against crop pests. It is reported that the Ministry of Agriculture is negotiating with certain bankers with a view to establishing a large corporation for the agricultural exploitation of land in Macedonia belonging to the Government, as well as certain lands owned by monasteries. It is thought that owners of unexpropriated lands will be compelled to participate in this corporation.

Spring floods in Macedonia and western Thrace have caused heavy damage to crops. Communications have been broken and railway service has been disrupted.

Tobacco, Currant, Olive Oil, and Sugar Situation.

The Greek authorities have practically abolished the control of foreign exchange in connection with the export of tobacco; in its place an export tax in sterling exchange is imposed. According to press reports, a group of American merchants are endeavoring to establish an industrial institute at Drama, Macedonia, for the study of tobacco cultivation and for the training of tobacco specialists.

During the period September, 1922–March, 1923, exports of currants to the United States, United Kingdom, and Germany show a heavy decline when compared with the corresponding six months of 1921–22,

although a slight increase is noted in the exports to Belgium and the Netherlands. Exports to the United States were only 5,800 tons as against 18,500 tons. This general decrease was the effect partly of the exchange control and partly of temporary prohibitive measures against the export of foodstuffs.

Export of 12,600,000 pounds of olive oil has been authorized by the Greek authorities.

Available stocks of sugar at Patras are the lowest known in 20 years. Wholesalers show only 18 tons on hand, while the normal stock is about 500 tons. For the past six months buying has been in a hand-to-mouth manner. As most of the sugar imported into this district comes from the United States, it would be well for American houses to keep in touch with local buyers.

CABLE ITEMS.

British Foreign Trade in April.

Based on cable from Commercial Attaché Walter S. Tower, London, May 12, 1923.

During April British trade recorded a decrease in the excess of imports over exports and reexports as compared with March. Imports were less by 4 per cent, while exports and reexports registered an increase of 7.6 per cent. The value of total imports during the month was reduced £3,600,000 from the preceding month. Raw materials dropped by £4,700,000, or 17 per cent; this decline was partially offset by an increase of £1,000,000 in the classification of food, dring, and tobacco. Total exports increased £1,900,000, manufactured articles being greater by £1,000,000 and food, drink, and tobacco by £570,000. Reexports increased £3,400,000, raw materials being greater by £3,100,000.

British foreign trade for April, 1923, and a comparison with March, 1923, and April, 1922.

Imports and exports.	April, 1923.	March, 1923.	April, 1922.
Total:			
Imports	£86,417,000	£90,002,000	£80,661,000
Exports	62,871,000	60,921,000	55,507,000
Reexports	12,429,000	9,086,000	9,199,000
Food, drink, and tobacco:			
Imports	41,772,000	40,726,000	40,098,000
Exports	3,224,000	2,646,000	3,010,000
Reexports	1,592,000	1,639,000	2,322,000
Raw materials and articles, mainly unmanufactured:			
Imports	22,939,000	27,732,000	21,404,000
Exports	11,717,000	11,564,000	7,375,000
Reexports	8,618,000	5,586,000	4,704,000
Articles mainly or wholly manufactured:			
Imports	21,446,000	21,226,000	18,961,000
Exports	46,922,000	45,935,000	44,336,000
Reexports	2,207,000	1,858,000	2,168,000
Animals, not for food:			
Imports	105,000	23,000	55,000
Exports	73,000	48,000	130,000
Reexports	12,000	3,000	4,000
Parcel post:			
Imports	155,000	315,000	143,000
Exports	936,000	728,000	654,000

Total imports during the month were £5,800,000 in excess of the total for April, 1922, or 7 per cent; total exports and reexports showed an increase of £11,600,000, or 18 per cent. All classification of imports during the month increased over the corresponding month of 1922, the largest gain of £2,500,000 being recorded in the classification of manufactured articles. Exports also registered an increase in the major classifications, raw materials showing an increase of £4,400,000 and manufactured articles £2,600,000. Reexports were £3,300,000 greater than in April, 1922, raw materials increasing £4,000,000. A decline of £730,000 was noted in reexports of food, drink, and tobacco.

Exports and Reexports of Key Commodities.

Exports and reexports of cotton piece goods and woolen and worsted tissues, which have decreased continuously since reaching the 400,000,000 square-yard mark in January, showed a further decline during the month. Cotton piece goods were less in quantity by 21,200,000 square yards and in value by £1,000,000, and woolen and worsted tissues declined 1,500,000 square yards and £500,000. Coal exports fell off 1,340,000 tons; however, value figures increased £97,000 over last month.

Total exports and reexports of key commodities from the United Kingdom during April, 1923, March, 1923, and April, 1922.

Commodities.	April, 1923.	March, 1923.	April, 1922.
Cotton piece goods:			
Square yards	316,736,000	337,906,000	302,762,000
Value	£10,315,000	£11,307,000	£10,971,000
Woolen and worsted tissues:			
Square yards	12,982,000	14,466,000	14,097,000
Value	£2,473,000	£2,932,000	£2,779,000
Iron and steel:			
Tons	388,000	369,000	259,000
Value	£6,028,000	£5,841,000	£4,994,000
Coal:			
Tons	6,841,000	7,180,000	4,093,000
Value	£8,915,000	£8,818,000	£4,650,000

As compared with April, 1922, exports of cotton piece goods during the month increased 14,000,000 square yards, although value declined £600,000. A decrease of 2,000,000 square yards was registered in woolen and worsted tissues, value figures falling off £300,000. Iron and steel exports increased 129,000 tons, values increasing £1,000,000. Coal exports were greater by 2,800,000 tons, or 66 per cent, values having increased by £4,300,000, or 93 per cent.

American Consular Officers on Leave.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Gauss, Clarence E.	Tsinan, China	July 11	Department of State, Washington, D. C.
Hathaway, jr., Charles M.	Dublin, Ireland	June 25	827 West Lincoln Avenue, Olyphant, Pa.
Lawton, Ezra M.	Sydney, Australia (formerly at Sao Paulo, Brazil.)	June 28	Department of State, Washington, D. C.
McDonough, Dayle C.	La Paz, Bolivia	June 16	Do.
McMillin, Stewart E.	Antofagasta, Chile	June 12	1419 Las Palmas Street, Hollywood, Calif.
Memminger, Lucien	Leghorn, Italy	June 29	Department of State. Washington, D. C.
Thackara, Alexander M.	Paris, France	June 12	Do.
Von Tresckow, Egmont C.	Arica, Chile	June 26	Camden, S. C.
Weddell, Alexander W.	Calcutta, India	July 20	Department of State, Washington, D. C.

The State Department advises that an American vice consulate is being established at Puerto Castilla, Honduras, and that the office will be opened in the near future.

ARE YOUR SAMPLES AND ADVERTISING MATTER TRADE WINNERS?

By R. P. Wakefield, Division of Foreign Tariffs.

Exporters should beware of making their prospective customers pay duties or annoying charges on advertising matter or samples. Such things should be placed in the prospect's hands without expense or molestation to him. Practical methods of accomplishing this are suggested.

Samples and advertising matter sent to foreign firms are intended to serve as "trade getters." It may be found, however, that unless they are properly handled their distribution may act as a boomerang and retard rather than promote sales. In order to secure the full benefit of the expenditure represented by catalogues and samples they should be sent by such channels as will insure their delivery to the desired foreign customers free of all charges, and with the minimum annoying procedure generally attending the clearance of parcels through the customs. The best method of handling varies with the particular country, and according to the method of shipment.

The question should be considered from four different standpoints:

(1) When imported alone as a separate shipment, (2) when imported with other goods, (3) when sent in small quantities through the mails, and (4) with regard to the pre-payment of duties.

(1) *When shipped separately.*—Samples of dutiable goods sent to most foreign countries, when having commercial value, are dutiable as ordinary commercial shipments. If obviously of no commercial value, that is, in such small quantities as to be unsalable, or if mutilated so as to be rendered unfit for use, they are generally admitted free of duty.

Advertising matter sent to foreign countries as a regular shipment is, in most cases, subject to duty. The rates of duty vary widely, but will be found to be highest in such countries as Brazil and Uruguay, and the British self-governing dominions, where there are protective duties in favor of goods of domestic production. Generally, in countries that are more dependent on imported manufactured goods, the duties on advertising matter are generally lower. As a rule the duties on advertising matter will be found to be more or less proportionate to the general level of duties on other articles, and in most cases are not excessive.

(2) *When shipped with other goods.*—In general, the inclusion of dutiable samples and advertising matter in regular shipments of other goods will not affect the customs treatment of either, provided that such samples and advertising matter be stated separately on the invoice and other shipping documents. It is important, however, that they be separately listed, even if without commercial value, and in the smallest quantities. Generally, when advertising matter is presented in very small quantities, it may be admitted free of duty, but for larger quantities, the regular rates of duty would ordinarily be imposed. In Uruguay considerable liberality is shown in the case of instruction books imported with machines, which would usually be passed free of duty. For Colombia, Venezuela, and the countries of Central America other than Panama, however, it is recommended that advertising matter or samples be shipped in separate packages, since inclosure with the other commodities may result in higher duties; and, in some cases, the regulations for separate weighing of mixed packages are particularly burdensome. In any case, the shipping of samples and advertising matter with other goods is not likely to result in reduction of duty, and it is advisable that they be shipped separately, or at least that they be packed separately.

(3) *When sent through the mails.*—According to reports from American commercial attachés and consular officers in a number of foreign countries, advertising matter and catalogues of small weight sent in single copies through the mails are nearly always admitted without payment of duty, except in certain British dominions. This statement has its limitations and exceptions, but for most countries single copies of advertising matter sent as printed matter through the mails are admitted free. It is noted that this exemption often extends only to advertising matter sent through the mails, and not through the parcel post.

Shipment of samples and advertising matter by parcel post to most Latin American countries is inadvisable, because of the necessity for consular invoices and fees on parcel-post shipments, considerable customs handling fees, required *despachante* services, and the tedious procedure in clearing parcel-post packages through the customs. Samples of articles capable of packing within the 18-ounce limit may be sent by sample post, and will be free of customs formalities, if considered unsalable. Advertising matter and catalogues may be sent by mail as printed matter if put up in packets not exceeding the weight limit for the particular country (as specified in the current edition of the United States Postal Guide). If the shipment exceeds the weight limit specified by the convention with the country involved the package should be broken up into two or more parcels to meet this requirement. Bulk shipments of either samples or advertising matter are best sent by freight or express.

(4) *Prepayment of duties.*—The only countries for which it is possible to prepay the duty on advertising matter are Australia, Canada, and the Union of South Africa. These duties are prepaid by means of customs stamps which may be used only to prepay the duty on advertising matter in each case. Canadian customs stamps may be obtained from the commissioner of customs at Ottawa, or from Mr. H. J. Gould, Canadian customs representative, 44 Whitehall, New York City. Those for advertising matter going to the Union of South Africa will be furnished by the High Commissioner for the Union of South Africa, 72 Victoria Street, London, S. W., while those for shipments to Australia are supplied by the official representative of the Australian Department of Trade and Customs, Mr. N. B. Synan, 44 Whitehall, New York City.

For those countries where it is not possible to prepay duties by means of customs stamps, the services of a reliable freight forwarding company should be secured to undertake the free delivery of the parcels, billing the consignor for the expense incurred. Or they may be consigned in bulk to an agent to deliver free of cost to the person for whom it is intended. In order to create or hold the good-will of the foreign customer, care should be taken in every case to see that no sample or advertising matter reaches its final destination with unpaid duties or delivery charges, unless previously re-

quested by the consignee. Even then prepayment is always advisable.

[The exact conditions governing the shipment of samples and advertising matter to any particular country will be supplied to exporters upon specific request to the Division of Foreign Tariffs. The submission of samples of the commodities and advertising matter involved is desirable.

The Division of Foreign Tariffs has under preparation a series of special circulars on the shipment of samples and advertising matter to individual countries. These circulars for the more important British areas are now ready and single copies may be had upon request. As similar circulars for other countries are ready, they will be announced in COMMERCE REPORTS under the section entitled "Tariffs and Trade Regulations."]

LUMBER

Axel H. Oxholm, Chief, Lumber Division

EVIL EFFECTS OF DISREGARDING FOREIGN BUSINESS.

Is it wise for American firms to disregard their foreign business, now that the domestic market is booming? Considering immediate profits only, this policy is perhaps expedient. The question is, however, whether such procedure will benefit the lumber concerns in the end. Only a little more than a year ago it was generally conceded that the export business not only saved many mills from ruin, but also enabled thousands of workmen to find steady employment during the depression. Representatives of the Department of Commerce say that importers and agents soon learn who is who in the lumber export trade in the United States and any information in regard to falling down on contracts soon becomes a matter of common property. One thing is sure, foreign importers and agents are going to favor the exporters in this country who have stayed in the business and have lived up to their contracts during the period of domestic prosperity. Therefore it is a wise concern which maintains its foreign connections and lives up to its contracts. The reward will come later in the form of steady foreign demand which will tide the exporter over the dull periods in the domestic market.

INCREASED IMPORTS INTO UNITED KINGDOM.

Trade Commissioner Alexander V. Dye, London, April 18.

The lumber import trade of the United Kingdom showed around a 25 per cent increase in volume during the first quarter of 1923. Imports of north European and United States softwoods as well as hardwoods increased. The principal growth in the importation of American lumber was in Douglas fir, southern yellow pine, and oak. While the relative quantities of British Columbia and United States Douglas fir imported were not as large as those of southern yellow pine, there was a greater percentage increase in the amount of Douglas fir imported. Douglas fir imports were approximately eight times in the first quarter of this year what they were last year, and more than double in 1922 what they were in 1921. The imports of southern yellow pine for the first quarter of this year were about double what they were in 1922, while the imports in that year were double those of 1921, so that the lumber trade in these lines is recovering steadily from the depression in 1921.

Increased Demand for Railway Cars, Building Trade, and Shipbuilding.

The demand on the part of the railways for lumber, which it was hoped would materialize last year, has finally begun to develop and there is a considerably increased demand for oak to be used for the construction of railway cars. An idea of the increase in railway carriage construction may be gained from the fact that in the Rotherham district in Sheffield the number of unemployed is now only 1,200 as compared with 10,000 a year ago. Fair quantities of hickory wood have been shipped, mostly "on contract."

The demand from the building trade has been fairly good, but toward the end of March was suffering from a threatened stoppage, due to disagreement in regard to wages and hours. This stoppage, however, was avoided at the eleventh hour by an agreement on both sides to refer the disputed points to arbitration. Consequently the increase in house building should continue, with a corresponding increase in the demand for American oak flooring, provided the consumer on this side can be brought to see the advantage of the narrow American widths over the usual 3½ and 4 inch widths of continental manufacture.

Shipbuilding has slightly increased and is calling for increased quantities of southern yellow pine and mahogany lumber. The furniture trade shows no increase, but is waiting for the completion of more houses.

The difficulty from the importer's standpoint remains the same as it has been for some time past, namely, that prices in the United States advance more rapidly than they do in this country. The result is that importers do not like to buy unless they can see a steady, healthy demand. With the building trade difficulty temporarily settled, however, there should be a good demand for the next few months.

Plywood Imports Doubled With But Little From United States.

The increase in the importation and consumption of plywood was not stopped even in the depression of 1921, and has lately shown a greater increase than that of the general lumber trade, but the part which America has taken so far in this trade is very small. No official statistics on the importation of plywood are given, but a local trade paper has checked up the statistics of various countries, compared them with the information available at United Kingdom ports, and has come to the conclusion that the imports of plywood in 1922 amounted to no less than $3,072,300, as compared with $1,501,500 in 1921. Finland furnished about 31 per cent, and, together with Esthonia, Lithuania, Latvia, Poland, and Russia, provided 90 per cent of the imports. While all the other countries together furnished only 10 per cent in 1922, Japan increased its exports to the United Kingdom five times, and the United States and Sweden three times over 1921.

Cooperage Coming From Europe.

The United States has not taken part in the stave trade for some time, but there was, toward the end of the quarter, some little improvement in the demand.

The difficulty has been that the market has been glutted with Polish and Baltic staves. The new budget announced on April 16 removes 1 penny from the price of beer, which should lead to a larger consumption and hence an increase in the demand for staves. So far American staves have not been very popular in the brewery trade, most of the American staves being used for whisky and other purposes.

Imports of lumber into the United Kingdom.

LUMBER EXPORTS FROM BRAZIL.

Commercial Attaché W. L. Schurz, Rio de Janeiro.

Exports of lumber from Brazil for 1922 amounted to 87,300,000 board feet compared with 67,000,000 feet in 1921, and 13,500,000 feet in 1913. Most of these exports from the southern section of the country to the River Plate consisted of Parana pine. Other lumber is also exported and from nearly all ports. Exports might have been larger except for the transportation crisis in the lumber zones, which prevented the filling of part of the orders.

According to Spanish statistics Brazilian lumber imported into Spain in 1921 amounted to 569,592 pesetas (approximately $76,000), and was used for barrels, furniture, coaches, dye products, pulp, and for naval constructions. The Brazilian consul at Barcelona has recently reported that all Brazilian lumber has a good market in Spain, preference being given, however, to Macahuba, Freijo, Itauba, Pao amarello, and cedar.

Macahuba advantageously serves as a substitute for the Mogno of Central America, known as "Caoba de Cuba," which is used for the manufacture of furniture and fine coaches. Freijo is chiefly used for the manufacture of barrels. Itauba is used for railway cars substituting for the Peca de Java. Cedar is used for furniture and Pao amarello for street-car seats.

Exports From Para to Various Countries.

A considerable amount of cedar has been exported from Para, Brazil, to the United States, but this exportation has gradually fallen off, due to the scarcity of the wood in the State of Para. The Amazon cedar which was also sent did not wholly satisfy the New York importers, who claimed that there was too much moisture and oil in the wood which made it unsuitable for a good many purposes. To Spain, Para exported about 500 cubic meters of Macahuba, Amarello stim, and Freijo which had to be sold at a loss by the exporters, who shipped it "on consignment" and generally mismanaged the whole affair. Spain has also received about 10,000 railway ties (hardwoods), the results of this shipments being unavailable. There have been small shipments to Italy which seem to have been liked, judging from the increase of orders which Para exporters are receiving from that country. In the past Para exported a large quantity of Freijo to Portugal, but, due to the fall in the exchange value of the escudo, and to the practice of the exporters in sending other similar woods under the name of Freijo, thereby discrediting this wood for the making of wine barrels, the exportation has practically stopped. Para exports to the south of Brazil considerable lumber, such as Acapu and Amarello for flooring; planks of cadar, amarello setim, macahuba, mirapirango, etc., for furniture; Angelim Rajado for paneling and fancy works; Massaranduba, Mata-mata, Cupiube, and others for piles, civil, and naval construction; and 20 woods for railway ties.

RUMANIAN EXPORTS EXPANDING.

Extracts from reports by Acting Commercial Attaché Louis E. Van Norman, Bucharest; Gilbert Redfern, clerk to trade commissioner, Bucharest; and Trade Commissioner William F. Upson, Vienna.

Comparative figures for Rumanian exports during the years 1921 and 1922 are here shown for the principal classes of lumber exported. (Figures given in board feet, round numbers, computed from metric weights and measures.)

Classes.	1921	1922
	Board feet.	*Board feet.*
Rough softwood lumber [1]	89,428,000	457,260,000
Other softwood lumber or timbers	12,583,000	36,239,000
Construction lumber and timber of hardwoods:		
Oak	4,000	248,000
Other hardwoods	548,000	4,913,000
Softwood logs	5,668,000	24,496,000
Total	108,231,000	523,156,000

[1] Rumanian softwoods are pine, spruce, larch, and fir.

Rumanian February Exports 780 Per Cent Over February, 1922.

The following table, based on official figures issued by the Ministry of Industry and Commerce, shows the quantities and countries of destination of lumber exported from Rumania during the month of February, 1923. (These figures show an increase of 780 per cent over figures for exports for February, 1922.)

Rumanian lumber exports during February, 1923.

Country of destination.	Boards of resinous wood.[1]	Other construction lumber of resinous wood.	Dressed lumber.	Logs of resinous wood.
	Board feet.	*Board feet.*	*Board feet.*	*Board feet.*
Bulgaria	2,132,970	989,604	.....	.....

Total for February, 1923	41,473,845	2,405,772	411,600	229,230
Total for February, 1922	4,350,465	477,972	77,910	26,036

[1] Pine, spruce, larch, fir.

March Prices—Trade with Italy Depends on Transportation.

On March 22 prices per 1,000 feet were as follows, free on car at Bucharest: Oak logs, $20.67; ash logs, $20.67 to $22.97; elm, $13.78; and beech boards, $8.04 to $10.33.

Rumania can deliver wood to Italy very cheaply by way of the Danube, the Black Sea, and the Mediterranean. If transportation conditions in Rumania improve, the large stocks in storage there will be thrown on the market at low prices. This will cause considerable competition, especially with Austria, should there be a marked rise in the crown.

CUT-OFFS.

German Trade Inactive.

The inland lumber trade in Germany is inactive, but slightly increasing exports to England, Holland, and Denmark are noted. (Cable from Commercial Attaché C. E. Herring, Berlin, May 11.)

Investment Opportunity in Ecuador.

There exists an opportunity for an American concern to invest in timberlands in Ecuador, according to a report received from Consul Frederic W. Goding at Guayaquil. Additional data and samples of the wood found on the property may be examined upon application to the lumber division.

American Railroad Ties for Bolivia.

The Government recently placed an order for 25,000 American wooden crossties for the Potasi-Lucre Railroad. During January and February there were received from the United States 6,651 crossties and a shipment of white oak and walnut lumber. (Consul Doyle C. McDonough, La Paz, March 5.)

Metric System Introduced in Russia.

The competent authorities in Russia have resolved to introduce the metric system. The length of all timber materials is henceforth to be expressed in meters, width and thickness in centimeters. In all constructive plans and drawings metric measures are to be applied commencing with February 1, 1923. (Minister F. W. B. Coleman, Riga, Latvia, March 29. Item from Moscow Economic Life.)

Increased Cut in British Columbia.

It is reported that in anticipation of an immediate increase of 50 per cent in the lumber production of British Columbia, which would bring the total volume to $3,000,000 a month, lumber companies are preparing for a busy season, which will probably be the most active for many years. New camps are being established, while many of those in operation are preparing to greatly increase their output, in many instances nearly 100 per cent. The increased demand has come principally from the Atlantic seaboard and the Orient. All branches of industry have felt the quickening impulse, unemployment has been greatly reduced, and wages have materially advanced on account of the increased demand for laborers. While the logging companies predict a most active and prosperous year, the more conservative realize a possibility of overproduction, stimulated by the present unusual demand with a natural reaction later. (Consul General Frederick M. Ryder, Vancouver, Canada, April 11.)

Additional information regarding lumber appears in this issue under the following sections:

Cable review, Far East:
Japanese lumber stocks and market in April.
Chinese lumber market firm.
Cable review, western Europe: Swedish lumber exports in April.
Foreign trade opportunities Nos. 6558, 6559, 6560.
Tariffs and Trade Regulations: Reduction in Canadian import duty on certain staves.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

MANGROVE SOURCES, DEVELOPMENT, AND TRADE.

H. M. Hoar, Research Division.

Mangrove jungles are found along the tropical shores of both the Eastern and the Western Hemispheres. Although not an exploiter of this product, the United States consumes important quantities of the bark and the extract, obtaining its supplies chiefly from the African and Asiatic markets. The tannin content of the bark ranges from 5 to 48 per cent and of the extract from 48 to 72 per cent, depending on the country of origin.

Mangrove bark constitutes one of the world's most important tannin assets because of its great abundance, wide distribution, rapid growth, and comparatively low cost. With a constantly growing market for leather, and a consequent need for ready supplies of tannin, there seems no reason to doubt an early awakening to the economic possibilities of the vast jungles of mangrove that await development along the tropical foreshores of the Eastern and Western Hemispheres. A greater exploitation than hitherto of this most valuable source of tannin, together with the development of new regions of production, would afford effective relief in future demands for tannin.

The mangrove extract of commerce is obtained from the barks of trees belonging to the family Rhizophoraceæ. Of these, the one special to the American Tropics is the Rhizophora mangle, popularly known as red mangle, while several species abound in the eastern Tropics, where the areas under mangrove are far more extensive. All parts of the mangrove tree, but more especially the bark and leaves, contain tannin. The percentage of tannin in the bark ranges from 5 to 48 per cent, the content increasing with the size and age of the tree; the average of commercial grades is about 35 per cent. If the bark is exposed to moisture after collection, a considerable loss in tannin is sustained, hence the necessity for drying under cover during the rainy season. When dried the bark is roughly broken into small pieces and placed in bags or packed in small bales, sometimes under pressure, for export.

Sources of Mangrove Supply.

The mangrove extends as far north and south as the twenty-ninth parallel. It forms a dense growth in patches on the low coasts of all tropical islands. In the United States it occurs along the shores of southern Florida, at the mouth of the Mississippi River, and on the coast of Texas. The low coast marshes of Porto Rico produce abundant supplies of mangrove, but, while used locally for both its wood and its bark, the industry has not yet reached an export basis. Mangrove barks constitute the greatest single source of tannin in the Philippines. Analyses prove Philippine barks as rich in tannin content as those used in the cutch factories of Borneo; in fact, the same species of mangrove are common to both regions. Notwithstanding the abundance of mangrove in the Philippines, there are no cutch factories, although the swamp area of one bay in Mindanao covers 25,000 hectares, which, estimating 25 tons of bark to the hectare, would yield a total of 625,000 tons of bark. With a 20-year rotation this should be sufficient to supply a large factory indefinitely. Foreign markets for the bark have not been developed.

Prior to the war Germany was active in the exploitation of mangrove bark as a tanning agent. Its main source of supply was East Africa, whose barks seem to be richer in tannin than those of the East Indies. In the former German protectorate the bark was most carefully stripped from the living tree (stripped trees are said to renew their bark in four to six months) under the supervision of the forest department and prepared for export. The export of bark containing less than 45 per cent of tannin was prohibited.

Madagascar exported 21,938 metric tons of mangrove bark in 1913, the greater proportion of which was taken by Germany. In 1917 its exports totaled only 3,410 tons. This decrease was due largely to lack of transportation facilities. Post-war exports, however, have not yet reached the 1913 level. While West Africa has extensive mangrove swamps, no serious attempt at bark collection has yet been made, except in British West Africa, where the industry is well established. Some years ago bark collection was started in Senegal by a French company, which allowed the trees to be cut down without making provisions for replanting, with the result that rapid erosion of the foreshore took place. The Government prohibited further exploitation by that company. Stocks of mangrove bark in Burma were practically exhausted in 1919. The problem of working important areas of mangroves in the Andaman Islands is receiving the serious consideration of the authorities.

Imports of Mangrove by United States.

While not itself an exploiter of mangrove, the United States consumes important quantities of both bark and extract. The consumption of bark in 1919 (the latest year for which statistics are available) totaled 2,018 tons, valued at $125,750, and of extract 4,968,440 pounds, valued at $266,437, all of which represented imports. No separate figures for American imports of mangrove extract are available. Of the mangrove bark, much of which is used in making extract, the United States imported during the years 1913 to 1922 the following quantities:

United States imports of mangrove bark.

Year.[1]	Total imports.	Imported from—				
		Dominican Republic.	Venezuela.	Straits Settlements.	British South Africa.	Portuguese Africa.
	Tons.	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*
1913	15,187	.....	594	.....	.....	3,474
1914	7,689	.....	87	150	.....	2,862
1915	8,096	.....	417	25	.....	5,796
1916	21,186	285	3	132	2,358	12,880
1917	10,565	544	8	.....	700	7,341
1918	2,363	983	5	.....	.....	.....
1919	2,523	1,494	.....	200	200	.....
1920	6,702	604	17	618	409	1,421
1921	2,260	279	60	225	.....	1,286
1922	3,478	1	315	135	500	2,525

[1] Statistics for 1913–1917 cover fiscal years ending June 30; those for 1918–1922 cover calendar years.

Germany, though not appearing in the foregoing table, was the largest contributor to United States imports of mangrove bark in 1913 and 1914. Of the total imports in those years Germany supplied 10,554 tons, or 69 per cent, and 4,366 tons, or 56 per cent, respectively. Other countries not indicated helped to establish the high peak of 1916. Thus Trinidad and Tobago furnished in that year 1,201 tons; Jamaica, 836 tons; Colombia, 790 tons; British India, 1,300 tons. In 1918 England supplied 800 tons; Dutch Guiana, 321 tons; Jamaica, 140 tons. In 1920 England contributed 158 tons; Jamaica, 37 tons; British India, 377 tons; and British West Africa, 931 tons, the only record of United States imports of mangrove bark from that region.

Advantages of Manufacturing Extract in Producing Countries.

The manufacture of extract in the principal countries producing mangrove bark has not been as effectively developed as that of quebracho extract in Argentina and Paraguay. If, however, the industry could be promoted in those countries possessing abundant supplies of mangrove, not only the poorer grades of bark could be utilized but also the leaves, which contain considerable tannin. The leaves are rarely exported, owing to deterioration during transportation. To avoid certain unfavorable chemical changes, which the bark undergoes within 48 hours after cutting, it is considered essential to work it up as soon as possible. For this reason the factory should be located in or near the mangrove area. It requires 4 to 6 tons of bark to produce 2 or 2½ tons of cutch. The elimination of waste, greater convenience for shipment, and saving in transportation costs should make for further expansion in this industry.

Mangrove extract is also called mangrove cutch, because of a similarity of properties to the cutch derived from the Acacia catechu of India and Burma. A constant supply of the latter could not be relied on, and when the mangrove product came into the market it superseded the Indian cutch to such an extent that the term is now mainly applied to mangrove extract.

Export Trade of Dutch East Indies and Straits Settlements.

In Dutch and British Borneo the manufacture of extract has become an industry of great importance. The principal factories are located at Pontianak, Rejang, Brunei, Kudat, and Sandakan. The latter two are under Scotch control. In 1919 the Netherlands Indies exported 3,547 metric tons of mangrove cutch, against 805 tons in 1918. Japan was the princi-

pal purchaser for the 1919 exports, taking 2,077 tons; followed by Singapore with 788 tons; Great Britain, 467 tons; and the Netherlands, 172 tons. Statistics for 1920 and 1921 show exports of 1,598 and 830 tons, respectively. Of the 1920 total Singapore took 1,412 tons; Japan, 81 tons; United States, 52 tons; and the Netherlands, 50 tons. In 1921 Singapore again led as the principal market, taking 819 tons of the total exports, the remaining 11 tons going to Japan. The bulk of these exports was the output of the Pontianak factory.

Exports of mangrove cutch from the Straits Settlements aggregated 2,481 tons in 1920, an increase of only 106 tons over 1919. The chief countries participating in this trade were the United States, which took 1,174 tons; Hongkong, 708; Great Britain, 369 tons; and Austria and Japan 45 and 44 tons, respectively. Of the 2,375 tons exported in 1919 Hongkong received 705 tons; Great Britain, 486 tons; United States, 485 tons; Japan, 371 tons; and French Indo-China, 212 tons. The exports for 1921 totaled 3,602 metric tons, a marked increase over the previous two years. Great Britain was the largest single purchaser for the 1921 cutch, taking 1,604 tons; followed by Hongkong with 1,174 tons; French Indo-China, 348 tons; Japan, 326 tons; and China, 126 tons; the remainder being divided among Siam, Sumatra, Australia, and the United States. Straits Settlements exports are largely reexports having their origin in Borneo.

The Mangrove Extract Industry in Other Countries.

The extraction of tannin from mangrove bark is a well-organized industry of East Africa. The interest which that region takes in its expansion is manifested in two recent concessions for exploitation of mangrove forests in Portuguese East Africa and Madagascar, both of which contain provisions making it obligatory on the concessionnaires to inaugurate tannin-extract factories within certain specified periods of time. Statistics of exports of this product from East Africa are not available.

The activity of the tannin-extract industry in Colombia was evidenced by its exports to the United States of 2,075,991 pounds of mangrove extract in 1914, the only year for which statistics are obtainable. The principal factories are located at Cartagena and Sinu, each of which has an annual productive capacity of 3,000 tons. With, however, a world-wide reduction in industrial activities during the period of post-war depression, mangrove-extract production in Colombia has been greatly diminished. Both Venezuela and Brazil manufacture mangrove extract for local consumption.

Tannin Content of Mangrove Extract.

Mangrove extract is imported in large blocks of a reddish-brown color and has a tannin content ranging from 48 to 72 per cent, according to country of origin. The higher grades come from East Africa and Borneo. Used alone this extract yields a good, pliant, workable leather, but of undesirable color. To modify this objection German tanners blend it with myrobalans, valonia, sumac, and similar materials; the British, with pine, oak, and mimosa barks; and in France the favorite mixture is: Mangrove bark, 30 per cent; hemlock bark, 40 per cent; oak bark, 20 per cent; and mimosa bark, 10 per cent. The French blend yields a superior grade of leather with an excellent color for general use.

Additional information regarding hides and leather appears in this issue under the following sections:
Foreign trade opportunities Nos. 6568, 6569, 6570, 6571.

CHEMICALS

Charles C. Concannon, Acting Chief, Chemical Division

INCREASE IN UNITED STATES CHEMICAL EXPORTS, FIRST QUARTER OF 1923.

The value of chemicals and allied products exported from the United States during the first quarter of 1923, according to preliminary figures, registered an increase of 17 per cent over the corresponding period of 1922. These increases in value ranged from 19 per cent in the case of medicinal and pharmaceutical products to 130 per cent in the case of wood and denatured products and also included coal-tar products; naval stores; paints, pigments, and varnishes; and perfumery, cosmetics, and other toilet preparations.

Coal-Tar Products Show Decided Increase—Dyeing Extracts Decline.

Foreign sales of coal-tar products for the first quarter of 1923 showed an expansion of 53 per cent over the corresponding period of 1922, rising from an aggregate value of $1,810,331 in 1922 to $2,761,118 in 1923. The major increase in this group was in crudes. However, the value of intermediates doubled and finished coal-tar products increased over 30 per cent. Large increases were made in many of the individual commodities shown under this class, especially benzol, which rose 55 per cent from $518,867 (15,523,529 pounds) in the first quarter of 1922 to $802,435 (23,910,698 pounds) in the same period of 1923; and coal-tar colors, dyes, and stains, which increased 32 per cent, from $973,603 (1,387,245 pounds) to $1,288,642 (3,766,410 pounds). In the coal-tar groups, declines occurred in naphthalene, which fell from $4,433 (36,264 pounds) in the 1922 quarter to $4,196 (30,171 pounds) in 1923; medicinals, from $64,909 (132,036 pounds) to $37,555 (51,324 pounds); and photographic chemicals from $34,974 (101,291 pounds) to $24,172 (59,543 pounds).

Noticeable decreases occurred in the value of the exports of all dyeing extracts, although the quantity of the exports of dye extracts other than logwood increased considerably.

Heavy and Fine Chemicals Record Both Gains and Losses.

Important gains and some losses as to values occurred in the exports of the heavy and fine chemicals during the periods under discussion. The biggest advance was made in bleaching powder (68 per cent) and the largest loss was in calcium carbide (63 per

cent). Other chemicals recording expansions in value were aluminum sulphate, 41 per cent; acetate of lime, 36 per cent; dextrine or British gum, 36 per cent; baking powder, 22 per cent; glycerin, 12 per cent; and washing powder and fluid, 70 per cent. Potassium chlorate more than doubled. On the other hand, in addition to the drop of 63 per cent in calcium carbide, copper sulphate diminished 37 per cent; potassium bichromate, 22 per cent; and formaldehyde, 6 per cent. The shipments of chemicals to foreign countries for the first quarter of 1922, as compared with the first quarter of 1923, were as follows:

Exports of chemicals from the United States, January to March, 1922 and 1923.

Articles.	January-March, 1922.		January-March, 1923.	
	Pounds.	Value.	Pounds.	Value.
Ammonium and ammonium compounds	1,235,296	$254,618	2,033,158	$261,793
Aluminum sulphate	4,791,480	77,336	7,940,287	109,332
Baking powder	782,284	354,852	1,069,026	457,679
Acetate of lime	5,530,106	127,805	5,092,206	173,741
Calcium carbide	8,749,488	189,087	1,656,411	70,719
Chlorinated lime or bleaching powder	5,946,367	111,320	10,581,533	186,678
Copper sulphate	2,325,964	105,345	1,167,716	65,092
Dextrine or British gum	3,101,274	95,481	3,597,115	130,245
Formaldehyde	618,079	72,250	410,378	67,545
Glycerin	1,164,733	454,185	281,963	510,855
Potash:				
Chlorate	137,240	6,255	1,723,928	12,297
Bichromate of	1,755,506	180,738	1,664,374	141,404
Other	5,168,693	158,217	844,910	45,268

Shipments of Medicinal and Pharmaceutical Preparations Increase.

An expansion of 19 per cent was recorded in foreign shipments of medicinal and pharmaceutical preparations, increasing from $3,538,186 for the first three months of 1922 to $4,206,214 in 1923. Exports of quinine sulphate and other salts of cinchona dropped from $138,422 (216,667 ounces) in 1922 to $65,720 (193,968 ounces) in 1923, and antitoxins, serums, and vaccines from $96,401 to $74,183, while all other medicinal and pharmaceutical preparations rose from $3,303,363 (7,681,059 pounds) to $4,066,311 (8,982,658 pounds).

Alcohol Shipments Almost Double—Acid Exports Decline.

Slightly smaller quantities of sulphuric and boric acids were sent abroad during the first quarter of 1923 than during 1922. On the other hand, almost double the amounts of wood and denatured alcohol were shipped to foreign countries, figures for which were: January-March, 1922, 285,000 gallons, valued at $201,036, in the 1922 period, and 514,147 gallons, valued at $462,808, in 1923.

Sodas and Sodium Compounds Increase in Quantity Only.

Although the group of sodas and sodium compounds showed an increase of 27 per cent in quantity for the first quarter of 1923, as compared with the first quarter of 1922, there was a decrease of 8 per cent in value. Total exports of sodas and sodium compounds for the January-March period of 1923 were 95,613,081 pounds, valued at $2,511,256, as compared with 75,243,898 pounds, valued at $2,733,196, in the 1922 period. The foreign demand for borax was evidenced by a rise of over 300 per cent in quantity and 200 per cent in value—12,335,514 pounds, valued at $491,323, in the first three months of 1923, as compared with but 2,880,847 pounds, valued at $155,098, in the same period of 1922. Outgoing consignments of sodium bicarbonate were 35 per cent in value above those of January-March, 1922, rising from $79,566 (3,478,519 pounds) in 1922 to $107,768 (4,319,144 pounds) in 1923. Sodium-cyanide exports increased 26 per cent in value, from $76,337 (423,605 pounds) to $95,810 (565,508 pounds). Sodium silicate (water glass) went from $62,402 (5,835,751 pounds) to $68,631 (6,471,892 pounds), appreciating 10 per cent, and soda ash from $159,506 (7,202,068 pounds) to $167,601 (7,575,018 pounds). Caustic soda was one of the sodium compounds registering decreases, dropping 38 per cent, from $1,539,879 (41,998,946 pounds) to $961,033 (25,151,759 pounds). Sal soda likewise fell off 14 per cent, from $45,660 (2,624,671 pounds) to $39,417 (2,874,337 pounds).

Perfumery, Cosmetics, and Other Toilet Preparations Show Gain.

The ever-increasing demand in foreign countries for perfumery, cosmetics, and toilet preparations is manifested by the 20 per cent gain during the January-March period of 1923, $1,711,939 worth having been shipped. There were exported 186,803 pounds ($138,966) of perfumery and toilet waters; 1,079,312 pounds ($410,000) of talcum and other toilet powders; 563,826 pounds ($260,685) of creams, rouges, and other cosmetics; 1,049,615 pounds ($652,069) of dentifrices; and 410,821 pounds ($250,218) of all other toilet preparations.

Fertilizer Exports Decline in Aggregate Value.

The group of fertilizers and fertilizer materials (the only one showing a reduction in the aggregate value of the foreign shipments) registers a gain in quantities shipped; 185,081 tons, valued at $4,682,444, having been sent abroad in the first quarter of 1922, as compared with 230,611 tons, valued at $4,334,766 in the similar period of 1923. Shipments of sulphate of ammonia and of other nitrogenous fertilizers fell off considerably, 33,640 tons ($2,305,812) of the former and 9,841 tons ($586,668) of the latter having been made in the first three months of the current year. The foreign demand for phosphate materials continues in excess of that for last year, 59,013 tons ($731,475) of high-grade hard rock; 115,286 tons ($620,211) of land pebble; 628 tons ($7,100) of other phosphate rock; and 6,261 tons ($120,759) of superphosphates (acid phosphates) leaving this country in the 1923 period.

Explosives Record Gain in Value.

A 7 per cent gain in value was made in sales to foreign countries of all explosives. The total exports of explosives for the first quarter of 1922 equaled 4,189,114 pounds, valued at $849,878, as compared with 5,681,714 pounds, worth $916,072, in 1923. The most noticeable decrease in this class was in blasting powder, where shipments fell from the 1922 quarterly total of 671,012 pounds, valued at $82,785, to the January-March, 1923, figure of 191,832 pounds, appraised at $21,545. Smokeless powder advanced from 146,337 pounds, worth $88,113, in the 1922 period, to 238,810 pounds, valued at $104,221, the first quarter of 1923; and dynamite from 3,244,033 pounds, valued at $642,536, to 4,874,375 pounds, valued at $700,562.

Pigment, Paint, and Varnish Trade Flourishing.

The healthy condition of the pigment, paint, and varnish industries is shown by an improvement of 41 per cent in the first quarter of 1923 over the first three months of 1922, shipments having risen from an aggregate value of $2,613,536 to $3,690,980. Expansions

were evident in all of the items included under this class, except in white sublimed lead, varnishes other than oil, and bone black. The value of the last named, however, fell short of the 1922 figures by but $26. Foreign sales of mineral earth pigments, ochers, umbers, siennas, metallic whiting, etc., in January–March, 1923, totaled $244,828 (6,705,618 pounds), surpassing those of January–March, 1922, by $58,228 (1,238,853 pounds). The total tonnage of zinc oxide sent abroad more than doubled, from 1,664,224 pounds in the first quarter of 1922 to 3,481,465 pounds in the similar period of 1923. During the first three months of the current year, exports of lithopone were 1,035,241 pounds ($56,149); bone black, 546,204 pounds ($32,856); carbon and lampblack, 4,684,391 pounds ($709,640); and red lead and litharge, 1,226,819 pounds ($120,405). Shipments to foreign countries of enamel paints, and others ready mixed, likewise more than doubled, from 213,584 pounds ($66,891) of enamel in the first 1922 quarter to 500,060 pounds ($135,926) in January–March, 1923; and from 252,270 gallons ($524,526) of other ready-mixed paints in the 1922 period to 2,235,338 gallons ($1,024,089) in 1923. Oil varnishes also showed an increase, comparing the corresponding three months of 1922 and 1923, going from 59,717 gallons, valued at $123,674, in the earlier period, to 112,068 gallons, valued at $204,616 in 1923. Exports of linseed oil also gained. Figures for the two quarters recorded a rise of 47 per cent in value, from $69,989 (628,895 pounds) to $103,104 (807,245 pounds).

Naval Stores Largely Consigned to Great Britain.

The exports of naval stores, gums, and resins showed further strength, expanding 54 per cent from $3,713,540 in the first quarter of 1922 to $5,736,962 in 1923. The marked strength in naval stores was due to a gain of approximately 100 per cent in the value of rosin exported. Of a total of 323,166 barrels of rosin weighing 500 pounds each, worth $3,071,000, shipped to all foreign countries, the United Kingdom was the largest consumer, taking approximately one-quarter, with Japan, Argentina, and Brazil following with over $300,000 each. Although the value of the shipments of spirits of turpentine in the three months of 1923 exceeded that of the first quarter of 1922, the quantity was less. The United Kingdom likewise was our best customer for spirits of turpentine, receiving one-half of the total of $2,276,418 (1,584,067 gallons).

Crude Drugs and Essential Oils Advance in Value, but Decrease in Quantity.

Exports of crude drugs, herbs, leaves, and roots advanced in value from $673,932 in the first quarter of 1922 to $687,535 in 1923, but dimished in quantity from 1,338,658 in 1922 to 881,963 pounds in 1923. Shipments of essential oils also dropped considerably in quantity from 443,953 pounds in January–March, 1922, to but 129,418 pounds in January–March, 1923, while the values increased slightly from $201,852 to $203,959. Sales to foreign countries of peppermint oil for the first quarter of 1923 totaled 22,243 pounds, valued at $63,552.

AUTOMOTIVE PRODUCTS

M. H. Hoepli, Acting Chief, Automotive Division

STEADY DEMAND IN DANISH CAR MARKET.

Assistant Trade Commissioner H. Sorvensen, Copenhagen, March 28.

Denmark's automotive development, which has taken place almost entirely since the war, is rapidly passing from the stage where the motor car is looked upon as a luxury or semiluxury to the point where it is considered a necessity or seminecessity. The purchasing power of the average Danish consumer has not only remained unaffected by the adversities of recent years, but has considerably increased among certain classes, especially the farmers, who constitute about 50 per cent of the population. The present season, therefore, will undoubtedly witness a complete recovery from the post-war overexpansion, overstocking, and subsequent depression.

Denmark, with a surface of approximately 18,000 square miles, a population of nearly 4,000,000, an excellent road system of about 45,000 kilometers, and a general standard of living and education considerably above the average, has in operation to-day about 17,500 passenger cars and 5,000 trucks (the actual registration in 1921 was 15,635 passenger cars and 4,679 trucks). Of this total, dealers estimate that from 35 to 40 per cent is of American manufacture, 15 to 20 per cent French, 15 to 25 per cent German, and the rest English and Italian.

With the exception of one factory producing about 200 trucks per year, all motor vehicles used in Denmark are imported. Statistics showing imports during the past four years are given below:

Danish imports of passenger cars and trucks during 1919–1922.

Country of origin.	Pre-war, 1913.	Post-war.				
		1919	1920	1921	1922	Total.
Germany	454	3,346	1,815	841	622	6,624
Great Britain	167	125	175	116	58	474
Sweden	8	41	9	8	7	65
Belgium	14	.....	23	45	23	91
France	102	37	360	336	215	948
United States	106	2,565	1,235	267	540	4,607
Holland	.....	.....	2	6	2	10
Italy	1	37	95	28	4	164
Austria	6	4	14	17	28	63
Norway	.....	37	22	18	6	83
Switzerland	.....	2	4	1	1	8
Other countries	.....	.....	3	2	14	19
Total	858	6,194	3,757	1,685	1,520	13,156

In drawing conclusions from the above figures it must be remembered that they do not include machines produced by the American assembling plant in Copenhagan, which in 1920 turned out 5,313 cars, in 1921 a total of 5,703, and in 1922 the nearly double number of 10,552. While Denmark does not absorb the entire output of this plant, it does take a far greater number than the other two Scandinavian countries. Taking this into consideration, it will be seen that Danish imports of American automobiles have increased much faster than have importations of European-made cars. Importations from Germany, under the stimulation of chaotic currency conditions, have reached considerable proportions, but now appear to be steadily declining.

Preference for Low Horsepower and Low Price.

The low and medium priced car of 10 to 12 horsepower is by far the most popular, owing to the high taxes based on horsepower and to the excellent road system over a flat country which obviates any necessity for great reserve power. The open car still leads registration, but the all-year-around closed car is rapidly gaining in popularity. All modern equipment, such as electric starter, demountable wheels, and full dashboard equipment, is demanded; the addition of small extra equipment often aids the sale, owing to the average Dane's love for "all the trimmings."

The increasing predominance of American cars is not so readily discernible as in the case of certain European makes, since about 80 per cent of all American makers are represented here, whereas the number of European makes is comparatively small. Because of this fact, each of these European makes has a relatively greater number of cars running than has each American make. The most popular French makes are the Renault, Unic, Citroen, and Peguet; of the German, the Mercedes, Bentz, Adler, and Opel are the best known; and of the Italian, Itala and especially the new model Fiat are popular. The English Humber, Daimler, Vauxhall, and Rolls-Royce are also quite well known and favorably received, but the English machines on the whole are too high priced. Competition from European cars is not serious and not very likely to become so.

The element of price will be the determining factor in future sales. Local prices are approximately 33 per cent higher than in the United States. The most popular car of the future will be those selling between $1,000 and $1,200, which can be bought by the average Danish purchaser without straining his purse to the breaking point and will still satisfy his good taste. The market for high-priced cars will always be limited, owing to the fact that while prosperity is general, the wealthy class is really comparatively small.

Truck Market Still Overstocked.

The Danish truck market is still suffering from the general overexpansion of business which took place shortly after the close of the war and the consequent overexpansion of truck service. Danish business took on far greater proportions than it could ever hope to maintain, and the greater number of trucks required to meet the service demands of this inflated business have since fallen back on the market as a drug. Besides, there was a fairly large stock of new trucks on the market when the deflation began to set in. As these stocks of new and secondhand cars have not yet been disposed of and as many firms which in 1919 had three or four trucks running now have one or more of them put up, the truck-market outlook can not be characterized as very bright. Only one Danish factory manufactures trucks; but as their yearly output never exceeds 200, most of the demand in normal times is supplied through importation. Of late years there has been a tendency to limit the size of trucks in order to lessen deterioration of roads. Practically no trailers are used, largely because of the exorbitant taxation.

Merchandising Handicapped by Scarcity of Representatives.

The large number of American makes on the market, combined with the scarcity of good representatives, has given rise to a number of merchandising problems which must be solved before the Danish market will give the fullest returns to American manufacturers. Foremost is the question of better service for American cars; parts and general repair service given by dealers to Danish owners of American cars is inferior to that given to owners of European cars. The greater number of cars of each European make represented in the market enables their dealers to give better service, especially since the manufacturers are closer to the market and often place spare parts on consignment basis. Considering that a great number of American cars use standard parts, such as axles, bearings, etc., it would appear a good arrangement to establish a central plant at Copenhagen where a considerable number of American cars could obtain service.

In matters of distribution, sales, advertising policy, and general plans of representation, there appears to be no radical difference between the methods employed by American and European manufacturers. One exclusive agent located in Copenhagen can handle the entire country nicely through 25 to 50 subagents located in all the provincial cities. The mistake is often made by both American and European manufacturers, however, of granting their agency to people who in some cases already represent from three to five different makes, even of competing type. The scarcity of good local representative material is perhaps often to blame for this, but the result in most cases has been decidedly detrimental to the best interests of the manufacturer. A close investigation of each firm considered for representation should be made with the assistance of the Copenhagen office.

Advertising Could Be Increased—Time Payments.

The art of advertising is not so highly developed here as in the United States. Most of it consists of small uncolored ads in dailies and trade publications (of which there are only two) and comprises generally a simple drawing of the car and the dealer's name and location. In most cases the manufacturer supplies cuts and Danish text. It would seem as if a more progressive and extensive advertising should yield good returns. Exhibitions are held from time to time, but are very small and relatively unimportant. The absence of suitable exhibition quarters is a serious drawback to this form of sales promotion, and appears to warrant greater initiative.

Payment from dealer to manufacturer in the case of American cars is generally on a cash basis, while a good many European manufacturers place both cars and parts with Danish dealers on a consignment basis—a procedure not to be recommended. Most sales from dealers to the ultimate purchaser are made on a cash basis, only a very small percentage being sold on the installment plan. A well-known low-priced American make on the market is now being sold on the time-pay-

ment plan throughout the country; but as banks under present conditions of restricted credits look askance at this method of financing sales, it is not generally adopted.

Healthy Growth in Sales Expected.

The demand from the Danish market will unquestionably show a steady growth, as the saturation point is yet far from being reached. Stocks have been reduced to normal, or perhaps in the case of American passenger cars slightly below normal, although a number of European cars are said to be yet in stock. In addition to cars for private use, the sale of motor vehicles for taxi, bus, and other public-service uses is certain to show considerable increase. Taxi service throughout the country is absorbing increasing numbers of smaller medium-priced cars; the entire country is literally honeycombed by bus lines, new ones being established each week in such numbers that the bus service in moving both freight and passengers is giving serious concern to the railways. The use of the motor vehicle for delivery purposes is also steadily growing.

During the coming season, therefore, a revival in automotive sales is generally expected. This is not likely to take the form of a flare-up similar to that immediately following the war, but rather a substantial steady demand which can be relied upon to continue as a normal growth.

[The market for accessories in Denmark was reported in COMMERCE REPORTS of May 14, 1923. A special circular showing prices of 10 popular makes of passenger cars of all nationalities in the Danish market has been sent to passenger-car manufacturers on the Exporters Index.]

British Demand for Valve Grinders Increasing.

Assistant Trade Commissioner W. M. Park, London, May 2.

American valve grinders are finding a growing demand in the British market, in contrast to a long list of other motor-vehicle accessories and service-station equipment. The demand at the present time, however, is somewhat hindered by the difficult financial straits in which most of the garages are placed, and tools are only purchased where absolute necessity demands their installation. Approximately 200 American valve grinders have been sold in the United Kingdom in the last six months, about 90 per cent of which were handled by one important accessories dealer in London. American manufacturers are meeting with no competition in the market, as British manufacturers do not produce valve grinders and but few or none are imported from the Continent. On the other hand, when the demand increases appreciably, British interests are almost certain to enter the field of production. Electrict valve grinders are finding little demand at present.

Prices current for valve grinders in the United States serve very well as a price basis for competitive selling in the British market. Grinders are imported free of duty, since they do not come under the customs classification as motor-car accessories but as a tool.

Nevertheless, London dealers are convinced from experiences of recent years that the present is not an advantageous time to start extensive sales campaigns, unless the agent undertaking the test is protected by other lines of accessories and equipment which sell rapidly.

AUTOMOTIVE DIGEST.

Porto Rico—Motor Cars Preferred to Motor Cycles.

Although Porto Rico offers a good market for both high and low priced motor cars, motor cycles are not popular and the number of machines on the whole island is negligible. This is accounted for partly by the excessive heat, which makes motor-cycle travel extremely uncomfortable and disagreeable. City car owners prefer high-powered cars; natives living in the country prefer low-priced cars. A large number of the 5,537 passenger cars registered in Porto Rico are in the city of San Juan. (E. S. Gregg, Chief, Transportation Division, May 1.)

Brazil—Taximeters May be Required in Bahia.

A recently appointed commission, considering a law covering the use of taxicabs in the city of Bahia, is favorably inclined toward their use, with a proviso that taximeters be installed within a period of four months. The rates will undoubtedly be the same as those in Rio de Janeiro. The mayor of Sao Paulo has again postponed the installation of taximeters on the cabs in that city, as meters are not available in either Rio de Janeiro or Sao Paulo. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, April 3.)

France—Automotive Foreign Trade in 1922.

Imports of passenger cars into France during 1922 totaled 3,143, valued at 34,270,000 francs, as against imports valued at 29,855,000 francs in 1921. Comparison by numbers is not possible, as 1922 was the first year when such records were available. The United States furnished 2,229 cars, Italy 660, Belgium 186, England 54, Switzerland 11, and Germany 10. Exports during 1922 totaled 16,645, valued at 543,524,000 francs, as against 512,715,000 in 1921. Shipments were made to various countries, as follows: England, 6,091; Belgium, 4,616; Algeria, 2,140; Spain, 1,113; Switzerland, 735; Morocco, 596; and the United States, 478. (Consul General A. M. Thackara, Paris.)

United Kingdom—Detailed Registration Figures Available.

Figures recently released by the Ministry of Transport show the number of licenses issued from December 1, 1921, to November 30, 1922, as 293,740 cars taxed on horsepower, 158,856 commercial vehicles (trucks, etc.), 72,263 motor hackneys, and 352,340 motor cycles for Great Britain. The summary shows that, for all types of vehicle, there were issued during the year 231,114 annual and 139,503 quarterly licenses in England, 10,819 annual and 8,186 quarterly licenses in Wales, and 25,105 annual and 12,718 quarterly licenses In Scotland. [Tables of the official returns, showing the registration by county councils and boroughs throughout Great Britain, may be secured from the Automotive Division through the proper district or cooperative office of the Bureau of Foreign and Domestic Commerce, by applying for Miscellaneous Exhibit No. 305.] (Assistant Trade Commissioner William M. Park, London, April 10.)

Additional information regarding automotive products appears in this issue under the following sections:

Cable review, Far East:
Prospects favorable for sale of automobiles in Australia.
Japanese automotive market in April.
Tariffs and Trade Regulations: Proposed changes in Belgian import duties on automobiles and trucks.

SPECIALTIES

Henry H. Morse, Chief, Specialties Division

MOTION PICTURES IN FOREIGN MARKETS.

The Sao Paulo Market for Motion Pictures.

Consul E. M. Lawton, Sao Paulo, Brazil.

American motion pictures are more popular in Sao Paulo than those of any of its foreign competitors, about 80 per cent being of American origin. The clearness of the photography, the elegance of the scenery and accessories, and the artistic portrayal of the leading parts make American films particularly desirable. The only complaint made (and this comes from the local exhibitor) is that films seem to wear out very quickly.

So far as foreign films are concerned, France holds second place. Certain classes (notably the Pathé Freres and Gaumont) are quite popular, particularly when they deal with a subject where the natural scenery and buildings of France can be shown to good effect. German pictures have a fairly large following, but in no way compare in popularity with the American or French product. A curious feature is that, although Sao Paulo has a very large Italian population, pictures of Italian make are not well liked, being considered mediocre in artistic effect and frequently bordering on the vulgar. A few English and Austrian films have been exhibited, but their number is negligible.

Types of Pictures Most Popular.

The sort of pictures which most please the public in Sao Paulo are society pictures where are shown dramas from real life, having a moral in view and from which one may receive instruction. Western or cowboy pictures are no longer accepted by the elite, but meet with ready approval in the industrial section of this city. Serial films are also popular, but only as they interpret romances of historical facts and providing that the series do not extend over too many performances. Comedies are always acceptable, providing they are well mounted and in good taste. This same requisite applies to humorous films, the Sao Paulo public being of such a cosmopolitan character that the old-style "slap stick" variety is no longer marketable.

Location of Theaters and Prices of Admission.

There are 20 good-sized motion-picture theaters in Sao Paulo, which are open seven days in the week, without taking into consideration many other smaller establishments scattered throughout the suburbs. It is estimated that there are from 15,000 to 20,000 paid admissions daily to motion-picture theaters in this city alone. Programs are changed daily, being made up usually of one or two comic films, together with a drama of real life or some "super production," a comedy, and sometimes news films showing scenes of world-wide interest.

The prices of admission to the best cinema theaters in Sao Paulo are 2$200 for adults and 600 reis for children, which, at the present rate of exchange, corresponds to 25 cents and 7 cents, respectively. Second-class theaters charge 1 milreis (12 cents) for the best seats and 600 reis (7 cents) for the general admission. Performances are daily and usually continuous, and patrons may remain from one performance to another if they desire. Films of superproductions naturally command higher prices, on which occasions special prices are charged and the admission is for one exhibition only. Some of the more important theaters have daily or triweekly matinees. The matinee exhibitions are from 2 to 5 o'clock and the evening performances from 7.30 to 11.30. Sunday evening performances with afternoon matinees are invariable.

Points of Distribution for Films.

Newly imported films are first shown in the various theaters of Sao Paulo for one or two months and afterwards sent to interior towns, requiring about six months to cover all the interior of the State. The center of distribution is in Rio de Janeiro, which is the central port for all of Brazil. From that city they are distributed to interior centers, such as Sao Paulo, Rio Grande do Sul, and Para. Important firms have branches in these several zones. Sao Paulo supplies the southern part of Minas Geraes, the State of Parana, and the State of Sao Paulo. Rio Grande do Sul serves the State of the same name, the State of Santa Catharina, and a part of the State of Matto Grosso. The rest of the country is handled largely from Rio de Janeiro. Programs sent out usually have 20 sets of reels, 15 of which are American.

There is a rigid censorship of motion pictures by the police authorities of Sao Paulo and no film can be exhibited without the approval of the police authorities.

FIREARMS.

Market for Firearms in Naples.

There is a very good potential market for cartridges and shells in Naples, Italy. There are already some American goods of this kind on sale, as, for example, two brands of 0.22 shorts, longs, and long rifle, that sell at a reasonable price. The retail cost is at present 35 lire ($1.75) a hundred. The heavier calibers, however, are nearly all of Belgian make. These seem to be somewhat higher in price than their equivalent in the United States. The Browning 0.25 automatic shells sell at 10 to 15 lire for a box of 25. In American currency this is about $0.50 to $0.75. In the importation of shells into Italy there are restrictions which make it obligatory to obtain a permit from the authorities. (Consul Homer M. Byington, Naples, February 28.)

American Firearms in Portugal.

There is a fairly good market for American firearms in Portugal in spite of the fact that the Portuguese Government requires a permit before weapons can be carried. The United States stands third on the list of exporters of both shotguns and revolvers to Portugal. It also stands high in exports of shotgun, rifle, and revolver ammunition, although ammunition is rather high-priced, owing to the depreciated exchange. (Consul General W. Stanley Hollis, Lisbon, March 22.)

The Argentine Market for Firearms.

The Argentine demand for American rifle and revolver ammunition is very strong. Large quantities of cheap shotgun shells are made in Buenos Aires, but the better qualities are largely purchased from the United States. American rifles and repeating shotguns are preferred to the exclusion of other makes. On the other hand, double-barrel shotguns of the better type are obtained from Great Britain, while Germany and Belgium supply the inferior qualities. Spanish imitations of well-known American revolvers are selling readily. (Assistant Trade Commissioner Clarence C. Brooks, Buenos Aires, April 9.)

Market for Firearms in the Netherlands.

The United States has found the Netherlands market for firearms rather difficult of access, chiefly because of the price factor. American firearms, however, are well liked as to quality and, it is believed, can successfully compete with firearms from France and Germany when the exchange factor is less in favor of those countries. (Vice Consul Eugene W. Nabel, Rotterdam, March 30.)

Large Market for Good American Films in Austria.

Trade Commissioner William Ford Upson, Vienna, April 14.

There is a large market in Austria for recent films of the better class to take the place of the outworn films now being shown. The chief handicap to any such change is the fact that distribution rights in Austria can only be obtained through a number of middlemen who add materially to the distribution cost without contributing to the transaction. Therefore, the Excelsior Film Co., which is a leading distributor of American motion pictures, feels that if it could establish direct contact with American lessors of film rights it could exhibit first-class motion pictures at a cost within the reach of the public.

Some such arrangement would be particularly valuable at this time. American films are very popular in Austria, and it would be most unfortunate to impair this popularity by sending to Europe old motion pictures which have outlived their usefulness in the United States. German motion pictures, on account of difficulties at home, are losing ground in the Austrian market.

American Motion Pictures in Poland.

Assistant Trade Commissioner Elbert Baldwin, Warsaw.

American motion pictures in the Polish market during 1922 held an 80 per cent lead over Germany—the nearest competitor. Other films exhibited were: Polish, 59; French, 52; Italian, 47; Austrian, 46; Danish, 31; Russian, 9; English, 6; and Swedish, 6.

Poland is a good market for motion pictures, as there are over 800 theaters in that country, of which 50 of the larger houses are located in cities such as Warsaw, Lemberg, Cracow, Posen, Kattowitz, Lodz, Bromberg, Vilno, and Lublin.

There is a compulsory censorship of films in Poland by a national board of censorship located at the press bureau of the Ministry of the Interior, Nowy Swiat 69, Warsaw. It holds jurisdiction for all Poland and requires from 8 to 30 days for consideration of each picture. Among its rules is the provision that all titles must be in the Polish language or, in case of bilingual titles, the Polish title must precede. The conversion of a foreign language into Polish can readily be accomplished in Warsaw at a nominal cost.

American Motion Pictures Predominate in Argentina.

Assistant Trade Commissioner Clarence C. Brooks, Buenos Aires, April 9.

American films predominate in the Argentine market, where they have secured a very firm hold on the public. German, French, and Italian feature pictures are occasionally exhibited, but these countries do not enjoy a steady trade in this commodity. Local production is negligible and of a very inferior type.

MARKETS FOR WOOD MANUFACTURES.

The Yucatan Market for American Wooden Furniture.

Approximately 38 per cent of the wooden furniture imported into Yucatan comes from the United States and consists of standard types of all kinds, such as chairs, tables, dressers, beds, and office furniture. Of the remainder, about 2 per cent comes from Spain, largely in the form of bent-wood articles, and 60 per cent is manufactured locally either by the many carpenters or by the single furniture factory (Enrique Gil Sorribes at Merida) in the district.

Previous to the war about 20 per cent of Yucatan's furniture needs were supplied by Austria, France, and Spain, but the predominance gained by American furniture manufacturers during the war is not likely to be relinquished in favor of the cheaper and less durable European styles. The comfort and artistic style of American furniture is well recognized and is imitated as closely as possible by local manufacturers.

At present the furniture trade of Yucatan is dull, the volume of business being only about 20 per cent of what it was from three to six years ago. There are signs, however, that the market is improving. It should be noted that the price of American-made furniture compares favorably with the local product, and its quality is better.

No complaints have been made as to the packing of American furniture. The packing for ocean shipment is heavier than is necessary in the United States domestic trade. Shipments from New York to Progreso are generally packed to withstand rough handling in the open and unprotected harbor. Ships from New Orleans generally come to piers in Progreso. Veneered furniture is subject to blistering both in shipment and in the local climate.

Softwood backs and interior parts are subject to destruction by white ants. The good reputation of American furniture in its effect upon future trade demands that hardwoods be used for export to the Tropics, and that all gluing be done in such a way as to withstand the effects of tropical climates. Softwood drawers are also subject to swelling in warm, moist climates.

Prices have generally been quoted f. o. b. factory, the principal local importers having representatives in American ports to attend to transportation and insurance. (Consul O. Gaylord Marsh, Progreso, April 26.)

The Market for Settees and Benches in Montreal.

The difficulty of successfully marketing settees and benches in the Montreal consular district is the competition from local manufacturers. In other words, it

would be necessary for the American producer to establish a price on his product which would meet the price at which similar articles of Canadian manufacture are sold, and this would have to include freight, duty, and sales tax.

The best field for sales of American settees and benches would probably lie outside of Montreal. The city of Verdun, for example, is making preparations for new playgrounds, which will be liberally equipped with benches; and Outremont and Westmount, it is understood, are planning park improvements. On this basis it might be worth while for American firms to get in touch with the city engineers of these municipalities. (Consul General Albert Halstead, Montreal, April 10.)

The South African Market for Handles.

The United States is the largest supplier of handles for picks, shovels, etc., to the South African market, although Canada and Australia have secured a foothold in the trade. Attempts have been made to supply the demand from local woods, but the white ironwood, which seems to be the best South African wood for this purpose, fails to grip the iron in the manner of imported woods and consequently there is greater danger that the heads of tools will come off. Unless extreme protective measures are taken, it is doubtful if handles will be made locally. For this class of trade, manufacturers' agents with specialized knowledge of hardware have been most successful in securing business. The retailing of handles also is largely done through stores dealing in mining material and hardware. (Trade Commissioner Perry J. Stevenson, Johannesburg.)

Special Swedish Industries Fair.

In connection with the jubilee exhibition at Goteborg, Sweden, a Swedish industries fair will be held from August 20 to 26, 1923. The exhibits will be confined to Swedish products, but will represent the industries of the whole of Sweden. The Specialties Division has on file a limited number of announcements of this exhibit, which can be secured by firms interested.

Additional information regarding specialties appears in this issue under the following sections:

Construction News: Catalogues of office equipment desired for new office building to be constructed in Switzerland.
Foreign trade opportunities Nos. 6520, 6525, 6529, 6530, 6531, 6532, 6534, 6535, 6536, 6538, 6541, 6542, 6543, 6545, 6546, 6547, 6548, 6565, 6575, 6584, 6592.

MINERALS AND METALS

Luther Becker, Chief, Iron and Steel Division

FOREIGN MARKETS FOR UNITED STATES IRON AND STEEL IN MARCH.

Exports of iron and steel products from the United States to Canada increased very largely during March, as did, to a lesser degree, shipments of these commodities to Japan, Cuba, China, the Philippine Islands, Spain, and the United Kingdom. There was a falling off in consignments to some of the more important of the February markets. In order that the variation in the largest markets during February and March may be clearly observed, the following table, showing the shipments of iron and steel products for both months to all countries which took over 500 tons during March, is given.

United States exports of iron and steel to principal foreign countries.

Countries of destination.	February, 1923.	March, 1923.	Countries of destination.	February, 1923.	March, 1923.

Commodities Taken by Leading Markets.

Exports to Canada for March were comprised primarily of the following, in tons: Pig iron, 1,568; scrap, 3,016; ingots, blooms, billets, and slabs, 844; iron bars, 573; steel bars, 6,973; wire rods, 1,841; plates, not fabricated, 11,136; skelp iron or steel, 8,215; galvanized sheets, 2,977; black steel sheets, 5,650; strip steel, 980; hoops, bands, and scroll, 1,201; tin plate, 1,880; structural shapes, not fabricated, 9,726; structural shapes, fabricated, 689; other structural forms, 677; rails weighing 50 pounds per yard and over, 7,363; boiler tubes, 918; plain wire, 515; galavanized wire, 538; barbed wire, 753; and iron castings, 928. Heavy rails and track accessories constituted the largest item of Japan's share in the trade, which included 868 tons of scrap, 1,735 tons of black steel sheets, 2,153 tons of tin plate, 1,165 tons of structural shapes (not fabricated), 2,091 tons of welded black pipe, and 1,360 tons of galvanized wire, besides 8,545 tons of rails weighing 50 pounds per yard and over, and 1,176 tons of rail accessories. The principal shipments to Cuba were: Steel bars, 1,342 tons; galavanized sheets, 1,274 tons; structural shapes, not fabricated, 528 tons; other structural iron and steel, 798 tons; rails weighing 50 pounds per yard and over, 2,144 tons; and barbed wire, 678 tons.

Other outstanding shipments of specific commodities were: Pig iron, 1,027 tons to the United Kingdom; steel bars, 1,220 tons to the United Kingdom, 795 tons to China, 704 tons to Kwantung, and 691 tons to the Philippine Islands; skelp iron or steel, 791 tons to France and 1,522 tons to the United Kingdom; galvanized sheets, 508 tons to Chile, 736 tons to Colombia, 2,504 tons to British India, and 767 tons to the Philippine Islands; tin plate, 581 tons to Italy; structural forms, 662 tons to China; 1,706 tons of heavy rails to Spain;

2,043 tons of heavy rails and 73 tons of light rails (weighing less than 50 pounds per yard) to Chile; 116 tons of heavy and 493 tons of light rails to Honduras; 94 tons of heavy and 420 tons of light rails to the Philippine Islands; casing and oil-line pipe, 861 tons to the Straits Settlements, 642 tons to Peru, and 564 tons to Mexico; welded black pipe, 716 tons to the United Kingdom and 1,025 tons to Mexico; welded galvanized pipe, 779 tons to Australia; galvanized wire, 548 tons to Argentina and 821 tons to Australia; barbed wire, 1,292 tons to Argentina, 795 tons to Brazil, and 867 tons to Australia; ferromanganese and spiegeleisen, 1,000 tons to Belgium.

BIG DROP IN UNITED STATES IMPORTS OF PIG IRON.

Importation of iron and steel into the United States during February dropped to only 56 per cent of the January figure, the decline being due primarily to a great reduction in the entries of foreign pig iron. Scrap-iron and steel shipments were also considerably under the previous month. The receipts of foreign iron and steel products by the United States in January and February, 1923, are shown in the following table:

United States imports of iron and steel.

Articles.	January, 1923.	February, 1923.	Articles.	January, 1923.	February, 1923.
	Long tons.	*Long tons.*		*Long tons.*	*Long tons.*
Pig iron	83,935	35,793	Round iron and steel wire	296	329
Ferromanganese, manganese metal, and alloys	4,218	7,741	Wire rope and insulated wire, all kinds	126	27

Sheets and saw plates	87	210	Total	120,080	67,707
Tin plate	2,129	2,889			

Sources of American Pig Iron Imports.

The leading sources of the American imports of foreign iron and steel in February were: United Kingdom, 26,484 long tons; Canada, 20,450 tons; France, 12,536 tons; Germany, 5,495 tons; Sweden, 1,490 tons; Belgium, 786 tons; and Austria, 308 tons.

Imports from the United Kingdom were composed mainly of 13,810 tons of pig iron; 7,741 tons of ferromanganese and manganese alloys; 2,881 tons of tin plate; 1,182 tons of steel ingots, blooms, billets, slabs, and bars; 300 tons of scrap; and 263 tons of round iron and steel wire. Important receipts from Canada were 12,790 tons of scrap, 5,898 tons of pig iron, 1,480 tons of ferrosilicon, and 162 tons of castings and forgings. France's contributions included 10,744 tons of pig iron; 1,266 tons of rails and splice bars; 258 tons of structural shapes; and 207 tons of steel ingots, blooms, billets, slabs, and bars. Other large shipments were: From Germany, 4,242 tons of pig iron, 550 tons of scrap iron and steel, 413 tons of rails and splice bars, and 112 tons of structural shapes; from Sweden, 547 tons of wire rods, 540 tons of steel ingots, blooms, billets, slabs, and bars, 132 tons of sheets and saw plates, and 100 tons of pig iron; from Belgium, 700, and from Austria, 299 tons of pig iron.

In addition to the previously mentioned tonnages, there were imported during February 14,088 square feet of card clothing, 143,702 tons of iron ore, and 3,159 tons of manganese ore and concentrates, as compared with 19,394 square feet, 205,532 tons, and 829 tons, respectively, during January. The iron ore came from Chile (59,450 tons), Sweden (34,004 tons), Cuba (33,339 tons), Algeria and Tunis (16,200 tons), Germany (539 tons), Canada (123 tons), and Spain (47 tons). Brazil supplied practically all of the manganese ore and concentrates (3,125 tons), although England sent 32 tons and Germany and China each contributed 1 ton. The card clothing came from England (8,783 square feet), Germany (4,818 square feet), and Switzerland (487 square feet).

BRITISH FOREIGN STEEL TRADE INCREASES DURING APRIL.

Based on cable from Commercial Attaché Walter S. Tower, London, May 12.

British exports of iron and steel continued to increase during April, showing the largest shipments for any month of this year. The exports for this month totaled 386,957 long tons, as compared with 368,072 tons in March, 317,568 tons in February, and 353,389 tons in January. Imports of these commodities also increased from 110,965 tons in March to 115,384 tons in April. The following table gives a comparison of the chief iron and steel products shipped to and from Great Britain during the months of March and April:

British iron and steel imports and exports for March and April, 1923.

Articles.	Imports.		Exports.	
	March.	April.	March.	April.
	Tons.	*Tons.*	*Tons.*	*Tons.*
Pig iron and ferro-alloys	15,197	6,392	103,776	111,255

Bolts and nuts, including screws for metals	267	410	1,633	1,959
Wire manufactures, not elsewhere specified	487	421	1,705	1,627
Ingots, blooms, billets, slabs, etc	45,626	58,492	1,539	4,083
Nails, tacks, rivets, and washers	310	313	1,177	1,547
Wire cables and rope	.....	.....	1,728	1,799
Wire nails, including staples	4,485	5,059	204	448
Iron and steel castings in the rough	332	420	310	286
Iron and steel forgings in the rough	43	67	90	18

Pig-iron production during April also was the largest of any month in 1923. The output amounted to 652,200 tons, as compared with the March figures of 633,600 tons. The steel output decreased from 802,500 tons in March to 749,400 tons in April. At the end of April there were 216 blast and 362 open-hearth furnaces operating.

AUSTRALIAN GYPSUM INDUSTRY.

Trade Commissioner J. W. Sanger, Melbourne.

Gypsum is found in various parts of the Commonwealth of Australia, but is at present mostly worked in Victoria and South Australia, although the Hay, Hillston, and Mossgiel districts of New South Wales have also given good results, and very large deposits have been found near Lake Austin and Lake Seabrook in Western Australia. The production of Victorian gypsum in 1920 amounted to 3,393 tons, valued at £1,696, chiefly from Lake Boga, while 40,000 tons, valued at £32,000, were obtained in the same year from southern Yorke Peninsula in South Australia. A factory for the manufacture of plaster of Paris has been erected at Dry Bone Lake, South Australia, but architects say that there is room for other factories of this kind to meet the present and future demand.

Australian gypsum occurs in two forms—large crystals, and a floury earth consisting of minute crystals, known as "copi." It is used largely as a natural manure, especially for light moist soils, and recent experiments at Goroke, Victoria, have given wonderful results in wheat growing. A dressing of 1.5 tons an acre applied with 1 hundredweight of superphosphates increased the yield by 20.9 bushels an acre, as compared with the crop grown without manure. Superphosphate by itself increased the yield on another plot by 9.8 bushels per acre, so that the effect of the gypsum was to increase the yield by 11.1 bushels per acre. The chief difficulty in the way of the extensive use of gypsum for fertilizing is the price, which, at £2 5s. per ton, is considered too high for more than experimental work. However, with such large and easily procurable deposits, the expansion of the Australian industry would seem to be only a matter of time, and good prospects await the opening up of this industry.

Australian Imports of Gypsum.

Australian imports of gypsum in 1920–21 were 1,057 tons, valued at £15,902, from the United Kingdom, and 188 tons, valued at £1,355, from the United States. Exports of gypsum of Australian production in the same year amounted to 3,155 tons, valued at £4,633, all but 1 ton of which was sent to New Zealand.

Australian imports of plaster of Paris in 1920–21 amounted to 1,542 tons, valued at £21,217. The countries of origin, amounts exported, and values were: United Kingdom, 237 tons, valued at £3,041; Canada, 286 tons, at £2,932; New Zealand, 67 tons, at £1,384; Italy, 25 tons, at £350; United States, 927 tons, at £13,510. Australian exports of plaster of Paris in the same year amounted to 1,095 tons, valued at £10,151, all but 2 tons of which went to New Zealand.

There is a certain amount of importation of American wall board, and this is proving popular and is likely to continue in demand. Thus far, gypsum has been little used in the Australian building trade. Gypsum hollow tiles and blocks are very seldom in demand. Concrete is more popular, but many builders consider gypsum superior to concrete on account of its being waterproof.

Mineral and Metal Items.

Prussian Order for Rails Goes to Austrian Firm.

The Alpine Montangesellschaft has received a large order for rails from the Prussian State railways, and a similar order from the same railways is said to have been given to the Suedbahn rolling mills near Graz. (Trade Commissioner William Ford Upson, Vienna, April 7.)

Hungarian Iron for Germany.

It is reported that the Manfred Weiss Works and the Rima Muranyer Iron Works in Budapest have just made a shipment of 1,000 tons of iron to Germany on the Basis of £11 per ton, payment being effected in pounds sterling. (Trade Commissioner H. Lawrence Groves, Prague, April 7.)

Resumption of Exportation of Antimony Ore from San Luis Potosi.

The first shipments of antimony ore for several years from San Luis Potosi, Mexico, were made to the United States during April. Although the quantity was insignificant, the revival of the mining of this mineral was regarded as a hopeful sign. (Consul Walter F. Boyle, San Luis Potosi, May 1.)

Swansea Tin-Plate and Black-Plate Exports Break Record.

Exports of tin plate and black plate from the Swansea district during the first four months of 1923 were 150,000 long tons, making an absolute record for such shipments. Exports of coal from the district for the same period were 2,000,000 tons—a post-war record. (Cable from Consular Arthur B. Cooke, Swansea, Wales, May 3.)

Price of Czecho-Slovak Tin Fixed.

The Finance Ministry of Czechoslovakia has announced that in the future the sales price of tin manufactured in the State ovens will be equivalent to the price in the London market, plus the Czecho-Slovak import taxes. Similarly, the price of antimony from the State works will be brought in line with, and governed by, outside competitive prices. (Trade Commissioner H. Lawrence Groves, Prague, April 14.)

Price of Spanish Ingots Higher.

An important variation in prices of ingots in Spain developed in April, quotations rising from 190–200 to 225–250 pesetas per ton. The cause of this was the increased cost of British coke which is said to have increased the cost of producing ingots by approximately 60 pesetas per ton. The price of mineral ore has also increased from 18 pesetas to 22 and 23 pesetas, f. o. b. Bilbao (1 peseta=$0.1521). During the month of March 261,221 tons of iron ore were shipped from the port of Bilbao against 158,330 tons in February and 181,665 tons in January. The Spanish steel plants at present are well booked with orders. The minimum time contracts for deliveries vary from two to three months, while there are some orders on the books for rails for delivery within from six months to a year. (Commercial Attaché Charles H. Cunningham, Madrid, April 23.)

Additional information regarding minerals and metals appears in this issue under the following sections:

Cable review, Western Europe:
Metallurgical conditions less favorable in Belgium.
Spanish mercury production.
Cable review, Far East:
Japanese iron and steel stocks and market in April.
Japanese coal production increases.
Tariffs and Trade Regulations: Reduction in Canadian duty on iron and steel scrap.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF.

Dominican Republic a Market for Jute Bags.

American manufacturers of jute bags will find the Dominican Republic a good market. These bags are used for the local sugar and cocoa-bean crops. Dealers usually place orders in November. (Consul W. A. Bickers, Puerto Plata, April 17.)

Dominican Republic Cordage of Poor Quality.

Much of the rope used in the Dominican Republic is a rough native product of country districts made of vegetable fiber. It is poorly made, lasts but a short time, and the waste is of no use. (Consul Charles Bridgham Hosmer, Santo Domingo, March 29.)

American Cotton Goods Preferred by Abyssinians.

The Abyssinians prefer American cotton goods, despite the lower prices of the competitive Japanese product. This preference is based on past experience with American cotton goods, which not only wear better but are more suited to local demand. (Consul Raymond Davis, Aden, Arabia, April 4.)

Status of Italian Wool Industry.

Italian wool manufacturers are now commencing to negotiate for raw wool. Last year's stocks are almost exhausted and holders are asking for higher prices. Spinners are working for the most part to supply knit-goods manufacturers. (Trade Commissioner A. A. Osborne, Rome, April 21.)

Polish Hemp Crop.

The 1922 Polish hemp crop amounted to 25,857 metric tons of seed and 21,190 tons of fiber. The total area sown to hemp comprised 41,769 hectares (1 hectare=2.471 acres), and the average yield per hectare amounted to 620 kilos of seed and 510 kilos of fiber. (Consul General L. J. Keena, Warsaw, April 17.)

Japan an Importer of Woolen Goods.

Japan imported, during 1922, 22,631,000 yards of wool fabrics, valued at 44,444,000 yen. This quantity was almost double the imports of 1921. While England was the principal country of origin, Germany, France, China, the Netherlands, and Belgium, as well as the United States, shipped small quantities. (Japan Chronicle, March 11.)

Tendencies in Hungarian Cotton-Goods Markets.

Czechoslovakia has surrendered to Austria its place as leader in the Hungarian cotton-goods markets. Other countries with high exchange, including Italy and Switzerland, also have lost ground, whereas Germany and Austria are gaining. A comprehensive report on the Hungarian market for cotton goods may be obtained from the Textile Division, reference No. 7382. (Clerk A. E. Fenselau, Prague, Czechoslovakia.)

Belgian Linoleum Industry Small.

The Belgian linoleum industry manufactures almost exclusively for domestic consumption, there being less than 50 metric tons exported during 1922. The domestic industry produces only medium and low grades, while high grades of linoleum are imported. During 1922 Belgium imported 3,675 metric tons, valued at 14,231,775 francs. (Consul George S. Messersmith, Antwerp, April 12.)

Brazilian Wool Production Small.

According to the 1920 official census, there were 7,933,437 sheep in Brazil, of which 4,485,546 were in the State of Rio Grande do Sul. The total exports of wool from Brazil during 1921 were 3,232,877 kilos, and during 1922 3,561,000 kilos (1 kilo=2.2046 pounds). All of these exports are from the State of Rio Grande do Sul. (Commercial Attaché W. L. Schurz, Rio de Janeiro, April 14.)

Milanese Silk Exports Gain.

Raw silk exported from Milan, Italy, during the first quarter of 1923 was valued at $8,318,728, or practically double the value of the same period last year. Leading shippers explain this increase by the fact that last year American purchasers found it more profitable to buy in the Orient than in Italy. Local stocks of raw silk are extremely low at present. (Consul C. Carrigan, Milan, April 19.)

China's Ramie Exports Stable.

Exports of ramie from Hankow, China, were slightly under 19,000,000 pounds, valued at $1,892,000, during 1922. This was approximately the same amount as was exported in 1921 and only approximately 10 per cent below the 1920 quantity. Japan is the principal destination for ramie exports, the United States taking only 347,732 pounds in 1922. Ramie noils are being manufactured at Wuchang. (Consul P. S. Heintzleman, Hankow, April 5.)

Japan a Good Felt-Hat Market.

Japan imported 11,023 dozen felt hats during 1921 and 11,527 dozen during 1922. While Great Britain predominates in the market, increasing quantities of American felt hats of the highest quality are much in demand, due to variety and cut. A comprehensive report on the Japanese felt-hat market and industry may be obtained from the Textile Division, reference No. 7581, or the district and cooperative offices of the Bureau of Foreign and Domestic Commerce. (Assistant Trade Commissioner Paul B. Steintorf, Tokyo, February 13.)

Australian Rabbit-Skin Trade Large.

Australia's exports of rabbit skins amounted to $3,828,848 in 1922, as compared with $4,742,927 in 1921. These totals were somewhat lower than the 1920 maximum of $17,847,985, but considerably above the 1917 value of $2,145,646. The bulk of these skins are purchased from trappers by dealers who hold large auction sales at regular intervals. The United Kingdom and the United States are the principal buyers of these skins, though large quantities are sold to Japan and France. At recent auction sales the demand has been good, though the former high prices have not been maintained. (Consul General Thomas Sammons, Melbourne.)

SOUTH AFRICAN COTTON GOODS TRADE IN 1922.

Trade Commissioner P. J. Stevenson, Johannesburg, March 6.

South African imports of cotton manufactures in 1922 reached the high total of £7,646,511. This figure compares very favorably with the 1920 record of £10,780,259, when prices were unprecedented and the local market was suddenly deluged with unfilled orders and goods far in excess of the country's requirements, especially in the face of depression and curtailed buying power. From the 1922 figures it is evident that excessive stocks have been more than wiped out and that buying has been resumed on a more normal scale. For example, 1922 imports by value were 31 per cent, or £1,809,955 above the 1921 total of £5,836,556.

British Predominant in South African Cotton Goods Trade.

In view of the lack of South African statistics by volume, it is difficult to trace the exact relation between the pre-war and the present volume of trade. However, from the British export statistics it is evident that the volume of trade in 1922 was exceptionally heavy, if not establishing a record. During the year shipments of piece goods from the United Kingdom to British South Africa (which includes Rhodesia, the native protectorates, and the South-West Protectorate), totaled 78,262,100 square yards, or 1,411,000 yards more than the total of both 1919 and 1920, and practically 30,000,000 yards more than the 1921 figures. In 1913 the yardage was only 71,977,400 and, as British statistics were then reckoned in yards instead of square yards as at present, the total is considerably larger than that for 1913. It is also interesting to note that the average unit value of the 1922 piece goods exported to South Africa from the United Kingdom was practically 55 per cent under the 1920 value, the average dropping from 22.5d. to 10.3d. per yard. It may also be of interest to note that the British piece-goods exports in 1922 were divided mainly as follows: Gray, unbleached, 4,576,200 square yards; white, bleached, 18,995,500 square yards; printed goods, 24,619,700 square yards; dyed or manufactured of dyed yarns, 30,070,700 square yards. On the basis of these figures it may safely be said that the 1922 trade by volume was about as large as any on record.

The British continue predominant in supplying cotton goods to South Africa. In 1922 (omitting canvas and duck, for which detailed figures are not yet available) their share was £5,928,406, or 78.6 per cent of the total. While this is a very high percentage, it is below the 1920 figure of 82.8 per cent and the 1921 of 81.7 per cent, and is even slightly below the pre-war figure of 80 per cent. This decrease is only significant as reflecting the generally higher prices for English cotton manufactures in 1922, as compared with American and other prices. There is no indication that the decreases of the past two years are evidence of any material weakening of the British hold on the cotton-goods trade in South Africa.

American Cotton-Goods Imports Into South Africa.

American cotton goods not only continued to hold second place, but materially strengthened their position during the past year. Imports from the United States totaled £433,997 in 1922, as against £246,011 in 1921, and £34,587 in 1912. The total compares very favorably with the trade during the war and postwar years. For example, the American total was £662,903 in 1920, £567,172 in 1919, and £232,763 in 1916. Considering the difference in prices, 1922 imports by volume probably were the largest ever recorded. By percentage, the American participation was 1.5 in 1912, 6.1 in 1920, 4.3 in 1921, and 5.7 in 1922. This is largely attributable to the fact that American prices were very favorable in the early part of the year, resulting in substantial orders, especially for piece goods.

Probably the outstanding feature of the year's trade was that of the comparatively large imports of German materials. In 1920 German cotton manufactures were imported to a value of only £12,310. In 1921 the total was £73,965, when Germany stood eighth in rank as a supplier to South Africa. In 1922 Germany shipped into the country £289,382 worth of cotton goods, rising to third place, as compared with its pre-war position, which was second. It should be noted, however, that the trend of imports of German cotton manufactures has been downward during the last half of the year and that £167,711, or 58 per cent, of the German total of £289,382 came in during the first six months of 1922.

Cotton-Goods Imports from Other Countries.

Belgium maintained its position, ranking fourth in 1922, as in 1921, although the 1922 total was £227,299, as against £140,217 in the previous 12 months.

Although its trade increased slightly from £175,571 to £176,792, comparing the past two years, Japan dropped from third place to fifth. With other sources of supply available, local merchants have practically stopped the importation of Japanese lines with the exception of the very cheapest grades of hosiery and underwear, principally the latter, for the native trade. The other principal suppliers in 1922 were as follows: Italy, £146,728; the Netherlands, £99,686; Switzerland, £89,473; France, £89,183; and India, £47,571; the small balance being divided among 22 other countries.

Imports of Piece Goods.

Piece-goods imports accounted for £4,423,579 of the £7,646,511 total of cotton imports. This was about £1,300,000 above the 1921 figure and the same amount below the 1920 record total. Of this trade the United Kingdom supplied 84.4 per cent, or £3,734,885, as compared with £2,742,369, or 87.5 per cent, in 1921, and £1,422,575, or 80.6 per cent, in 1912. In this class of the trade British lines showed remarkable strength. During 1922, however, American lines of piece goods reached their record total of £315,161, as against £157,184 in 1920 and £146,665 in 1921. The trade was well maintained during the year, although there is reason to believe that 1923 imports will be below the level of the past year.

Germany was the third largest supplier of this class of goods, with £148,170, compared with £23,521 in 1921 and £1,303 in 1920. This trade, while very satisfactory, was still below the pre-war totals in value, indicating that in volume it was much smaller. The increase was due mainly to the increased sale of German prints, which have always been popular with the natives.

Italian lines were imported in fair volume, being valued at £83,555 in 1922—a big increase over the 1921 figure of £27,451. As with Germany, prints accounted largely for Italy's increase. Other suppliers of importance were: France, £40,915; Belgium, £26,984; India, £25,519; and the Netherlands, £21,831.

Hosiery and Underclothing Imported into South Africa.

Imports under this classification amounted to £1,294,043 during 1922—an increase over the 1921 total

of £1,039,810. The United Kingdom supplied £917,914, or 70.9 per cent, as compared with £763,329, or 73.4 per cent in 1921. Japanese goods were imported to a value of £161,155, as against £131,409 in 1921 and £98,865 in 1920.

The United States was third, with shipments worth £113,575—an increase of £79,197 over the 1921 figure, but far below the 1920 total of £451,367. An encouraging feature, however, is that 55.5 per cent of the total was imported in the last half of the year.

On the other hand, German hosiery and underwear fell off in the last half of the year, being only £21,524 as against £37,282 in the first six months. The yearly total (£58,806) compared very favorably with the 1921 figure of £19,158 and was not far below the pre-war trade, measured by values.

The balance of the trade was divided between 12 countries, including Switzerland with £16,422 and Italy with £12,518. The Swiss total is made up largely of women's vests, which find a ready sale in this market.

Present Conditions and Prospects.

At the present time the trend of purchase is heavily in favor of British manufactures. German conditions are so unsettled that, as a source of supply, Germany can not be considered dependable. Further, German manufacturers are unable to make prompt deliveries, while the stipulations and conditions surrounding orders are quite unusual and onerous. On the other hand, American prices have advanced so rapidly in recent months that they are no longer competitive, as they were in 1922.

According to trade opinion, imports in 1923 will even exceed those of the past year. There are no heavy stocks in the country. In fact, stocks are, if anything, low, especially in the staple or "bread and butter" lines. With improving local conditions, especially in the farming communities, consumption should be heavier with a resultant increase in indents placed by local merchants. Just now merchants are beginning to place orders for next summer's business. The tendency appears to be toward careful buying, but in somewhat larger volume in view of advancing prices.

Merchandising Methods Recommended for American Manufacturers.

It would appear that on the whole American lines are being sold through too many sources, whereas English and other lines are generally sold through one channel only. While the use of a qualified firm of manufacturers' agents, who sell on a commission basis to both importing wholesalers and retailers is, in the writer's opinion, desirable, it is realized that American export commission houses are well equipped to handle such business, and that the choice between such house and agents is often difficult to make. There can be but little doubt that a choice is necessary and that either method is far superior to promiscuous selling through several channels. British, German, Italian, and Japanese manufacturers all utilize manufacturers' agents for local sales work in South Africa, while American manufacturers do not seem to be so willing to do this. It is believed that this is largely attributable to a lack of understanding of their functions and importance. The quality of the American product, the packing, the terms of sale, and other factors are, generally speaking, highly satisfactory.

Additional information regarding textiles appears in this issue under the following sections:

Cable review, Western Europe:
Export business supporting Belgian textile industry.
Spanish textile market expected to improve.
Cable review, Far East:
Stocks of textiles in Japanese warehouses in April.
Active Chinese market in cotton piece goods.
Tariffs and Trade Regulations: Canadian duties on artificial silk and tire fabrics.
Foreign trade opportunities Nos. 6584, 6594.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

DAIRY PRODUCTS IN THE NETHERLANDS.

Consul General George E. Anderson, Rotterdam.

Industry practically back to normal. Exports of butter still below pre-war record. Changes developed in destination of exports. Cheese production and exports increase.

The Dutch dairy industry has in essential respects reached pre-war conditions in production and foreign trade, although exports of butter in 1922 were much less than pre-war records. After two years of effort to hold up prices in both the domestic and foreign fields, the industry has adjusted itself to world conditions and successfully faced competition on a world basis.

Production and Exports in 1922.

Production in 1922 is estimated at 91,000 metric tons of cheese and 53,000 metric tons of butter, as compared with 65,000 and 54,000 metric tons, respectively, in 1921. Exports of cheese increased from 52,290 metric tons, valued at the equivalent of $22,570,696, in 1921, to 65,213 metric tons, valued at $20,377,880, in 1922. At the same time exports of butter increased from 20,198 metric tons, valued at $16,223,271, to 23,125 metric tons, valued at $16,767,500.

These figures show an increase of 24.7 per cent in the volume of cheese exports, and a decrease of 9.7 per cent in value. Butter exports increased 14.4 per cent in volume and 3.3 per cent in value. The export value of cheese averaged 14.2 American cents per pound in 1922 and 19.6 cents per pound in 1921, while butter averaged 32 cents per pound in 1922 and 36.8 cents per pound in 1921.

The decrease in the production and exports of butter compared with those of the pre-war period have been more than compensated by the increased production and exports of cheese.

Development of New Markets in Cheese Trade.

The 1922 export trade in cheese is the result of comprehensive efforts to increase sales in markets that were more or less new. Before the war, Great Britain took about half the total cheese exports of the Netherlands, and Germany took most of the remainder. In 1921, Great Britain took 6,933 metric tons, Germany 13,587 metric tons, Belgium 13,211 metric tons, and France 9,645 metric tons. In 1922, Great Britain showed a small increase, taking 9,250 metric tons. Germany took only 9,408 metric tons, while exports to Belgium and France showed notable increases, amounting to 19,558 and 14,209 metric tons, respectively. Total exports of cheese amounted to 52,290 metric tons valued at $22,570,696 in 1921 and 65,213 metric tons valued at $20,377,880 in 1922.

Imports of cheese into the Netherlands show no features of special interest. They consist of small amounts of special cheeses of the finer grades.

Dutch Butter Meets Keen Competition in 1922.

In 1921 France was the largest customer for Dutch butter, taking 7,386 metric tons. Belgium followed with 6,781 metric tons, Great Britain with 3,252 metric tons, and Germany with 1,163 metric tons. In 1922 Belgium advanced to first place, taking 10,009 metric tons. France and Great Britain showed small increases, taking 7,668 and 3,974 metric tons, respectively, but Germany dropped out of the market.

The year 1922 was characterized by keen competition between Dutch butter and butter from Australia, New Zealand, and Denmark. Because of the high price of Dutch butter in the spring months, imports from these countries assumed large proportions. Later in the year Dutch butter decreased in price and regained most of its markets at home and abroad. Total imports of butter for the year were 4,906 metric tons, as against 1,996 metric tons for 1921.

PRODUCTION OF FOOD CROPS IN POLAND.

Alfred P. Dennis, special representative of Department of Commerce, Vienna, May 4.

Sugar Beets Show Good Acre Yield.

The Polish sugar campaign is now closing, with 70 factories employed compared with 87 before the war. The beet acreage is 40 per cent below pre-war acreage, but the acre yields for the entire country are practically back to normal. Per acre production in Prussian Poland, where the industry is chiefly concentrated, is 12 per cent above the pre-war figure. The high yields are attributed to the ability of the beet growers to get imported fertilizer in exchange for sugar through a barter agreement conducted by the agricultural syndicate.

An increase of 15 per cent is expected in spring sowings of beets. It is estimated that this increase will restore Polish sugar production next year to 80 per cent of the pre-war figure.

Potato Crop Below Previous Estimate.

Poland holds second place among the potato-growing countries of Europe, Germany ranking first. Like Germany, Poland has a highly organized system for absorbing excess production through industrial channels. Polish authorities now place the crop at 24,000,000 metric tons, as against a previous estimate of 33,000,000 metric tons. This reduced figure still leaves a margin of some 3,000,000 metric tons to be absorbed industrially, after allowing 21,000,000 metric tons for seed, table consumption, and animal feeding.

The output of potato starch for the current season is estimated at 60,000 metric tons, with 95 factories in operation. The product is finding a ready market through the French and English textile industries. There are 1,179 potato distilleries in operation, with a combined estimated output of 29,000,000 American gallons of pure alcohol per year. The domestic consumption of Poland is 21,500,000 gallons. The surplus is taken chiefly by Germany for industrial purposes. There are in operation 148 potato driers, working mainly for foreign customers. Exports of potato flakes and chips during the present season amount to 60,000 metric tons. A previous estimate placed the figure at 90,000 metric tons.

Potato Prices Comparatively Low.

The disposition of the Polish potato surplus is significant to American farmers in view of the glutted potato market at home. The field run price of Polish potatoes, delivered at the factory, averages not more than 100,000 marks per metric ton, or in American money about 6½ cents per bushel. Allowing for the internal purchasing power of the Polish mark rather than its exchange value in American money, and considering the low cost of farm labor in Poland, potatoes can be grown profitably at this figure, although the price is far below production cost in the United States.

The price of potatoes, weight for weight, last season was 30 per cent of the price of rye. At present it is only 11 per cent. Despite their cheapness, potatoes are not being used to any great extent as a substitute for bread. The last rye harvest was sufficient to cover the needs of domestic consumption. At present there is no shortage of bread in Poland.

Live-Stock Statistics Show Increase in Hogs.

According to estimates of the agricultural syndicate, the number of cattle and horses in the country has been practically restored to the pre-war basis. The number of sheep has been reduced from 4,000,000 to 2,500,000 head. Hogs have increased from 5,000,000 head before the war to 5,800,000, and the country is about to become a factor in the international hog products trade. At present a special license is required for the export of hogs and hog products.

Estimated Imports of Japanese Rice.

Assistant Trade Commissioner Paul P. Steintorf, Tokyo.

Imports of rice into Japan for the rice year extending from November 1, 1922, to October 31, 1923, are estimated at 1,413,500 koku, or 7,235,700 bushels. This estimate is based on stocks on hand, 1922 crops, estimated exports, necessary reserve stocks, and estimated domestic consumption, and such an estimate is obviously only an approximation. It is believed that the figure given represents the minimum and that larger importations may be expected. Any sharp increase in the price of Japanese rice is likely to cause heavy speculative imports, even though this would necessitate subsequent reexports and would increase the reserve stock.

Report on Netherlands Sugar Trade.

A report on the sugar trade and industry of the Netherlands, with a list of all sugar factories, sugar

refineries, and molasses-alcohol factories in operation at the present time, has been received from Consul General George E. Anderson, at Rotterdam. Because of its length this report can not be published in COMMERCE REPORTS. Copies of the report may be had upon application to the Foodstuffs Division, Bureau of Foreign and Domestic Commerce, or to the district or cooperative offices of the Bureau. (Refer to file No. 91044.)

Zanzibar Exporter Offers Cloves.

Consul William L. Jenkins, Nairobi, Africa.

An exporting firm in Zanzibar, specializing in the best quality of cloves, desires connection with American importers of cloves for the confectionery and grocery trades. Importers may get in touch with this firm through the Foodstuffs Division, Bureau of Foreign and Domestic Commerce. (Refer to file No. 92600.)

Information on Argentine Fruit.

A booklet relative to the fruit industry in Argentina, issued by the Argentine Ministry of Agriculture, has been received at the Bureau of Foreign and Domestic Commerce. The booklet is the result of a circular sent to fruit growers. It contains the names of producers by Provinces, the kinds of fruits grown, seasons of maturity, and general conditions of sale and shipment. Interested persons may examine this publication upon application to the Foodstuffs Division or the Commercial Intelligence Division of the Bureau of Foreign and Domestic Commerce or to any district office. The booklet is written in Spanish.

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Far East:
Australian wool stocks and exports.
Australian wheat exports.
Chinese crop conditions excellent.
Stocks of rice in Japanese warehouses during April.
Cable review, Western Europe:
Increased demand for American tobacco in Antwerp market.
Crop prospects in Spain.
Western Europe: Imports of foodstuffs into United Kingdom.
Latin America: Coffee, sugar, and bananas sent from Guatemala to United States.
Tariffs and Trade Regulations:
Changes in Canadian import duties on various food products.
Reduction in Canadian import duty on cigarettes.
Foreign trade opportunities Nos. 6491 to 6523 inclusive, 6550 to 6555 inclusive.

TOBACCO

AUSTRALIA TO INCREASE TOBACCO PRODUCTION.

Consul General Thomas Sammons, Melbourne.

The State of Victoria is showing great interest in the matter of tobacco cultivation. For several years attempts have been made to increase the production and to improve the quality of domestic tobacco, in order to reduce the tobacco imports into Australia. Their efforts, however, have been unsuccessful, principally because the growers are unfamiliar with the proper methods of culture and curing the leaf.

The State has commissioned Mr. Temple Smith to proceed to the United States for the purpose of inducing at least 12 American tobacco growers to emigrate to Australia, to demonstrate there to Australian farmers the proper methods of cultivating and curing tobacco.

The value of imports of American tobacco into Australia for the fiscal year ended June 30, 1922, amounted to about $10,264,137.

Proposed Greek Institute for Training Tobacco Specialists.

C. E. Dickerson, jr., clerk to trade commissioner, Athens.

A group of American tobacco merchants, in conjunction with certain of the tobacco producers' associations, has submitted to the Ministry of Agriculture a proposition regarding the establishment of an industrial institute for the study of tobacco cultivation and for the training of tobacco specialists. The American group proposes to expend 3,000,000 drachmas on this venture and requests that the Government turn over to it 300 stremmata (1 stremma equals 0.247 acre), upon which the institute may be constructed. It is proposed to locate the institute at Drama in Macedonia and to devote its attention to the study of various grades and qualities of tobacco, methods of imitating Macedonian tobaccos of the higher grades, the problem of increasing Greek tobacco production, and the training of experts in tobacco growing. The tobacco trade, as well as various methods of manufacturing tobacco products, will also be studied under the proposed project.

The Ministry of Agriculture has not as yet given consent to the proposal with regard to the granting by the Government of 300 stremmata for the founding of the institute but has expressed approval of the principle suggested.

Dominican Tobacco Crop.

The prospect of a record tobacco crop in the Dominican Republic this year, which was predicted in a previous report, will not materialize.

According to a report from Consul W. A. Bickers at Puerto Plata, Santo Domingo, a very large acreage was planted under favorable conditions and a crop of 40,000,000 to 50,000,000 pounds was forecasted, but heavy freshets in February and tobacco pests have done much damage to growing plants and have materially reduced the yield. The effect of these two setbacks was small in comparison with the heavy damage caused by the drought, which has prevailed since the last of February until the present time.

If the drought continues the yield will probably be as low as 15,000,000 pounds, while under the most favorable conditions the crop will not exceed 25,000,000 pounds.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

PROPOSED TELEPHONE AND TELEGRAPH CONSTRUCTION WORK IN FINLAND.

Consul Leslie A. Davis, Helsingfors, April 21.

Improvements to be made during 1923 by the Finnish telegraph administration will add greatly to the present telephone service in northern Finland. An appropriation of 785,000 marks (the present value of the mark is about 2¾ cents), which has been made for the construction of a telephone line between Tornea and Enontekis, will be used for the building this year of a copper line from Tonea to Turtola, from which place there runs an iron line to Kolari. From there a copper line will be built to Muonionniska. It is also intended to replace the iron line between Turtola and Kolari with a copper line and to extend the terminus from Muonionniska to Enontekis.

The telegraph administration is at present procuring material for the building of these lines.

Between Brahestad and Uleaborg there will be erected a new telegraph line and in southern Finland a telegraph line will be built between Viborg and Sordavala.

The State has also purchased for 400,000 Finnish marks the telephone lines of Ostra Finlands Telephone A/B. These lines will be taken oven on June 1, 1923. They extend from Vigborg to the eastern frontier and have 13 centrals but are not in very good condition and will have to be repaired.

Slackness Reported in the Italian Electric-Lamp Industry.

Trade Commissioner A. A. Osborne, April 14.

According to most Italian trade periodicals at the present time, many domestic industries, especially the manufacture of incandescent lamps, are encountering hard times. It is said that Italy's lack of raw materials and the competition from imports of Austrian and German lamps, both of which have the advantage of low exchange in their favor, are chiefly responsible for the crisis. In that connection it is true that a large number of lamps are coming in from the two central European countries named, but imports from the Netherlands and Switzerland (two countries with currencies at high premium in terms of the lira) are also heavy. The latest record of the number of lamps imported applies to the nine months from January to September, inclusive (1922), and is compiled by countries as follows: Austria, 1,948,591; Germany, 2,248,988 commercial and 263,910 on reparations account; the Netherlands, 3,570,625; Switzerland, 1,104,706; other countries, 230,850; total, 9,367,670.

The depression in the Italian industry is said to be aggravated by the competition of foreign lamps. Until a short time ago the product per workman reached on the average only 12 lamps per day. With the installation of more modern equipment some establishments have managed to reach an individual production of 300 lamps per man in an eight-hour day. However, retarded development and foreign competition have resulted in closing down a number of the 36 establishments listed as manufacturing incandescent lamps in Italy.

Austrian Electrical Industry Steady.

Trade Commissioner William Ford Upson, Vienna, April 7.

The Austrian electrical industry is withstanding the period of deflation better than most other industries in that country. One of the leading Vienna factories had been running with its full quota of 5,500 employees until last November, since which time between 300 and 400 men have been gradually discharged. Those remaining, however, are at present working full time. The wages of the workmen are now about 60 per cent of the pre-war amount, taking the crown at its exchange value, but in real purchasing value, according to the Volkswirt index of living costs, 95 per cent of pre-war wages. The official March index for living costs gives this same percentage as 84.5.

Wages of lathe hands are $0.10 per hour, or $0.80 per day, with those of women $0.50 per day. Meals are served to employees at nominal prices. For unemployment insurance about 16 per cent of the pay roll of this company is regularly paid out.

Prices of electrical products range from 5 to 25 per cent above pre-war prices as reckoned in gold. The factories generally appear to be thoroughly up to date and well run, comparing favorably with similar American manufacturing plants.

ELECTRICAL TRADE NOTES.

Dullness in German Electrical Industry Persists.

Further slackness in the electrical industry of Germany is noticeable, according to late cable advices from the American commercial attaché in Berlin. This report indicates a continuance of the trend which has existed for some time.

Bolou, Turkey, to Have Electric Plant.

Electric power may be obtained from a waterfall near the city of Bolou in Turkey, according to Consul General G. Bie Ravndal, who states that a proposal has been laid before the district legislature for this purpose. The proposition is said to have been accepted and decision reached to insert in the next budget the necessary credit for the installation of a hydroelectric plant.

Electrical Developments in Quebec.

Electrification of the railways of the Province of Quebec has been suggested recently by the prime minister of the Province. This has been made possible by the favorable governmental handling of the problems in connection with water-power development, an ample supply of this form of energy being available. (Consul E. Haldeman Dennison, Quebec, May 4.)

Additional information regarding electrical equipment appears in this issue under the following section:

Construction News: Hydroelectric plant to be constructed at Wendigo Falls, Ontario.

RUBBER

P. L. Palmerton, Chief, Rubber Division

RUBBER PRODUCTS.

DIRECT SHIPMENTS REQUIRED TO FRENCH INDO-CHINA.

Consul Leland L. Smith, Saigon, March 15.

Tire exporters to French Indo-China are likely to have little success through the medium of correspondence, as both foreign and American tire companies have active representation on the ground. It should be borne in mind that all shipments must be sent direct to Saigon without transshipment at any port, or else the maximum customs tariffs instead of the minimum will be levied. Such added expense would preclude the possibility of competing with French tires, which enter duty free. The Tampa & Inter-Ocean Steamship Co. from New Orleans and the Struthers & Barry Steamship Co. from San Francisco are the only lines that have occasional vessels direct to the ports of Indo-China from the United States. The same shipping rules apply for shoes as for tires. White canvas shoes are worn by the majority of the population.

Tire Market Overstocked in Beirut, Syria.

Consul Paul Knabenshue, Beirut, April 11.

At present the Beirut market is being flooded with tires and tubes of all descriptions, resulting in price cutting and keen competition. While it is estimated that about 2,412 tires are consumed in the busiest month of the year (July), local dealers are not placing large orders, as the market appears to be overstocked. Unfortunately, importers of every known commodity are now taking tire agencies as a side line, and the result of such competition can be imagined. Competition by a French brand of tire, the Michelin, has also had a marked effect upon the sale of the American product. This French company practically controls the trade, owing to its superior marketing organizations, transportation conveniences, and the stability of exchange rates between the two countries, due to the fact that Syrian currency is based upon the French franc, at the rate of five Syrian piasters to the franc. Thus American tire representatives have been seriously handicapped in attempting to compete with the Michelin representatives, and the immediate outlook for the sale of American-made tires is not bright.

Handbooks on Canada and the Philippine Islands.

The Rubber Division has recently issued outline monographs giving facts affecting the importation of rubber products into Canada and the Philippines. The Canadian market, which is supplied chiefly by local manufacturers who have the advantage of a very high protective tariff, is an important market to United States exporters of rubber goods. The rubber goods trade in the Philippines is practically monopolized by United States manufacturers, Japan being the only foreign country securing any appreciable share of the trade. Copies of the handbooks are available, free of charge, to exporters of rubber products who are listed on the Exporters' Index.

BRITISH IMPORTS OF RUBBER FOOTWEAR AND WATERPROOF CLOTHING.

Statistics of rubber footwear imports into the United Kingdom are shown in a single class without separate subdivision of boots, shoes, and canvas rubber-soled shoes. The total imports in 1920 were 280,481 dozen pairs valued at £714,685; in 1921, 62,600 dozen pairs valued at £158,985; and in the first 10 months of 1922, 100,996 dozen pairs valued at £202,608. Of these imports the United States and Canada supplied 95 per cent in 1920 and 58 per cent in 1921, the proportion of the United States being 67 per cent in 1920 and 31 per cent in 1921.

Assuming that the United States and Canada together supplied 60 per cent of the 1922 rubber footwear imports of the United Kingdom, it is estimated that the 100,996 dozen pairs imported in the first 10 months of 1922 should be divided into the following percentages: Canvas rubber-soled shoes, 80 per cent; rubbers, arctics, etc., 13 per cent; and rubber boots, 7 per cent. These figures are calculated on the quantity exports from the United States for the first 11 months of 1922, and from Canada for the seven months ended October, 1922, in which periods canvas rubber-soled shoes were first separately stated in the export statistics of these countries. It is estimated that of the £202,608 value of rubber footwear imported into the United Kingdom 65 per cent consists of rubber-soled canvas footwear and 35 per cent of waterproof footwear.

During 1920 the United Kingdom imported 3,441 rubber-proof overcoats, mackintoshes, and the like, valued at £6,130, while in 1921, 5,143 were imported, valued at £6,737. The imports for the first 10 months of 1922 are combined with imports of "overcoats and mackintoshes made waterproof with oil paint and other proofing, as well as rubber," the total being 14,400 garments valued at £6,037. The imports of garments proofed with oil, etc., in 1920 numbered 5,061 valued at £7,044, and in 1921, 31,447 valued at £7,985. The sources of imports for waterproofed clothing are available only for 1920, in which year the United States supplied 22 per cent of the rubber-proofed garments and 75 per cent of the oil-proofed garments.

Rubber Trade Notes.

Tire Market in Canary Islands.

All tire dealers in the Canary Islands are retailers, and it is a general custom to allow a discount of 5 pesetas on any tire sold to a chauffeur, but now owners are likewise trying to obtain this discount. American tires enjoy a good sale; prices are reasonable, quality satisfactory, and the agents are progressive. Michelin and Continental hold second and fourth places, respectively, in the market. Michelin cord-tire prices, in pesetas, are as follows: 760 x 90, 88; 815 x 105, 113; 820 x 120, 150; (straight side) 32 x 4, 131; 33 x 4, 135; and 32 x 4½, 181, representing a decrease of approximately 14 per cent since December 31. (Vice Consul Raymond Phelan, Teneriffe, April 12.)

Italian Tire Market Inaccessible.

Only two American-made tires are on sale here. Dealers' discounts range from 10 to 15 per cent, plus yearly premiums, according to the importance of sales. The high rate of exchange and competition from local producers makes the prospect for introduction of American-made tires unfavorable. (Consul C. Carrigan, Milan, April 10.)

Tire Market in Palestine.

The recent importation of a considerable number of American-made cars has increased the demand for American-made tires. Michelin is holding third place among the tires in this market. Retail prices of representative Michelin cords, stated in Egyptian piasters, are as follows: 820 x 120, 600; 30 x 3½, 350; 32 x 4 straight side, 475; 33 x 4, 500; 32 x 4½, 650. The Michelin 30 x 3½ fabric retails at 250 piasters, the rate of exchange being 21 piasters to the dollar. (Vice Consul George C. Cobb, Jerusalem, March 31.)

Additional information regarding rubber appears in this issue under the following sections:

Tariffs and Trade Regulations: Proposed Belgian import duties on ties and tubes.
Foreign trade opportunities Nos. 6545, 6555, 6556, 6557, 6565.

PETROLEUM

Henry C. Morris, Chief, Petroleum Division

CHILEAN MARKET FOR PETROLEUM PRODUCTS.

As of interest in connection with the recent increasing attention to explorations for possible petroleum deposits in Chile, the following brief survey of the market for petroleum products in that country is given.

There is as yet no domestic production of crude petroleum in Chile, and all petroleum products consumed must be imported. There is a fairly large demand in the Republic for all classes of mineral oils, and competition in their sale is keen. Practically all of the larger importing houses handle oils and a number for foreign petroleum companies have branches or representatives in Chile for the sale of petroleum products. Mexico, Peru, and the United States supply practically all of the imports of these products, the larger part of the fuel oil coming from Mexico, while the United States furnishes most of the refined products, particularly lubricating oils. Diesel oil is largely imported from Peru, while some gasoline and kerosene comes from both Peru and Mexico.

Fuel Oil Replacing Coal in Industrial Use.

There is normally a considerable consumption of fuel oil by the nitrate industry of northern Chile as well as for railroads and for the bunkering of ships. The principal possible expansion of this business appears to lie in the increased use of oil as a fuel in the nitrate industry, and it is doubtless in anticipation of such development that so many competitors have installed plants which are more than adequate for present consumption. At the more important nitrate oficinas there have been in the past few years many changes back and forth between fuel oil and coal, and while it appears that the general preference is for oil, a stock of coal is carried against a possible emergency. The tendency at present appears to be for the larger nitrate producing companies to operate their own tank cars, which would seem to indicate that oil is regarded as the more acceptable fuel under ordinary conditions.

Diesel engines have been used as a source of power for the electric plants in a number of oficinas, but it appears likely that the larger plants will tend in the future toward the use of turbines receiving high-pressure steam direct from the boilers, thus eliminating the accessory power unit. In the section of Chile from Valparaiso and Santiago south there is but little use of fuel oil, and there does not appear to be any likelihood of any increase either for railroads or industry because of the supply of native coal and the unlimited water-power resources.

Fair Demand for Refined Products.

The demand for gasoline and kerosene is fair, but in many parts of Chile the use of these oils is increasing slowly or not at all, and the facilities installed for their handling are in some cases in excess of the sales possibilities. The use of electricity for lighting, which is highly developed in some sections, notably in the Iquique district, has limited the sale of kerosene for this purpose, while the cheapness of candles has caused many of the poorer classes to make use of this means of illumination. The consumption of kerosene in stoves for heating is increasing steadily, though slowly, and there sometimes appears to be a shortage of oil for this purpose.

Gasoline and kerosene were formerly imported entirely in containers, but there is now an increasing amount brought in bulk to be put in containers in the country. A decision of August 28, 1922, permits the importation of gasoline and naphtha with a reduction of duty when imported in tank steamers for the purpose of putting into containers in Chile.

The use of lubricating oils and greases is relatively large in northern Chile in times of normal activity of the nitrate industry, as the nitrate plants, the railways, and shops are all steady consumers. Paraffin wax is consumed in fairly large quantities, chiefly by the candle factories.

Import Trade in Petroleum Products.

The following table shows imports of the principal petroleum products into Chile during the last four years, as far as statistics are available.

Imports of petroleum products into Chile.

Products.	1919	1920	1921	1922
	Kilos.	*Kilos.*	*Kilos.*	*Kilos.*
Fuel and gas oil	567,442,775	638,088,714	541,837,420	722,531,000
Gasoline and naphthas	11,852,301	17,268,234	14,416,780	(1)
Illuminating oil	17,894,440	19,135,898	13,677,595	18,021,452
Paraffin wax	4,740,088	6,463,253	4,924,575	8,262,021
Lubricating oils	9,056,901	9,128,492	4,643,834	(1)

[1] Figures not available.

Petroleum products are distributed through local agents of the foreign oil companies or through the large importing companies; important orders are almost al-

ways sold on contract. Some companies sell for cash to distributors and retailers, while others grant 30 to 60 days' credit. In some cases subagents are appointed who pay for the goods when sold.

Petroleum Notes.

Portuguese Lands Available for Research.

The districts of Aveiro, Coimbra, Leiria, Santarem, Lisbon, and Faro have been declared free for registering for petroleum research and explorations, according to decree No. 8677 of the Portuguese Government. (Leon de Veh, clerk in American consulate general, Lisbon, March 9.)

Petroleum Prospecting in the Dutch East Indies.

Indications of petroleum were discovered in Boeton, southeast of the Celebas, several years ago, but because of its remoteness and the difficulty of procuring coolie labor, a comprehensive survey has never been made. A late cable reports that the Dutch Colonial Government is about to make an investigation there in order to determine the extent of the deposit.

New Panama Petroleum Law.

Legislation relating to the exploitation of petroleum deposits in the Republic of Panama was approved on April 6, 1923. This legislation is known as law No. 21 of 1923, and amends Chapter V, Title V, Book I, of the Panama Fiscal Code. (American Minister J. G. South, Panama, April 16.)

[A limited number of copies of the translation of the above law are available and may be consulted by interested parties on application to the Petroleum Division or to the district and cooperative offices of the Bureau by referring to file No. 92366.]

Petroleum Consumption in Poland.

The consumption of petroleum products in Poland during 1922 amounted to 245,140 metric tons, an increase of 27,040 tons over 1921, according to figures compiled by the Polish Ministry of Commerce. Consumption of the principal products was as follows: Gasoline, 19,750 metric tons (approximately 7,110,000 gallons); kerosene, 100,860 tons (33,620,000 gallons); gas oil, 18,970 tons; lubricating oils, 54,250 tons; and other products, 51,310 tons. (Consul General L. J. Keena, Warsaw, April 17.)

Petroleum Activities in Chiapas and Tabasco, Mexico.

Two petroleum companies which apparently are planning drilling activities in the States of Chiapas and Tabasco, Mexico, are said to have requested the permission of the Government to construct a railroad which would unite these two States. The companies are to advance the money required for this construction and the Mexican Government is said to be regarding the project with favor. (Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City, April 14.)

Demand for Paraffin in Mexico.

There is a demand for paraffin in the Vera Cruz district to be used in the manufacture of candles. Candles are universally used by the poorer classes for lighting purposes, and the houses of the better classes, although equipped with electric lights, always have a supply of candles on hand for emergencies. A large number of candles are also used in the churches, it being estimated that during normal times candles to the value of 10,000 pesos a month were used in the churches throughout the Republic. (Consul John L. Wood, Vera Cruz, April 11.)

Argentine Petroleum Output.

During the 15 years since the Argentine Government started development work in Comodoro Rivadavia, approximately 1,581,000 metric tons of petroleum (about 107,508,000 barrels) have been produced. It is further stated that up to January 1, 1923, approximately 54,000,000 pesos (1 peso equals 42 cents) have been spent in producing this oil, or at the rate of over 34 pesos per ton, while oil is selling in Buenos Aires at 30 pesos per ton (at the time of writing, March, 1923). The importation of petroleum products during 1922 is given as twice the output of the Argentine fields. (La Nacion, Buenos Aires.)

Polish Petroleum Exports to Germany.

Poland supplied 139,050 metric tons of petroleum and petroleum products to Germany during 1922, according to the Journal de Pologne. These shipments represented approximately 20 per cent of the total German imports of petroleum products, amounting to 701,410 tons. The imports from Poland included 25,000 tons of gasoline, benzine, etc., 37,550 tons of illuminating oil, 16,620 tons of gas oil, and 20,600 tons of lubricating oil, besides some crude oil and paraffin and other products. Poland is thus second only to the United States as a source of German petroleum imports. (L. J. Cochran, clerk to trade commissioner, Warsaw, March 29.)

Petroleum Trade at Curacao, Dutch West Indies.

Imports of crude petroleum from Venezuela into Curacao during the first quarter of 1923 totaled 82,857 metric tons. A shipment of 7,576 tons of crude was also received during March from San Pedro, Calif. Exports of petroleum and products during the first three months of the year included three shipments of crude to Fall River, Mass., totaling 33,435 tons; fuel oil to Gibraltar and the Canary Islands, 22,998 tons; bunker oil to steamers at Curacao, 16,400 tons; gasoline, 629,460 gallons, of which nearly two-thirds went to Porto Rico and the remainder to Colombia, Venezuela, and the West Indies; kerosene, 241,875 gallons, to Venezuela and the West Indies. (Consul B. S. Rairden, Curacao, April 13.)

Gasoline and Kerosene in British Guiana.

Gasoline and kerosene are the principal petroleum products imported into British Guiana. Trinidad is now the leading factor in the gasoline market, as the product from that island has the advantages of a short haul and preferential duty. Imports of gasoline into British Guiana during 1921 totaled 290,128 imperial gallons, of which 234,595 gallons came from Trinidad, 55,136 gallons from the United States, and the small balance from other countries. The United States still leads in the amount of kerosene furnished, although the competition of illuminating oil from Trinidad is being felt. Total imports of kerosene in 1921 were 521,453 imperial gallons. (Consul Chester W. Davis, Georgetown.)

Additional information regarding petroleum appears in this issue under the following section:

Tariffs and Trade Regulations: Canadian import duty on crude petroleum.
Foreign trade opportunities Nos. 6555, 6594.

COAL

FEATURES OF BRITISH COAL EXPORT TRADE.

Trade Commissioner Alexander V. Dye, London, April 21.

The chief characteristic of the British coal trade for the first quarter of this year was the large increase in export trade. Total shipments during the January-March period amounted to 18,694,402 tons, valued at £21,961,486. This rate of export would mean about 85,000,000 tons per annum, exclusive of bunker coal, which would be about 12,000,000 tons more than in the banner year of 1913. If it had not been for the fact that loading facilities of the United Kingdom have reached their maximum under present conditions, shipments would have been even larger. This increase has been largely caused by increased shipments to the Continent. The principal markets for British coal during the first quarter of this year and a comparison with the quantities taken by the same countries during the corresponding period of last year are shown in the following table:

Leading markets for British coal.

Countries of destination.	January-March, 1922.	January-March, 1923.
	Tons.	*Tons.*
France	3,616,801	4,562,567
Germany	1,074,920	3,358,350
Italy	1,481,954	2,005,621
Belgium	802,589	1,462,300
Netherlands	1,228,511	1,302,805
Denmark	567,962	752,661
Sweden	388,087	648,471
Argentina	382,183	588,002
United States	14,579	581,717
Egypt	408,956	494,677
Norway	436,039	461,817
Other countries	2,833,923	2,475,414
Total	13,236,504	18,694,402

One of the best illustrations of the irregularities of postwar trade is the fact that in 1921 the United States shipped about 3,000,000 tons to the United Kingdom, even literally "carrying coals to Newcastle," whereas in the next year the United Kingdom shipped approximately the same amount to the United States. In both instances this movement was due to a strike in the respective countries. In 1922, however, the shipment of coal, as noted above, has proceeded even long after the strike was settled. In fact, before the close of the present quarter, and while shipments were still moving to the United States, the export of coal from the United States to Europe began.

Prices for export have been extremely high but are now not quite so firm, owing to the fact that the trading is in odd lots which have not hitherto been contracted, and, as collieries are all sold up until the early part of May, buyers are not willing to contract at present high prices beyond that period.

Prospects for American Coal in Italy.

Consul Homer M. Byington, Naples, March 26.

British coal has practically controlled the Italian market for some time. The figures published by the Italian Ministry of Finance covering the first nine months of 1922 show that of all the coal imported into the country 61 per cent originated in the United Kingdom. Germany was the next largest source of supply with 32 per cent. The figures for other countries do not begin to compare with these two, France shipping 4 per cent and the United States but 2 per cent. A very significant factor in the foregoing is that 2,052,320 tons, or 31 per cent of the total imports, came from Germany as payment on reparations account. It is not probable that such an amount will be delivered in the present year.

Prices Rise Following Ruhr Occupation.

Between the 1st of February and the last of March a most remarkable rise was evident in the coal quotations on the Naples market, as is shown in the following figures issued by the Banca di Roma. (Conversions into American currency were made at the rate of 20 lire to the dollar.)

Prices of British coal in Naples.

Grade of coal.	Feb. 1.		Mar. 25.	
	Lire.	Dollars.	Lire.	Dollars.
Cardiff, first	225	11.25	285	14.25
Cardiff, second	220	11.00	270	13.50
Newport	220	11.00	255	12.75
Anthracite	325	16.25	400	20.00
Newcastle	235	11.75	280	14.00
Newpelton	230	11.50	275	13.75
Rubbly culm	175	8.75	195	9.75
Gas coal, first	205	10.25	255	12.75
Gas coal, second	200	10.00	250	12.50

The above prices, coupled with the fact that stocks of bunker coal in the port of Naples are very low at present (only some 5,000 tons), leads to the conclusion that the usual channels of imports have been materially slowed up if not stopped entirely.

Opportunity for American Shippers.

The loss of the reparations coal deliveries will affect primarily the national industries. The quality of the German coal has been too low to make it acceptable for bunkering. The best bunker coal has been Cardiff, which, as the above table has shown, has risen to unprecedentedly high price levels. Heretofore the low freight rates and the generally lower price of Cardiff coal have favored imports of British coal, but now it would seem that American companies should be able to compete in the Italian coal market.

[A list of coal dealers in principal cities of Italy can be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by referring to file No. EUR 6013-A.]

Coal and Coke Consumption of Burma Railways.

The annual consumption of coal by the Burma Railways is between 192,000 and 200,000 long tons per year. They also consume annually about 1,000 tons of soft coke and 400 tons of hard coke. Most of this coal and coke is imported from Bengal. The only other large consumer of coke in Burma is the Burma Corporation, which uses about 30,000 long tons annually for smelting purposes only. (Consul J. P. Moffitt, Rangoon, India.)

Notes on Foreign Coal Trade.

Italian Production of Lignite and Peat.

The production of peat and lignite in Italy in 1922 amounted to 905,520 tons, according to the annual report of the Montecatini Co. The production of these fuels appears to be declining, as the 1921 output was 1,334,320 tons and that of 1920, 1,739,922 tons. (Consul Leon Dominian, Rome, April 6.)

Supplies and Prices of Bunker Coal at Naples.

Coal prices in Naples during the past few months have risen to a level even higher than that of the corresponding period of 1922. During the summer of 1922 prices declined considerably owing to increased stocks. The average stock of bunker coal on hand in Naples is from 5,000 to 10,000 tons. In July, 1922, there were more than 45,000 tons available, and prices dropped 10 to 20 per cent from the winter quotations. At the present time it is reported that there are 5,000 to 6,000 metric tons in stock. (Consul General Homer M. Byington, Naples, March 19.)

Swiss Coal Supply Normal.

The coal supply for Switzerland is normal and adequate for both industrial and household requirements, reports the Berne correspondent of the St. Galler Tagblatt. Stocks at the gas works have run a little low on account of the strike in the Saar Basin, and they have been compelled to obtain coal from Silesia and England. The imports of union briquets have been greatly reduced on account of strikes and shipping difficulties, but this situation has again improved and arrangements have been made with the German authorities for the shipment of a minimum of 20,000 tons per month. (Schweizer Industrie Zeitung, Zurich, April 11.)

Coal Consumption of Martinique.

The annual consumption of coal on the island of Martinique is about 65,000 metric tons, all of which is imported. The principal consumers are the sugar centrals and the steamship companies. Very little change occurs in the demand from year to year, but it depends to some extent upon the calls made for coal by passing vessels and reexports to other ports. The French Government supplies its naval vessels, the dry docks, and the small vessels that ply the coast of Martinique with coal from France, and all other coal consumed is imported from the United States. (Consul Thomas R. Wallace, Fort de France.)

Additional information regarding coal appears in this issue under the following section:
Cable review, Western Europe: Spanish coal industry shows strength.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

FACTORS AFFECTING SALE OF COMBINED HARVESTERS IN YAQUI VALLEY.

Consul Bartley F. Yost, Guaymas, Mexico.

The recent sale of Canadian combined harvesters to farmers in the Yaqui Valley (Mexico), which was referred to in COMMERCE REPORTS No. 14, issue of April 2, 1923, page 48, appears to have been the result, in part at least, of the more liberal credit terms offered by the Canadian firm. Most of the farmers in Sonora find it extremely difficult to do business on a cash basis, and consequently the foreign firm which offers the most liberal terms is likely to secure the business. The machines referred to have been sold at a price of 4,900 pesos ($2,450), with a 5 per cent discount for cash. If a time contract is preferred, the Massey-Harris Co. (which is the firm that has been selling these machines) will accept 50 per cent after the wheat harvest in May and the remaining 50 per cent after the rice harvest in January. The rate of interest is 1 per cent per month.

It is claimed that the Canadian machine has some advantages over the American combined machines in that it can be set sufficiently low to pick up the grain which has fallen on account of strong winds or other causes. Although lower prices have been quoted for American machines, the fact that the Canadian machine is drawn by mules, while American machines which have been offered were designed primarily for tractors, seems to have been a factor in its favor. The farmers in the Yaqui Valley generally are opposed to the extensive use of tractors, considering the use of mules as being cheaper, and, consequently, a combined machine requiring the use of a tractor is at a disadvantage as compared with one that is readily adaptable both to tractor and animal traction.

Certain development projects, which are now under way, are evidently intended to attract new settlers to the valley, which, of course, would result in an increased acreage under cultivation and need for additional implements. In the light of these facts, it is advisable to give careful study to conditions that may act to hinder the sale of American implements in this region.

British Scheme to Study Use of Machinery in Farming.

Assistant Trade Commissioner, William M. Park, London, April 27.

During the latter part of 1922 a committee was appointed by the British Ministry of Agriculture to determine the general conditions which should govern the admission of agricultural machinery for tests under the auspices of the Ministry and the principles which should be laid down as to duration and conditions of test.

This committee has recommended that the Department of Agriculture assume direct responsibility for the whole of the work in connection with agricultural machinery, having a technical staff to take care of this work, and an advisory committee, which should be representative of various interested organizations. The committee also recommended various investigations, individual testing, research, advisory work, and exchange of views between farmers, distributers, and manufacturers. The work to be carried out in the near future should consist of investigations, not of one but of several machines performing the same operation,

and of groups of cultivating machinery, threshing machinery, manure distributers, corn drills, potato planters, hedge-cutting machinery, dairy appliances, and others. Facilities should be provided for a limited number of individual tests, performance certificates to be issued in each case which would give the data necessary to indicate the results of the test.

It is estimated that £50,000 will be available for this work during the next five years, and it is expected that the research work will be carried out at a university which possesses an agricultural and an engineering department. This scheme should prove beneficial to all concerned; it should be of benefit in the standardization of plows and small implements.

Decreasing Use of Farm Tractors in Great Britain.

Assistant Trade Commissioner William M. Park, London, April 24.

A marked tendency throughout England to replace tractors by horses is indicated by information given out by the Ministry of Agriculture. This is ascribed to the low prices of horses, with which farms are generally well stocked; to the reduced cost of labor; and to the fact that farmers complain that tractors are too expensive to operate and keep in repair. There has also been the usual difficulty in getting farm hands competent to operate and take care of tractors properly. In a few districts the use of tractors is increasing, particularly on the large arable farms, where they can be advantageously employed in threshing and other operations. In some districts they are used more extensively for road-haulage work than for farm work. Much arable farm land is being turned over to grass and this again has decreased the need for tractors for plowing and other purposes.

Tractor Sales in Chile.

R. H. Squirrel, secretary to commercial attaché, Santiago, April 5.

Tractor sales at present in Chile are small. Agents for various tractor manufacturers report that few sales are being made and that considerable difficulty is encountered in converting the farmers to the use of tractors. This difficulty may be gradually overcome, but one representative of an American manufacturer has recently recommended to his firm that its sales efforts be concentrated on its various lines of agricultural implements until they have become firmly established in the market, and that only when that has been accomplished should a vigorous campaign for the selling of tractors be inaugurated.

Cooperative Purchases of Implements in South Africa.

Consul Charles J. Pisar, Cape Town.

The purchases made by the Farmers Cooperative Association of South Africa (Ltd.) for the 32 weeks' period ended February 10, 1923, amounted to £180,527, as compared with the corresponding period ended in February, 1922, when the purchases totaled £101,436. A large proportion of these purchases consisted of dairy machinery, spraying machinery, and agricultural implements. Some purchases were made in the United States, but up to the present they have been few.

The chief object of this association is to do the collective buying and selling on behalf of its constituent societies, and it claims a relatively large membership. An office has been established in London in conjunction with similar Australian and New Zealand federations, and the question of establishing an office in New York is to be taken up at the next conference of the three associations. The purchases of this organization are increasing, and since they are largely made up of agricultural implements, there seems to be an opportunity to increase the number purchased by the society in the United States.

Market for Threshers in Australia.

The demand for threshers in Australia is limited and is constantly diminishing, according to a report published by the Canadian Commercial Intelligence Journal. The report states that the demand is limited to those of medium size and is confined to certain sections where conditions are not favorable to the methods that are generally used throughout the country. Formerly threshers were in more general use, but have gradually been displaced by the stripper harvester and reaper thresher.

There are two leading makes on the local market—one of American make and the other of domestic manufacture. The American machine is equipped with tailing elevator, bagger, and 14-foot straw elevator mounted on truck, including pole, neck yoke, two-horse trees, and brake, and sells for from £142 to £163, depending on the terms of sale. The Australian machine is a complete thresher and cleaner, with 16-foot straw elevator, and sells for £115 cash, or for £120 or £125, depending on the terms of credit granted.

When the American machine was first introduced into Australia considerable experimental work was required to adjust it to Australian conditions, which differ materially from those in America. It is felt that the same need would follow the introduction of new and untried makes and for that reason local dealers are reluctant to consider propositions leading to the handling of locally unknown threshers.

Increased Sale of Tractors in Australia.

An Australian importing house, which is interested in the sale of American tractors, reports that their distributors recently sold 50 machines of a well-known make of American tractors in one week. It is thought that this success was the result of the demonstrations of tractors at the last agricultural show of the State of Victoria, held at Melbourne in September, 1922. Previous to September, 1922, less than a dozen tractors had been sold in the Melbourne district and the total disposed of since that time was over 60. A vigorous effort is being made to develop the agricultural resources of Victoria and the use of American tractors is found to be suitable and advantageous. (Consul General Thomas Sammons, Melbourne, March 17.)

Additional information regarding agricultural implements appears in this issue under the following section:

Foreign trade opportunities Nos. 6537, 6582, 6583, 6584, 6585, 6586, 6592.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

INCREASE IN FOREIGN DEMAND FOR SHOE POLISH.

The shoe polish manufacturers of the United States may well feel encouraged over the increase in foreign business in the first part of this year. According to export statistics, 1,325,631 pounds of shoe polish and paste, with a total valuation of $288,520, were exported by the United States to various foreign countries durthe first quarter of this year, as compared with 1,074,040 pounds, valued at $242,375, during the corresponding period of last year.

In a comparison of the quantities exported during the first quarter of 1923 with those of 1922, it is noted that the 1923 shipments to Cuba, Japan, Mexico, Egypt, the Philippines, South America, and British India, which have always been the leading markets for this commodity, exceeded those of 1922. Detailed statistics concerning the exports to these markets are given below:

United States exports of shoe polish.

Important markets.	January.	February.	March.	Total.
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*

1922	123,155	106,054	207,586	436,795
1923	74,370	73,402	130,570	278,342
Total:				
1922	345,093	263,856	465,091	1,074,040
1923	324,806	367,417	633,408	1,325,631

During 1923 the March shipments of this commodity were valued at $135,631, and showed a large increase over those for January and February, valued at $79,306 and $73,583, respectively.

United States Import Trade in Leather Gloves.

The demand in the United States for foreign manufactured leather gloves was nearly 200,000 pairs less during February of 1923 than in the corresponding month of 1922. This decreased importation applied to men's, as well as women's and children's gloves, and affected all of the leading countries from which the United States customarily obtains leather gloves. It is noted, however, that February, 1923, importations (432,490 pairs) exceeded those of January (389,245 pairs). This increase occurred in the shipments received from France and Italy.

The following table shows the number of pairs and value of the leather gloves imported by the United States during February, 1922 and 1923:

United States imports of leather gloves.

Imports of gloves.	February, 1922.		February, 1923.	
	Pairs.	Value.	Pairs.	Value.
Women's and children's	614,136	$878,328	430,685	$462,217

AUSTRALIAN MARKET FOR BELTING.

Trade Commissioner J. W. Sanger, Melbourne.

Leather belting predominates in the Australian market. A very conservative estimate puts the proportion of leather belting used at about 75 per cent of the whole. It is employed largely for transmission drives in the various factories and manufacturing concerns, and for the most part is of Australian manufacture. The total imports of leather belting for the year ended June 30, 1921, were valued at only £16,904, the United Kingdom supplying three-fourths of the whole. The United States supplied goods to the value of £3,922, and was practically the only other competitor.

Next in importance comes rubber belting, which is used largely for conveyors in mining districts and elevator belting for silos. It is manufactured by the larger rubber companies of Australia. Importation of rubber belting in the year ended June 30, 1921, amounted to £21,741, and the chief countries of origin were Canada, £8,649; the United States, £7,450; and the United Kingdom, £4,974.

Under the heading "Canvas and composition belting," a large amount of goods, valued at £142,748, was imported during the year ending June 30, 1921. This would seem to imply that there was a good demand for canvas belting in Australia, whereas in reality there is absolutely no demand at all for this product. The explanation is that under the item "Canvas and composition" are grouped all imports of belting composed of any material other than leather or rubber, and that canvas belting represents a very small proportion of the imports under this group.

An Australian dealer in belting has stated that the reason why canvas belting has not become popular in Australia for use in agricultural machinery and for the other uses to which it is so largely put in other countries is that Australian-made leather belting can be produced so cheaply and in such good quality that it is preferred to any other kind of belting, and that it is not likely to be discarded in favor of canvas or composition belting.

British Exports of Saddlery and Harness.

The value of the saddlery and harness exported by the United Kingdom during the first quarter of 1923 was £55,625, a slight increase over exports during the corresponding period of 1922, valued at £53,525. Despite the almost equal values, there were in the 1923 quarter noticeable changes. The value of shipments to Europe and British South Africa showed increases of £2,000 and £11,000, respectively, over the consignments of similar goods in the first quarter of 1922, while exports to Australia declined by £14,000.

The following table gives by principal countries of destination the value of the saddlery and harness exported by the United Kingdom during March and the three months ended March, 1922 and 1923:

Value of exports of saddlery and harness from United Kingdom.

Countries of destination.	March—		Three months ended March—	
	1922	1923	1922	1923
Countries in Europe	£1,651	£3,600	£3,785	£5,777
United States	4,410	2,956	10,901	10,140
Central and South America	725	1,096	2,231	2,417
British South Africa	1,357	4,074	3,321	14,377
British East Indies	975	358	2,344	4,032
Australia	10,790	1,589	19,382	5,581
New Zealand	522	1,028	847	2,381
Other countries	3,127	3,660	10,714	10,920
Total	23,557	18,361	53,525	55,625

Items of Interest to the Trade.

United States Imports of Boots, Shoes, and Slippers.

Statistics for February, 1923, show that the United States imported 24,976 pairs of dutiable leather footwear and 78,963 pairs of leather boots and shoes not subject to duty in that month, as compared with 57,139 pairs and 92,139 pairs, respectively, in January.

Increase in the U. S. Foreign Trade in Harness and Saddlery.

The volume of harness and saddlery exported by the United States in the first quarter of 1923 was 278,124 pounds, or nearly three times the weight of similar goods (95,001 pounds) exported in the corresponding period of 1922. Dominating markets during the first quarter of 1923 were Cuba, 177,329 pounds; Mexico, 55,656 pounds; Canada, 11,859 pounds; and Honduras, 8,715 pounds.

Imports of Shoe Buttons into Canada.

During the 11 months ended February, 1923, Canada imported shoe buttons valued at $26,634; of this amount $13,673 represented the value of papier-mâché buttons. The United States supplied all of these goods except a small shipment valued at $17 which came from the United Kingdom. The value of this class of goods during the corresponding periods of 1921 and 1922, respectively, were $20,549 and $33,216.

Additional information regarding shoes and leather manufactures appears in this issue under the following section:

Foreign trade opportunities Nos. 6572, 6573, 6574, 6575.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

BRITISH NEW CAPITAL ISSUES DURING FIRST QUARTER OF 1923.

Assistant Commercial Attaché Candler Cobb, London, April 20.

In spite of the sudden spurt in British new issues during the last half of March, the total for the first quarter of 1923 falls far below that for the same period in 1922. In round numbers, figures for the two periods are: First quarter of 1922, £286,000,000; first quarter of 1923, £86,250,000. This decline is due largely to the changed requirements of the British Government. In the first three months of 1922 the Government took about £212,000,000 (almost three-fourths of the total), whereas in the same period this year the Government took only £44,000,000—somewhat less than one-half of the total. These figures do not include British Government borrowings by treasury bills nor ways and means advances. In considering the figure for the first quarter of 1923 it should also be noted that £14,175,000 was taken by the British Government in the last few days of March by the new 4 per cent treasury bonds, issued at 94½.

Eliminating the British Government from the calculations, it appears that in the first quarter of 1922 all other issues were about £74,000,000 and in 1923 about £42,000,000. Going a step further into the comparison, it is seen that the first quarter of 1923 shows a 25 per cent falling off in colonial-government borrowings, and an improvement of more than 50 per cent in foreign-government loans at approximately £5,600,000. Foreign corporations, except railways, failed to appear, whereas for the same period of last year they had taken more than £2,750,000.

If British, colonial, and foreign governments are eliminated, there are but £24,000,000 for all others. This sum includes over £3,500,000 for four oil companies, approximately £3,500,000 for distilleries, and over £1,500,000 for rubber. Mines, including Australia and South Africa, took a trifle less than £1,500,000; and railways, docks, harbors, and shipping account approximately £2,250,000. Financial investment trusts, banks, and insurance companies appear at about £2,000,000.

Funds for Investment.

Throughout the first quarter of 1923 it has been evident that there is a large store of funds ready for investment. Most of the issues have been quickly absorbed and many have, in subsequent trading, risen to premiums over issue prices. The general tendency of the investor seems to incline toward a chance for improvement in prices or values, but a good security must be back of the issue.

Response to Offering of Austrian Treasury Bills.

One feature of the quarter should be noted—the ready response to the offering of the £1,800,000 one-year Austrian treasury bills at 93. To be sure, these were brought out under the auspices of the League of Nations and are guaranteed by the British Government, but it is felt that the ready and sympathetic response to the offering may well be said to presage other and further financial assistance in central Europe.

Cash Involved in New Capital Issues.

The following table, taken from the Economist, shows the total cash involved in the issues for the first quarters of 1922 and 1923:

British new capital issues during first quarter of 1922 and 1923.

Class of issue.	1922	1923
British Government loans	£211,893,100	£43,775,200
Colonial government loans	16,490,000	12,567,300
Foreign government loans	3,574,600	5,594,000
British corporation and county loans	5,555,300	.....
Colonial corporations	960,000	1,495,500
Foreign corporations	2,850,000	.....
Colonial railways	.....	1,199,700

Banks and insurance	920,700	230,100
Miscellaneous	1,569,500	1,980,500
Total	286,207,100	86,251,500

Banking Operations in Czechoslovakia.

Acting Commercial Attaché H. Lawrence Grover, Prague, April 7.

Reports covering the year 1922 have been published by the Industrial & Agricultural Bank (Industrial u. Landwirtschaftliche Bank) and the Bank for Commerce & Industry (Bank fur Handel und Industrie). Both are Prague institutions, the former being probably the second largest bank in the country, with a capital of 210,000,000 crowns (1 crown=$0.02973 at present exchange). The Industrial & Agricultural Bank showed net profits for the year of 32,000,000 crowns, or over 15 per cent of the capital, from which a dividend of 8 per cent was paid and over 10,000,000 crowns carried to special reserve funds. This bank is a merger (effected about a year ago) of the former Bohemian Industrial Bank with the Agricultural Credit Bank of Prague and the Trade and Industry Bank in Ostrau. The Industrial & Agricultural Bank already has taken steps to absorb another provincial bank—the Commercial Bank of Kralove Hradec in eastern Bohemia, with a capital of 10,000,000 crowns.

The Bank for Commerce & Industry, with a capital of 80,000,000 crowns, showed net profits of 16,200,000 crowns for the year 1922, being an increase of approximately 1,000,000 crowns over the preceding year, and declared a dividend of 8¾ per cent, against 7½ per cent for 1921. Like many of the commercial banks in Czechoslovakia, this bank is heavily interested in a number of important industries in the country, on the successful operation of which much of the success of the bank depends.

Affiliation of Banks with Industry.

This local bank policy of owning large-share interests in industrial establishments is quite contrary to American banking policy, but it is a policy which the banks here appear to have followed and developed through long years of practice. It was the too-close association with certain local industrial establishments which precipitated the failure of the Bohemian Bank recently. The stronger local banks state, however, that they have all followed a very conservative policy in establishing strong reserves in the recently profitable years of business to tide them over the difficult times Czecho-Slovak industry is now experiencing.

British Government Securities.

Assistant Commercial Attaché Candler Cobb, London, April 20.

In view of the fact that the Chancellor of the Exchequer has so clearly indicated the attitude of the British Government toward preserving the principle of sinking funds, it is interesting to note the general trend of the prices of the Government securities during the first quarter of 1923 and the few days which have elapsed since the budget for the period from April 1, 1923, to March 31, 1924, has been introduced. Quotations have been as follows:

Prices of British Government securities.

Securities.	Jan. 6.	Feb. 3.	Mar. 3.	Apr. 14.	Apr. 19.
War loan, 5 per cent	100.44	100.56	101.13	103.19	103.38
Victory bonds, 4 per cent	88.50	90.00	90.13	93.50	94.13
Conversion, 3½ per cent	75.13	76.25	[1] 75.63	79.50	79.63
Consols, 2½ per cent	55.90	56.25	[1] 57.63	59.38	59.25
Funding loan, 4 per cent	86.13	87.50	88.75	91.13	91.25
Local loans, 3 per cent	64.13	64.75	[1] 65.63	68.50	68.25

[1] Ex-dividend.

In each of the typical securities listed it will be seen that during the three months there has been a substantial rise. The fact that the rise has not been so pronounced since the introduction of the budget may easily be attributable to the fact that the Chancellor made no secret of his intentions. In fact, as the fiscal year drew to a close, study of the revenue returns showed that the Treasury was utilizing the surplus as vigorously as possible toward reduction and redemption of debt. Opinion was so confident that sound provisions for sinking funds would be included in the budget that much of the rise in values can be said to have been due to the discounting of this confidence in advance.

In this connection it should be noted that the investing public has shown no reluctance to absorb gilt-edge securities as quickly as they have been offered. The fact that new issues have been much less this first quarter of 1923 than in the same period in 1922 might well indicate that the investing public is turning to the Government issues where the security is of the best, but where the returns are proportionately low, and the element of chance for increase in prices is less than with industrials and the usual offerings.

Swedish Public Debt.

Chargé d'Affaires Hallett Johnson, Stockholm, April 5.

The Year Book of the Swedish National Debt Office places the total national debt of Sweden at the end of 1922 at 1,551,460,000 crowns—1,465,010,000 crowns in consolidated debt and 86,450,000 crowns in floating debt (1 crown=$0.268). About 20 per cent of the total is held abroad. No new State loans were issued.

By issuing premium bonds of the loan of 1921 during 1922 the consolidated debt was reduced by 37,700,000 crowns, but this increase was offset in part by amortization amounting to 6,040,000 crowns. The floating debt was increased by 8,820,000 crowns as a result of loans made from State institutions. Therefore, the net increase of the total debt during the year was 40,480,000 crowns.

Canadian Bond Sales in 1923.

Vice Consul Harold S. Tewell, North Bay, Ontario, April 9.

According to the summary of A. E. Ames & Co. (a leading Canadian bond house), sales of Canadian bonds during the first three months of 1923 aggregated $104,289,577, compared with $75,413,559 during the same period in 1922. Sales in January amounted to $49,075,054; February, $34,954,991; and March, $20,259,532. Of the total sales in the first quarter of 1923, $15,575,000 represented Government loans, $44,133,577 municipal loans, and $44,581,000 corporation loans. Sales in Canada amounted to $57,845,577; in the United States, $44,944,000; in Great Britain, $1,000,000; and elsewhere, $500,000.

Bank of Taiwan to Handle Foreign Exchange.

Taiwan Nichi Nichi, March 27, 1923.

The Bank of Taiwan has been recognized officially by the Japanese Government as a bank engaging principally in foreign exchange. The necessary funds will be supplied by the Bank of Japan. In foreign exchange transactions this bank will become a rival of the Yokohama Specie Bank.

Japanese finances in April.
Shanghai silver stocks increase—silver market discounted.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

BANKRUPTCY AND INSOLVENCY LAWS OF HAITI.

Consul Damon C. Woods, Cape Haitien.

Bankruptcy proceedings in Haiti may be instituted either by the bankrupt or by a creditor, by filing with the clerk of the tribunal of commerce a petition alleging the retirement of the debtor, the closing of his establishment, or his failure to acquit his commercial engagements. Article 580 of the Commercial Code also provides that he may be subject to such action if his last inventory shows that, having assets equal to 50 per cent of his debts, he has made substantial loans; if he has resold his merchandise at a loss or below the current rate; or if he has given his signature for credit or for negotiable paper for a sum triple the value of his assets, according to his last inventory.

Haitian jurisprudence admits a difference between cessation and simple suspension of payments. It allows the debtor who possesses resources the privilege of delaying payment, with the consent of a majority of his creditors, but provides that such consent can not bind those who do not agree to it. Suspension of payments follows from protest, condemnation, and delay, and may give rise to insolvency. If creditors who refuse to sign the agreement demand that the judge pronounce the debtor bankrupt, he must do so, even though the debtor is really solvent and continues his commerce. Notice of the alleged bankruptcy will be given through the papers and by letters from the trustees. The creditors have 40 days in which to present their claims in detail to the trustees or to the clerk of the tribunal of commerce.

A merchant may be adjudged a fraudulent bankrupt for the commission of certain deceptive and dishonest acts in fraud of his creditors or of public authority, while he is in a state of insolvency. The offenses enumerated do not differ essentially from those defined by Federal laws in the United States.

Public Action Against Bankrupts.

Public action against the bankrupt is taken by the tribunals of correction, relative to acts of simple bankruptcy, and by the criminal tribunals, relative to acts of fraudulent bankruptcy. It is entirely distinct from and independent of the procedure of the tribunal of commerce, which concerns itself with the liquidation of the bankrupt's estate. Trustees appointed by the tribunal of commerce have charge of this liquidation.

Reclamation of Merchandise.

Claims for specific merchandise sold by creditors to the bankrupt and unpaid for, can be allowed only while the shipments are still en route, and before the goods have entered the storehouse of the bankrupt or of the agent charged to sell them for the account of the bankrupt. They can not be reclaimed if, before arrival, they have been sold, without fraud, on invoices and bills of lading or waybills.

Merchandise consigned to the bankrupt for storage or to be sold for the account of the shipper may be reclaimed. In the latter case the price may be recovered if it has not been paid or passed into the account current between the bankrupt and the purchaser.

Imported merchandise is considered in the possession of the importer when the customs formalities have been completed, the duties paid, and the goods placed at the disposal of the buyer.

In case of reclamation, the claimant must pay into the assets of the bankrupt all advances made or incurred for freight, commission, or other charges.

A judgment of bankruptcy against a United States branch of a Haitian firm has no effect upon the firm's

property in Haiti. If a bank upon which a bill of exchange has been drawn by a local firm, becomes bankrupt before the bill reaches the firm's creditor, or before a reasonable time for its presentment for payment has elapsed, the debtor is still liable on his debt. Articles 529 and 532 of the Commercial Code provide that creditors holding pledges or other securities of the bankrupt are preferred creditors to the extent of such security.

Domesticating Foreign Corporations in the Dominican Republic.

Vice Consul George A. Makinson, Santo Domingo.

In order to become domesticated in the Dominican Republic a foreign corporation must petition the Executive power, through the Department of Justice, for authorization to establish a legal domicile in the Republic. When applying for this privilege the petitioning corporation must present a copy of its by-laws, duly authenticated by a Dominican consul; a copy of the foreign certificate of incorporation; and a certificate of any Dominican police authority recommending the antecedents of the petitioner. Upon obtaining from the Executive power the right of legal domicile, the corporation must make formal declaration of domicile in the secretary's office of the municipality where the corporation is to be established.

The restrictions upon doing business through an agency without domiciling the corporation are practically the same as in the United States. Whenever a corporation is doing business in its own name through an agent it is best to have the corporation legally domiciled.

The rules governing partnerships in the Dominican Republic are somewhat different from those generally prevalent in the United States, and for that reason, unless there are peculiar circumstances which would warrant the formation of a partnership, it is preferable to form a corporation.

There are no expenses prescribed for the domestication of foreign corporations, but it is customary to engage the services of a Dominican attorney when preparing the petition to the Executive power. The fees for such assistance are generally agreed upon in advance and probably amount to $100.

Taxes on Corporations in Dominican Republic.

There are no taxes levied either on the capital or the profits of corporations, whether Dominican or foreign. Corporations operating for commercial purposes are subject to the payment of an annual license tax known as "patente." The rate and amount of the "patente" varies according to the nature and volume of the business transacted. In general, manufacturing enterprises pay a higher tax than nonmanufacturing concerns. The highest "patente" tax now being paid by any corporation is less than $1,000 per annum. All corporations as well as individuals, owning lands or buildings in this Republic, are required to pay the land tax, which amounts to one-half of 1 per cent of the appraised value of all real estate and permanent improvements thereon. The above-described taxes cover operations in all parts of the country and there are no other taxes affecting corporations.

Domesticated foreign corporations enjoy the same privileges and rights as Dominican concerns in such matters as taxation, property rights, expropriation, and diplomatic protection. The National Government welcomes the admittance of foreign capital and has always taken pains to insure that no obstacles are placed in its path.

Advantages and Disadvantages of Incorporating in Dominican Republic.

There are both advantages and disadvantages in forming a Dominican corporation rather than qualifying a foreign corporation to do business. There is no legislation with regard to foreign corporations and the courts have always been very liberal in recognizing their personality. Perhaps from the point of view of the taxes which a foreign corporation has to pay in its own country it might be advantageous to organize it as a Dominican corporation, because in this Republic there is no law providing for taxes on corporations or upon their earnings, and it would seem that for the present it is improbable that such taxes will be imposed. On the contrary, the attitude in this country is to encourage corporate existence which has as yet been very little developed.

There are, however, certain practical disadvantages in the forming of a Dominican corporation. Dominican corporations are subject to provisions of law which require the officers to make semiannual and annual statements to the corporation. The annual statement consists of an inventory of real and personal property including assets and liabilities, a balance sheet, and a statement of profit and loss. As a practical matter it has been found that local corporations which are formed entirely by foreign interests have considerable difficulty in getting up these statements in a form which would satisfy the requirements of the law here and at the same time conform with their system of bookkeeping in the United States, in cases where the local corporations are subsidiaries. Another point which must be kept in mind in the forming of a Dominican corporation is that all of the capital stock must be subscribed and one-fourth paid in in cash upon the organization of the corporation. This is in many cases an inconvenience.

Italian Taxation of Foreign Capital.

Consul Joseph Emerson Haven, Trieste, March 23.

Italian law provides that a foreign limited-liability company is subject to taxation if it has a branch or agency within the Kingdom of Italy, or if it operates within the Kingdom, or outside if a part of the capital be designated for the operations practiced within the Kingdom. Since article 70 of the decree uses the phrase "foreign companies" in the general sense and without modifications, taxes become due not only from commercial companies but from all other concerns formed by the issuance of shares and which operate in the Kingdom of Italy.

The object of the taxation is the capital destined by foreign companies for their operations in the Kingdom of Italy. In determining the taxable capital and in order that sums actually employed or spent should not exceed the original capital destined for operations in the Kingdom of Italy, notice is taken only of money destined and not of that actually employed. Such capital for operations in the Kingdom of Italy is subject to taxation without any modifications whatever.

Regulations Regarding Taxation.

All foreign companies operating in the Kingdom of Italy with capital subject to taxation must give notice

to the competent finance office within 30 days of receiving authority to operate or, in the event of the company becoming active prior to receiving authority, from date of first operation. This notice must be presented to the finance office in such place as the company has its head office and should indicate the total capital destined for operations in the Kingdom of Italy, the head office and branches of company in the Kingdom of Italy, and the full names and addresses of managers and agents in the Kingdom of Italy. These companies must also announce increases of capital employed, and any changes which may take place regarding the offices or representatives of the company, within 30 days of such change.

On the basis of said reports the financial administration will make the necessary assurances and will then determine the portion of their capital to be subjected to taxation.

Changes in Amount of Tax Payable.

Since the tax is a yearly one, any variations in the capital destined for operations in the Kingdom of Italy will have effect only from January 1 of the year following such changes. Thus, during the year in course, the tax can neither be increased in consequence of augmentation of capital nor decreased following diminution of capital. In the event of the cessation of the company in the Kingdom of Italy, tax is payable only to the end of the quarter in which operations ceased.

The tax is payable quarterly at the office where notice of activity of company was reported. Should payment be delayed, a supertax of 30 per cent of the sum in arrears is imposed.

The foregoing dispositions enter into force on January 1, 1924, so that, taking into account the 30 days' grace, all foreign companies must comply by January 30, 1924.

Bureau Advice Regarding Contracts and Agency Agreements.

The sales contract and the agency agreement are basic instruments in foreign trade. The articles which have appeared from time to time in COMMERCE REPORTS have called attention to potential perils in ignoring or violating certain rules of experience and foreign laws in drawing up sales contracts and agency agreements.

It is apparent that these warnings have been hidden, for the Bureau of Foreign and Domestic Commerce has received from many American firms forms of agreements and contracts with a request to express an opinion regarding them. It is found necessary to point out that it is not the function of the Bureau of Foreign and Domestic Commerce to formulate legal opinions on such delicate and technical subjects as the details of an exclusive or partial agency agreement or the sales contract for a particular commodity.

In the first instance, it is one matter to point out certain features which experience shows desirable to incorporate and others which it is found wise to eliminate when contracting with foreign agents and customers, but it is an entirely different matter to say positively whether a particular contract meets both the requirements of foreign law, and the American principal's merchandising requirments. It is very easy in this connection to stray from informal and preliminary advice to a didactic statement which is beyond the competence of a Government agency.

The Bureau will always willingly examine such documents with the understanding that any suggestions made regarding them are to be considered informal and preliminary, and that finally the opinion of qualified counsel should be obtained; so that no responsibility or obligation is incurred by the Bureau in this connection.

CONSTRUCTION NEWS

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce, or its district and cooperative offices, by referring to the reference numbers given. Where no reference number is given, further information is not available.]

Canada.—It is understood that the Associated Canadian Goldfields Co. (Ltd.) plans the construction and equipment of a 500-ton mill on its property near Larder Lake, Ontario. It is also reported that a hydroelectric plant will be constructed by this company at Wendigo Falls. A development of 6,000 horsepower is said to be possible at that point, and the first unit is expected to provide 2,500 horsepower, to be in operation during the first half of 1924. Reference No. 93411. (Vice Consul Harold S. Tewell, North Bay, Ontario.)

Switzerland.—American manufacturers and exporters of heating, plumbing, and ventilating equipment, elevators, hardware, lighting fixtures, library installation, dictaphones, and modern office equipment are requested to submit catalogues and price lists for the consideration of the International Labor Office at Geneva. This organization is contemplating the erection of a thoroughly modern office building at a cost of about $500,000. Reference No. 93399. (Consul Robert B. Macatee, London.)

South Manchuria and Chosen.—According to Japanese press reports, the South Manchuria Railway Co. will undertake this year the building of a pier at Dairen and double-track work in Chosen, to cost, respectively, 7,000,000 yen and 4,000,000 yen, the value of the yen being $0.4985. (Consul General Ransford S. Miller, Seoul.)

Italy.—The Societa Generale Montecatini per l'Industria Mineraria e Agricola, of Milan, Italy, expects, in the near future, to build a large superphosphate fertilizer factory in Venice. Indications are that building operations will be started as soon as possible, and an effort will be made to rush the construction work. According to plan, the new fertilizer factory when completed will have a production capacity of 110,000 tons per annum. The present specifications call for the construction of a factory which will produce annually about 36,376 tons of phosphate fertilizer. (Consul James B. Young, Venice.)

Additional information regarding construction news appears in this issue under the following section:

Electrical equipment: Proposed telephone and telegraph construction work in Finland.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

SHIPPING.

PRESENT PACKING METHODS INADEQUATE.

J. F. Keeley, Transportation Division.

Not all American exporters have yet learned the lesson of packing their goods properly for oversea shipment. In spite of all that has been written on this subject and the continuous recital of the injury done to American foreign trade in general, there is still a minority which, through carelessness or lack of knowledge, persists in shipping its products abroad inadequately packed to withstand the loading, stowing, and unloading hazards which export shipments must meet.

Mr. William I. Irvine, special trade commissioner of the Bureau of Foreign and Domestic Commerce, who recently returned to the United States after a prolonged trip abroad, had an excellent opportunity at several Far Eastern ports to view the results of improper packing; his observations, backed by actual photographs, make an impressive story.

Result of Poorly Constructed Cases.

At one port six large cases of merchandise were unloaded in a sling and dropped over the ship's side to the dock. A photograph taken by Mr. Irvine shows vividly that the cases were not built to resist the rough usage given them. No attention had been paid to proper nailing, the cases were not cleated on the ends, and instead of having a substantial strap around each end, there was but one and that was around the center of each case. The ends of the cases were broken, the goods probably damaged and exposed to the elements, and the chances of pilferage increased. In all probability well-balanced packing cases, correctly nailed and strapped, could have been constructed at the same cost and the goods could have been delivered safely and in good condition to the foreign customer. It was evident that the American shipper did not understand even the fundamentals of export packing.

Inadequate Bolting and Bracing for Motor Vehicles.

Perhaps no commercial group has given more study to export packing than has the automotive industry, and the ever-growing sales of American automobiles and trucks in foreign countries bear witness to the fact that these products generally arrive at their foreign destination in excellent condition. That there are exceptions, however, is proved by four photographs taken by Mr. Irvine in the Far East, showing the poor condition in which three touring cars and one truck arrived at their foreign address. The heavy truck, while packed in a substantial case, had not been properly bolted down and the shifting of the heavy machine had completely destroyed one end of the case. The sides, top, and bottom of the case all were loosened, and the shipment was thus subject to damage from water and salt air on shipboard and to the elements on shore.

The touring cars were in even worse condition. An end of one case was completely destroyed, and the rear of the car body was damaged almost beyond repair. The other two cars, after removal from the boxes, showed signs of the great strain to which they had been subjected through being neither properly packed nor braced, the bodies being badly dented, the enamel finish scratched, and the tops broken and torn. In each instance repairs aggregating hundreds of dollars would be necessary in order to make the cars acceptable to the foreign customers.

American Prestige Injured.

The conditions cited above not only cause a needless economic waste, but actually work a hardship on American foreign trade in general, as markets built up with great difficulty and expense are in this manner easily destroyed. It is to remedy this situation that the Transportation Division of the Bureau of Foreign and Domestic Commerce is making a study of the best practices in export packing in the various industries throughout the country. The information so gathered will be made available to all exporters in a manual to be published shortly, thus placing at the disposal of the new and inexperienced shipper packing methods used by successful exporters in building up their foreign business, thereby adding to American prestige abroad.

CURRENT AMERICAN SHIPBUILDING.

On May 1, 1923, American shipyards were building or under contract to build for private shipowners 250 steel vessels, of 240,745 gross tons, compared with 236 steel vessels, of 269,911 gross tons, on April 1, 1923.

There were four wooden vessels of 264 gross tons building or under contract to build for private shipowners during the same period. These figures do not include Government ships or ships building or contracted for by the United States Shipping Board.

Following is a summary of reports of shipyards to the Bureau of Navigation, Department of Commerce, showing the number and gross tonnage of steel and wood vessels of 100 gross tons and over under construction or contract for private owners on May 1, 1923:

Companies	Steel.		Wood.	
	Number.	Gross tonnage.	Number.	Gross tonnage.

Details of New Contracts.

Following are the particulars of new contracts entered into during the month of April, 1923:

Vessel.	Gross tonnage.	Steel or wood.	Owner.	Trade.
American Car & Foundry Co., Wilmington, Del.: Hull No. 571	(1)	Wood.	Atlantic Coast Line R.R. Co.	Freight.
Hull No. 572	(1)	...do...	...do...	Do.
Bethlehem Shipbuilding Corporation, Bethlehem, Pa.: (Name not given)	(1)	Steel..	Standard Oil Co. of California.	Bulk oil.
Booz Bros., Baltimore, Md.: Lighter No. 21	144	Wood.	The Cottman Co.	Lighter.
Craig Shipbuilding Co., Long Beach, Calif.: Hull No. 146	650	Steel..	Craig Shipbuilding Co.	Harbor.
Hull No. 147	150	...do...	Curtis Packing Co.	Tug.
George Lawley & Son Corporation, Neponset, Mass.: Hull No. 942	250	...do...	(1)	Yacht.
John H. Mathis Co., Camden, N. J.: (Name not given)	(1)	...do...	Reading Co.	Car float.
Do	(1)	...do...	...do...	Do.
Nashville Bridge Co., Nashville, Tenn.: J. N. Pharr	115	...do...	Chotin & Johnson	Sugar
Hull No. 47	280	...do...	Bell Coal & Navigation Co.	Coal.
Hull No. 48	280	...do...	...do...	Do.
New York Shipbuilding Corporation, Camden, N. J.: Hull No. 279	170	...do...	American Dredging Co.	Tug.
Sturgeon Bay Dry Dock Co., Sturgeon Bay, Wis.: (Name not given)	1,000	...do...	Lake Sand (Inc.)	(1).
Vinyard Shipbuilding Co., Milford, Del.: Hull No. 76	120	Wood.	Cuban American Sugar Co.	Sugar.

[1] Not given.

Vessels Completed in April.

Following are the particulars of the new vessels completed during April, 1923, for private owners:

Vessel.	Gross tonnage.	Steel or wood.	Owner.	Trade.
American Shipbuilding Co., Cleveland, Ohio: Richard V. Lindabury	7,939	Steel..	Bradley Transportation Co.	Stone.
Brewer Dry Dock Co., Mariners Harbor, N. Y.: Ludlow	475	Wood.	New York Central R. R. Co.	Freight.
Saybrook	475	...do...	...do...	Do.
Arthur D. Storey, Essex, Mass.: Columbia	152	Wood.	Columbia Associates	Fishing.
Doullut & Williams Shipbuilding Co. (Inc.), New Orleans, La.: No. 415	595	Steel..	Doullut & Williams Co. (Inc.).	Freight.
Federal Shipbuilding Co., Newark, N. J.: Berkshire	5,486	Steel..	Merchant & Miners Transportation Co.	Passenger.
Great Lakes Engineering Works, River Rouge, Mich.: Wayne	379	Steel..	Cleveland-Cliffs Iron Co.	Freight.
Great Lakes Towing Co., Cleveland, Ohio.: T. F. Newman	1,205	Steel..	Great Lakes Towing Co.	Freight.
Ira S. Bushey & Sons (Inc.), Brooklyn, N. Y.: Marion	481	Wood.	New York Central R. R. Co.	Freight.
Newton	481	...do...	...do...	Do.
James & R. J. Robertson, Alameda, Calif.: Golden West	594	Wood.	Golden Gate Ferry Co.	Ferry.
Lake Union Dry Dock & Machine Works, Houghton, Wash.: Yaquina	339	Wood.	Pacific Spruce Corporation.	Lighter.
Manitowoc Shipbuilding Corporation, Manitowoc, Wis.: John E. Meyer	205	Steel..	Barnet & Record Co.	Tug.
Pensacola Shipbuilding Co., Pensacola, Fla.: No. 1	318	Steel..	Belcher Asphalt Paving Co.	Tanker.
R. Lenahan Co., Kingston, N. Y.: Jack Egan	233	Wood.	R. Lenahan Co.	Freight.
Sun Shipbuilding Co., Chester, Pa.: Dickenson	831	Steel..	Commercial Pacific Cable Co.	Passenger.
Toledo Shipbuilding Co., Toledo, Ohio.: Worrell Clarkson	8,203	Steel..	Kinsway Transit Co.	Freight.

Kiel Canal Traffic in 1922.

Vice Consul Harry J. Anslinger, Hamburg, Germany, March 20.

During the calendar year 1922 there passed in transit through the Kaiser Wilhelm Canal 39,210 merchant vessels, aggregating 12,575,987 net tons. This represents an increase over the 1921 total by 6,955 vessels of 3,091,533 tons, and an increase over the 1913 total by approximately 2,226,058 tons.

German ships transiting the canal during 1922 constituted 74 per cent of the number, but only 40 per cent of the total tonnage. Of the 9,898 vessels flying foreign flags, 2,584 were Danish, 2,510 Swedish, 1,244 Dutch, 1,226 Norwegian, 883 British, 486 Finnish, 161 American, and 804 were other nationalities.

Proposed Merger of Dutch Steamship Lines.

Paul S. Guinn, office of the commercial attaché, The Hague, April 16.

The United Netherlands Navigation Co. has proposed to absorb the Holland South Africa Line. This merger is especially interesting because of the subsidy which the latter line has been receiving from the Government and its failure to operate successfully even with this aid. According to the Minister for Labor of the Netherlands, there was paid to this line a total of 2,250,000 florins during 1921–1923. No interest or repayments on these advances have so far been made by the company. [See "The Netherlands Government and Shipping," COMMERCE REPORTS, April 9, 1923, p. 117.]

Additional information regarding shipping appears in this issue under the following section:

Cable review, Far East:
Government proposal to reduce number of ships in Australian commonwealth line.
Japanese shipping improved; freight rates higher.
Cable review, Western Europe: New Spanish steamship services.

RAILWAYS.

Additional Rolling Stock for Latvian Railways.

Trade Commissioner Carl J. Mayer, Riga, April 4.

Latvia's increasing need for locomotives and cars is being met, according to a statement by the Director of Latvian Railways to the Jaunakas Sinas of March 27. Traffic has increased 100 per cent over last year, car loadings amounting to nearly 1,000 daily. Transit traffic also shows an increase.

An agreement has been reached with Lithuania whereby 500 freight cars, 12 passenger cars, and 40 locomotives will be made available for use in Latvia. Fifteen damaged passenger locomotives have been purchased from the Russian Railway Commission, and will be repaired at Riga and Libau; 8 locomotives and 125 freight cars have been purchased from Poland; and 3 passenger engines, 10 passenger cars, and 40 freight cars for the narrow-gauge lines have been ordered from German firms in Breslau.

These additions appear to be in line with improvements made by several other Baltic countries. Transit traffic agreements are facilitating the transfer of goods between these and neighboring countries, and as production and consumption increase, growing demands on the railroads are natural. Early in 1922 there were 289 locomotives (37.3 per cent in need of repairs), 512 passenger cars (30.5 per cent in need of repairs), and 5,397 freight cars (6.4 per cent in need of repairs) on the 2,889 kilometers of Latvian State railways. Of these lines, 1,482 kilometers were of the Russian gauge (1,524 millimeters), 451 kilometers of West-European gauge (1,435 millimeters), 280 kilometers of 750-millimeter gauge, and 676 kilometers of 600-millimeter gauge, according to the Latvian Economist of May, 1922.

Combination Season Tickets for London Commuters.

Assistant Trade Commissioner William M. Park, London, April 20.

The London Underground Co. announces the introduction of combination season tickets, good on its own lines and on connecting omnibus and electric tramway lines. In addition to facilitating journeys to and from the city. these tickets in every case will be cheaper than the combined ordinary fares, and the number of journeys will not be limited. The tickets will be issued monthly or quarterly from Golders Green Station and from local booking centers which are being arranged for in different parts of London. The cost of a three-months' season ticket between Charing Cross and Tally-Ho Corner—the most extreme points—is £3 17s. 6d.; that of a one-month season ticket is £1 8s. 6d. This represents a saving, over the present combined ordinary fares, of 13s. 6d. on the quarterly rate and 1s. 10d. on the monthly rate.

Additional information regarding railways appears in this issue under the following sections:

Cable review, Western Europe: Spain expanding transportation facilities.
Construction News: Railway construction planned in South Manchuria and Chosen.
Latin America: Railway from Guatemala to Salvador being considered.

COMMUNICATIONS.

Italian Telegraphs and Telephones in 1922.

Consul H. Earle Russell, Rome.

The director general of Italian electric services reports a large amount of construction work on telegraph and telephone lines of Italy during 1922 and an increased amount of traffic over both the wire system and the coastal radio stations.

A total of 3,720 kilometers of wire was erected for internal service and 1,600 kilometers for international circuits. Ten of the long-distance telephone circuits were simplexed for telegraph service. A new telephone cable to conect with the Swiss system was ordered, and 22 kilometers of this line have been laid in the Simplon Tunnel. A new submarine telephone cable was laid across the Straits of Messina for the new Rome-Messina and Rome-Palermo circuits, and a contract was let for the construction of a system of long-distance telephone cables between Turin, Milan, and Genoa with a total cable length of 310 kilometers, at a cost of 50,000,000 lire ($2,500,000).

Traffic of Italian ships with Italian radio stations amounted to 400,000 words, and the correspondence between land radio stations reached 500,000 words during the year. Press dispatches for American news associations, transmitted by radio to Halifax, averaged 45,000 words monthly.

In addition to the construction mentioned, the equipment and apparatus of many offices was improved—among them Genoa, Milan, Bologna,and Naples.

Radio System Proposed for Algeria.

A recent report to the French Government by the Commercial Syndicate of Algiers recommends the establishment of a radio system to supplement the land lines and cables to France. A new cable from Marseille to Philippeville is proposed, making five in all between the two countries; but it is felt that the interior and the foreign communications of Algiers would be greatly improved by the execution of a definite plan for a radio system. (Consul Edward A. Dow, Algiers, March 31.)

Registered Mail Service in Mexico.

Registered mail service has been made generally effective throughout Mexico within the last month, this being the first instance of the establishment of such service in the Republic. Letters and packages to the value of 2,000 pesos are being accepted and insured, the Post Office Department assuming full responsibility for any losses occurring within the Republic. (Assistant Trade Commissioner H. Bentley Mackenzie, Mexico City, April 21.)

Additional information regarding communications appears in this issue under the following sections:

Electrical Equipment: Proposed telephone and telegraph construction work in Finland.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES.

NORWAY-PORTUGAL.

Diario do Governo, Lisbon, April 12.

Commercial Treaty Granting Reciprocal Minimum Rates.

By a treaty signed April 11, 1923, and effective April 16, Portugal grants the minimum rates of its tariff to Norwegian goods in general and accords most-favored-nation treatment to a specified number of characteristic Norwegian products, such as fish, wood, synthetic nitrates, electrical apparatus, special steels, and paper products. Norway, in return, grants minimum rates to goods originating in and coming from Portugal and its colonies and accords most-favored-nation treatment to a specified number of Portuguese products, including sugar, raw cotton, raw rubber and manufactures thereof, various fish products, various oil seeds, cork, and a number of fruits and nuts.

Other provisions of the treaty deal with the unrestricted entry into Norway of certain Portuguese wines and with the treatment of each other's ships.

The treaty is effective for one year and indefinitely thereafter, subject to termination at the end of the year or at any time thereafter upon three month's notice by either party.

[By this treaty the tariff war which was brought on by Norway's restrictions on the importation of Portuguese wines and which has lasted for nearly two years, has been ended.]

IMPORT AND EXPORT RESTRICTIONS.

FRANCE.

Journal Officiel, Paris, April 20.

Relaxation of Import Restrictions on Medicinal Compounds.

The French prohibition on medicinal compounds not specified in the tariff nor mentioned in an official pharmacopœia (item No. 316), has been modified by a decree of April 19, 1923, so as to permit the entry of such products, provided that the usual names and the amounts of the active substances (exclusive of chemical formulas and names), together with the name and address of the manufacturer, be plainly indicated in French on both the immediate and outer containers. Serums, virus, and vaccine matter are not included among these compounds.

The duties applicable are those imposed on medical compounds not specified in the tariff but mentioned in an official pharmacopœia, i. e., 60 per cent ad valorem for the general tariff and 15 per cent for the minimum. Products from the United States are dutiable under the "intermediate" rate of 20 per cent ad valorem. The ad valorem duties are assessed on the basis of the sales price indicated on the bottles, boxes, etc. The value of the immediate packing is included in the dutiable value. The importer, however, may declare separately such packing as is dutiable. The decree also provides that the medicinal compounds described above shall be prohibited when originating in countries that do not concede equivalent import advantages to French medicines.

PERU.

Acting Commercial Attaché W. E. Dunn, Lima, April 24.

Establishment of Alcohol Monopoly.

An alcohol monopoly incorporating the former monopoly of denatured alcohol was established in Peru by law No. 4650 of April 23, 1923, whereby the distillation and sale of native alcohol of cane, grape, or any other extraction shall be strictly under governmental supervision through an agency known as the "Estanco del Alcohol." Such articles are also prohibited from importation as well as from manufacture within the country by foreign companies. Wines and beers, however, including their varieties and imitations, are allowed to be produced and sold by native manufacturers and distributers and may be imported from foreign countries, though somewhat heavily taxed in both cases.

Denatured alcohol intended for industrial purposes, produced under the supervision of the Estanco del Alcohol, is not taxed, but this with all other alcohols requires a special permit or license for production from the Estanco which has full authority in regard to them, and is itself under the administration of the National Tax Collecting Co. (Compañia Recaudadora de Impuestos).

[Note: There are four other Government monopolies incorporated under the laws of Peru, the oldest of which is the opium monopoly of 1891, the next is the salt monopoly of 1896, the tobacco monopoly and that of guano for domestic consumption following closely.]

Acting Commercial Attaché W. E. Dunn, Lima, April 16.

Removal of Restrictions on Cattle-Hide Exports.

An executive decree of April 12, 1923, authorizes the exportation of cattle hides from Peru without previous permission of the Government. A special license was formerly necessary.

CUSTOMS REGULATIONS.

SPAIN.

Cablegram from Commercial Attaché C. H. Cunningham, Madrid, May 16.

Necessity of Strict Compliance With Recent Regulations on Certificates of Origin.

In view of the fact that American exporters generally have failed to comply with the Spanish regulations regarding certificates of origin, their attention is again called to the Spanish decree of March 20 last, effective May 1, requiring certificates of origin for a considerably increased list of goods. Shipments continue to arrive without certificates of origin and the importers of these goods are thus obliged to pay the duties of the first column or wait for the arrival of the certificates of origin before clearing the merchandise through the customs.

[A notice of the decree extending the list of articles for which certificates of origin are necessary appeared in COMMERCE REPORTS for April 16, 1923. It was stated that shippers to Spain should take the precaution of either applying to the local Spanish consul for a certificate of origin in each case or of making inquiry at the Division of Foreign Tariffs, Depart-

ment of Commerce, as to whether the particular commodities to be shipped are included in the list of goods for which these certificates are required.]

UNION OF SOUTH AFRICA.

Consul Charles J. Pisar, Cape Town, March 26.

New Weights and Measures Act in Effect.

The new weights and measures act of the Union of South Africa has been proclaimed by the Governor General as effective from April 1, 1923.

[This act appeared in the Government Gazette of the Union of South Africa, February 1 and July 26, 1922, and was announced in COMMERCE REPORTS March 2, 1923. Information in specific phases will be furnished upon request.]

TARIFF CHANGES ON SPECIFIC ARTICLES.

BELGIUM.

Cables from Commercial Attaché S. H. Cross, Brussels, May 15 and 16.

Proposed Rates on Automobiles and Rubber Tires Established by Treaty with France.

The proposed Belgian import duties on automobiles and rubber tires provided for in the new tariff schedule (an analysis of the proposed tariff appeared in COMMERCE REPORTS for April 30) have been modified by the treaty with France signed May 12 last, and awaiting ratification by the Governments of Belgium and France. These latest changes in the proposed tariff, together with the duties at present in force, are given in the table below:

Proposed tariff items.	Articles.	Import duties. Present.	Proposed. Basic duty.	Proposed. Coefficient.
		Per cent ad valorem.	*Francs per 100 kilos.*	
704	(a) Solid tires	12	80	1.20
	(b) Pneumatic tires:			
	(1) Casings for automobiles and motor cycles—			
	Studded	12	150	1.50
	Unstudded	12	140	2.00
	(2) Casings for other vehicles	12	120	1.15
	(3) Inner tubes—			
	For automobiles and motor cycles	12	200	No.
	For other vehicles	12	200	1.50
1100	Complete passenger automobiles, weighing—			
	Up to 950 kilos	20	160	2.60
	From 950 to 1,800 kilos	20	160	3.10
	From 1,800 to 4,000 kilos	20	160	3.70
	Over 4,000 kilos	12	160	3.70
	Trucks, weighing—			
	Up to 950 kilos	20	160	2.60
	From 950 to 1,800 kilos	20	160	3.10
	From 1,800 to 2,000 kilos	20	160	3.70
	Over 2,000 kilos	12	140	No.
	Chassis:			
	For passenger automobiles and trucks, weighing—			
	Up to 675 kilos	20	160	2.60
	From 675 to 1,300 kilos	20	160	3.10
	From 1,300 to 2,000 kilos	20	160	3.70
	For passenger automobiles, weighing—			
	From 2,000 to 4,000 kilos	20	160	3.70
	Over 4,000 kilos	12	160	3.70

[A comparison of the present rates and the proposed rates on rubber tires before the treaty with France was signed appeared in COMMERCE REPORTS on January 15.]

BRITISH GUIANA.

Consul Chester W. Davis, Georgetown, April 5.

Relaxation of Recent Condensed Milk Requirements.

The adherence to the recently established 10 per cent butter fat standard for condensed milk has been pronounced impractical, and the Tariff Ordinance of British Guiana has been accordingly modified so that the lower rate of duty now applies to canned or powdered milk which, "in the opinion of the Comptroller," has been prepared from whole milk. The former requirement, as published in COMMERCE REPORTS for February 19, page 514, has been modified to read as follows:

	Duty rates. General.	Duty rates. British preferential.
Milk, condensed, including milk powder—		
(a) Which in the opinion of the Comptroller of Customs has been prepared from whole milk, per 48 pounds	$0.48	Free.
(b) Which in the opinion of the Comptroller of Customs has been prepared wholly or in part from skimmed milk, per 48 pounds	9.60	$4.80

The surtax of 15 per cent of the duties as expressed in the original ordinance is applicable under this amendment.

It is believed that the opinion of the comptroller of customs will be based upon the investigations and reports of the officials of the Department of Science and Agriculture, and it appears probable that American evaporated (unsweetened) milk and other American standard brands of condensed milk will be admitted at the lower rate of duty, provided that such contain not less than 8 per cent of butter fat, and are prepared from whole milk.

Correction.

COSTA RICA.

Correct Import Duty on Coloring Powder of Cement.

In publishing the notice of the changed duty on coloring powders for cement (pp. 68 and 69 of COMMERCE REPORTS for April 2), owing to the omission of the decimal point, the duty appeared as 10 colons per gross kilo, instead of 0.10 colon, which is the correct duty.

GENERAL TARIFF CHANGES.

CANADA.

Customs Memorandum No. 32, Ottawa, May 12.

Analysis of Budget Changes in Tariff and Taxes Affecting Imports.

General Summary.—The Candian budget presented on May 11 to Parliament by Minister of Finance Fielding, provides, according to the official text received by the Department of Commerce from the Commissioner of Customs and Excise, for a number of reductions and increases in import duties affecting special commodities, effective May 12, fixes a uniform sales tax of 6 per cent, to become operative from August 1, and modifies the internal taxes on a few products. Provision is also made for the repeal of the excise tax on sugar, and for somewhat more liberal drawback allowances.

Two general provisions of unusual interest are embodied: The first, empowering the Governor General to authorize negotiations with representatives of the United States Government for reciprocal tariff arrangements, subject to the approval of the Parliament of Canada; and the second, granting a discount of

10 per cent of the duty on most goods dutiable under the preferential tariff (conceded to products from all parts of the British Empire, except Australia), when conveyed, without transshipment, into a sea or river port of Canada.

The changes in customs duties have been made effective provisionally from May 12, but are subject to the approval or modification of the Canadian Parliament. The new duties are to affect all goods imported or taken out of warehouse for consumption on and after that day, and goods previously imported for which no entry for consumption was made before that day. The changes in the taxes on cigarettes are also effective from May 12, while that repealing the excise tax on sugar produced from sugar beets will be retroactive, in effect from January 1, 1923. The dates of the coming into force of other changes are indicated in each case.

Changes in Import Duties.—The changes embody mainly reductions in the duties on a number of commodities, with a few cases of increases in the rates. The principal American products affected are: Potatoes, raisins, and dried currants, malt flour, sugar, both raw and refined, cigarettes, fire brick, iron and steel scrap, staves of wood, manufactures or artificial silk, and abrasives. A comparison of the new and old rates on the major articles follows:

Tariff item.	Articles.	General rates.		Preferential rates.	
		Former.	New.	Former.	New.
	General rates apply to imports from United States.				
83a	Potatoes, when imported from a country which imposes a customs duty on potatoes grown in Canada	[1] 20 cts.	[2] 35 cts.	[1] 12½ cts.	[2] 20 cts.
99b	Raisins and dried currants..per pound..	½ cent.	3 cents.	½ cent.	Free.
134	Sugar above No. 16 Dutch standard in color, and all refined sugars, of whatever kinds, grades, or standards, not covered by tariff item No. 135; when exceeding 96° but not exceeding 97°.....per 100 pounds..	$2.27	$1.77	$1.51	$1.01
	NOTE.—For each degree of polarization above and below 96° there is a variation averaging about 3 cents for each degree.				
	Provided, That refined sugar shall be entitled to entry under the British preferential tariff, upon evidence satisfactory to the Minister of Customs and Excise, that such refined sugar has been manufactured wholly from raw sugar produced in the British colonies and possessions, and not otherwise.				
	Provided further, That sugar imported under this item shall not be subject to special duty when the home-consumption value at the place of shipment direct to Canada is more than 8 cents per pound.				
135	Sugar above No. 16 Dutch standard in color, when imported by a recognized sugar refiner, for refining purposes only, under regulations by the Minister of Customs and Excise, and sugar not specified, not above No. 16 Dutch standard in color, sugar drainings or pumpings drained in transit, melado, tank bottoms, sugar concrete, and molasses testing over 56° and not exceeding 76°; when exceeding 96° but not exceeding 97°.....per 100 pounds..	$1.71766	$1.31516	$0.8575	$0.455
	Provided, That all raw sugar, including sugar specified in this item, the produce of any British colony or possession, shall be entitled to entry under the British preferential tariff, when imported direct into Canada from any British possession.				
	Provided, That sugar imported under this item shall not be subject to special duty.				
143a	Cigarettes, the weight of the paper covering to be included in the weight for duty.....per pound..	$4.70	$4.10	$4.70	$4.10
	and.....	25%	25%	25%	25%
168	Malt flour containing less than 50 per cent in weight of malt; also extract of malt, fluid or not, including grain molasses—all articles in this item upon valuation without British or foreign excise duties, under regulations by the Minister of Customs and Excise .....per pound..	$0.03	$0.02	$0.03	$0.02
	and.....	35% Ad valorem.	35% Ad valorem.	35% Ad valorem.	35% Ad valorem.
235a	Licorice paste, not sweetened.....	22½%	17½%	15%	10%
242	Dry red lead, orange mineral, zinc white, and white oxide of antimony.....	5%	10%	Free.	Free.
267b	Crude petroleum, not in its natural state, 0.7900 specific gravity or heavier at 60° temperature, when imported by oil refiners to be refined in their own factories.....per gallon..	[1]	1/20 cent.	[1]	1/20 cent.
281	Fire brick for use in the construction or repair of a furnace, kiln, or other equipment of a manufacturing establishment.....	Free.	10%	Free.	5%
328a	Metal parts, unfinished, for the manufacture of spectacle and eyeglass frames.	20%	5%	15%	Free.
374	Iron or steel scrap, wrought, being waste or refuse.....per ton..	$1.00	$0.50	$0.50	$0.25
502a	Staves of wood, not otherwise specified, not less than ⅝ inch in thickness, further manufactured than sawn or split but not further manufactured than listed.....	Ad valorem. 25%	Ad valorem. 15%	Ad valorem. 17½%	Ad valorem. 10%
583c	Artificial silk fabrics or artificial fiber silk fabrics produced from a form of cellulose obtained by chemical processes or of which artificial silk or artificial fiber silk is the component part of chief value, n. o. p.....	37½%	30%	30%	17½%
	Hatters' bands (not cores), and cashmere when cut to shape for underbrims and hat covers—formerly free of duty under tariff No. 638a; now hatters' bands are probably dutiable according to the component material of chief value; and cashmere when cut to shape, probably now dutiable, under No. 567, at 35 per cent general and 27½ per cent preferential.				
670a	Carborundum wheels or stones not further manufactured than molded and burned.....	25%	15%	17½%	10%

[1] Per bushel.

[2] Per 100 pounds.

[1] Not hitherto specifically classified; believed dutiable at 2½ cents per gallon (general) and 1½ cents (preferential).

Ten per cent discount in preferential duties.—A discount of 10 per cent of the duties is granted to products of the British Empire (with the exception of Australia), when conveyed directly, without transshipment. The discount does not apply to wines, malt liquors, spirits, spirituous liquors, liquid medicines, and articles containing alcohol, sugar, tobacco, cigars, and cigarettes, and goods on which the duty does not exceed 15 per cent ad valorem, or, in the case of a specific duty or a specific and ad valorem duty combined, in which the computed rate does not exceed 15 per cent ad valorem, nor is it extended to goods entitled to reductions under the Canada-West Indies Trade Agreement of 1920.

Authority for reciprocity with the United States.—It is proposed also that if the President of the United States, under the tariff act of 1922, determines to reduce by 50 per cent the duties imposed by the act on a number of specified products, the Canadian Governor in Council may, by order in council, make such reductions of duties on similar articles imported into Canada from the United States in compensation for such reductions on Canadian products imported into the United States.

Modifications in sales, luxury, and excise taxes.—The sales or consumption tax is fixed at the uniform rate of 6 per cent, effective August 1, to be collected at the source on the sale price of all goods produced or manufactured in Canada (including the amount of excise

duties when the goods are sold in bond, to be paid at time of sale), as well as on imported goods, when the tax is payable by the importer or person who takes the goods out of bond, at the time when the goods are imported. The present tax is 3¾ per cent of the duty-paid value of imported goods when sold to manufacturers, wholesalers, or jobbers, and 6 per cent when sold to retailers or consumers, the corresponding taxes on sales of domestic goods are 2¼ and 4½ per cent respectively.

The consumption or sales tax is not payable on goods imported by a licensed manufacturer or producer to be used in the production of articles for sale, or on goods imported by a licensed wholesaler or jobber, whose sales are to be accounted for in accordance with the provisions of paragraph 2 of section 3 of the amending resolution, which reads as follows: "A wholesaler or jobber who sells not less than thirty per cent of his total sales of goods to a licensed manufacturer or producer to be used in articles to be produced for sale, may be granted an annual license, the fee therefor not to exceed two dollars. Such licensed wholesaler or jobber shall give security that he will keep proper accounts and render true statements of sales to licensed manufacturers or producers and pay any tax imposed by the said act."

A refund of the amount of the said consumption or sales tax may be granted on imported goods on which customs duties have been refunded on exportation.

The excise tax on cigarettes made from raw leaf tobacco or any substitute therefor, weighing not more than 3 pounds per 1,000 will be reduced from $7.50 per 1,000 to $6 per 1,000, the tax on such cigarettes weighing more than 3 pounds per 1,000 being $11 per 1,000, which is a reduction of $1.50 from the former rate of $12.50. The new taxes will be effective from May 12.

Section 378 of the inland revenue act and amendments, imposing excise taxes on all sugar produced in Canada from sugar beets, including sugar, sugar drainings, melado, sugar concrete and molasses, are repealed, effective from January 1, 1923.

The excise tax on wines of all kinds, except sparkling wines containing not more than 40 per cent of proof spirit will be reduced to 7½ cents per gallon, the excise tax on champagne and all other sparkling wines to be reduced to $1.50 per gallon. The date for the coming into effect of these taxes will be fixed by proclamation of the Governor in Council.

The excise taxes of 5 per cent and 10 per cent, respectively, on confectionery and beverages in Schedule I, and the tax of 5 cents per gallon on beverages in Schedule II, have been abolished, and the following item has been added to Schedule II; "Carbonic acid gas in cylinders, per pound, one cent," effective August 1.

Extension of Drawback Allowances.—The budget provides for more liberal drawback allowances, effective from May 12, by the following extensions and additions in the former schedule. The following table shows the provisions:

Tariff item.	Goods.	When subject to drawback.	Portion of duty (not including special duty or dumping duty) payable as drawback.
			Per cent.
1029	Materials.....	When imported by manufacturers of hat sweats and hatters' tips and sides and used in the manufacture of such articles in their own factories.	99
1030	.....do.....	When used in the manufacture of articles enumerated in tariff item 236.	50
1031	Sugar not above No. 16 Dutch standard in color, sugar drainings or pumpings drained in transit, melado or concentrated melado, tank bottoms, sugar concrete and molasses testing over 56° and not exceeding 96° of polarization.	When used exclusively in the manufacture of sirups and molasses enumerated in tariff item 140, not to include sirup and molasses produced in the process of refining sugar. *Provided, however*, That such drawback shall not be paid unless the claims as presented by a manufacturer at any one time aggregate $25.	.30
1032	Oil.....	When used in the manufacture of manila rope not exceeding 1½ inches in circumference, when used exclusively in the fisheries.	99
1033	Glass tubing.....	When used for the manufacture of glassware and other scientific apparatus for laboratory work in public hospitals.	99
1034	Barilla or soda ash.....	When used in the manufacture of sal soda.	99
1035	Machinery, and parts thereof, and dies valued at more than $500 each, of a class or kind not made in Canada.	When used in manufacturing or producing goods of a class or kind not manufactured or produced in Canada prior to the 12th day of May, 1923.	60
1036	Materials, including all parts not finished.	When used in the manufacture of goods enumerated in tariff item 448c (stumping machines and parts thereof).	40
1037	Copper in blocks, ingots, pigs, or bars.	When used in the manufacture of rods for use only in the manufacture of trolley, telegraph, and telephone wires, electric wires and electric cables.	99

GERMANY (OCCUPIED TERRITORY).

Conditions of Obtaining Deliveries From Occupied Germany.

The Department of State has worked out an arrangement with the Franco-Belgian authorities in the occupied territories of Germany whereby American Govment representatives in Europe can assist American buyers in obtaining export licenses for goods on order in those areas, particularly those contracted for prior to the occupation. Joined with the recent withdrawal by the Berlin Government of its former prohibition against German concerns delivering goods to foreigners who intend themselves to export them under license from the allied authorities, this arrangement is expected to facilitate the movement of goods on order for American account with concerns in occupied Germany. The instructions as to procedure in such cases are presented fully in the following statement issued by the Department of State:

American buyers intending to apply for export licenses for goods in occupied Germany must address their applications to the Rhineland High Commission at Coblenz, stating the date of contract, quantity and character of goods, value of order, and name of German supplier, and submit evidence showing that contract was made prior to February 1 and that payment has been made either in whole or in part. A copy of the contract should accompany the application.

However, the authorities in occupation stipulate that applications must be accompanied by a statement covering the American interest in the shipment. Accordingly, until further notice, American buyers should first submit the application direct to the American Embassy in Paris or Brussels, which will issue the statement required and forward it with the application to the American consul at Coblenz, who in turn will present the application to the High Commission for approval. When the application is returned the consul will, upon request, turn it over to the American buyer's agent or representative, who should then make all arrangements with the appropriate licensing office for deliv-

ery of the license and payment of export tax to the authorities in occupation.

The department is informed that the authorities in occupation on May 1 put into force an export tariff based on the German export tariff of 1921 instead of the 10 per cent ad valorem tax which has been temporarily collected and, furthermore, that the time for receiving applications from American buyers for contracts made previously to February 1 has been extended for an indefinite period. However, American buyers are urged to expedite their applications as much as possible. The department also understands that German firms are now authorized by their Government to deliver goods involved in commercial transactions made prior to February 20, provided they have first obtained a German export license.

In negotiating on behalf of American commerce with the various Governments concerned in this matter, it has been the aim of the Department of State to endeavor to obtain for American traders the same facilities granted to traders of other countries and at the same time to find a way out of the present deadlock of commerce, whereby, through the modification of conflicting regulations and the elimination as far as possible of official interference, the movement of American-owned goods for export out of occupied Germany could actually be accomplished.

The regulations outlined above represent such concessions on the part of the occupying and German authorities as have been obtainable up to the present time. The procedure is not so simple as desired, but its observance will, it is believed, afford relief to American trade.

Importance of Local Representation.

Under the above arrangement is is practically essential that the American buyer have a local agent or representative authorized to take over the goods from the German supplier and to make arrangements with the occupying authorities for obtaining the license and the payment of the export tax. Concerns who do not now have a representative or correspondent in that part of Europe, of other than German nationality, are advised to endeavor to make such connection through a bank, forwarding house, or steamship company in the United States which has non-German representatives either in the occupied territories or in the neighboring regions of France, Belgium, or the Netherlands. Officials of the American embassies at Paris and Brussels will be pleased to lend to the agents of American concerns every assistance possible under the circumstances.

PATENTS AND TRADE-MARKS.

JAPAN.

Commercial Attaché James F. Abbott, Tokyo, March 17.

Amendment of Patent Law.

Changes have been introduced into the Japanese patent law through the Imperial Ordinance of December 28, 1922, published in the Official Gazette of December 29, 1922, to provide especially for the registration of patents in trust. The new articles, granting the holder of a patent in trust the same privileges at law as those enjoyed by the inventor, are designed to conform with the Trust Law, and will come into force when this law becomes effective.

[Complete information pertaining to the ordinance cited above may be obtained from the Division of Foreign Tariffs.]

Additional information regarding tariffs and trade regulations appears in this issue under the following section:

Cable review, Western Europe: Spain negotiating commercial treaties.

WESTERN EUROPE

Alan G. Goldsmith, Chief, Western European Division.

SCOPE OF BRITISH IMPERIAL ECONOMIC CONFERENCE.

Commercial Attaché Walter S. Tower, London, April 26.

A British official announcement states that the Imperial Economic Conference will meet in London next October (probably opening October 1) and that the main subjects to be considered will be as follows:

1. Development of the natural resources of the dominions and colonies.
2. Commerce, shipping, and general communications within the Empire.
3. Improvement of technical research.
4. Organization of economic intelligence.
5. Unification of laws or practices throughout the Empire in various matters relating to trade.

While all these subjects offer considerable possibilities for constructive work through interimperial cooperation, it is quite evident that the chief interest attaches to the first two topics. These are the lines, it seems, through which definite action might bring very substantial results in the problem of industrial recovery and trade expansion.

Development of Natural Resources Considered Important.

On the one hand, it is hoped, and quite generally believed, that a discussion of ways and means for more fully developing the natural resources of the dominions and colonies will offer satisfactory solutions for various problems now confronting the home country, as well as promote the economic welfare of the overseas possessions. In this connection frequent references are being made to expanding the imperial supplies of raw materials and food products in order to decrease dependence on foreign sources. Cotton, wheat, and sugar are among the items commonly cited as providing examples of the serious neglect of possibilities within the Empire. Provision of homes and occupation for surplus population by overseas enterprises also would relieve the unemployment situation in Great Britain.

On the other hand, advocates of imperial preference in trade regard this as an opportune time to push the idea of "reciprocity all around." Through their influence efforts undoubtedly will be made to win favor for an Empire trade policy, in which tariff preference will figure prominently. One of the chief arguments likely to be advanced in support of such a trade policy is that there is no use providing labor and money to develop colonial resources unless there also is provision for markets for the products which would result.

Trade Reciprocity Viewed with Favor in Great Britain.

These arguments are sure to make some appeal both to merchants who find old markets for British wares more or less inadequate and to the manufacturers who fear the weakness of their position in depending on foreign-controlled supplies of raw materials. The local popularity of the idea of reciprocal trade within the Empire has been amply demonstrated through fre-

quent reference to it by Government officials, bankers, and manufacturers as the best remedy for trade depression. As a result the keynote of the conference, as viewed from the home country, may well be "to draw the Empire closer together and to promote trade between its different parts."

How much progress can be made toward that end will depend largely on the attitude of the dominions and colonies. The home country has little or nothing to offer in the form of trade preferences. The best it can do is to furnish capital and to offer more or less labor of various sorts, which the dominions may or may not want. Under any normal conditions the bulk of the capital annually available for overseas investment would find its way into the dominions and colonies. Knowing these facts, it is an open question whether the other parts of the Empire will see any new advantage to themselves in agreements which undoubtedly would benefit Great Britain, but possibly at the expense of some of their own freedom of markets.

In interested quarters existing world conditions are regarded as more favorable than ever before for some constructive action on imperial trade policy. Failing such action next October, it is predicted that this will be the last Imperial Economic Conference.

HESITATION IN BRITISH FOREIGN TRADE.

Commercial Attaché Walter S. Tower, London, April 24.

British foreign trade during the first quarter of 1923 has not maintained the general improvement which was evident in the closing months of last year. It is generally assumed that the uncertainties of continental conditions are the main reason for failure to realize the further expansion of overseas business which was freely predicted and expected when this year began.

A comparison of total values for the last quarter of 1922 and the first quarter of 1923 reveals the hesitation which British trade has experienced recently.

	Last quarter, 1922.	Last quarter, 1923.
Imports	£275, 526, 000	£273, 577, 000
Exports	185, 772, 000	185, 369, 000
Reexports	25, 904, 000	28, 706, 000

In making this comparison little or no allowance is necessary for changes in average price levels, the Board of Trade wholesale-price index having risen by less than 2 per cent from an average of 155.7 in the fourth quarter of 1922 to an average of 158 in the first quarter of 1923. Any correction on that account would serve only to accentuate the impression of hesitating trade during the quarter just closed.

Foodstuff Imports Indicate Increasing Consumption.

Many contrasts, however are revealed when actual quantities for individual lines of trade are considered. Imports of most food products, for example, have been larger than for preceding quarters, as shown by the following data:

Net imports of food products into the United Kingdom.

Commodities.	Quarterly average, 1922.	First quarter, 1922.	Fourth quarter, 1922.	First quarter, 1923.
	Hundredweight.	*Hundredweight.*	*Hundredweight.*	*Hundredweight.*
Wheat	24,058,000	21,329,000	23,503,000	24,047,000
Flour	3,308,000	2,851,000	3,347,000	3,343,000
Maize	9,252,000	8,937,000	11,089,000	10,383,000
Beef	2,493,000	2,497,000	2,522,000	3,088,000
Mutton	1,447,000	904,000	1,014,000	1,842,000
Bacon and ham	1,825,000	1,788,000	1,887,000	2,316,000
Butter	954,000	990,000	963,000	1,318,000
Cheese	658,000	689,000	555,000	589,000
Lard	575,000	580,000	600,000	680,000
Tea	841,000	1,010,000	1,113,000	991,000

The meat items in this list show notable increases this year over the corresponding period of 1922, and over the volume imported during the last quarter of 1922. It also is significant that the purchases of wheat and flour show absolutely no response to the agitation for restricting imports of foreign flour in favor of grain milled in the United Kingdom. On the whole these figures indicate a tendency toward increased food consumption, which in 1922, on a per capita basis, was lower than in 1913. In this respect, therefore, the trade tendency shows no pause.

Imports of Raw Materials Reflect Industrial Trend.

A safer guide to basic conditions, however, is found in imports of materials to be used in manufacturing industries, because such imports generally reflect the opinion of British producers as to the future demand for finished products. The accompanying table gives the quarterly totals for 15 classes of materials which affect in one way or another nearly all of the representative industries in the country.

Net imports of raw materials.

Commodities.	Quarterly average, 1922.	First quarter, 1922.	Fourth quarter, 1922.	First quarter, 1923.
Iron ore.....tons..	868,000	641,000	1,012,000	1,435,000
Pig iron.....do....	41,100	58,600	51,200	46,200
Copper.....do....	23,300	14,200	32,500	32,300
Lead.....do....	42,400	43,400	44,100	47,600
Zinc.....do....	18,000	16,600	15,500	40,300
Tin.....do....	12,000	9,600	13,600	12,700
Wood pulp.....do....	222,600	93,300	296,300	187,500
Pit props.....loads..	703,000	509,000	800,000	718,000
Cotton.....centals [1]..	3,367,000	2,934,000	4,931,000	3,580,000
Wool.....do....	1,645,000	2,214,000	850,000	1,449,000
Flax, hemp, and jute.....tons..	57,800	47,800	82,800	76,500
Hides.....hundredweight..	212,000	188,000	277,000	255,000
Rubber.....centals [1]..	100,000	77,000	82,000	56,000
Rosin.....hundredweight..	305,000	260,000	369,000	369,000
Crude petroleum.....gallons..	54,300,000	43,800,000	64,000,000	57,900,000

[1] 1 cental=100 pounds.

As compared with the first quarter a year ago, the March quarter this year shows substantially larger imports except for pig iron, raw wool, and rubber. The decline in the case of pig iron is directly due to disturbed conditions in the continental iron districts and accompanying expansion of domestic output. Smaller imports of wool and rubber reflect a somewhat slower activity in the local manufacturing industries concerned. In a year, therefore, British industry in general has gone ahead most encouragingly as measured by its consuming demand for imported raw materials.

The past quarter, however, shows for only 4 of the 15 items larger imports than were recorded in the quarter immediately preceding. Iron ore, lead, zinc, and wool increased in volume of imports; copper and rosin

were unchanged. The others decreased in volume by amounts ranging from nearly 8 per cent for flax, hemp, and jute to nearly 30 per cent for raw cotton. These changes do not necessarily mean as yet any considerable shrinkage of industrial operations, but they do mean that manufacturers are buying raw materials cautiously, that stocks are not being accumulated, and that in the near future either imports of raw materials must expand again or a slowing down of production will set in.

Exports of Staple Products.

These conclusions are fully supported by the figures for exports of staple products, as given in the accompanying table of 20 representative items:

Exports of British goods.

Commodities.	Quarterly Average, 1922.	First Quarter, 1922.	Fourth Quarter, 1922.	First Quarter, 1923.
Coal.....tons..	16,049,000	13,237,000	18,721,000	18,694,000
Bunker coal.....do....	4,565,000	4,403,000	4,603,000	4,568,000
Coke.....do....	628,000	522,000	842,000	784,000
Wool.....centals[1]..	153,000	147,000	192,000	166,000

Boots and shoes.....dozen pairs..	123,000	95,000	157,000	151,000
Paper and cardboard, ...hundredweight..	614,000	404,000	872,000	1,021,000
Hardware.....tons..	24,000	19,000	26,000	27,000

[1] 1 cental = 100 pounds.

With three exceptions—machinery, cotton yarn, and linen piece goods—the increases from the level of a year ago are most encouraging. When compared with the closing quarter of 1922, however, gains are few and relatively important, including only chinaware, copper and brass manufactures, cement, linen piece goods, cordage, paper and cardboard, and hardware. On the other hand, none of the other items in the list shows any sharp decline, the differences between totals for the two quarters being on a scale which clearly suggests hesitation rather than definite setback in overseas demand for these products.

The returns for March alone justify some hope that the tide is again turning toward greater activity than in the preceding months, but unless some radical change occurs from the conditions which have been responsible for the hesitation of trade since January, it is difficult to see how any early improvement can go very far.

HISPANO-AMERICAN COMMERCIAL CONGRESS.

Commercial Attaché C. H. Cunningham, Madrid, Spain, April 9.

During the first week in April the second series of sessions of the Hispano-American conferences was held in Madrid. During the preceding week sessions were held in Barcelona, but as they were attended by only a few Spanish delegates they were relatively unimportant, and the activities of the delegates were largely taken up with social affairs. At Madrid the sessions were more important and were better attended by delegates from the various cities of Spain.

In connection with the conferences it must be remembered that it is a congress of Spaniards engaged in overseas trade, and not one of native Latin-Americans interested in trade with Spain. It is not comparable therefore to the Pan-American conference now being held in Chile.

In conversation with delegates from Mexico, Cuba, and Argentina it was ascertained that many of the delegates were not only interested in the sale of Spanish goods in Latin America but also in American goods.

Recommendations of the Congress.

Among the projects which the congress recommends for political action by the Spanish Government are the establishment of a commercial credit bank for facilitating Spanish trade with Latin America, by providing adequate financial backing and the establishment of additional steamship lines from Spain to Latin America. The latter resolution encountered considerable opposition, however, and it was pointed out that several Spanish lines had been forced to abandon Latin American sailings because of lack of cargo. The failure of Spanish commerce in America was claimed to be due to the lack of export products needed there and the lack of facilities for the purchase and absorption of the vast majority of Latin American products, of which Spain consumes only a limited quantity, while very much better markets are found in the United States, Great Britain and its colonies, France, and Germany.

American Representatives Can Obtain Permanent Residence in Germany.

Press reports of last July stated that the Berlin Chamber of Commerce declined to give the necessary certification to permit American directors and staff of a long-established company to have their passports stamped "Good for permanent residence in Germany." This report was incorporated on page 9 of Trade Information Bulletin No. 52. Commercial Attaché C. E. Herring, of Berlin, now reports that the statement was not well founded. The Berlin Chamber of Commerce is anxious to extend its best cooperation to Americans doing business in Germany, and, as a matter of fact, has in the past intervened with the municipal authorities in order to secure the residence permit for American business men.

Additional information regarding Western Europe appears in this issue under the following sections:

Automotive Products:
British demand for valve grinders increasing.
Steady demand for Danish car market.
Transportation–Communications: Air service, Danzig–Berlin.
Commercial Law: Italian taxation of foreign capital.
Finance: British new capital issues during first quarter of 1923.
Tariffs and Trade Regulations:
Conditions of obtaining delivery of goods on contract from occupied Germany.
Commercial treaty concluded by Norway and Portugal.
Necessity for certificates of origin in shipments to Spain.
Changes in the Canadian import tariff.

EASTERN EUROPE AND LEVANT

E. Dana Durand, Chief, Eastern European and Levantine Division

CESSATION OF RUSSIAN TRADE WITH HARBIN.

Consul G. C. Hanson, Harbin, China, March 19.

Trade with Russia is of cardinal importance to Manchuria and particularly to Harbin. Upon this trade was founded the greater number of business enterprises at Harbin, and these gained considerable profit from supplying Russia with grain, piece goods, haberdashery, and many other commodities. There exists now no free trade with Russia. Only governmental and semiofficial institutions, such as the Gostorg, Sibvneshtorg, Dalvneshtorg, and Centrosoyus, have the right of conducting Soviet Russian export and import business; all others are subjected to a system of permits. Up to the present time not one of the larger firms has yet obtained the required permit.

Transbaikal Market Supplied From Moscow.

The number of permits issued at Chita also is not large. In Transbaikalia quantities of piece goods recently arrived from Moscow. According to statements made by merchants who have arrived in Harbin from Chita, the Moscow piece goods are slightly higher in price than the foreign material, but of considerably better quality, almost equal to the product of prerevolutionary times. This quality and the habit of the population in buying the Russian goods have combined to destroy the possibility of competition by foreign piece goods.

At the present time Manchuria's only export possibility with regard to Soviet Russia is the shipment of grain to Transbaikalia and the maritime district, together with small quantities of tea, sugar, and first quality flour (the Transbaikal army receives flour from western Siberia). Inasmuch as the consuming market is limited to Transbaikalia, where the population has only small buying capacity, it is not possible to count upon any important turnover.

Russian Exports Limited to Furs Sold at Chita.

Exports from Soviet Russia also pass by Manchuria. Trade in furs during the present season has touched Harbin but slightly, but large quantities have been sold in Chita. Buyers there were representatives of American and British firms. There is at present an active movement of furs from Siberia, part having already reached Irkutsk; but there is nothing to justify any expectations that these furs will be sold in Manchuria. Russia exports nothing over its eastern borders except furs, and its export trade thus passes outside Manchuria's business sphere.

Harbin's trade with Russia has dwindled to one-tenth its former volume. As it can not count upon any Russian business to speak of for some time to come, it is faced by the alternative of either concentrating upon home resources or of continuing to suffer under the present depression which has followed this elimination of trade.

BALKANS AND LEVANT.

Increased Interest in Bulgarian Trade.

Based on reports from Consul Graham H. Kemper, Sofia, and other sources.

While the agreement reached by the Bulgarian Government and the Inter-Allied Commission at Sofia has not yet been ratified by the Reparations Commission at Paris, it is generally believed that it will be ratified. The effect of this settlement on the economic situation should be favorable. Its effect upon the exchange situation is already manifest. The lev, which stood at $0.0062 on March 15, has steadily advanced, reaching $0.007 on May 7.

Already there has been renewed interest in American trade, and a number of inquiries have been made at the Sofia consulate by firms wishing to establish commercial relations with the United States. A number of German firms, which are now quoting prices in dollars or sterling, are losing a part of the trade which previously went to Germany as the result of its former policy of quoting in greatly depreciated currency. England has profited most by the exchange, since English firms are well represented in Bulgaria by their own nationals. There is a strong desire on the part of Bulgarian firms to deal with the United States; but there are no American representatives in Bulgaria, and terms offered by American firms to prospective purchasers with which they are acquainted by correspondence only are too strict to compete with those offered by foreign firms having representatives on the ground.

Exports to the United States during the first quarter of 1923 were more active than usual, although no great values were involved. These exports consisted of attar of roses, hareskins, goatskins, cheese, tobacco, wild animal skins, and carpets—a total of $143,846. Exports of tobacco to European countries continued active, although not equaling those of last autumn. In spite of the short crop of maize in 1922, the export of grain and flour to Grece and Turkey has continued.

Trade Facilities Offered by Egypt.

Consul George Wadsworth, Cairo.

The facilities offered by the Bureau of Commerce and Industry of the Egyptian Ministry of Finance now include not only classified local importers, exporters, and manufacturers, but there is on file several thousand catalogues of articles of foreign manufacture. American manufacturers are advised that this is an effective way to bring their export catalogues to the attention of interested Egyptian importers.

[This avenue for dissemination of trade information is, of course, in addition to that offered by the American consulates in Egypt.]

Additional information regarding Eastern Europe and the Levant appears in this issue under the following sections:

Transportation–Railways: Additional rolling stock for Latvian railways.
Transportation-Communications: Air Service, Danzig-Berlin.

FAR EAST

F. R. Eldridge, Chief, Far Eastern Division

ECONOMIC CONDITIONS SOUND IN NETHERLANDS EAST INDIES.

The commercial and economic development of the Netherlands East Indies, which only recently has arrested the attention of the western world and brought the insular colony into a position of importance as an economic entity, merits sustained interest on the part of American business men. The tangible form which this interest assumed in recent months was evidenced in the successful flotation in this country during 1922 of the two Dutch East Indian loans. A brief consideration of the war boom and post-war crisis in these islands, taken in conjunction with the present outlook, seems to justify the confidence thereby expressed in the economic stability of this far eastern colony.

Prosperity Evident in Favorable Trade Balances.

Known about a decade ago only as a group of islands rich in tropical produce, the years of the war inaugurated a period of unparalleled development and prosperity. The increased demand for the native raw products swelled the value of exports in 1919 to the unprecedented figure of 2,141,000,000 guilders, compared with 615,000,000 guilders in the pre-war year, 1913 (1 guilder=$0.402 at normal exchange). Again in 1920, although prices of export commodities fell alarmingly as consuming countries became overstocked, the fulfillment of orders contracted in 1919 brought the total value of exports to the record figure of 2,254,000,000 guilders. Imports that year also attained an unprecedented value, amounting to 1,125,000,000 guilders, compared with 638,000,000 guilders in 1919 and 437,000,000 guilders in 1913. Such favorable trade balances as the 1,503,000,000 guilders of 1919 and 1,134,000,000 guilders in 1920 never had been approached in the history of Dutch East Indian trade.

The year 1921 marked the period of greatest depression in the difficult transition from inflated post-war conditions to stability, the trade of the islands registered an unfavorable balance of only 2,000,000 guilders, imports amounting to 1,193,000,000 and exports to 1,191,000,000 guilders.

While complete trade figures for 1922 are not yet available, it is expected that a favorable readjustment will be shown. The year marked the first improvement in the rubber situation and sugar, coffee, tea, and tobacco, as well as many of the minor products, obtained satisfactory prices.

Present Outlook for Trade and Business Favorable.

Reports and cable advices received during recent months indicate a belief that world prices will sustain at a profit the production of these commodities. The export trade of Java has shown a gradual increase since the beginning of the year, stimulating the sale of imported goods. The liquidation of merchandise stocks in Batavia is practically terminated in most lines of staple goods, with the exception of textiles and certain stocks of motor trucks of the heavier types which can not be moved on account of the government's restriction limiting to 3 tons the trucks in use on Java roads. Dealers in motor cars, which were so heavily stocked in this market during the boom period, now say that business is returning to normal.

Sugar mills are reported in a sound condition. Losses charged against payments on machinery and equipment installed during the last three years were largely absorbed by returns on the 1922 crop. Many planters of Java and a number of the mercantile houses are still however, in the hands of bankers, who supervise their expenditures closely.

Economy in both industry and government expenditures has been a stabilizing factor in the period of readjustment in the islands. There has been a general downward revision of wage scales throughout the colony and unemployment has been largely relieved. Though labor unrest is in evidence, both among natives and Europeans, no serious difficulties have resulted.

The 50,000,000 people of these islands, stimulated by the war and post-war events to greater development of both agricultural and industrial potentialities, furnish a market of growing importance for imported goods. It is noteworthy that at the last annual fair at Bandoeng foreign imports occupied a more prominent place than domestic products. In the light of prevailing conditions, therefore, it may readily be appreciated that this country, with its rich store of tropical resources, possesses ample recuperative powers to make it an attractive component of the world's markets. An increasing number of American salesmen are reported arriving at Batavia to sell goods instead of to dispose of shipments which had been refused, as was the case some months ago. These representatives are optimistic regarding the future of the islands.

Japanese Government Urged to Assist Its Business Men in China.

It is reported that Japanese business men interested in China have petitioned the Government urging the necessity of its holding silver funds in China for the purpose of supplying money needed by private Japanese enterprise there.

The parties interested claim that, due to the constant fluctuation of silver, heavy losses may be suffered by all enterprises in China, and for this reason the Government should give careful study to the plan. They point out that the spinning, cotton, and iron industries which Japanese business men carry on in China are still on a small scale, but that they are destined to occupy an important place in Sino-Japanese trade relations.

The backers of the plan are said to have suggested that part of the coinage profits might, with propriety, be utilized in China for the redemption of loans, etc., and that a portion of the large sums of specie that are being held in New York and London by the Japanese Government might also be used advantageously as a fund for the economic development of business in China.

There is a division of opinion, however, among Japanese business men, as to the advisability of securing

Government aid for their business abroad, on the ground that such reliance upon official support prevents a healthy economic development.

Increase in Chinese Exports to United States.

Declared exports from China to the United States in 1922 totaled $163,891,630—an increase of 24 per cent over the previous year. The principal articles exported to this country during the year were raw silk, cow and calf hides, sheep's wool, wool oil, hair nets, squirrel skins, and goat and kid skins. Shanghai, with 35 per cent of the total, was the leading export city, followed by Canton, 26 per cent; Tientsin, 18 per cent; and Hankow, 8 per cent.

The following table shows the declared exports, by articles, from China to the United States in 1921 and 1922:

Declared exports from China to the United States in 1921 and 1922.

Articles.	1921	1922

Japan May Adopt the Metric System.

The metric system of measurement was put into effect in the southern half of Saghalien Island on April 1, according to the Japan Advertiser. Adoption of the system in Japan proper is expected to be officially announced in the near future. The 300 ruler dealers in Tokyo are said to be laying in stocks of metric measures in anticipation of the adoption of the system.

Additional information regarding the Far East appears in this issue under the following sections:

Minerals and Metals: Australian gypsum industry.
Foodstuffs: Estimated imports of Japanese rice.
Cable Review: Conditions in Japan, China, and Australia.
Finances: Bank of Taiwan to handle foreign exchange.
Tobacco: Australia to increase tobacco production.

LATIN AMERICA

J. R. McKey, Acting Chief, Latin American Division

SLIGHT IMPROVEMENT IN GUATEMALAN ECONOMIC CONDITIONS.

Consul A. C. Frost, Guatemala City, April 27.

The general economic situation in Guatemala during March, 1923, while not improving to any appreciable extent, manifested an undercurrent in some merchandising lines, indicative of a slow movement toward better conditions. One way in which this was shown was by the Chinese merchants (an important and stable element in the local business community) placing some substantial orders with importing firms. The month prior to Easter is about the best period of the year in mercantile circles and consequently seasonal demand for some articles increased during March. A decline in prices received for coffee was something of an adverse factor.

The National Assembly convened March 1, 1923, and is deliberating on a number of important projects which will have a direct bearing on the commercial situation in coming months. These include a very comprehensive commercial treaty with France, a concession for construction of a street railway by Franco-Belgian interests, and the concession for construction and operation, by the International Railways of Central America, of the railroad from Zacapa, Guatemala, to Santa Ana, Salvador. The latter would give Salvador an outlet to the Atlantic and probably make Puerto Barrios the premier port of Central America. The outcome of these propositions, and also of the foreign loan, remains problematical.

Exchange Unsteady.

During recent months the exchange rate of the Guatemalan peso has fluctuated within rather narrow limits. While the American dollar is the real basis of value, the paper peso serves as an index of local business conditions. As the masses of people have pesos,

their purchasing power of imported goods is restricted in proportion to the fall of the peso.

Exports Show Gain.

Exports for March continued the advance noted during previous months of this year over the corresponding periods of 1922. The proportion of coffee and sugar sent to the United States showed consistent gain. An experimental shipment of 400 bunches of bananas from San Jose de Guatemala to Los Angeles is believed to have been the first export of that fruit from the Pacific coast of Guatemala.

Publicity for Commercial Inquiries in Chile.

Vice Consul B. C. Matthews, Antofagasta, April 17.

An agreement has been reached between the American consulate at Antofagasta and a local newspaper, El Abece, for periodically publishing a list of commercial letters received by the consulate from American firms, stating succinctly the contents and the sort of connection desired with concerns in the consular district of Antofagasta. This service is being rendered gratis by El Abece. As a result of the publication of these lists, several inquiries have been received and already a number of trade opportunities have been secured.

Vital Statistics from South America.

Consul F. A. Sterling, Lima, April 13.

The official mortality statistics for the cities of Lima and Callao, Peru, for the years 1918 to 1921 and for Callao for 1922 have just been made public.

The population of Lima in 1918 was 167,968, and in 1922, 179,000. The latest figures give Callao a population of 52,258. The death rate in Lima for 1918 to 1921 averages about 30 per 1,000, and the same proportion holds good in Callao. It is estimated that one-fourth of the children born in both cities die within a year of their birth.

Increase in Argentine Immigration.

Argentina is benefiting by the increased migration since the war, according to a report of Ernesto Tornquist & Co., which estimates the immigration for the year 1922 at 152,400, and the emigration at 66,973. An estimate of the immigration during 1921 published in the Revista de Economia y Finanzas is 142,435.

Additional information regarding Latin America appears in this issue under the following sections:

Commercial Law: Bankruptcy and insolvency laws of Haiti.

INVESTIGATIONS BY UNITED STATES TARIFF COMMISSION.

PUBLIC NOTICE of Investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 24 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Print rollers.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 396 of Title I of said tariff act, namely: Print rollers, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of Investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 25 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Taximeters.

The United States Tariff Commission on this 4th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 368 of Title I of said tariff act, namely: Taximeters, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigations shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 4th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of Investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 26 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Cast polished plate glass.

The United States Tariff Commission on this 5th day of May, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 222 of Title I of said tariff act, namely: Cast polished plate glass, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 5th day of May, 1923.

JOHN F. BETHUNE, *Secretary.*

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The following further figures on April production and distribution have been received by the Department of Commerce:

Iron and Steel Products—Anthracite Production.

The average wholesale prices for iron and steel products were higher in April than in March. The composite price of pig iron for April, as compiled by the American Metal Market, was $31.44 per long ton, compared with $20.77 a year ago. The price index for metals and metal products compiled by the Department of Labor at 154 compares with 149 for March and 113 for April a year ago.

The production of anthracite coal in April amounted to 8,063,000 short tons and compares with 8,900,000 tons in March and 26,000 tons in April of last year, when, because of the miners' strike, the production of anthracite coal was practically at a standstill. Stocks of anthracite on April 30 amounted to 182,000 long tons, as against 161,000 tons on March 31 and 2,775,000 tons at the end of April, 1922. The wholesale price index for fuel and lighting at 200 for April compares with 206 for March and 194 for April a year ago.

Building Materials—Value of Building Contracts.

The index number compiled by the Department of Commerce at 209 shows no change for April in the cost of building materials entering into the construction of a six-room frame house. Contracts awarded in 27 Northeastern States, in point of floor space, amounted to 64,527,000 square feet and compares with 64,920,000 square feet in March and 58,146,000 in April, 1922. In point of value, contracts awarded for public and semipublic buildings amounted to $123,764,000, as compared with $137,661,000 in April a year ago.

Contracts for residential construction were let to the amount of $163,476,000, as compared with $164,267,000 in March and $132,478,000 in April, 1922.

Lumber—Face-Brick Production—Stocks on Hand.

The production of North Carolina pine in April amounted to 52,500,000 feet, as compared with 61,460,000 in March and 54,180,000 for the corresponding month of last year. The production of southern pine amounted to 428,471,000 feet, as against 480,966,000 in March, while stocks at the end of April were 1,056,358,000 feet, as compared with 1,107,612,000 on March 31 and 1,159,422,000 feet at the end of April, 1922. Production of oak flooring declined to 30,706,000 feet and compares with 19,892,000 feet produced in April a year ago. Maple-flooring production, at 11,401,000 feet, compares with 12,344,000 feet produced in March and 9,478,000 in April, 1922. Stocks of both oak and maple flooring declined during April.

Production of face brick by 32 identical plants amounted to 23,515,000 bricks, as against 23,004,000 produced in the preceding month. Stocks in sheds and kilns on April 30 were 65,447,000 bricks, as compared with 67,511,000 held at the end of April, 1922. Sales of tubular plumbing goods at $189,747 compares with $445,994 in March.

Canal Traffic—Freight-Car Surplusage—Freight Revenue.

Panama Canal traffic for the month of March, figures for which have just become available, amounted to 1,941,000 long tons of cargo, as compared with 960,000 tons of cargo traffic for March, 1922. Vessels entered and cleared in our foreign trade during April in point of tonnage were on the same level with April a year ago.

The daily average surplusage of freight cars for the last week of April at 13,556 cars compares with 14,196 for March and a daily average of 371,538 cars for the last week of April, 1922. The daily average car shortage declined to 35,282 cars and compares with an average of 842 for the last week of April a year ago. A total of 210,505 freight cars were in bad order on May 1, as compared with 206,312 on April 1 and 327,704 on May 1, 1922.

Freight revenue from 195 class 1 railways, including 15 switching and terminal companies, amounted to $398,536,000 in March and compares with $354,306,000 for the corresponding month of 1922. Net railway operating income for March amounted to $83,568,000 and compares with $83,483,000 for March a year ago. Total operating expenses amounted to $417,913,000 and compares with $361,163,000 for March, 1922.

Unemployment—Price Index of Leading Crops.

The total voluntary unemployment in Pennsylvania on May 15 amounted to 10,025 and compares with 215,410 on May 1, 1922. The number employed in April in 1,648 New York State factories amounted to 566,000, as against 567,000 for March and 478,000 in April a year ago. The weekly pay roll in these factories, at $15,276,000, compares with $15,262,000 for March.

The price index of 10 leading crops to the producer stood at 139 on April 15, as compared with 134 on March 15 and 115 on April 15, 1922. The index for live stock at 107 compares with 115 for April 15 a year ago. The Department of Labor wholesale price index for all commodities at 159 for April shows no change from the preceding month and compares with 143 for April, 1922. Dun's index declined slightly during April.

Advertising—Chain-Store Sales—Amount of New Insurance Written.

Newspaper advertising in the leading cities of the country amounted to 108,836,000 agate lines in April and compares with 98,031,000 lines a year ago. Total sales of the four large 10-cent chain-store systems aggregated $23,764,000, and compare with $22,429,000 for April, 1922.

Total new life insurance written during April amounted to $727,179,000, as against $699,089,000 in March, and $555,948,000 in April of last year. A total of $253,425,000 in the form of dividend and interest payments will be disbursed during May, as against $242,576,000 in May, 1922.

Data From Survey of Current Business.

The following table gives such data from the next issue (No. 22) of the Survey of Current Business as have been received during the week ending May 22, 1923. Another set of advance figures will be issued giving the remaining figures for the month of April.

All items given in the following table correspond with similar information in the issues of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. These figures given are in some instances collected by governmental agencies and in other cases by trade associations or technical journals. All of this is explained in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for $1 per year.

* Preliminary.

FOREIGN TRADE OPPORTUNITIES.

Reserved information may be obtained from the **Bureau and its district and cooperative offices** by duly registered firms and individuals upon written request by **opportunity number.** The **Bureau** does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

The Commodity Divisions Are at Your Service.

The bureau is prepared to furnish expert information concerning many products entering into our export trade, and special divisions for the following commodities have been organized: Agricultural implements, automotive products, chemicals, coal, electrical apparatus and equipment, foodstuffs, hides and leather, industrial machinery, iron and steel, textiles, lumber, paper and paper products, petroleum, rubber and rubber goods, shoes and manufactured leather goods, transportation equipment, and specialties, which include musical instruments, jewelry, amusement devices, hardware, scientific instruments, etc.

Each commodity division is headed by a man with practical experience in the sale of those products abroad and with first-hand knowledge of the problems confronting American exporters in foreign markets. The commodity divisions secure for the trade the kind of information which it wants and help to disseminate it as rapidly and widely as possible.

Each division is in close contact and cooperates with the principal trade associations in its particular field and is guided largely by these associations in determining the nature of the information and service which would be of most benefit to the trade as a whole.

COMMERCE REPORTS

A WEEKLY SURVEY OF FOREIGN TRADE

HERBERT HOOVER, SECRETARY OF COMMERCE — JULIUS KLEIN DIRECTOR BUREAU OF FOREIGN AND DOMESTIC COMMERCE

Privileges and Obligations of Foreign Trade.

There is an inescapable community of interests that unites all American exporters. An American firm taking up foreign trade falls heir to a series of privileges and obligations.

The exporter owes his success abroad in a great measure to the labor of those who have built up American reputation for high quality of goods and fair dealings.

Every American exporter is under a moral obligation so to shape his relations with foreign customers and agents that the good name of America—the Nation's most vital asset in international commerce—may not be tarnished.

Mistakes are unavoidable and, as a rule, can be corrected without lasting injury to American prestige. Arbitrary and improper actions, fortunately very rare in actual experience, are ruled out by the moral force of public opinion and the enlightened conscience of the American business world.

Perhaps this is why in the United States much consideration is given to the complaints of foreign merchants and the entire business community feels a concern in regard to individual infractions of sound business practice.

The Healing Power of Business.

In 1921 more than 3,000,000 tons of coal were shipped from the United States to England, and coals were literally carried to Newcastle and unloaded there. The following year slightly over 3,000,000 tons of coal were shipped from the United Kingdom (some of it from Newcastle) to the United States. Now, in the spring of 1923, the last of the incoming shipments of coal from the United Kingdom again meets the first of the outgoing cargoes of coal from the United States to continental Europe, and the economist, perhaps, throws up his hands in despair at the unwarranted waste of carrying these millions of tons back and forth across the sea.

But instead of assuming such an attitude he should give thanks for the saving grace of the trader's flair for business, which brings the things that humanity wants to the place where it wants them in spite of "strikes, war, pestilence, acts of God, or force majeure."

All this is nothing new, but the thing that is new is the fact that the healing currents of business now flow far more swiftly than in the past to fill a want created anywhere in the world. Inflation and deflation, prosperity and hard times tread more quickly on each other's heels than was their wont in days gone by. This is because the means of communication grow ever better and draw the world closer together.

Thus it behooves the international trader of to-day to keep his eye on the far horizon, for the far horizon is, after all, not so very far away.

A Wrong Kind of Advertising.

Complaints received from time to time by the Department of Commerce and by the Post Office Department indicate that in the foreign mails in general there is a disposition to treat printed matter of all kinds, especially magazines, catalogues, and advertising matter, with less consideration than is given the first-class mail. The Post Office Department, with the active assistance of the foreign representatives of the Department of Commerce, is constantly engaged in efforts to secure satisfactory service on catalogues and printed matter for American users of the foreign mails. Because of certain fundamental defects in the postal organizations of some foreign countries it is often difficult to assure the American business man even a tolerable service on this class of mail. It is felt, however, that some progress has been made, and the efforts of both departments in this direction are continuous.

It does not help, toward the accomplishment of this result, to have certain American trade papers fill the mails of foreign countries with what are, in effect, sample copies of their publications addressed to purely imaginary persons in the city of destination. These fictitious addresses have names so carelessly chosen as to make their absurdity apparent to the most casual observer. The natural result is that these copies are simply thrown away and that a real injury is done to other publications bearing genuine addresses. In a recent case brought to the attention of this department the postal authorities of the foreign country actually appealed to the American consul, pointing out the harm that was resulting from a practice which could under no circumstances be expected to benefit the publishers of the journal.

Is Siam a Neglected Market?

"Is there a market for American goods in Siam?" asks a correspondent.

The possibility of expanding sales in many American lines in Siam seems well worth considering. To be sure, the trade of the United States with Siam has never yet assumed notable proportions and can never be expected to equal our trade with Japan or China. At the same time, with practically no intensive sales effort, American goods are entering consumption in Siam in increasing percentage year by year. That alone is a business indicator which warrants attention.
